When, after their capture, his friend, the Honorable John H. Reagan, the postmaster general of the Confederacy, was separated from him to be sent to a northern prison, while he remained at Fortress Monroe, Mr. Davis said: "My old friend read frequently the Twenty-sixth Psalm; it has often given me the surest consolation." While enduring in agony and chains his imprisonment at Fortress Monroe, a cruelty that will ever be a blot upon our country's fair fame, he wrote thus cheerfully to his anxious and devoted wife: "Tarry there the Lord's leisure, be strong and He will comfort thy heart. Every day, twice or oftener, I repeat the prayer of St. Chrysostom." Again, from the dungeon he wrote to a friend: "Separated from my friends of this world, my Heavenly Father has drawn nearer to me."

And when his two pitiless years of imprisonment were ended, broken in health but unbroken in spirit, and when the short court proceedings were concluded in Richmond, which restored him to liberty and the bosom of his family, and a party of friends had joined Mr. Davis at the hotel, the venerable chief of the lost cause turned to his old pastor and said: "Mr. Minnegarode, you have been with me in my sufferings and comforted and strengthened me with your prayers; is it not right that we now once more should kneel together and return thanks?"

After his release, in shattered health and poverty, his fortune having gone with the cause he served and for which he suffered, but rich in the affectionate devotion of the people, who vied with each other in doing him honor, he returned to his beloved Mississippi and here spent the remnant of his heroic years. Out of fire and tempest and baptism of blood he came with an unfaltering purpose and an unclouded sky. There is something strangely beautiful in the old age of a great and good man. No sun sweeping through the opening gates of the morning has ever the radiant glory of its calm setting. Beautiful and buoyant as is the springtime, it fades before the color and splendor of the autumn. And so there is a sweet serenity and chastened beauty about the evening of a cheerful, well-spent life that far exceeds the brightness and bloom of its fair young morning.

The last days of Jefferson Davis were peaceful and beautiful. They were spent in dignified retirement, cultivating the sweet companionship of books, enjoying the association of friends, and in writing a masterly exposition of the great principles of government that had been the creed of his political faith and the ground of his people's hopes. This was his last will and testament to those "who have glorified a fallen cause by the simple manhood of their lives, the patient endurance of suffering, and the heroism of death."

Though never an indifferent observer of passing events, he wisely took no part in public affairs and rarely ever appeared on public occasions. When occasionally one of the numerous invitations with which he was overwhelmed was accepted, it was to speak words of encouragement and hope to his people, urging them, with stout hearts and strong hands, to labor for the largest good of our reunited country.

In a notable address before the Legislature of Mississippi in 1884, when in age and feebleness extreme, standing in the old hall where in the days of his splendid prime he swayed enraptured audiences as with the wand of a mighty magician, he thus spoke to the people who had ever held the highest place in his affectionate heart: "Reared on the soil of Mississippi, the ambition of my boyhood was to do something which would redound to the honor and welfare of the State. The weight of many years admonishes me that my day of actual services has passed, yet the desire remains undiminished to see the people of Mississippi prosperous and happy, and her fame not unlike the past, but gradually growing wider and brighter as the years roll away. * * * Fate decreed that we should be unsuccessful in the effort to maintain and resume the grants made to the Federal Government. Our people have accepted the decree; it therefore behooves them to promote the general welfare to the Union, to show to the world that hereafter, as heretofore, the patriotism of our people is not measured by lines of latitude and longitude, but is as broad as the obligations they have assumed and embraces the whole of our ocean-broad domain."

And now, young men of our reunited country, sons of heroic sires, proud of the flag that floats over us, and jealous of its increasing and unfading glory, glad that there is a star on it that answers to the name of Mississippi, I commend to your emulation the words of solemn counsel and patriotic encouragement with which Mr. Davis concluded his masterly and monumental work. The rise and fall of the Confederate Government: "In asserting the right of secession it has not been my wish to incite to its exercise. I recognize the fact that the war showed it to be impracticable, but this did not prove that it was wrong, and now, that it may not be again attempted, and the Union may promote the general welfare, it is needful that the truth, the whole truth, should be known, so that crimination and recrimination may forever cease, and then, on the basis of fraternity and faithful regard for the rights of the States, there may be written on the arch of the Union, 'Esto perpetua.'"

By the sacred political convictions which had inspired his every public and patriotic service, he consistently lived to the end, and went down to his grave without laying any sacrifice of repentence upon the altar of his conscience or his country. Without compromise or modification, and with never a suggestion of contrition or concession, he died in the accepted faith of his fathers. And for that fearless and unshaken fidelity to his honest conception of truth and duty the South will continue to adore him, the world will never cease to admire him, and with a wreath of unfading glory the genius of history will not fail to crown him. For the future he had no fear. In the last public paper that emanated from his pen, representing himself and his countrymen, he calmly reiterated his unfaltering faith in these words: "We do not fear the verdict of posterity on the purity of our motives or the sincerity of our belief, which our sacrifices and our career sufficiently attested."

Had he ever recanted or even receded, had he ever apostatized or even compromised, had he shown in any way that his often reiterated doctrines were not the undying convictions of his sincere soul, had he ever plead for pardon on the ground that he had misconceived the truth and misguided his people—the South would have spurned him, the North would have execrated him, and the verdict of history would have deservedly and eternally condemned him. But, in the calm consciousness of having done what sacred duty and the cause of constitutional liberty seemed to demand, to the end of his days he walked with a steady step that knew no variableness or shadow of turning. The banner under which he fought went down in blood and tears but was never furled by his hands.

And for us to be honestly and absolutely loyal to the whole country and our glorious flag, we need not and will not forget or cease to venerate the exalted character and splendid virtues and unsullied patriotism of Jefferson Davis and his compeers.

"Time cannot teach forgetfulness
When grief's full heart is fed by fame."

Over the portico of the Pantheon in Paris are these words in large letters: "To great men, the grateful Fatherland." Fellow Mississippians, I cannot repress the painful regret that it is not the proud privilege of Mississippi to be "the grateful fatherland" of the greatest Mississippian and to keep holy watch and ward over the sacred dust of her most illustrious son. He was great to those who knew him best—those who were nearest to him in intimate, confidential companionship—and he will grow greater with the growing years. Caleb Cushing, in introducing him to a vast audience in Faneuil Hall, said he was "eloquent among the most eloquent in debate, wise amongst the wisest in council, and brave among the bravest in battle." Senator Reagon, of Texas, the Postmaster General of the Confederate Government, said: "He was a man of great labor, of great learning, of great integrity, of great purity." The great-hearted and marvelously eloquent Senator, Benjamin H. Hill, of Georgia, said: "I declare to you that he was the most honest, the truest, gentlest, bravest, tenderest, manliest man I ever knew."

Greatest of Mississippians, the leader of our armies, the defender of our liberties, the expounder of our political creeds, the authoritative voice of our hopes and fears, the sufferer for our sins, if sins they were, and the willing martyr to our sacred cause, we shall ever speak his name with reverence and cherish with patriotic pride the story of his matchless deeds. He died without citizenship here, but he has become a fellow citizen with the heroes of the skies.

Marvelous, many-sided, masterful man, his virtues will grow brighter and his name be writ larger with each passing century. Soldier, hero, statesman, gentleman, American—a prince of Christian chivalry, the uncrowned chief of an invisible republic of loving and loyal hearts—when another hundred years have passed, no intelligent voice

will fail to praise him and no patriotic hand will refuse to place a laurel wreath upon his radiant brow.

"Nothing need cover his high fame but heaven,
No pyramid set off his memories
But the eternal substance of his greatness,
To which I leave him."

Legislation, Progress, and the Columbia River

EXTENSION OF REMARKS
OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 4, 1947

Mr. HORAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement I made before the House Committee on Public Works:

Mr. Chairman and members of the House Committee on Public Works, I appreciate the opportunity you have given me to appear before you to discuss H. R. 3036. Before touching upon the bill under consideration, I deem it necessary to establish the physical and legislative background in order that the point of view of the people in the Northwest can be thoroughly understood.

GREATNESS OF COLUMBIA'S POTENTIALITIES RECOGNIZED EARLY

Nearly a century and a half ago, Thomas Jefferson had a vision "of a great empire on the Columbia River." Accordingly, he sent his secretary, Capt. Meriweather Lewis, and Capt. William Clark to claim and survey the Columbia country. The actions of this committee and its predecessors in the last 20 years have made the vision of Thomas Jefferson a reality. The development of the river judged by results only, therefore, has been built upon a solid basis. I appear to urge that the past constructive work be continued and that nonapplicable legislation be eliminated.

The Pacific Northwest, which covers the Columbia Basin, is a fuelless region and because of this deficiency it became necessary for the people of this region to turn to the development of hydro power to secure economic security. The quality and quantity of hydro power existing in the Northwest are far better and much different from the usual type of hydro power encountered on the majority of torrential streams in other sections. Consequently, policy which would be applicable to secondary producers will be destructive to the development of such a mighty stream as the Columbia.

SCENE OF GREAT STRIDES IN APPRECIATION OF BASIC FUNDAMENTALS IN OVER-ALL RIVER DEVELOPMENT

For over half a century the people of the Northwest have been thoroughly grounded in the fundamentals of a correct development. This region pioneered the large-scale and high-head hydroelectric development. It also pioneered in high-voltage transmission in rural electrification, in low rates, and in sound financing. It also pioneered in mass production at the lowest possible rates in order to encourage the widest use. Consequently, since the turn of the century, the Northwest has had the lowest rates and the largest per capita consumption in the country. Mass production was initiated in the Northwest a few years before Henry Ford applied this concept to the automobile industry. Therefore, because of necesssity, the people of the region have long been thoroughly grounded in what constitutes the correct and sound development of hydro power. Because of this long experience, both in politics and in sound power operation, our people are able to immediately recognize what is beneficial and what is not. Only recently have the contents of H. R. 3036 become publicly known in the Northwest and as a result I have had numerous letters and wires from the full cross section of our electorate to appear and discuss this bill. It is these requests that lead to a detailed analysis on my part. I therefore approach this discussion after a full and fair consideration.

JURISDICTION OVER THE COLUMBIA

I have appeared before the former Rivers and Harbors Committee on several occasions and discussed the characteristics of this stream and the legislative background in connection with the Foster Creek authorization. At this time it is essential that this legislative background, as well as the physical characteristics of the Columbia, be thoroughly understood before an adequate approach can be made on the application of H. R. 3036.

THE YEAR 1925 SAW FIRST ATTEMPTS TO PROBE FULL MEANING OF THE COLUMBIA RIVER

From my investigation I find that the first legislative direction applying to the Columbia River came with the Rivers and Harbors Act of 1925, which is known as Public Law 585, Sixty-eighth Congress, approved March 3, 1925. This act directed the Chief of Engineers of the United States Army, acting through the Secretary of War, to prepare and submit to the Congress an estimate covering the cost of surveys of navigable streams and their tributaries where power development appeared to be feasible. The purpose of this survey enactment was to outline general plans for the multi-purpose improvement of feasible and constitutional streams, including navigation, flood control, irrigation, and the sound, economical development of hydro power.

SECRETARY OF WAR REPORTS

Following this authorization, the Secretary of War, on April 12, 1926, submitted his report to the Congress. This report was printed as House Document No. 308, first session, Sixty-ninth Congress. This report naturally included the Columbia River and its principal tributaries. Following the publication of the 308 reports, the Rivers and Harbors Act of 1927 directed the Secretary of War, through the Chief of Engineers, to make the necessary investigations, surveys, and plans in accordance with the recommendations of the 308 reports.

Under the authorization of the 1927 Rivers and Harbors Act, the Chief of Engineers proceeded with the necessary surveys, examinations, investigations, plans, and sketches which would lay the foundation for a general plan for the most effective multi-purpose development of the Columbia River. This final report covering all the purposes of the previous legislation was submitted to the Congress on March 29, 1932, and was published as House Document No. 103, first session, Seventy-third Congress.

I have studied the 103 reports in considerable detail and, therefore, feel that I am qualified to state that these reports are perhaps the most comprehensive and practical documents that have yet appeared on over-all river development. These 103 reports forcibly brought out the outstanding characteristics of the Columbia River and the potentialities which existed and were capable of being developed into the greatest and lowest-cost prime hydroelectric power system on this continent. The 103 reports of the Army engineers were so thorough and complete that it was taken as the foundation of the Bonneville and Grand Coulee projects when the allotments were made by the President in 1933 pursuant to the NRA Act of that year.

OUTLINE OF COLUMBIA RIVER DEVELOPMENT

The 103 reports also laid the foundation for the full development of the Columbia River and cited the outstanding benefits that could be derived by "step by step development of the river". The outlined ultimate plan consisted of a series of 10 dams covering the stretch of the river from the Canadian border to tidewater. Two of these great projects have been completed except for additional generator installations and reclamation features at Grand Coulee.

When the public works allotments list was made public in 1933, both Grand Coulee and Bonneville were included. Also included was the Parker Dam on the Colorado River between Arizona and California. The Parker Dam project led to a controversy between States. This controversy was carried to the United States Supreme Court as the court of original jurisdiction. In the Parker Dam decision, the Supreme Court held that constitutionally authorization could come only from Congress under the authority of the commerce clause of the Constitution. Consequently, as a result of this decision, the former Rivers and Harbors Committee again took up the consideration of the Bonneville and Grand Coulee Dams and authorized both of these projects in the omnibus rivers and harbors bill of 1935.

SUPREME COURT ASSERTS VALIDITY OF COMMERCE CLAUSE WITH REFERENCE TO COLUMBIA AND OTHER INTERSTATE RIVERS—NECESSITATES ACTION BY CONGRESS

In 1936 the Rivers and Harbors Committee considered the matter as basic policy legislation applying to the Bonneville project. The quick adjournment of Congress prevented a conference on the 1936 bills passing both Houses and as a result of the Seventy-fifth Congress continued the consideration of the control policy, and passed the act of August 20, 1937, which also originated in the former Rivers and Harbors Committee. The act of August 20, 1937, was not a party matter, although the Democrats at that time were in control of all the branches of the Government. The outstanding men on both sides of the aisle in both houses contributed to the passage of this act, known as the McNary-Mansfield Act.

RESULTS, FINALLY, IN BASIC ACT OF AUGUST 20, 1937—GREAT RESULTS FROM THIS ACT

The wise provisions of the 1937 act have resulted in the great industrial and economical developments in the Pacific Northwest and the outstanding war contributions that the early development of this power made possible. The remarkable contribution made under this act was the principle providing for actual and potential markets. This policy directed heavy industry to the Columbia Basin, which was capable of absorbing large quantities of power-producing pay rolls. Nearly 40 percent of the metal which went into our wartime air program as well as the atomic bomb was made possible through the act of 1937. This development consequently has turned out to be the keystone in our defense system. Without the proper future utilization of this power the foundation of our defense system can be transferred to foreign lands. We hear a great deal about the preservation of the secrets of the atomic bomb. However, we stop and realize that if unwise legislation is passed without such full consideration we can undermine our defense structure to the point that would be equivalent to giving away the secrets of the atomic bomb.

WAR CONTRIBUTIONS

Provisions embraced in the early enactments coming from the predecessor committee produced the tools of victory in the

recent war. At the outset of the war in Europe, it became increasingly evident that this country was ill-prepared to fight a modern war because of the lack of electrochemical and electrometallurgical industrial plant capacity. Such defense capacity required large volumes of low-cost power. The Columbia River power during the war worked around the clock 365 days a year in the war effort. It produced the light and strong metals that made the national air program possible.

GREAT RESULTS CONTINUED

During the last 12 months of the war, the Columbia River hydroplants produced over 503,000,000 pounds of aluminum annually, which was the equivalent of 10,000 B–29's or 145,000 fighter planes. In addition it was the low-cost hydropower from these two plants which made the Hanford atomic-bomb plant possible. Also the power from the two Columbia plants was used to weld together a substantial part of our maritime and Navy construction. During fiscal year 1945, Columbia River power produced 181 ships in northwestern shipyards. The war industries served directly by these two Columbia River plants during this fiscal year consumed over 5,500,000,000 kilowatt-hours of electric power. This amount of power is more than was used in Greater New York and is over 50 percent of the greatest output of the largest private power system in this country. Therefore, it is evident from this background that we must approach the application of H. R. 3036 with considerable caution.

EFFECT OF 3036 ON THIS PROGRESS NEEDS CLARIFICATION

Paragraph 1 (b) of H. R. 3036 states "that nothing in this act shall change the provision of the Bonneville Act." However, a close examination of H. R. 3036 brings out that the provisions of H. R. 3036 certainly do unwittingly change the provisions of the Bonneville Act and destroy the sound foundations constructed by this act. The region has had 10 years of operating experience under this act and although it is recognized that further perfecting is needed in the direction of equitable distribution of benefits, it is apparent that the all-wise policy inclusions included in the act of 1937 should not be nullified.

THE INTENT AND MEANING OF H. R. 3036 ON "UNDEFINED" TERM—EFFECT OF "UNDEFINED" TERM ON REGIONAL CLARIFICATION IN PROGRESS AT PRESENT TIME

The intent of this bill is to amend section 5 of the Flood Control Act of December 22, 1944, known as Public Law 534, Seventy-eighth Congress. However, in the use of the undefined term "reservoir projects under control of the War Department," the scope of H. R. 3036 is extended beyond amending the Flood Control Act of 1944. Only last January all the private-power interests and all the operators of the public municipal plants in the Northwest got together and reached agreements. These interests have appeared before the House and Senate Appropriations Committees advocating the further development of the Columbia along the lines of the act of 1937. Naturally there was some controversy in the submitted joint recommendations by these interests, but these were of minor consequence.

NEED OF CLARIFICATION—BUT 3036 A STEP TO THE REAR

The evident intent of H. R. 3036 was to prevent the destruction of private investments. The Tacoma accord of January 22, 1947, demonstrated that public development could continue without in any way destroying private investment provided the policy provisions of the 1937 act were strictly followed. H. R. 3036 makes fundamental changes in Federal power policy and the reaction in the Pacific Northwest is that these changes will have a far-reaching effect on the economy of the region. There is general agreement that the function of Congress is to perfect established policies and modify existing laws, but in so doing Congress should be fully advised as to the effects which are bound to flow from such changes. Admittedly, there exists an opportunity for clarification and simplification of Federal power policy. However, the feeling exists in my section that H. R. 3036 would overthrow many of the beneficial policies which have developed in Congress during the last 50 years. H. R. 3036 in the opinion of our people would confuse the issues rather than clarify policy.

ARMY ENGINEERS HAVE NO DESIRES TO BECOME MARKETING AGENCY—O. K. BPA AS SUCH

During the hearings before the Senate Appropriations Commttee one of the staunchest friends of the Army engineers on that committee stated publicly that the Army engineers did not wish the transfer of power-marketing activities to their organization. It follows, therefore, that the Army engineers considered the workings of the Bonneville Act as the proper type of management setup, which preserves to the Army engineers their long-established public works functions.

COLUMBIA RIVER PROJECT

H. R. 3036 requires the transfer of certain activities from existing agencies directly to the War Department and indirectly to the Federal Power Commission. The division of operating responsibilities between two agencies makes for imperfect management, and so divides responsibility that the most efficient results cannot be obtained. I will cover this in fuller detail in what follows.

H. R. 3036 SUGGESTS UNWANTED TRANSFERS OF ADMINISTRATIVE POWER

Before H. R. 3036 can adequately be appraised, we must know what projects have been authorized and what legislation applies to these authorized projects.

NEED FOR MORE SPECIFIC LANGUAGE IN 3036 TO COMPLETELY CLARIFY BONNEVILLE EXEMPTION MENTIONED IN 3036

McNary Dam, which is now under construction, was authorized in the Rivers and Harbors Act of 1945. Likewise the lower Snake projects were authorized in this same act. According to the 1945 Rivers and Harbors Act, the operation of McNary and the lower Snake projects were specified to be covered under the Bonneville Act of 1937. The Bonneville project is specifically exempted from the provisions of H. R. 3036, but this latter bill doesn't mention the exclusion of McNary and the lower Snake River projects. Although H. R. 3036 is proposed as an amendment to section 5 of the Flood Control Act, the bill language applying to "reservoir projects" is so broad as to lead to confusion as to what is included in the term "reservoir projects." How reservoir projects authorized under rivers and harbors acts are to be handled is uncertan.

NEED CONTINUED

The Columbia Basin project, the Hungry Horse project and the upper Snake River projects have all been authorized under the reclamation law and inferentially it can be concluded that these reclamation projects would not be directly affected by H. R. 3036. In these cases we have different handling in the same region. However, the Willamette Basin projects which include Detroit, Lookout Point, and Quartz Creek have all been authorized under previous flood-control legislation. Foster Creek project was authorized under the last Rivers and Harbors Act and is a reservoir project under the terms of this bill but not under interpretation as an amendment to section 5 of the act of December 22, 1944. H. R. 3036 leaves open the marketing of Foster Creek power.

H. R. 3036 WOULD COMPLICATE AUTHORITIES

The Bonneville Power Administration is now marketing the power from the Bonneville and Columbia Basin projects under the terms of the act of 1937 and the Reclamation Act of 1939. This agency is also the designated marketing agency for the power to be produced at Hungry Horse, McNary, and the lower Snake River projects. As a result of the 1937 act the Bonneville marketing administration has a transmission system of over 3,000 circuit miles. This transmission system is capable of being used to market the power from all the Columbia Basin projests under the terms of existing legislation, but nevertheless H. R. 3036 would evidently transfer part of these facilities to another policy. This would result in endless confusion and a nonworkable physical set-up. Because of this physical situation a number of ambiguous questions can and will arise as a result of enactment of H. R. 3036 as written. Unless this ambiguity is cleared up, H. R. 3036 will result in nullifying a number of beneficial and workable congressional policies which have been established over a long period. H. R. 3036 is not needed in the Columbia Basin and if enacted in the form as written will seriously upset the economic foundation of a large section of the country.

H. R. 3036 NOT COMPOSED FOR SUCH STREAMS AS COLUMBIA

H. R. 3036 is evidently written to fit a certain class of torrential streams, and cannot be used on such a stream as the Columbia, with high, steady flows, high waterfalls, and a large proportion of firm power. The Columbia power does not require steam standby whereas H. R. 3036 is written to cover those types of torrential streams which are largely secondary producers requiring steam standby. Nature does not standardize its water courses or its waterfalls and when we attempt to legislate standardization, such as is covered in H. R. 3036, we are bound to run into conflict with natural laws.

PAY-OUT—BUS-BAR LIMITATION A THREAT TO SOUNDNESS OF PAY-OUT PROGRAM

In order to demonstrate the financial soundness of the Columbia River projects, I initiated 2 years ago the pay-out procedure. I will not take your time to repeat the method used in standardizing pay-out demonstrations, as I have fully covered this subject in various speeches on the floor. Last year and this year full pay-out reports have been submitted to both Appropriations Committees. These pay-out tests were founded upon independent audits made by a nationally known firm of public accountants who are handling such work for the largest private power systems in America. The soundness of the conclusions reached in the submitted pay-out tests has never been challenged. Therefore, I can state that the Columbia River projects are fully reimbursable and will not constitute a burden upon the taxpayers.

All the power available from the Columbia River plants has been sold and the area is now encountering a power shortage. Thus, according to the Tacoma agreement between public and private interests a market exists for more Federal capacity than is available. Furthermore, there is no major controversial issue before the Congress on Columbia power. Those that do exist, according to recent testimony, are of minor consequence and can be corrected without doing violence to the fundamentals responsible for the development of the great Northwest. All Federal facilities built on or in connection with the Columbia River projects are now loaded to the maximum obtainable capacities. Foster Creek, when it is brought in, will have a ready market and this market should not be handicapped by the policy provision contained in H. R. 3036.

PUBLIC PREFERENCE AND BUS-BAR SALES

H. R. 3036 states "preference in the sale of power shall be given to public bodies and cooperatives either directly or through the

resale by the purchasers." The stated policy of the bill is to continue the preference to public bodies which has become a congressional policy starting with the Lincoln land laws. Nevertheless, the operation of H. R. 3036 would make the distribution of these benefits impossible.

BUS-BAR PROVISION CONTRARY TO HISTORIC POLICIES

This bill directs the Secretary of War to dispose of power at the bus bar. Bus-bar sales as a general proposition are distinctly a step backward, nullifying all preferential power legislation starting with the Reclamation Act of 1906 and continuing through the Raker, TVA, Bonneville, and Fort Peck Acts. Bus-bar sales mean sales to a single company on the company's terms. The net effect would be the creation of a monopoly and placing such a monopoly between the people and the dams built with taxpayers' funds. Consequently only one private utility could be benefited by H. R. 3036.

Bus-bar sales according to the thinking of the majority of the people of the Northwest would soon eliminate all prospective purchases save a few monopolies. The result would be a reduction in revenues to the Federal Government and an impairment of the pay-out under existing statutes. A policy of bus-bar sales covering one set of Federal projects and transmission sales from other Federal projects in the same area is bound to produce chaos.

Since the initial authorization of 1906, permitting the sale of power from reclamation projects, Congress has always granted preference and priority to public agencies. There is not a single power act passed within the last half century that does not contain public preference provisions. Furthermore, the reclamation laws authorize transmission construction. H. R. 3036 states a preference and then through operating functions turns arcund and limits the preference to such an extent as to nullify a long-established congressional policy. The preference as written into H. R. 3036 is granted provided it is consistent with the full development of power. This constitutes an invitation to private groups to initiate such economic action as will wash out the stated preference. This is tantamount to an open request addressed to private interests to demand the full output of a plant to the complete exclusion of all types of public bodies and cooperatives.

In places where feasible hydro developments are removed from load centers, public bodies and cooperatives will be unable to finance the construction of necessary transmission lines and facilities to connect the Federal generating sources with the existing markets. Under H. R. 3036 only very large private consumers can operate. If the sponsors of H. R. 3036 would consider the type of load and the hours of use of such a load, they would find that H. R. 3036 would operate against public bodies. In the final analysis, the nonprofit public distributors would have no real opportunities under H. R. 3036.

PRESENT POLICY

The long-existing congressional policy is to dispose of power in such a manner as to encourage the widest possible use and to prevent monopolization of taxpayers' investment by limited groups.

BASIS OF PRESENT POLICIES

This policy was specifically approved in numerous laws such as the TVA Act of 1933, the REA Act of 1936, the Bonneville Act of 1937, the Fort Peck Act of 1938, the Flood Control Act of 1944, and the Rivers and Harbors Act of 1945. A universal rule of bus-bar sales would be totally inconsistent with these authorized policies. It is possible to go back even further and cite the Raker Act of 1913 and the Reclamation Act of 1906. Such Federal projects and the constitutional power generated therefrom are the property of all the people. If all the people are to benefit from these Federal investments, power must be brought to the people at the point where they can use it through agencies created by democratic processes.

PRESENT POLICIES ENDORSED BY COLUMBIA RIVER PEOPLE

The people of my State over a long period, by referendums, have consistently voted down any proposals that limited power benefits. The most recent example was the overwhelming defeat of Referendum No. 166 in the last November election. The State of Washington voted Republican in this election, and overwhelmingly defeated the cited referendum. Major utilities in the States of Washington and Oregon both public and private agreed to the following Tacoma agreement language that stated that power from the Government dams should be carried by Government transmission lines to the load centers: "Inasmuch as these Federal plants are located at a considerable distance from the region's load centers and inasmuch as present transmission facilities of the Bonneville Power Administration are already approaching conditions of full load, it is agreed as essential that appropriations for backbone transmission facilities be made available to the Bonneville Power Administration on an annual and continuing basis adequate to provide means for the delivery of power to load centers."

In the consideration of H. R. 3036 we must remember that we are dealing with major constitutional policies and that these policies, such as included in the Bonneville Act, have been affirmed by recent decisions of the United States Supreme Court.

MANAGEMENT

Under H. R. 3036 we find a mixture of operating and quasijudicial functions tied together. The Federal Power Commission is a quasijudicial agency which under the Water Power Act of 1920 is charged with the responsibility of regulating private companies engaged in interstate commerce. Nevertheless H. R. 3036 adds additional functions to the Federal Power Commission. As I interpret H. R. 3036 it runs counter to the concept of separation of powers contained in the Federal Constitution. Under the Federal Constitution there is a significant difference in the grants of authority to the three separate branches of Government. The principle of separation of powers provides that no one of these three branches of Government can encroach upon the functions of another. In addition, the Constitution further provides that dangerous concentration of power must be avoided and that respective powers be delegated in such a manner that the authorization can be exercised within the limits of separation of powers.

DANGER IN TOO MUCH POWER FOR FPC

The abuses which follow from the concentration and nonseparation of functions were brought out in the Couzens investigation covering the Federal Power Commission. It was this abuse that led to large investment losses during the late depression. Furthermore when the Bonneville Act was under consideration in 1936 and 1937, an attempt was made to give the Federal Power Commission operating functions in the Bonneville Project Act. This attempt was rejected for the reasons that I have just given.

Division of responsibility never results in sound management. H. R. 3036 would require the Federal Power Commission to approve every power contract. This is an unnecessary and unworkable restriction which was discarded when the Bonneville Act was passed.

O. K. OF CONTRACTS WOULD CREATE UNNECESSARY DELAYS

As far as I have been able to determine this concept of contract approval is not a part of utility regulation. Such a provision would create delays in marketing power. From inquiries I find that this experience was encountered during the war years. During this period, under a Presidential directive, the Power Commission was required to approve power contracts entered into by Government and their principal governmental contractors. A review of this wartime experience shows that delays resulted which in some instances extended over months and months, and even years.

FPC PROPERLY A QUASI-JUDICIAL BODY—NOT A MANAGEMENT BODY

The Federal Power Commission as a quasi-judicial agency has necessary functions which should be fully used in the consideration of any power marketing set-up. The Federal Power Commission consequently should have full authority to allocate investment costs and to check and approve power rates so that any executive market agency could be subject to all possible checks and balances. Negotiation of contracts is not a judicial function. Furthermore, the responsible operator of a marketing agency must have sufficient flexibility to meet requests for immediate power deliveries and to meet the various situations that accrue in the best operating set-ups, as well as to meet all the requirements inherent in national security and common defense.

NULLIFIES AND CONFUSES 15 YEARS OF PROGRESS IN MARKETING OF POWER FROM FEDERAL GENERATING HYDRO PLANTS

H. R. 3036 also nullifies recent congressional procedures aimed to improve administration and promote efficiency. Up to the last 15 years there was no congressional policy covering the designation of a marketing agency for power generated at rivers and harbors and flood-control projects. The Bonneville Act was one of the first large project acts covering marketing from rivers and harbors projects. A separate act was enacted for the Bonneville project for the reason that the Columbia River was in a different category from most streams. Since 1937 the Bonneville Act has been amended twice, but these amendments in no way changed the basic policy, and are confined to minor housekeeping provisions. The Fort Peck Act was enacted shortly after the Bonneville Act and is patterned after the Bonneville Act in designating a departmental agency to market the power, in this case the Bureau of Reclamation.

In the early part of the last war, the Denison and Norfork projects were brought to a generating stage, and in the absence of any statute covering administrative and marketing machinery, the President, under the authority of the First Water Powers Act, placed the marketing of power from these two dams in the hands of the Secretary of the Interior. As a result the Southwestern Power Administration was established to carry out the marketing functions applying to the two Southwest dams.

The Flood Control Act of 1944 initially established general marketing policy and designated the Secretary of the Interior as the marketing agent for reservoir projects under the construction jurisdiction of the War Department. H. R. 3036 would abandon the Congressional policy of fixing responsibility which is contained in the 1944 Flood Control Act. Thus, H. R. 3036 makes a change by a division of responsibility. Such a division would result in personnel and facility duplications and would create competition between established Federal agencies in same area and conflicts over marketing policies. Furthermore the bill now under consideration would prevent adequate planning and timing of new generating facilities and the accompanying marketing requirements. From this standpoint H. R. 3036 would result in waste and inefficiency.

Hydro power projects in the same region and covering the same marketing area should be operated as a unit. Unit operation achieves a greater supply of firm power over what would be possible through separate isolated and independent operations, providing unit operation is made to conform strictly to pay-out feasibility. The incremental increase of the number of kilowatts of firm power by transmission integration on the Columbia amounts to more capacity than could be obtained in the Southwest. Furthermore, unit operation encourages industrial growth, whereas isolated operation will prevent resource development. H. R. 3036 attempts such coordination but the provisions are ambiguous and vague, and no application is provided for projects not under jurisdiction of the War Department. Isolated or multiple marketing agencies will constitute a barrier to regional development. Separate policies and separate agencies within the same region would result in duplicating personnel and facilities and will result in waste and inadequate service, all of which affect net return on the investment.

CONCLUSION

For the reasons I have stated H. R. 3036 needs extensive revisions. The bill as drafted proposes far-reaching changes in power policy. The changes represent a backward movement. These changes could not be classified as good government, efficient administration or good business. If changes are to be made, such changes should reflect the public interest and provide for more efficient administration. If this bill must be reported favorably, it should be amended to exclude the entire Columbia Basin, rather than the brief citation of exclusion in section (b) of the bill. It is apparent that the changes contemplated are so extensive as to warrant exhaustive hearings. I appreciate and respect the intent to deal fairly with private interests. Therefore, I repeat that this can be accomplished without sacrificing long-standing fundamentals.

Shortages of Petroleum Products

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

RESOLUTION OF THE BOARD OF DIRECTORS, NATIONAL OIL MARKETERS ASSOCIATION

Whereas during the past winter many sections of the country have suffered from fuel-oil shortages far more severe than any experienced during the war, which shortages were caused to a considerable extent by manipulation of supply and transportation; and

Whereas the panic thus caused among consumers and jobbers has been further heightened by repeated statements of many individuals and organizations subservient to the major oil companies to the effect that critical shortages of petroleum products will occur in the future; and

Whereas total stocks of crude oil and refining capacity are larger than at any time in recent years; and

Whereas many refiners, jobbers, and distributors of petroleum products are having difficulty in securing proper amounts thereof; and

Whereas many independent refiners have been removed from the competitive market; and

Whereas the controls being exercised over the production, refining, transportation, and distribution of petroleum products by the major oil companies appears to be the result of illegal combinations and agreements: Now, therefore, be it

Resolved by the board of directors of the National Oil Marketers Association in meeting at the Morris Hotel, Chicago, Ill., this 21st day of May 1947, That the Attorney General of the United States be requested to impanel a grand jury or grand juries to the end that a thorough investigation be made to determine if monopolistic practices or activities otherwise in violation of the Federal antitrust laws exist in the petroleum industry and if such conditions be found to exist that those responsible therefor be prosecuted; and

That a copy of this resolution be sent to the Attorney General of the United States and to such others as may be of assistance in enforcing the antitrust laws.

The Importance of the Merchant Marine to the Mississippi Valley and the Midcontinent Area

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Mr. Solon B. Turman, executive vice president, Lykes Bros. Steamship Co., in St. Louis, Mo., on National Maritime Day:

It is indeed gratifying to a shipping man to be invited into the deep interior of our country on National Maritime Day to talk about our merchant marine.

I was especially gratified that my invitation came from the foreign-trade bureau of the chamber of commerce, the Export Managers Club and the Propeller Club of the United States, port of St. Louis, for the very existence of such organizations, almost at the geographical center of the United States, symbolizes the great interest being taken today in foreign trade and all it stands for economically and as an influence in the development of more cordial international relations. That interest indicates the world-wide vision of those in whose hands lies the future development of our great valley and midcontinent areas.

Ships and foreign trade are so interdependent that it is impossible to discuss one without referring to the other. Neither can live alone. Ships cannot exist without foreign trade, and foreign trade can only be carried on if ships be available to handle it. Both are essential to our economic and national existence.

It was on May 20, 1933, that Congress first took cognizance of the fact that, on May 22, 1819, the American steamship *Savannah* sailed from Savannah, Ga., on the first transoceanic voyage under steam propulsion and requested the President to call for the annual observation of May 22 as National Maritime Day.

When the *Savannah* made its voyage the American merchant marine was well embarked upon one of the most glorious phases of its long and eventful history. At that time, and during the decades immediately following, American merchant ships established standards of speed and safety of transportation which were seldom equaled and not surpassed by those of any other maritime nation. Our accomplishments at sea during the "clipper ship" era which immediately preceded the Civil War are so well known that they need not be repeated here. We were oceanic carriers for the world, and our national wealth and strength increased accordingly.

Our early American merchant marine went into a decline after the Civil War from which it never fully recovered, except to meet the emergencies of World Wars I and II. Probably the chief reason for this was that Americans turned their backs to the sea in the post-Civil War period to concentrate on developing our country's interior.

This was a period of great domestic expansion and our internal needs and opportunities were so great that many Americans lost interest in foreign trade and in our merchant marine. Between 1870 and 1914, approximately 90 percent of our foreign trade, in value, was carried in foreign vessels and, in the year 1910, ships flying the American flag carried only 8.7 percent of our foreign trade, in value, the lowest since the days of our famed clipper ships.

When we had few ships, and none in operation to many countries, foreign flag shipping combines closed many markets to us and, in times when their own national needs were paramount, we were deprived of the use of a considerable part of the shipping transportation upon which we were dependent to reach our markets and to bring essential materials and supplies to us.

The *Savannah* made her notable crossing of the Atlantic nearly 130 years ago. At that time our country was, in many respects, much more self-sufficient than it is today. The progress of science and invention has brought with it definite and Nation-wide need for many products which were, at that time, not considered necessary to our economic life—or were, in fact, unknown. We then, for example, did not require the rubber which now is so important in our automobile, electrical, and other industries, nor did we need the manganese and other ores which now come to us from other parts of the world and are necessary in our metallurgical industries—while the greater number of our people got along very well without coffee, tea, sugar, and many other imported things which now are classed as necessities. Nor had we then developed our industrial, agricultural and mineral resources to the extent which makes it essential, as it is today, that we export a substantial part of our production in order to provide stable livelihood for our people.

Our need today for adequate and always-available oceanic transportation is greater than ever before. And that need will intensify with passage of time. Only a fleet under the American flag will assure dependable service to American importers and exporters and give them regular and frequent service to their markets and sources of supply overseas. Only a fleet under our own flag can give us transport essential in war.

When the United States entered World War I, we were without ships to carry our troops and supplies to France. Captured enemy and friendly foreign vessels did a limited job for us, while a hastily organized shipbuilding effort went forward. This program, costing about $3,000,000,000, produced a good number of ships. But many of them were not delivered until actual hostilities had ended. However, those ships enabled us to handle a substantial part of our postwar foreign commerce—which reached unprecedented volume. In 1920, we carried 43 percent of that commerce in our American ships and, in that year, our exports and imports amounted to more than $13,000,000,000—400 percent greater than the volume in 1912. But the fleet of American vessels which contributed so materially to that result was, in large part, obsolete and unable, for long, efficiently to compete with more modern foreign tonnage. The volume of American tonnage engaged in our foreign trades steadily

declined and, by the end of 1935, we had in active service less than one-half the tonnage of 1920.

Speaking before the Merchant Marine Committee of the House of Representatives in March 1935, Senator WALLACE WHITE, of Maine, a former chairman of the committee and an eminent authority on the merchant marine, stated that in 10 years, 1922–32, we had paid $6,000,000,000 to foreign vessels in freight moneys and passenger fares.

Realizing that we were losing ground in world trade and were slipping into an alarming state of unpreparedness for national emergency, the Congress was aroused and passed the Merchant Marine Act of 1936. This was a new deal for American shipping. Instead of Government operation of the greater part of our fleet, which followed World War I, private ownership, with Government cooperation, was made possible and a long-range policy for building new ships of improved types and operating them in regular service upon essential trade routes was adopted.

World War II found us more fully prepared to meet its early demands and, at the same time, to keep open available trade lanes than we were when World War I was thrust upon us. But, again, we had to pay for years of indifference and neglect of our merchant fleet and were forced to resort to a program of frenzied ship building at constantly rising costs. However, I believe military authorities are agreed that, except for our ability to meet the first impact of the war with the ships which had been built following passage of the act of 1936, the war would have been dangerously prolonged and might not have been won.

If we are to have future benefit from the billions of dollars spent for emergency shipbuilding during World War II, which has left us with ships having a deadweight capacity of more than 50,000,000 tons, many of them very fine vessels, and if we are to assert ourselves as a powerful force in world affairs, through international trade, we must have a merchant fleet fully adequate for both trade and defense under a program that will permit the consistent replacement of over-age ships with vessels of the most efficient type. To attain this objective, the American merchant marine must receive the support of American exporters and importers. We cannot give our trade to foreign ships and expect to keep a merchant fleet strong enough to maintain our economic freedom in times of peace and our military security in time of emergency or war.

At this time our ships are as good as, or better than, any in the world; our seamen are the best treated and the highest paid and our operating organizations are capable and strong. The American merchant marine generally is, as to cargo ships, in position to give American exporters and importers service of such character and efficiency as fully to deserve their support.

Our war-built fleet was, however, constructed primarily for the carrying of cargo and troops and we now find ourselves short of passenger vessels and of combination passenger-and-freight vessels which are necessary to balance our merchant marine and fully adapt it to efficient commercial use. These needs are receiving current attention. The President of the United States recently appointed a special committee of five outstanding businessmen to investigate the critical problems of the merchant marine. The Maritime Commission and members of its staff already have appeared before this committee; and shippers, ship owners, and others will be heard in due course. The men on this committee are of high caliber and the President should receive sound and constructive advice which, no doubt, will be passed along to Congress for such legislative action as may be appropriate.

The merchant marine is an industry necessary to our national defense and to the flow of the lifeblood of our business. Like any other commercial enterprise, it must, in order to survive and to provide continued service and employment, return a profit to its owners. And, with American ships and American crews, they must meet the competition of the world.

Other countries build ships more cheaply than we can and, because of the lower-than-American living standards of their people—with consequent lower wages for seamen and shore personnel and lower cost of supplies and upkeep—can operate them more cheaply than we can.

To make it possible for American ships to cope with such competition, our government authorized, through the Merchant Marine Act of 1936, as amended, the payment of subsidies to offset our higher-than-foreign construction and operating costs. Closely regulated and with provision for recapture by the Government of excess profits, these so-called subsidies actually do no more than make it possible for an American ship owner to purchase ships for what it would cost to build them abroad and reimburse him, in part, for the higher-than-foreign American wage, subsistence, maintenance, repair and insurance costs to which he is subjected through giving employment to American labor, both ashore and afloat, and by purchasing American materials and supplies, rather than foreign.

These equalizing aids are the price we pay to keep alive an industry which is an important instrument in international relations and a vital arm of our national defense and economic life.

Experience has proved that the price is not a very big one.

As a matter of fact, recapture provisions in the operating contracts may require the return to the Government of the full amount of operating subsidy paid to each subsidy contract holder; such provisions require that one-half of the profits in excess of 10 percent of the capital necessarily employed in the business, over a 10-year period, must be refunded to the Government. The first settlement period under this arrangement is nearly ended and the amount to be recaptured by the Government is almost equal to the total operating subsidy payments made during the 10-year period. The actual net outlay of Government funds in operating aids over the current 10-year period probably will amount to substantially less than $3,000,000 a year.

Compare this with the tremendous costs of emergency construction which have been forced upon us twice in one generation—consider the economic and national security benefits which the operation and existence of our vessels bring to us—and we find the Government is paying a very small insurance premium for an always valuable—and, in time of war, priceless—protection.

The Department of Commerce has estimated the United States will furnish about $16,200,000,000 in goods and services to other nations this year—an increase of $900,000,000 over 1946. It is estimated other countries will provide about $9,000,000,000 in goods and services to this country. Our combined exports and imports for 1947 will probably be 17 percent more than those of 1946.

I firmly believe the greater part of our foreign trade in the future will be with the Midcontinent and Gulf area of the United States.

Agricultural products have always represented a very substantial portion of our exports. In 1945, more than 61 percent of the national income from farm marketings originated in this area.

Manufacturing is definitely moving to the Midwest and South Central States—this area, to 1939, consistently showing an increase in its production of national manufacturers, while the entire Atlantic coast area reflected a decline.

During World War II, industrial facilities costing almost $10,000,000,000 were constructed by the Federal Government in the midcontinent and Gulf States. This was approximately 59 percent of all Government industrial facility contracts as against 28 percent in the Atlantic coast area and 13 percent in the Pacific mountain area.

After the war, private capital was invited to purchase or lease these properties for conversion to peacetime use. To March 31, 1947, property located in the midcontinent-south central area, originally costing more than $1,700,000,000, had been disposed of to private interests. This was 64 percent of the original cost of all plants sold or leased in all sections of the country to that time. Sales and leases in the Atlantic coast area, to the same date, were only 19 percent of the total taken over by private interests, while the Pacific mountain area absorbed only 17 percent. Pipe lines and sales of property to schools and public bodies for nonindustrial uses are not included in these percentages. This plainly shows that the natural drift of manufacturing to the midcontinent area of the United States, which had been taking place up to 1939, was greatly accelerated during the war and that the transfer of so many of these facilities to private industry since the cessation of hostilities portends much for the future productivity of this section.

In addition to these war-built plants, many millions of dollars have been invested or are being spent at the present time for new manufacturing facilities and plant expansion in this area—far more, I believe, than in any other section of the country.

Postwar surveys have shown that industrial employment in Omaha, St. Louis, Evansville, Kansas City, Memphis, and many other points in the Middle Western and Southern States greatly exceeds that of 1940.

The actual statistics on manufacturers have not been available since 1939, but I am confident an accurate survey made at this time would show that a substantially greater part of national manufacturing is today in the midcontinent-south central area.

I am also confident that the future development of this area will be greater, relatively, than that of any other portion of our country because, in addition to the great natural advantage and the abilities of its people, the area is one having benefits of protection afforded by the mountains paralleling our eastern and western coasts and it reasonably may be anticipated that our industries of national importance will be, for the most part, located within it. The development of our agricultural and mineral resources will similarly be accelerated.

This will tend to increase the volume of foreign trade through the Gulf ports, which are the logical gateways for much of the traffic that will originate, or terminate, in the Middle West.

Before World War I, when there were no dependable American-flag services at the Gulf ports—except a few to nearby Central American countries—the shipper in St. Louis or other midwestern points was at a competitive disadvantage with shippers nearer the eastern seaboard. If he required ocean service, he frequently had to ship via an Atlantic port or overland to the Pacific.

Today much of this handicap has been materially reduced by the maintenance of dependable American-flag services now available between Gulf ports and practically all ports of the world. During the 15-year period—1931 through 1946—the total tonnage of the port of New Orleans increased 100 percent, a larger increase by far than that shown by all the other ports of the United States. Exports showed a gain of 93 percent.

Coastwise tonnage was up 124 percent, and river traffic chalked up a gain of 349 percent.

To be prepared for the clearly evident demand of the future, the port of New Orleans is now proposing the construction of a supplementary outlet to the sea, known as the New Orleans tidewater seaway, which will supplement the present river channel to the Gulf with a more direct and quicker route and, at the same time, will make possible the extension of present berthing space for vessels and the installation of the most modern and efficient facilities for handling cargo and providing shipside storage, with ample and convenient car-handling facilities which should make available economies equal to those offered by any other port in the world.

The present wharf space at New Orleans now is operating close to the limit of its economic utility but the tidewater seaway, if authorized and constructed as recommended by the division engineer of the United States Army, will meet this situation and give access to ample space for extensions.

New Orleans is fully alive to the requirements of the great future of the midcontinent-so ıth central area and, with other Gulf ports, has taken definite action to insure the economical and expeditious handling of the traffic moving from and ipto that area.

And now for a concluding word on the outlook and future prospects for the American merchant marine.

Our wartime construction program brought us to the end of hostilities with a very large fleet. Many of the ships were of desirable type; others, built primarily for war service and to meet wartime needs, are not too well suited for commercial operation in the face of competition. Congress, in the Merchant Sales Act of 1946, set forth the formula by which the Maritime Commission is to dispose of the war-built vessels. Since the enactment of that act, the Commission has disposed of most, if not all, of the most desirable long-range vessels of the C types. In addition, a substantial number of liberty and other type ships have been sold.

Nearly all of the C type vessels have been purchased by American operators—although some, and a substantial number of the liberty-type vessels, have been sold to our allies of the war.

The American shipping industry generally feels that no further sales of war-built vessels should be made to foreigners since it is obvious that, should our Government continue to sell them additional vessels, it will only be a year or two before certain of the foreign governments will possess merchant fleets of an aggregate greater tonnage than they possessed in 1939, prior to the outbreak of hostilities in Europe. It is the feeling of the industry that our Government has fully satisfied any obligation it had to assist its allies in this direction.

For itself, the American shipping industry asks no undue consideration or concessions.

With continued and fair administration of the Merchant Marine Act of 1936, the industry will provide service second to none and, providing it, will keep in being an American fleet of modern, fast ships with continuous employment for experienced crews and operating personnel, shipyard, and other shore workers—ready for service in any national emergency.

The Mississippi Valley midcontinent area is destined, I firmly believe, to become the greatest productive and consuming area of our country. Its well-being will depend—in the future to greater extent than in the past—upon the shipping services which will convey its products to market and bring to it the materials which must come from across the seas.

Those services, in the interests of the area and of the Nation, which are inseparable, can best—and will most consistently—be supplied by American ships.

Memorial Day Services

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 4, 1947

Mr. JAVITS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following addresses at the services on the occasion of Memorial Day, Friday, May 30, 1947, at the twenty-eighth annual memorial services of the Richard J. McNally Post, No. 263, American Legion, New York City:

ADDRESS BY SAMUEL DAVIS, POST COMMANDER, CHAIRMAN

Friends and neighbors of the Richard J. McNally Post, American Legion, we are assembled here this afternoon to pay our humble tribute to the hallowed memory of the men and women of our armed forces of our country who gave their lives and made the supreme sacrifice in the service of our great Nation.

Their sacrifices have served not only to shield our Nation but the entire democratic peoples of the world.

By this humble tribute, we again avail ourselves of the honored privileged of rededicating ourselves to the service of these United States, and what it stands for and represents: Freedom, justice, liberty, and democracy.

It is an historical fact, that the human race has from time immemorial fought for liberty and freedom.

It was in these United States, however, that the greatest victory was achieved. Our Constitution, our principles of democracy, our democratic form of government, represent the greatest achievement in the struggle for liberty and freedom.

Here, in America, have come the persecuted peoples of every race and creed and from every nation in every corner of the world, to be fused into one people, and have emerged—the greatest miracle of the world—Americans.

The skeptics never believed it possible that from this melting pot would merge a great people, the people of these United States.

Think well, my fellow Americans in what a wonderful country we are privileged to live.

Remember, my friends that this Nation of ours can only survive by tolerence to your fellow Americans, be he of a different faith, or of a different color.

Ponder well, that this Nation can only survive, by justice and equal opportunity to all, be he Jew, or Gentile, be he black or white.

You live in the freest country of this universe. It is your solemn duty, both to yourself and to your children to see that these principles are adhered to.

The people of this Nation have a solemn obligation to perpetuate the principles of justice and equality for all.

You and I have the solemn duty to combat foreign ideologies that are inimical to our liberty and freedom as practiced in the United States. You must combat these ideologies to protect our democratic way of life.

The system of our American Government is our great heritage. The democratic spirit is our sacred inheritance. It must be cherished and preserved.

With these principles in our hearts, let us never forget that our hallowed comrades died, so that justice, freedom, liberty and democracy may survive.

ADDRESS BY ARTHUR HEYMAN, POST COMMANDER

Today we remember all our martial yesterdays. We honor those who gave up their tomorrows to guarantee ours. And we search for hope that our tomorrows will be different from our yesterdays and that no new generation of American youth will have to rewrite the guarantee.

Once again today's parade was a spectacle to kindle local pride. Riverside Drive again beheld the pagentry of uniformed thousands. Not a house along the route of march failed to fly the flag; not an onlooker who failed to thrill to the bugles and drums. The city of New York was proud of itself and prouder of the Nation. America was, is and always will be worth fighting for. Americanism is a pattern of life worth dying for.

But what of those who did die for it so that we the living might enjoy its fruits and freedoms.

Oratory is easy. Rhetoric is cheap. It is sacrifice that is hard, and total sacrifice was the price they paid for the security we have. But to show real appreciation of these sacrifices we must make every day a remembrance day. When the heroes we honor gave their lives for us, they also gave us a solemn obligation. That was to carry on the task for which they died. That task was to keep America safe and always American.

That is an every day assignment—a continuous job.

It calls for making America strong both for her own security and for her leadership toward enduring peace, to rid the world forever of bombs, bullies, and bigots.

It calls for a rebirth of old-fashioned Americanism to preserve the tried and tested virtues of democracy, justice, equality, and freedom of opportunity.

It calls for vigilance because that still remains the price of liberty.

Only in this way can we keep the faith with those who gave their last full measure of devotion to God and country.

By keeping this faith we shall make certain that our hero dead did not die in vain, that others shall not have to die to hold what has been paid for in the past with so much blood and treasure.

ADDRESS BY SAM E. DRIBBEN, POST ADJUTANT

We assemble here this afternoon to bow our heads in respectful memory of those brave men and women who gave their lives in defense of their country in times of war. They gave their lives because of love for their country; they gave their lives because of their belief in our form of government; they gave their lives because they believed in American traditions and ideals. Let us never forget the debt we owe them.

Our Government, instituted 170 years ago, has stood the acid test of time. It has been the symbol for all people who believe in freedom, opportunity, and tolerance. On two occasions, when the civilized world has cried out to save it from ruthless dictators, whose purpose it was to enslave others, America has responded to its plea and saved the world at a tremendous cost in the lives of young American men and women.

World War II is now history, but the world itself is in a rather unsettled frame of mind, and it is extremely unfortunate to see some who call themselves Americans, and who received their opportunities as Americans, criticizing the American way of life.

What a far cry it is from living conditions here in the United States and those of other countries. We do not deceive ourselves into believing that everything is perfect; that we have reached the end of the road to progress. We realize it is human to err; we understand that human nature sometimes is weak and that those to whom we have entrusted our affairs at times misplaced that trust, but recognizing all of our own shortcomings, all of our weaknesses as a nation, we still hold that conditions in America are a thousand times better than in other parts of the world; indeed, better than anywhere else in the

world. Here every citizen may worship God in his or her own way; here every child is guaranteed an education; here the poorest boy may rise to be the President of the United States; no citizen is too poor to have his or her own day in court; nowhere else in the world is the standard of living so high; nowhere is home life so comfortable or the pursuit of peace and happiness so secure. Compare these conditions to the conditions in other places and you will thank God you are an American citizen. It was because of that which I have just presented to you, and to protect and safeguard our American way of life, that the men and women whose memory we pay tribute to today gave their lives, and because of them let us rededicate ourselves to America and to the ideals of Washington, Jefferson, Lincoln, and Roosevelt; let us make America safe for only those who believe in the American way of life. Long live the United States of America.

Just a word or two on a subject I have touched upon in this community for many years past. It is the debt we owe to our less fortunate comrades in the hospitals; to the wounded, sick, and disabled; to their families and to the widowed and orphaned; for them the war is not yet over. Let us pledge ourselves to do all within our power to help lighten their burdens, to make their days on hospital cots cheerful and bright, and to see to it that they receive every recompense and comfort that we, a grateful people, can give them. Let this day of national observance and recognition be the occasion of our national rededication to those things which we prize and which we bequeath to the youth of America as a continuing heritage.

ADDRESS BY HON. JACOB K. JAVITS

Mr. Chairman and Commander Heyman, fellow veterans and friends and neighbors, we are gathered here today in a solemn service of memory, respect, and dedication for our neighbors and fellow Americans who have given the "last full measure of devotion" in World Wars I and II. What would they who are in the special heaven reserved for heroes ask us to speak of at such a time? Would they ask us to recount the days of their lives? Or would they rather that we considered that state of man and the world which caused them to be cut off in the flower of their youth in a foreign land and what we are doing and plan to do to eliminate the scourge of wars? I should rather think that what they whom we memorialize today have endured would make of them such loving philosophers that they would be entirely concerned with our plans for peace beyond all else.

For as our heroes look down from the Valhalla they see strewn all about us the wreckage—physical, spiritual, and moral—of a world; the sufferings of millions from hunger, depression, and fear; or, as martyred DP's and refugees in Europe, still in concentration camps, at the limit of despair. They see millions of others bewildered by the march of international events. They see the two greatest powers on earth engaged principally in baring their teeth at each other. How our heroes must wonder whether we shall in these circumstances avoid yet another war.

All of you have often been told that we live in the most challenging hour of mankind's destiny and that what we do now will determine the fate of the world for a thousand years. All of you have read so many newspapers and magazines about the destructive powers of the new atomic weapons that I am sure I need not torture you more with the gruesome details. We are all, I am sure, agreed that another war is indeed too terrible to contemplate; too terrible in a totally new sense because it promises the most awful destruction right here in our own country despite our geographic distance from those with whom we might fight.

There are, however, hopeful signs, too. First and foremost is the existence of the United Nations, a parliament of man where at the very least the nations of the world can discuss their differences and permit the impact of world opinion to operate upon them. Then there is the profound conviction in which all nations join—of the awful destructiveness of another war. And, finally, there are the growing ties of economic interdependence and of closer links in communications, transportation, and information which make the peoples of the world infinitely better acquainted with each other and truly, as a great American phrased it "one world."

But where, our heroes may ask, in all this is the individual, the citizen; and it is of the individual and the citizen that we should speak today. For it is in our minds and hearts that the memory of those who died in wars must generate a new spirit, a new understanding, and a new determination.

The spirit must be one of reverence for those who have suffered and died, and of dedication to the service which will seek to prevent its happening again. The understanding requires that the citizen shall know what is going on in the world which affects the cause of peace; the struggle with outworn social and economic ideas in China, India, and Indonesia; the struggle of freedom against the forces of reaction—whether of the left or the right—in countries like Greece; the struggle against feudalism in the Arab lands of the Middle East, and finally the heroic struggle of the Jewish people for justice in Palestine. All of these take study; great pains to acquire information and even greater pains in communicating it again to friends, neighbors, and associates who need to know what is going on.

And last is determination—the determination of the citizen that the informed public opinion so characteristic of our country shall truly rule its relations with the world. So, for example, occurs the crying need for our support of the part of the United States in world economic reconstruction; the recognition that with over 60 percent of the world's productive resources we must carry the responsibility for a major share of the world's postwar rehabilitation; the recognition of the fact that an expanding and prosperous United States is only possible in an expanding and prosperous world and that when we help world rehabilitation today, we are helping ourselves tomorrow. For desperate and hungry people without hope are easily made ripe for new-made adventures of war. We cannot hope to be healthy in a world sick with the contagion of hunger and despair; therefore our resources must be used for the relief of the hungry and the oppressed. So, too, we must support international justice under the United Nations and respect for international treaties and covenants, rather than the tyranny of men—even famous men—if we would have peace. In the final analysis, whether the millions we extend in aid to other nations will bear fruit in prosperity and good will must depend on our own administration of these millions, and that in turn will depend upon the continuous impact of an informed and enlightened public opinion in our own country on our own Government.

I want to emphasize that I am fully aware of our problems at home such, for example, as the No. 1 domestic problem of housing. The productive resources with which we came out of the war, however, are great enough to enable us to do our job effectively in the United States as well as in the world. After all we have two objectives—domestic prosperity and peace—one is to be found at home and the other abroad.

The fate of the world lies in the hands of all of you and of the other 140,000,000 Americans. It lies in our spirit and understanding, and our determination that as our heroes look down upon us today from above we dedicate ourselves to the full and joyous discharge of our responsibility for the fate of mankind as a duty beyond our jobs, our home, and our very lives. Let us pray together that this be so.

Veteran Preference

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. REES. Mr. Speaker, under unanimous consent granted me by the House, I am including with my remarks an informative article that recently appeared in the magazine Foreign Service. The article is entitled "Veteran Preference—Now You See It, Now You Don't," and is written by the Honorable Omar B. Ketchum, director of the Veterans of Foreign Wars national legislative service. I commend the reading of this article:

With economy being stressed at every turn and the Federal Government launching a major scaling down of operations, the issue of veteran preference in civil service, long an administrative headache and economic conflict, is again in the spotlight and more acute than ever.

The peak of Federal civil employment within the continental limits of the United States was reached in June 1943, with 3,022,453 persons on the pay roll, while outside the continental limits the peak was reached in June of 1945, with 854,170 civilians drawing Federal checks.

The United States Civil Service Commission estimates the total number of Federal jobholders will be reduced to 2,100,000 by the end of June 1947, and by June 1948, the total will be further reduced to around 1,800,000. Upon comparing these 1947 and 1948 estimates with the peak load in June 1943 and 1945, it is understandable that a scramble for the remaining jobs is under way.

The percentage of veterans among Federal employees has risen from 16 percent in 1945 to approximately 42 percent at the present writing. The increase in the percentage of veterans is due in part to the sharp reduction in force among Federal employees and the application of veteran preference, although a substantial increase in the total number of veterans employed cannot be denied. From now on, however, the clash of economic interests will be much sharper and veterans hard put to hold the upper hand.

In April 1942, the United States Civil Service Commission, through Executive order, froze all permanent appointments in civil service and declared all future employment to be war-service appointments for the war duration and 6 months thereafter. This action was taken to preserve competitive civil-service opportunities for the millions of persons going in the armed forces. In February 1946 war-service appointments were discontinued and temporary, indefinite appointments were established while the change-over machinery, from war service to probationary appointments leading to permanent status, was put in motion.

In the change-over, all jobs held under war service appointments are either to be eliminated or subjected to competitive examination, requiring the temporary jobholder (veteran or nonveteran) to compete with other

veteran or nonveteran applicants for Government employment. The change-over has been slow and tedious, with a rising volume of complaints against permitting the temporary jobholders to hang on without competitive examinations.

In an effort to speed up the change-over and place war service jobs under competition, the United States Civil Service Commission has adopted a decentralized program, permitting certain Government agencies to set up their own boards of examiners, give examinations, grade papers, establish registers, and make appointments. Approximately 750 such boards of examiners and separate registers will be created under the decentralization program.

Vigorous objection was immediately raised by spokesmen of the major veteran organizations against the decentralization program on the grounds that it would minimize the value of veteran preference and lessen the opportunities of veterans to use their preference in competing for available jobs. Instead of their preference operating simultaneously from a few registers among the many agencies, veterans are now largely limited to jobs in a given agency unless they make applications, take examinations, and qualify on the several of the 750 separate registers.

It was pointed out by veteran spokesmen that even in one area, where several Government agencies operate, the veteran, to obtain maximum consideration, must apply at all the agencies, take several examinations, perhaps for the same type of job, and get on the various job registers. An example was cited by VFW Civil Service Officer George L. MacElroy, where a veteran applied at two different agencies for the same type of job, took two separate examinations, was qualified by one agency, and disqualified by the other.

The Civil Service Commission justifies the decentralization program on the grounds of economy and speed-up of the change-over from war service to permanent appointments. The Commission insists that decentralization is necessary where Congress will not appropriate sufficient funds to operate a centralized control, and that it will keep a close check and control on the individual agency operations to preserve veteran preference and assure maintenance of civil service rules and standards. Veteran spokesmen reply by admitting that decentralization will speed up the change-over, but that the over-all cost to the Federal Government will be more than if handled by the Commission under a central program, and that veterans will be the victims by reason of minimized opportunities to compete for available jobs. Chairman Ed Rees, of the House Civil Service Committee, expressed apprehension that decentralization might cause a reversion to the old spoils system.

In the meantime, the reduction-in-force program and the change-over are developing headaches for veteran organization civil service officers, uncovering absurdities and inequalities, as well as revealing some glaring weaknesses in the Veterans' Preference Act. Unsympathetic agency officials and personnel directors are seizing upon loopholes in the law to evade the clear intent and purpose of the act. Veterans, with excellent service and combat records, holding war service jobs, are being forced to yield their jobs to other veterans who can establish some degree of service-connected disability, even though the former made a high earned examination rating while the latter was barely able to get a passing grade by adding his 10 points to his earned grade, after which he automatically floats to the top of the list of applicants.

Chief among the headaches, giving rise to veteran appeal cases, is the policy of the Navy Department, in shipyards and installations, to seize upon a few words in the Veterans' Preference Act, "to promote the efficiency of the service," and interpret said language to mean that unless a veteran employee is better qualified than a nonveteran the efficiency of the service is promoted by demoting or terminating the veteran and retaining the nonveteran.

As a result of this Navy policy a demotion program applied in conjunction with reduction in force has thrown hundreds of veterans out of supervisory positions in navy yards while nonveterans, reduced from a higher level, retain the jobs vacated by veterans who were performing satisfactory service with efficiency ratings of good or better. Hard-nosed Navy spokesmen, prodded by nonveteran supervisory organizations, profess respect for veterans but insist that it would be contrary to efficiency to retain a satisfactory veteran when there is a better qualified nonveteran available. Navy is somewhat vague on how the better qualified determination is made.

Another trick, frequently employed, to bypass or evade veteran preference is downgrading veterans in efficiency ratings below the level of good and thereby removing them from under the protection of preference. Not infrequently, a veteran, who for years has been receiving efficiency ratings of good or better, suddenly is confronted with a rating of less than good and finds himself on the way out. Although an appeal from the rating is open to the veteran, it is usually a long-drawn out and costly action with no assurance of success. Most veterans, under these circumstances, take it on the chin rather than fight it out to the bitter end.

A group of veterans in the Boston, Brooklyn, and Norfolk Navy Yards, however, chose to fight it out with appeal cases when socked by the Navy in the demotion program. Represented by veteran spokesmen from the navy yards, civil-service officers of the major veteran organizations, including V. F. W.'s hard hitting George MacElroy, the appeals were carried from local to regional to central board of appeals and finally dumped in the lap of the three members of the Civil Service Commission itself.

After long and almost continuous conferences between veteran spokesmen, Civil Service officials, Navy brass, and the House Civil Service Committee, the Civil Service Commission handed down a decision which was a smacking victory for the veteran appellants and a set-back for the Navy as well as all other agencies guilty of this policy. The Commission found that the Navy, in its demotion program, had not followed the procedure required in the Veterans Preference Act and ordered it to:

1. Restore to duty, in their former positions, all veterans who had been wrongfully demoted or separated.

2. Require written notice, 30 days in advance of demotion or separation, giving full and complete reasons for such action, explaining and justifying in detail why the veterans were selected for demotion or termination and how it would promote the efficiency of the service. Each veteran affected shall be given such notice and explanation.

3. Permit the veteran to file an appeal, giving him access to all information pertaining to the nonveterans who are to be retained, and present evidence showing that it would not necessarily promote the efficiency of the service to demote him while retaining a nonveteran.

In a conference, following the Commission decision, the Navy Department promised to follow the order and explained how they proposed to carry out the procedure. All veterans would be restored to duty, if available and desiring restoration, and all jobs would be resurveyed with the view of again instituting demotion in accordance with Commission requirements.

When questioned as to how they could satisfactorily explain and justify the demotion of a veteran supervisor, satisfactorily performing his duties, in order to retain a nonveteran dropping down from a higher level, Navy spokesmen were frank to state that if it could not be justified it would not be tried and that the new procedure would probably result in many veterans being retained while nonveteran supervisors might be forced to drop through all the various levels and out through the gate.

Regardless of the temporary victory and the more reasonable attitude of the Navy Department, veteran organizations are on the alert and prepared to handle appeal cases where the veteran has been selected for demotion or termination. A lively battle is predicted on appeal cases where it is contended the veteran was demoted and his place was filled by a better qualified nonveteran to "promote the efficiency of the service."

As a result of continuous study of veteran preference problems developing in the reduction-in-force program; the change-over from war service to permanent status; and almost daily conferences with representatives of the Civil Service Commission, agency supervisors and Members of Congress, the Veterans of Foreign Wars, through its national employment service and national legislative committee, is advocating the following points:

1. No permanent status veteran civil-service employee, satisfactorily performing his duty, shall be demoted and displaced by a permanent status nonveteran employee who is being demoted from a high level.

2. No war-service veteran employee, satisfactorily performing his duty, shall be demoted and displaced by a war-service nonveteran employee who is being demoted from a higher level.

3. No permanent-status veteran employee, satisfactorily performing his duties, shall be demoted or terminated as long as there are war-service nonveterans occupying positions on the same or higher level for which the veteran may qualify.

4. Permanent-status veterans, with reemployment rights, shall be given an opportunity to qualify for higher level jobs occupied by war-service nonveteran employees.

5. Veterans who have been wrongfully or illegally separated from their jobs, or have been unduly delayed in being restored to employment under reemployment rights, shall, upon reinstatement or reemployment, be compensated for the period of waiting.

6. The decision of the Civil Service Commission recommending that a veteran be restored to employment, following appeal, shall be mandatory and binding on the agency involved.

7. That the language in section 14 of the Veterans' Preference Act, "shall not be demoted * * * except for cause to promote the efficiency of the service" shall not be interpreted to mean that unless the veteran is better qualified than the nonveteran, the efficiency of the service would be promoted to retain the nonveteran and demote or terminate the veteran.

In order to strengthen and justify veteran preference, and to eliminate discrimination and inequalities between veterans competing for civil-service jobs, the VFW national legislative committee recommends the following changes in the Veterans' Preference Act:

1. Require the veteran applicant for a civil-service job to meet the minimum requirements and make an earned passing grade before adding his preference points.

2. Require that a veteran applicant for a civil-service job establish a compensable degree of service-connected disability (10 percent or more) before being eligible for the special 10-point disability preference which automatically "floats" the disabled veteran to the top of the register.

Airplane Accidents

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MILLER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 3, 1947

Mr. MILLER of Connecticut. Mr. Speaker, the country was shocked over the past week end by the two tragic airplane accidents. It seems almost unbelievable that anyone would try to take advantage of such tragedy to accomplish their own selfish purposes.

Secretary of Commerce Harriman was quoted in Monday's Washington newspapers as warning that air accidents would increase if the Senate concurred in House-approved appropriations cutting $70,000,000 from CAA funds.

This statement could only have been issued to make people believe that in some way these recent crashes were due to lack of safety equipment on our air lines. All the money the Congress could appropriate for ILS or any other known safety device could not have prevented either the New York or the Maryland accidents. Nor will the cut of $70,000,000 from the CAA appropriation for next year increase one iota the hazards of air travel in the United States.

Secretary Harriman was further quoted as saying that air travel is eight times more hazardous than railroad or bus travel. As a matter of fact, figures released from Secretary Harriman's own Department showed that there were 2.4 fatalities for every hundred million passenger miles traveled on the railroads in 1945 and 2.5 fatalities on our regularly scheduled commercial air lines. In a 3-year period, from 1943 to 1945, there were 2.5 fatalities for the railroads and only 2.4 for the air lines.

We all want our air lines made as safe as possible, but the spending of unnecessary millions of tax dollars will not in itself add to safety. The record is quite clear that the investigation of air-line crashes started last January by the House Interstate and Foreign Commerce Committee stirred up more activity in the CAA and the CAB than has been apparent for many months.

The Secretary of Commerce's attempt to blame an economy-minded Congress for airplane accidents will not fool the American taxpayer.

Memorial Day Address

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me on Memorial Day at Norwalk, Conn.:

My fellow citizens and friends, 79 years ago Americans first celebrated Memorial Day in homage to the gallant men who fell in the war to preserve the Union. Today we honor also the memory of those who since that day have given their lives not only to preserve the Union but to preserve inviolate and vigorous for future generations the flame of liberty. We Americans have always loved peace. But we have always also preferred to fight rather than accept a peace based on human bondage. Americans have preferred death in battle to a peace imposed by tyrants. We have been true to our traditions by choosing the exhaustion, the despair, the suffering, and the death of war instead of the abject surrender of a dishonorable peace. We have understood the grim challenge of war and we have shown, for all the world to see, that we possess the manly virtues necessary to pursue to a victorious end a war based on justice and carrying in its relentless onward sweep the high hopes of mankind for a more abundant life.

Now we are faced with the challenge of peace. We must also understand this challenge if we are to salvage from the desolation of the recent war some of the things for which the war was fought. We must meet this challenge if we are to vindicate the sacrifices of the brave men whom we honor today; if we are to provide a resounding demonstration to a desperate world that these men and women did not die in vain.

In order to do this, we must realize that there is no sharp dividing line between war and peace. Wars are but extensions of peacetime conflicts, the final confession of man's inability to solve his problems by peaceful means. Accordingly we must learn to be as militant in peace as we have to be in order to win a war. If we do not learn that lesson, we shall inevitably reap another war. We must keep our noble purpose undiminished while we learn to face the grim realities of the modern world. We are not loathe to deal with realities in time of war. When the perils of war surround us, when nations are engaged in mortal combat and men fight to kill, the challenge is clear and the issue clear-cut and overpowering. We must win the war. So much is certain, and that much is sufficient to call forth the realism and summon the courage of an entire people. In the hot flush of battle, under the impact of lethal weapons, men find the steady purpose and calm resolve to face the facts of war and to devise ways and means to defeat the enemy. This is never accomplished by wishful thinking but by the ascertaining of facts and the concoction of means to meet existing conditions.

But when the heat of battle is over there arises an unwillingness to face the facts, and with this unwillingness a desire to accomplish overnight at a peace table what has not been accomplished in all recorded history. The strain of war has been such that it seems there is no strength left to cope with the problems of peace, which, if the truth were known, are equally grim and urgent. Then, if we are not vigilant, heroism gives way to apathy, self-sacrifice to self-indulgence, national dignity and pride to national depravity and indolence. And at that very moment, amid the ruins of the war itself, the germ of the next war is born.

We are at this very moment in the midst of a great moral crisis. The solution to this crisis will not be found in procedural remedies, organizational devices, or governmental hand-outs. It will be found only in the manner in which the individual discharges his or her individual responsibilities, for the challenge of peace is a moral challenge. Moral forces are intangible and difficult to assess, and yet the only sure way to help the peace is to be forever mindful of the moral forces surrounding us, for it is because of our failure to meet the challenge of peace that we must inevitably accept the challenge of war or succumb.

Now, the challenge of peace runs the whole gamut of the challenge of life itself. Just as individuals are judged by their ability to meet the emergencies of life, so it is with nations. Accordingly, in order to preserve peace, we must not only give our attention to the political, diplomatic, military, and economic implications of our world commitments but we must also look with a large and steady eye at ourselves and attempt to improve our own society, casting, so to speak, the beam from our own eye. This is by no means an easy task, and we shall make it no easier by our refusal to face the facts.

We must, of course, be stanch in our opposition to such subversive and barbaric forces as communism. But we should not blame communism, just as we once blamed nazism, for all the troubles with which we are beset. We must realize that these forces will make headway only as we fail to meet the moral challenge—only as we do not grasp the rich opportunities which our free system brings to every American. The struggle is not over. This is no time to grow tired.

In these days of tension and uncertainty we shall do well to to remember the challenge as we met it in the early part of the war when Britain was reeling, when the Germans were at Stalingrad, and when the Japanese were at Manila. We shall be wise not to forget the pain and the suffering, the cries of the wounded and the shrieks of the dying, the devastation and misery, the famine and degradation, the cruelty and horror which characterized World War II. We shall be well advised to recall that while the Japanese were attacking Pearl Harbor we were training with broomsticks, that while the French were overpowered we were protected by two merciful oceans, and then, if we are not only wise but humble, we shall say, "There but for the grace of God go I." We must learn from these tragic mistakes of the recent past.

Now gathered as we are on this Memorial Day in the blessed freedom of our beloved America, amid the beauty and comfort of a New England spring, let us solemnly recognize that the men and women who died in the cause of freedom gave their lives in order that we might have the opportunity to meet the challenge of peace. Daniel Webster said, "God grants peace only to those who love it and are always ready to safeguard and defend it." Are we determined to be free and fearless? Are we prepared to dedicate our lives and our wealth toward the protection of freedom at home and the spreading of freedom abroad, or shall we look the other way while the frontiers of freedom shrink? Shall we conduct an unworthy retreat from life until at the last the forces of freedom are ignominiously routed and overwhelmed within our own borders?

We cannot be oblivious to the desolation and woe of a ravished world. Robert E. Lee said, "Human virtue should be equal to human calamity." This is a task which we must undertake not only as a matter of humanity but particularly as a matter of national self-interest and in the cause of peace. We know that chaos and human misery breed communism. We know, when we look around us, that the concept of human liberty for which we fought in 1776 is still the great revolutionary force for which we must continue to struggle. It remains the essential discovery of our time, but it will perish unless it is constantly nourished with the dynamic faith of the American people.

Let us, then, as we mourn the passing of those who gave their lives for their country, regard this day as more than a ceremonial

lip service to the innumerable caravans of death. Let it instead provide us with a mighty compulsion to accept the great responsibilities which constitute the price of liberty. Our dead gave their lives for freedom. Let us now live for this transcendent truth. We know that we must discharge our responsibilities to other men and renew our faith in freedom in order for freedom to survive. Freedom and responsibility are inseparable.

This ceremony is, therefore, not only one of commemoration but also, and above all, one of rededication to the unfinished task for which these departed soldiers and sailors gave "the last true measure of devotion."

Post Office Deficits

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. HUGH D. SCOTT, JR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Geo. E. Sokolsky from the Washington Times-Herald of June 4, 1947:

THESE DAYS

(By George E. Sokolsky)

The most usual contact that most Americans have with their Government is with the post office and the postman. The post office does a huge business at a deficiency. Postmen are poorly paid in comparison even with other Government employees. Post offices are usually dirty, ill-kept places, except in those colossal, ornate marble and granite buildings erected wastefully and beyond practical needs.

Of course, there are plenty of exceptions and this is not intended as a reflection on the men down the line, but on the incompetence of the politicians who operate this business enterprise.

The real trouble is that the politician appointed to run the post office is usually either chairman of the Republican or the Democratic national committee and therefore has no time to operate the business for which the taxpayer pays him a salary.

The present Postmaster General, for one reason or another, is not around too much to manage this business. Its policies are made by the permanent subordinates who, at any rate, know that a stamp is not something exclusively for philatelists.

Each year the post office comes to Congress to make up a deficit. Nobody investigates why the post office has a deficit. Nobody tries to find out why it cannot be run efficiently. The problem is to make up the deficit.

The Democrats for 15 years wangled this problem without too much trouble, because they did not care how much they spent. The Republicans, who should shake out the waste in Government, take the post office's word for it that there is a deficit and decide that one way to make it up is to add $8,200,000 by a new tax on the users of second-class mail.

And they justify the discrimination by the New Deal doctrine that the more competent and successful should be penalized in the interest of the smaller units. It was generally thought that that doctrine died with Harry Hopkins.

The post office asks for an appropriation of $1,500,000,000, which is more than they are spending this year and is twice as much as during the prewar years.

The types of publications selected for soaking are metropolitan newspapers, farm journals, and national magazines. All other publications will be exempt from the new provisions. Small newspapers are exempt; labor, religious, fraternal, and veteran publications are exempt.

The large magazines will really carry the full load, which is what the Post Office plans should be the case. The 15 large, national-circulation magazines are the ones that are to be soaked. These magazines generally pay their way completely; that is, they paid $6,579,080 in postal receipts against $6,570,332 in ascertained postal costs for the fiscal year June 30, 1945.

Now, generally speaking, very few care about the other fellow being soaked, so those who are exempt will be well pleased that the load has been passed to the other fellow. If, however, these 15 discover some way of getting out from under, by rearranging their publishing or some other means, the deficit will be there again next year and somebody now exempt will have to be soaked. So passing the buck does not solve the problem.

The way to solve this problem is to discover who says there is a deficit and why. The administration ought to hire one of the great business engineering firms of this country to study the Post Office as a business enterprise, with the object of reorganizing it so that it functions right.

Cutting air mail for spotlight politics and then searching around for some place to tack on the deficit is not a business operation. Nor is it a business operation to promote one kind of mail against another—air mail against ordinary mail—and then to send air mail by train, without a rebate to the sender, as was done for many years.

All these shenanigans represent nothing realistic. Soaking the 15 big magazines will probably bring no additional revenue, but it looks like good politics to soak the successful. Good politics for whom? For the Postmaster General or for the country?

Fight Against Communism

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt of an address by Tom C. Clark, Attorney General, before the national convention dinner of B'nai B'rith, May 12, 1947:

But, my friends, all of the armament, legal or otherwise, in the world cannot prevail against ideals. It was an ideal—the flaming zeal to make democracy a living fact—which carried our ancestors safely through the trying times of the War for Independence. But there is another type, the insidious infiltration of propaganda by the Communist Party, by bigoted Fascist-minded groups like the Ku Klux Klan and the Columbians, and by other nefarious organizations which would destroy our unity and with it our way of life. I am very proud that your organization is in the forefront fighting against communism in this country, as so forcefully stated in a recent issue of the National Jewish Monthly:

"We are opposed to communism in the United States. We are opposed to it because it would substitute for our present social freedoms the dictatorship that would mean the end of free speech, free press, free religious assemblage. There is nothing wrong with democracy that more democracy won't cure."

Oh, how true; let me repeat, "There is nothing wrong with democracy that more democracy won't cure."

Agricultural Research in Alaska

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. DIRKSEN. Mr. Speaker, under leave to extend my own remarks, I include a communication from Mr. W. Carroll Hunter, Solicitor of the Department of Agriculture, respecting the authority of the Congress to modify an act of the Territorial Legislature of Alaska appropriating funds to the University of Alaska by altering the control and supervision of their expenditure. The opinion of the Solicitor follows:

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SOLICITOR,
Washington, D. C., April 8, 1947.

To: The Solicitor.
From: Associate Solicitor on Litigation.
Subject: Authority of Congress to modify appropriation act of the Territory of Alaska and to make Territorial and Federal funds for the Alaskan Experiment Station subject to control of the Secretary of Agriculture.

Congressman DIRKSEN has requested our views concerning the authority of Congress to restrict the expenditure of funds heretofore appropriated by the Legislature of the Territory of Alaska and the funds to be appropriated by Congress for experimental and research activities in Alaska under the Hatch, Adams, and Purnell Acts. The latter acts authorize appropriations for grants to the States and Territories for expenditure by the agricultural experiment stations that are attached to the land-grant colleges. The purpose of the grants is to enable the experiment stations to carry on experimental and research activities in cooperation with the United States Department of Agriculture.

I understand that the Legislature of the Territory of Alaska has appropriated for the University of Alaska certain funds to be expended on experimental and research work in cooperation with the Department of Agriculture pursuant to these acts. The legislature has completed its work and has adjourned. The money so appropriated by the Territorial legislature and the money that Congress customarily appropriates for such work is normally subject to the control of the governing body of the University of Alaska.

I am informed that it is desired to alter this arrangement by providing that the sum already appropriated by the Territorial legislature, together with the funds to be appropriated by Congress, shall be used for the conduct of such work under the direction and control of the Secretary of Agriculture. The legal question presented is whether Congress may modify the act of the Territorial legislature appropriating funds to the University of Alaska by altering the control and supervision of their expenditure.

Article IV, section 3, clause 2, of the Constitution authorizes Congress "to make all needful rules and regulations respecting the territory or other property belonging to the United States." It is well settled that under this provision Congress has plenary authority

to legislate with respect to the territories of the United States. This power may be exercised directly, or it may be exercised indirectly through local legislatures established in the Territories. In the case of Alaska Congress has followed both procedures. Prior to 1912 Alaska had a judicial and an executive system, but it had no legislature. (Organic Act for Alaska, May 17, 1884, 23 Stat. 24). During that period Congress legislated directly for the Territory, imposed local taxes (e. g., act of June 26, 1906, 34 Stat. 478, 48 U. S. C. 230), and provided for the use of local taxes to support the local government (48 U. S. C. 41). Its authority to do so was affirmed by the Supreme Court (*Binns* v. *United States*, 194 U. S. 486). Since 1912 Alaska has had a legislature with general legislative power subject to limitations specifically imposed by Congress (act of August 24, 1912, 37 Stat. 512, 48 U. S. C. 67–90). Although the creation of local legislature presumably relieved Congress to some extent of the necessity of acting in that capacity, Congress has nevertheless enacted a substantial amount of local legislation since that time. (See Pocket Supplement to 48 U. S. C. A. for laws enacted since December 7, 1925.)

The Supreme Court has held that in the exercise of its plenary power over the Territory of the United States the Congress may annul or modify any act of a Territorial legislature. (*First National Bank* v. *Yankton* (101 U. S. 129); *Church of Jesus Christ of L. D. S.* v. *United States* (136 U. S. 1); *Cincinnati Soap Co.* v. *United States* (301 U. S. 308); *Inter-Island Steam Navigation Co.* v. *Hawaii* (304 U. S. 306); *Downes* v. *Bidwell* (182 U. S. 244); Cooley's Constitutional Limitations, vol. 1, p. 78, footnote 1.)

In *First National Bank* v. *Yankton*, Congress had disapproved an act of the legislature of the Territory of Dakota and then reenacted it for limited purposes. In affirming the authority of Congress to do so, the Supreme Court said:

"In the organic act of Dakota there was not an express reservation of power in Congress to amend the acts of the Territorial legislature, nor was it necessary. Such a power is an incident of sovereignty, and continues until granted away. Congress may not only abrogate laws of the Territorial legislatures, but it may itself legislate directly for the local government. It may make a void act of the Territorial legislature valid, and a valid act void. In other words, it has full and complete legislative authority over the people of the Territories and all the departments of the Territorial governments. It may do for the Territories what the people, under the Constitution of the United States, may do for the States."

In *Church of Jesus Christ of L. D. S.* v. *United States*, Congress had disapproved an act of the legislature of the Territory of Utah incorporating the Mormon Church. In affirming the authority of Congress to do so, the Supreme Court said:

"But it is too plain for argument that this charter, or enactment, was subject to revocation and repeal by Congress whenever it should see fit to exercise its power for that purpose. Like any other act of the Territorial legislature, it was subject to this condition. Not only so, but the power of Congress could be exercised in modifying or limiting the powers and privileges granted by such charter for if it could repeal, it could modify; the greater includes the less. Hence there can be no question that the act of July 1, 1862, already recited, was a valid exercise of congressional power. Whatever may be the effect or true construction of this act, we have no doubt of its validity."

This case was referred to and quoted with approval by the Supreme Court in the Inter-Island Steam Navigation Co. case, which involved an act of the legislature of Hawaii.

In view of the unbroken line of precedents sustaining the power of the Congress to make all laws necessary for the government of its Territories, it is clear that Congress may modify the appropriation act of the Legislature of Alaska and provide for the expenditure of the sums appropriated to the University of Alaska to carry on agricultural research in a manner prescribed by Congress. Mr. DIRKSEN'S objective would be accomplished by inserting in the appropriation bill for the Department of Agriculture, at the end of the paragraph entitled "Office of Experiment Stations, Payments to States, Hawaii, Alaska, and Puerto Rico," the following language:

"*Provided*, That notwithstanding any other provision of law, including the laws of the Territory of Alaska, the funds herein appropriated for payment to Alaska and the funds heretofore appropriated by the legislature of the Territory of Alaska for experimental and research work under said acts shall be disbursed under the direction and control of the Secretary of Agriculture in such manner and for such experimental and research activities within the scope of said acts as may be designated by him; and the facilities of the University of Alaska shall be made available for such activities upon request of the Secretary."

Approved, April 9, 1947.

W. CARROLL HUNTER, *Solicitor.*

Taft-Ellender-Wagner Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 4, 1947

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolutions:

MASSACHUSETTS ALLIED VETERANS' HOUSING COUNCIL BUDDIES CLUB,
Boston, Mass., May 20, 1947.

Hon. JOHN F. KENNEDY,
House Office Building,
Washington, D. C.

DEAR MR. KENNEDY: This is merely to thank you cordially for having taken the trouble to appear at the Faneuil Hall housing rally and also to express our warm approval for your strong unequivocal support of the vital Taft-Ellender-Wagner bill.

We would further like you to know that we are writing strong letters to the other Massachusetts Representatives expressing our feelings about their attitudes toward this measure.

For your convenience we are enclosing a list of the most common allegations made by the opposition although we realize you are all too familiar with them by now. We are also enclosing the latest statistical position on housing in Massachusetts.

EDWARD PRATT,
Department Commander, American Veterans Committee of Massachusetts.
WILLARD IDE SHATTUCK, Jr.,
Department Commander, American Veterans of World War II.
PHILIP V. LORY,
Department Commander, Disabled American Veterans.
DAVID LASKER,
Department Commander, Jewish War Veterans of the United States.
BERNARD J. CURTIN, Jr.,
Department Commander, Marine Corps League.
JAS. P. REYNOLDS,
Department Commander, Veterans of Foreign Wars.

At a regular meeting of George Dilboy Post, Veterans of Foreign Wars of the United States, held at its headquarters, No. 371 Summer Street, Somerville, Mass., on May 19, 1947, a quorum of the membership present and voting, the following resolution was unanimously adopted:

"Whereas the dire need of housing accommodations for our returned servicemen is a known-well fact; and

"Whereas this need has not been met by any remedial action by local, State, or Federal agencies; and

"Whereas Federal regulations and curbs hamper the possible chance of low-cost housing; and

"Whereas the cost of new building is an outrage to the average workingman in his economic set-up after return to peacetime pursuits; and

"Whereas family relations have become strained by the lack of proper individual family homes and in too many cases are ending in the divorce courts: Be it

"*Resolved*, That George Dilboy Post, No. 529, VFW, on behalf of its membership urges the adoption and passage of the so-called Taft-Ellender-Wagner bill to the end that some measure of relief will be granted, and that the Members of Congress representing this district be so advised."

JOHN A. MANSSELL, *Commander.*

A true copy.

Attest:

ERNEST P. RILEY, *Adjutant.*

Resolution adopted at the annual meeting of Massachusetts State Council, Knights of Columbus, held at Worcester, Mass., May 12, 1947:

"Whereas all the forces of our Nation were utilized to bring to a successful conclusion World War II; and

"Whereas we have a duty to our returned war veterans to see to it that they can reorient themselves to a peacetime economy; and

"Whereas the family is the basic unit of society: Be it hereby

"*Resolved*, That we urge the Massachusetts representatives in the Congress of the United States to take favorable action on the pending Taft-Ellender-Wagner housing bill which in effect would relieve the present housing shortage."

Development of Modern Amphibious Warfare

EXTENSION OF REMARKS
OF
HON. NOBLE J. JOHNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 4, 1947

Mr. JOHNSON of Indiana. Mr. Speaker, several marines have requested the following article from the Washington Post of June 1, 1947, be placed in the CONGRESSIONAL RECORD.

This article gives the history of the development of modern amphibious warfare:

AMPHIBIOUS OPERATIONS

In your May 28 editorial, Integrating Our Armed Services, I note your statement to the effect that there is dispute as to whether or not the Marine Corps pioneered the development of modern amphibious operations.

It has been said that facts speak for themselves. Let me present the following facts in chronological sequence:

1. 1921: The East and West Coast Expeditionary Forces, United States Marine Corps, were formed as offensive landing forces for

service with the United States Fleet. That was exactly 20 years prior to the training of any major Army unit for amphibious operations.

2. 1929: The Marine Corps schools at Quantico issued the first doctrinal studies on the conduct of modern assault landing operations ever to be promulgated within the armed forces.

3. 1933: The East and West Coast Expeditionary Forces were reorganized and increased in strength under new designation as the Fleet Marine Force, incorporated as an integral part of the United States Fleet for conduct of amphibious operations in the seizure and defense of advanced bases. The Marine Corps Equipment Board, the first professional body in the United States to devote its major efforts to development of military matériel for use in amphibious operations, was likewise organized.

4. 1935: Fleet landing exercise 1, the first modern amphibious maneuver in the history of the United States, was conducted by the Fleet Marine Force at Culebra, P. R. No Army troops participated. Marine Corps schools also issued a Tentative Landing Operations Manual, the first complete manual in the military history of the United States to be devoted to the technique and doctrines of amphibious operations.

5. 1935–41: The Fleet Marine Force, in conjunction with the United States Fleet, conducted annual large-scale amphibious maneuvers in the Caribbean or Pacific. Army participation in these amphibious assault maneuvers was limited to one instance (1937), when a hastily organized provisional force numbering less than 2,000 received amphibious training under direction of the Fleet Marine Force at San Clemente Island, Calif.

6. 1938: The Marine Corps schools' Tentative Landing Operations Manual was adopted intact by the United States Navy under title of FTP-167, Landing Operations Doctrine, United States Navy.

7. 1941: The United States Army issued Field Manual 31–5, the first Army publication ever devoted to modern landing operations. The preface of FM 31–5 stated (over General Marshall's signature) as follows:

"This manual is based to a large extent on Landing Operations Doctrine, United States Navy, 1938. The arrangement of subject matter is similar to the Navy publication and many of the illustrations are taken from it."

In other words the Army admitted in June 1941, that its initial publication dealing with landing operations was directly based upon the 1935 Tentative Landing Operations Manual of Marine Corps schools.

8. 1941–42: The First, Third, and Ninth Infantry Divisions, which composed the entire assault infantry component in the north African landings, received their amphibious training under direction of Fleet Marine Force commanders and their staffs, and with the assistance and support of the Fleet Marine Force. These were the first major Army units to be trained for amphibious assault (exactly 20 years after formation of the East and West Coast Expeditionary Forces of the Marine Corps).

9. 1942–44: Marine Corps training agencies completed the amphibious training of the Seventh, Eighty-first, Ninety-sixth, and Ninety-seventh Army Infantry Divisions, as well as ATF-9 Thirteenth Canadian Brigade, Seventh Infantry Division, Fifty-third and One Hundred Eighty-fourth Army Regimental Combat teams), a provisional corps organized for amphibious operations in the Aleutians.

In summary, therefore, you will note that the Marine Corps organized major forces for the conduct of landing operations well prior to the Army; the basic landing operations doctrines of both the Army and the Navy were originated at Marine Corps schools; the Marine Corps, without Army participation, conducted the first modern amphibious landing maneuvers in the history of the United States, and the Marine Corps trained the first three Army divisions to be indoctrinated in amphibious operations (followed by several more).

In light of all this, can you still say that there is dispute as to whether the Marine Corps pioneered the development of modern amphibious operations?

R. D. HEINL, Jr.,
Lieutenant Colonel, USMC.

WASHINGTON.

(EDITOR'S NOTE.—We, of course, intended no disrespect for the Marine Corps in our editorial. Actually we called for more protection for the Marines in the merger bill. What we said was: "Admiral Zacharias is on disputatious ground when he gives the Marines sole credit for developing the technique of amphibious operations." Granted that the Marines had the primary role in pioneering this technique, surely our correspondent would not deny that the Army added to the development through the lessons it learned and applied from such landings as that at Anzio.)

Congressional Voting Records

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 4, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from New Orleans States of May 28, 1947:

THROW LIGHT ON VOTING RECORDS

In the House of Representatives is a bill by Representative BOGGS, of Louisiana's Second Congressional District, which we believe should become law—if it ever gets out of committee.

It is a very short bill. It provides that the Legislative Reference Service shall compile and make available the voting records of the Congressmen to any 10 citizens who write for such a record, or any publication which desires such a record.

A voter today cannot get such information from the Congress without authorization of the Member whose voting record is sought.

As an indication of the manner in which the Library of Congress is conducted, on taxpayers' money, for the benefit of the Members we reproduce herewith part of a letter in reply to a request for the voting record of a Member of the Seventy-ninth Congress:

THE LIBRARY OF CONGRESS,
REFERENCE DEPARTMENT,
SERIALS DIVISION,
May 29, 1936.

It is the policy of the Library of Congress not to furnish information about a Member's voting record except at the request of the Member himself. However, this information appears in the CONGRESSIONAL RECORD, a file of which will be found in your public library.

For the Librarian of Congress.
Very truly yours,
H. A. PARSONS,
Chief, Serials Division.

Of course, it can be found in the CONGRESSIONAL RECORD. Every roll call is printed there. And if you haven't time to read it every day, and you haven't time to keep a file, or you haven't time to dig back over months and years, you just will not get it.

The Library of Congress won't give it to you.

But if the Boggs bill becomes law the taxpayers can get this information.

This bill has been in the Committee on House Administration since it was introduced on March 21, 1947. It has received widespread editorial support, and should receive the support of all persons interested in the voting record of the men in Washington who represent them in the House and in the Senate.

What is holding this bill up? Why hasn't it come to the floor for a vote?

The only Members of Congress who, in our opinion, would be against such a bill are those who don't want their records known. The Congress should cut this red tape and allow the citizens they represent to have immediate and full access to their records.

Labor Legislation

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 4, 1947

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

CAMBRIDGE COMMITTEE FOR
A LIVING WAGE,
Cambridge, Mass., May 20, 1947.

Hon. JOHN KENNEDY,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE KENNEDY: The following statement, signed by the 57 prominent Cambridge citizens listed below, has been issued to the press by the Cambridge Committee for a Living Wage. We are sending it to you for your earnest consideration.

"America is now moving toward a serious economic crisis at home. Prices and profits have soared, while wages have lagged far behind. The purchasing power of the people is falling off rapidly, which means inevitable hardship for the whole community—labor, professional, and small business groups alike. A powerful group in Congress is trying to silence the American people through political intimidation and by emasculating their united labor strength.

"The Hartley, Taft, and Ball antilabor bills are designed to abrogate our most fundamental rights and freedoms. They take away, for all practical purposes, the rights of working people to strike or to form effective union organization to protect and advance their living standards and working conditions. They openly flout traditional civil liberties.

"We emphasize that there is no such thing as a labor monopoly as has been charged in the Congress. Collective bargaining through strong unions gives workingmen only an equal voice with management in determining the price of labor. We agree with CIO President Philip Murray who said, 'the enactment of this contemplated legislation is the first real step toward the development of fascism in the United States of America.'

"In this hour of crisis facing America, we are reminded of the unequivocal statement made by Abraham Lincoln: 'All that harms labor is treason to America. No line can be drawn between these two. If any man tells you he loves America, yet he hates labor, he is a liar. If any man tells you he trusts America, yet fears labor, he is a fool. There is no America without labor.'

"We citizens of Cambridge, Mass., call upon the President, the Congress, and the people

to defeat all antilabor bills, and to work with renewed faith and vigor for the advancement of the political, economic, and social well-being of the American people."

Statement signed by Rhoda Truax Aldrich, 46 Shepard Street; Adele P. Bragar, 20 Ware Street; Mr. and Mrs. Samuel Cauman, 27 Shepard Street; Julia Newbold Clark, 8 Plympton Street; Noyes and Olga Collinson, 12 Concord Avenue; Mr. and Mrs. Richard L. Edsall, 15 Walker Street; Mary Eubanks, 13 Field Street; Kathleen Forbes, 62 Coolidge Avenue; Mr. and Mrs. William Gilbert, 94 Foster Street; M. K. Grossman, 146 Oxford Street; Mary T. Henderson, 70 Francis Avenue; L. J. Holmes, 119 Fayerweather Street; Rev. Kenneth and Mrs. Constance Hughes, 64 Gorham Street; Mr. and Mrs. Arthur Korb, 36 Highland Avenue; Florence H. Luscomb, 29 Bowdoin Street; Rabbi Hugo Mantel, 74 Highland Avenue; Judith Matlock, 139 Oxford Street; Jeanne and Frieda Pearlson, 52 Lee Street; Ashton Sanborn, 147 Brattle Street; Margaret E. Smith, 121 Brattle Street; Edna H. Sobel, M. D., 1675 Massachusetts Avenue; Somers H. Sturgis, M. D., 47 Raymond Street; Rebecca Wasserman, 355 Massachusetts Avenue; Dr. Mary C. Wright, 181 Windsor Street; Dr. and Mrs. Isadore Amdur, 24 Sacramento Street; Edward S. Castle, 42 Walker Street; Mrs. Alfred S. Clark, 205 Mount Auburn Street; Dorothy Colby, 46 Avon Hill Street; Rachel and William Crooks, 520 Franklin Street; Philip Eliopoulos, 20 Andrew Street; Dr. Melvin Field, 27 Irving Terrace; Louis A. Frye, 11 Whitcomb Street; Priscilla B. Grace, 3 Chestnut Street (Boston); Harvard Liberal Union, 21 Little Hall (by Frederic D. Houghteling, vice president); Mr. and Mrs. Wallace E. Howell, 34 Shepard Street; Dr. Leo M. Hurvich, 15 Everett Street; Francis and Eugenia Jones, 12 Upton Street; Marjorie Lansing, 147 Lexington Avenue, executive secretary, Massachusetts PCA; Prof. Kirtley F. Mather, Harvard University; Elizabeth J. McCune, 29 Maple Avenue; Rev. Prentiss L. Pemberton, 335 Harvard Street; Esther L. Smith, 48 Buckingham Street; Rev. F. Hastings Smyth, S. C. C., 21 Washington Avenue; Eric A. Starbuck, 86 Ellery Street; L. C. Wallach, M. D., 1426 Cambridge Street; Prof. Payson S. Wild, 9 Kenway Street, assistant dean graduate school, Harvard University.

Very truly yours,

WALLACE E. HOWELL,
Chairman, Cambridge Committee for a Living Wage.

The Responsibilities of Power

EXTENSION OF REMARKS
OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 4, 1947

Mr. AUCHINCLOSS. Mr. Speaker, under authority granted me, I consider it a privilege to insert in the RECORD a copy of a speech recently made by our well-informed and distinguished colleague, Hon. CHRISTIAN A. HERTER, of Massachusetts, entitled "The Responsibilities of Power." This speech was delivered before a distinguished group of citizens who are interested in the School of Advanced International Studies, located here in Washington.

Mr. HERTER is the chairman of the board of trustees of this institution and was very active in its formation. He was able to secure the interest and support of prominent citizens in business, as well as the political field, and its success was assured from the start. The school has just finished its third year and its future is pregnant with possibilities.

The object of the School of Advanced International Studies is to educate thoroughly trained specialists in the international field and recently courses have been inaugurated to train people in the business methods and procedures of different countries of the world. Intensive courses on American business in Latin America and the Middle East have been held and the interest shown in these courses indicates that they will be expanded in the future.

What an institution of this character means to the United States with its great international responsibilities and contacts cannot be overestimated. Its value to the economic development of our country in equipping men trained in foreign affairs will undoubtedly increase as the days go by, and we are greatly indebted to the foresightedness and ability of Mr. HERTER in his founding of this institution. His address about our Nation's responsibilities well depicts his statesmanship and his vision of the future. It follows:

Members of the board of trustees, members of the faculty, distinguished guests, and students of the School of Advanced International Studies, this occasion which marks the third meeting of a distinguished group participating in and interested in the School of Advanced International Studies is being held at a time when the very purposes to which the members of the student body have been addressing themselves are of the utmost importance. Our first graduating exercises concluded with an address by the then Acting Secretary of State, the Honorable Joseph C. Grew, during which he discussed the responsibility of power. In the second year the Honorable Warren R. Austin, the American representative on the Security Council of the United Nations, but then still a Senator of the United States, carried on where Mr. Grew had left off with an address on the same theme. While I realize that it may be an impertinence for me to follow the same path laid out by these two very distinguished individuals, I nevertheless feel that that subject; namely, The Responsibility of Power, still remains the most important one to which anyone could address himself, and so I shall try to carry on where they left off.

During the course of his address Mr. Austin made the following statement:

"During the 12 months since we listened to that really great commencement oration by Acting Secretary of State Grew, entitled 'The Responsibility of Power,' we have observed the disintegration of our military power in the occupation of the enemy territory.

"When Mr. Grew addressed us a year ago this Nation possessed the most exalted leadership that any nation in all history had attained. The magnificence of its power gave its voice wings that swept around the world, uplifting the aspirations and hopes of mankind.

"But, by our ineptitude and our surrender to fatigue, we have, in 12 short months, fallen from these heights, apparently unmindful that the victory is not attained, and that it cannot be attained in any such state of lassitude and weakness."

I am using that quotation because I fully agree with its implications. However, I feel that the words "ineptitude, surrender to fatigue," and "a state of lassitude and weakness," which Mr. Austin used, might well be replaced at this moment by the words "uncertainty and confusion."

It is no easy task for any responsible individual to state publicly that our assumption of the responsibility which goes with power is conditioned by uncertainty and confusion, yet in my opinion this is true. I believe this to be true primarily because, as a nation, we have been unable to grasp the implications of our newly found position and consequently have not as a nation seen fit to implement those implications.

In the history of many nations the impact of near neighbors and of foreign relations with those near neighbors has in considerable measure determined domestic policies. As a nation we have seldom permitted our foreign policy to dictate our domestic policies except under leadership which could clearly reconcile the two policies in a manner satisfactory to our law-making bodies, or when we were actually at war. With our inflexible system of government whereby responsibility is divided between the administrative and the representative branches, with the judiciary acting only secondarily in the determination of policy, the conduct of our foreign affairs and the determination of policies has had to be resolved through a considerable measure of agreement between these two branches.

Last November, the people of the United States caused a political turnover in the legislative branch of the Government. In most parliamentary systems this would have carried with it a change in the executive branch of the Government and presumably would have given to a new administration the support of the majority of Congress. Our turnover was, in my opinion, determined almost entirely by domestic policies. At the time of the election a virtual truce had been declared with respect to making international policies a partisan matter. Nevertheless, there were current many evidences of dissatisfaction with this bipartisan policy. They are now becoming more apparent.

Contrary to the expectation and hope of all of us who had anticipated a considerable measure of recovery in war-torn countries and a considerable measure of progress toward the achievement of international cooperation through the medium of the United Nations, there has occurred a comparative retrogression in both of these fields. The economic recovery of Europe, if the word "recovery" is even the correct word, has been tantalizingly slow. The progress of concerted international action toward giving the world a feeling of hopefulness with respect to a lasting peace has been equally slow. While the action of nature in denying certain areas of the world normal crops has, in part, been responsible for the lack of progress in economic recovery in sections of Europe, nonetheless the major factor has been political dissension. In fact, the major factor with respect to lack of progress in both the directions I have mentioned has been political dissension, brought about in large part by the inability of the spokesmen for two conflicting ideologies to reconcile what appear to be totally divergent policies.

While I know that it is a common practice to blame all of our troubles on the inability of the United States and Russia to find a solid basis for international cooperation, nevertheless, the record must speak for itself. It is such an unhappy record that large sections of the world have come to the conclusion that the differences are irreconcilable and cannot be solved except through the medium of armed conflict. This thinking has dominated and is still dominating the areas in which policies are made, but unhappily it has not led to the development of any clear-cut course within the United States itself.

We are all familiar with the fact that misery breeds communism. We also have almost unanimous faith in this country that misery can be remedied only by hard work performed under the benign cloak of an orderly and stable government based on the social and political freedoms which we describe in terms of "the American way of life." We wish to see society in other nations develop along the lines which we know to have been successful in this country. The leaders of the Soviet Union have a very different conception. The so-called capitalistic doctrine to which we adhere is to them completely antipathetic to their own social systems. They cannot recognize that we believe so fervently that the will to work, the will to achieve economic and political stability, and the will to be peaceful can flourish best under our free capitalistic system. In fact they are using every effort to oppose this belief and to create the very miseries in which their political philosophies have the best chance of flourishing.

Assuming for a moment that there is general acceptance, which I believe there is, of the underlying situation which I have just described, one might have reason to believe that the domestic and foreign policies of this Nation would be keyed together and would be so directed as to allow us to put out our maximum effort in combatting communistic philisophy and communistic influence. Clear-cut policies to achieve an end at this point become the primary responsibility of power. Uncertainty and confusion undermine that power.

Perhaps I can best illustrate what I mean by uncertainty and confusion, even though there be unanimity with respect to a desirable end, by citing some recent examples.

When the administration decided that because of the economic weakness of the British Empire, it would be obligated to assume some of the responsibilities which were no longer tenable for the Empire, it evolved what has come to be known, unhappily, I think, as the Truman doctrine. That doctrine is predicated upon the belief that the Soviet Union must not be allowed to increase its orbit of satellite states, either by the threat of force or by the infiltration of propagandists. It further has as its base an assumption that by raising the standards of living of many of the nations in which misery is prevalent, the Communist forces within the country will gradually give way to more moderate forces which still cling to the concepts of political and economic freedom. I do not think that anyone can quarrel seriously with either of these two premises. However, it is in the implementation that the trouble begins.

I can, of course, be accused of prejudice because I am a member of the opposite political party from the President and am likewise a member of the legislative body. However, I am deeply distressed by the fact that no clear-cut pattern for implementing the Truman policy has been presented to the country.

Legislation for Greek and Turkish aid, which became law in the last 10 days, is a case in point.

Of the $400,000,000 which was asked of the Congress, roughly $100,000,000 was to be spent on economic rehabilitation in Greece. The uses to which this $100,000,000 was to be put have been fairly clearly defined in a number of documents. On the other hand, even Senator VANDENBERG was unable to tell in the Senate how the money presumably earmarked for military purposes was to be used. When an amendment was offered on the floor of the House to limit to 200 the number of military persons to go to Greece and Turkey, this was bitterly opposed on the grounds that the Secretaries of War and Navy had changed their minds with respect to the public testimony which they had previously given to the effect that not more than 30 or 40 would be required and had privately told some individuals that they did not wish any limitations placed in the legislation. It is only natural that with this insistence on a free hand with respect to military personnel, the American people and the Congress should be confused and worried as to what military assistance actually means. Are Greece and Turkey just the beginning of a policy which is likely to extend very much further? We do not know, and yet every day commentators and editorial writers are indicating that the Truman policy will launch us on a program calling for vast expenditures estimated at from 5 to 20 billion dollars for a period of years, some of it to be expended for what might be called purely economic recovery measures and other parts for continuing military assistance.

If this policy is to be implemented as a part of the responsibility of power in such vast amounts, obviously the American people must be taken in as a partner, and the sooner the better. The American people know that economic collapse or even a serious depression in the United States would immediately negative any possibility of assuming the responsibilty of power. They remember that our collapse in the early thirties was one of the most powerful factors in giving Hitler his opportunity of rising to the top in Germany. They know that nothing would contribute more substantially to the world-wide spread of communism than economic failure in the strongest of the capitalistic nations. They are, therefore, determined that the maintenance of our own domestic stability should be the first consideration of government. They question how far and for how long this Nation can ship to foreign shores its capital and a considerable percentage of its production. They would like to be able to grasp the situation as a whole. They would like to feel that if they are going to be called on to make economic sacrifices, those sacrifices will not be in vain. They would like to throw out the life line, but they want to be certain that in so doing they themselves can remain strong enough to effect a rescue and not be themselves engulfed.

Again only recently, failure to make clear and have adequate support for a policy which presumably is a part of the Truman doctrine was made very apparent.

The wool growers of the West were determined to secure a support price for their wool which would insure them a protective return on wool for the next 2 years. Legislation to that effect had been passed by the Senate and was awaiting action in the House. The Senate, owing to its constitutional inability to initiate revenue measures, had recommended in sending its bill over to the House that the House include a provision placing an import fee (in other words, increasing the tariff) on wool so that the program of supporting the price of domestic wool would not be an excessive burden on the Treasury and the taxpayers of the United States. A provision to accomplish this was put in by the House Committee on Agriculture and the matter was then brought up for debate in the House.

Under Secretary of State William L. Clayton, representing our Government at Geneva, was forced to return to the United States to take a hand in opposing any possible increases in the tariff on wool because in order to secure even preliminary discussions for the creation of the International Trade Organization and for the negotiation of reciprocal-trade agreements in Geneva, he had been required by the British Empire group, Australia, New Zealand, and South Africa, to agree to discuss reductions in wool tariffs. Obviously, he could not do this in the face of possible domestic legislation which might have the effect of increasing the tariff. He wrote a letter which was read on the floor of the House, making his views very clear, and the result of the letter, instead of strengthening the hand of those who opposed this wool legislation, actually weakened it. The reason for this was very simple. The Members of the Congress bitterly resented the idea of having an individual determine domestic agricultural policies and insisted that this was the prerogative which belonged as much, if not more, to the Congress as to the administrative side of the Government.

I mention this particular incident only to stress the element of uncertainty and confusion to which I have referred. Obviously no administration can make economic commitments in the foreign field unless it is certain of support at home. It must give warning to the American people as to its intent. It must allow of the freest kind of debate and must have at hand some actual indication of support before it dares make a commitment which might be overruled.

I personally doubt whether the Greek-Turkish aid bill would ever have been enacted into law had it not been for the fact that to have rejected the bill would have served notice on the world and on the Soviet Government that the American people were not agreed as to the necessity of checking Soviet expansion. Approval to that bill was given not because of any enthusiasm or any certainty as to the utility of the policy to be pursued but only because of the fear that refusal would have led to serious loss of face.

In using the two illustrations which I have used, I am conscious that they can only serve to emphasize what you may have gathered is an underlying spirit of discouragement on my part. I plead guilty of this, but even though I am really discouraged as to whether or not we shall see our way clear to accepting the responsibility of power, I am at the same time not despairing.

Perhaps the new Secretary of State, George Marshall, will be the individual who can best dispel some of the uncertainties and confusions. Perhaps we shall have to wait until we have had a Nation-wide election. The election in itself cannot solve the problem unless during the course of the election issues which are clearly definable can be put before the people. That means that the leadership of both political parties will have to clarify their own thinking as to the course that we should pursue. I do not believe that we can be effective without achieving a much greater unanimity of conviction as to our course, and we obviously cannot assume responsibility with a muddled mind.

There is one further factor that adds to my discouragement which I feel that I should mention. I am convinced that as a Nation we want to be helpful both from the humane side and from the side of our own best interests in reestablishing the economies of many other nations. I am convinced that we are willing to go to some lengths to accomplish this end. However, there is a real doubt whether or not monetary help alone can accomplish the purposes we all desire without what might be considered a very real measure of interference in the internal affairs of other nations—a kind of interference which, unless exercised with extraordinary skill, might well be so objectionable politically to proud peoples that it would defeat the very purposes we have in mind. Already those doubts have arisen with respect to our proposed mission to Greece, and those doubts are focused largely on the fear that there do not exist in this country sufficiently skilled and well-trained people familiar with the intricacies of foreign customs and foreign psychologies to be able to make their counsel really effective.

I share those fears. If 20 or 30 years ago it had been possible for some training institution similar to the one of which you are members to have put into the bloodstream of this Nation a nucleus of individuals with your interest, your background, and your training, I should be feeling many fewer

qualms. However, I am confident that it will not be long before you can make your influence felt in far greater degree than your numbers signify, and I envy you the opportunity that lies ahead.

I hope that in starting out in your various appointed tasks you will attribute my apparently discouraging words to the fact that at times I am too close to moving events to be able to get an adequate prospective.

However, I assure you that I have stressed the discouraging note only to emphasize the complexity and enormity of the task that must be met. That you, with the freshness and vigor of youth will meet your careers and grapple with that task in the spirit of optimism which alone can lead to great achievement, I do not doubt. Godspeed you.

Why the Taft-Hartley Conference Report Should Be Adopted

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. ENGEL of Michigan. Mr. Speaker, as one of the three Republicans in the House who voted against the Hartley bill when it was before us in April, I quite naturally have had more than the usual interest in the conference report on the Taft-Hartley bill.

The report itself has not been available to us until today. I have therefore had to content myself with the May 30 committee print of the bill which was delivered yesterday noon. Prior to that I had the benefit only of the various newspaper accounts that appeared as the House-Senate conference was in progress.

I have not been able to go into all the legal ramifications of each item of the bill. But a reasonably careful study has convinced me the conference bill is a worthy improvement over the original Hartley version in the House. On the whole the conferees, in my judgment, have done a good job, producing a bill in which the sound features outweigh those that to my mind are questionable or downright wrong.

The Hartley bill to me was a backhanded attempt to deunionize American industry. It smothered its good features in a rampage of one-sided restrictions. To be very explicit, it endeavored to give employers and employees the right to be free of effective unions. It specifically upheld individual rights but at the expense of that same worker's organizational rights.

I could not conscientiously support the Hartley bill. At the same time I am as aware as anyone of the need for effective propublic labor-management legislation. Furthermore I have been at this business long enough to know no one can write his own bill. I know any bill must be a compromise of ideas, in which all of us must yield some of our convictions. But I expect it to be a workable bill and when I know in my own mind that it is not workable—as the Hartley bill was not—I intend to say so.

I recognize that in general the obligations of a National Labor Relations Act should be genuinely and scrupulously two-sided; should aim as far as humanly possible to equalize the bargaining power of labor and management in the public interest, since that is the sole basis of satisfactory industrial relations. The main objective of management-labor legislation should be to settle disputes, not strikes—so disputes do not become strikes.

In that regard the Hartley bill was a tragic mistake. It would have turned collective bargaining into an unworkably rigid and legalistic procedure.

I want to be very specific by calling attention to eight major improvements in the conference bill as compared to the Hartley bill.

First. The Hartley bill's serious and in fact vicious encroachments on the Norris-LaGuardia Act have been rejected in the conference bill. The Hartley bill provision permitting injunctions by individual employers has been removed.

Second. The Hartley bill's outlandish formula for handling Nation-wide or industry-wide strike emergencies has been brought down to earth.

Third. The vitual ban on the union shop that was contained in the Hartley bill has been removed in the conference bill.

Fourth. The so-called workers' bill of rights section of the Hartley bill, which was as fancy an array of double-talk and hypocrisy as one could ever want to see, has been eliminated from the conference bill.

Fifth. The Hartley bill ban on industry-wide bargaining has been dropped in the conference bill.

Sixth. The provision to keep communists out of leadership of unions, which was merely a catch-all club in the Hartley bill, appears in the conference bill to have been made workable.

Seventh. A logical and commendable division in judicial and prosecuting functions of the National Labor Relations Board has been incorporated in the conference bill, including an independent conciliation and mediation service.

Eighth. The Senate bill's commendable provision, absent from the Hartley bill, to set up a joint committee to study and report on the basic problems of labor-management relations has been incorporated in the conference bill.

I repeat again that I by no means endorse every provision of the conference bill. I am frankly fearful of some of its provisions. There are loop-holes that can too easily be used unscrupulously. There are provisions in the conference bill that may put a premium on tricky methods. But it is evident that these are not the over-all tone of the conference bill. I am convinced furthermore that the loop-holes in the conference bill, if serious abuses develop, can and must be promptly corrected.

Many persons have exerted a somewhat overanxious effort to make the conference bill inseparable from the Hartley bill. They would make it appear that the former is only a more subtle version of the latter. It is apparent from the above analysis that this is not true. Honesty calls for plain speaking on that, since such a point has been made of it.

That which is constructive in the conference bill sufficiently outweighs its weaknesses so that the bill should be approved. For these reasons I shall support the conference report.

I want, in full frankness, to add one other thought. I do not share the view of those who feel that the passage of this or any similar bill will more or less automatically end all our labor-management difficulties. I have no great confidence in that regard. In the conference bill, as in its far less satisfactory preceding versions, we are setting up a vast Federal referee and patrol system over both management and labor. No one knows how large an organization will have to be developed if the patrol job is to be done with any proper degre of efficiency. But we do know that satisfactory labor relations can never be legislated.

If the conference bill becomes law, it will work only if individual unions and individual employers get down to a basis of reasonable collective bargaining in good faith on their own. Henry Ford II, when he recently addressed the National Press Club in Washington, said he looked with apprehension on the "evident attempt" to settle disputes by Government interference and intervention. That was at the time the Hartley bill itself was before the House. One of the things Mr. Ford meant, I suspect, was that such intervention, if indulged too frequently and relied on too continuously, can in itself be disastrous. It is no simple cure-all by any means.

There is one other point on which we should not delude ourselves. The conference bill, if enacted, will prove itself effective only if we continue to have increasing productivity and reasonable prosperity in this country. That is the real key to the whole program.

Antilabor Legislation

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a resolution on antilabor legislation adopted by the Textile Workers Union of America, CIO, on May 24, 1947, in Boston:

ANTILABOR LEGISLATION

Whereas legislation which would destroy the free trade-unions of the United States, undermine the industrial democracy that is so vital to the well-being of our Nation, and move toward a totalitarian control of our economy is now in a conference committee of the Congress; and

Whereas the conference committee has shown no disposition to report out a final measure which would remove the major labor-destroying provisions of measures already passed by the House and the Senate, so that unions might retain essential freedom and collective bargaining could be given free play; and

Whereas the Textile Workers Union of America, CIO, representing 400,000 textile workers in more than 1,700 mills in 34 States,

and the overwhelming majority of employers with whom it negotiates have proved throughout the years that the ordinary processes of collective bargaining can solve the preponderant majority of all labor-management disputes; and

Whereas experience has taught us that congressional fiat is now and never will be a substitute for good faith and understanding at the collective bargaining table: Now, therefore, be it

Resolved, That this conference, representing 80,000 members of TWUA-CIO who work in New England cotton mills, hereby call upon the President of the United States to veto the Taft-Hartley bill when it comes to him from the Congress; and then be it further

Resolved, That we call upon all local unions, joint boards, and Textile Workers Union of America, CIO, members represented here to communicate this position to the President of the United States.

Fish Protection

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. HAVENNER. Mr. Speaker, as a member of the Committee on Merchant Marine and Fisheries, I have repeatedly urged that a permanent Federal policy should be established by the Congress to insure adequate protection for fish whenever a dam is constructed by the Government. I have repeatedly emphasized the fact that salmon periodically enter nearly all of the American rivers and streams which flow into the Pacific Ocean in order to spawn in the headwaters of those streams. In the past many of these rivers and streams have been dammed by agencies of the Federal Government without proper facilities to enable these fish to proceed upstream. The result has been that thousands of salmon have perished in a futile effort to reach their spawning beds, and a vitally important source of food supply for the American people is being dangerously impaired.

In this connection I desire to direct the attention of the Members of the House to the following article which appeared in the May 21 issue of the San Francisco Call-Bulletin entitled "Low Waters Doom San Joaquin Salmon," and signed by the fishing editor of that newspaper, "Uncle Joe" Dearing:

A pitiful, repulsive sight may be seen along the San Joaquin River these days—a run of doomed salmon vainly struggling to reach spawning beds that have been left high and dry by a man-made dam.

With only 84 second-feet of water flowing from the Friant Dam, the splashing and threshing of these great fish as they battle over bars in the shallow water can be heard hundreds of feet away. So reports Game Warden Hilton Bergstrom, of Los Banos.

That these fish are at the mercy of law breakers makes little difference. Most of them will perish before spawning, so why shouldn't they be used for food?

The United States Reclamation Bureau, which controls Friant Dam, evidently disregards its duty and pledge to protect all natural resources.

The California Division of Fish and Game now has a maintenance crew on the river to open channels through dry bars and assist the fish in reaching spawning grounds. We understand it didn't have until the deplorable situation was pointed out in green ire by one of our contemporaries.

Unification of Armed Services Now

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 22, 1947

Mr. TEAGUE. Mr. Speaker, the President's Advisory Commission on Universal Military Training has called our attention to the fact that our military forces are only a hollow shell. This warning has gone unheeded by many in times past, but it will not be overlooked by our potential enemies or those who are looking to us for leadership. With our ground forces reduced to two or three effective combat divisions and our Air Forces unable to muster a large striking force, our military leaders are certainly confronted with a dismal situation.

The President's Commission of Educators and Businessmen unanimously confirmed the opinions of our wartime leaders that because of our wealth and position of leadership, the United States is the logical first target for aggression. No longer can we depend on the ocean distances for our security nor is it likely that we will again have a long breathing spell to prepare and organize. We must train and equip a large reserve which could be ordered up in an emergency.

Universal military training is necessary and we must take action soon to provide this trained reserve to supplement our regular forces. However, immediate unification of the armed forces is of utmost importance if we are to prepare and plan security forces to operate effectively, such as modern warfare requires.

There have been newspaper reports that the Republican leaders of Congress do not consider unification of the armed services as "must" legislation for this session. I sincerely believe that we must provide unification now.

Mr. Speaker, under leave to extend my remarks in the RECORD, I am including the following letter received from Mr. Travis B. Bryan, president of the First National Bank of Bryan, Tex., regarding unification of the services:

THE FIRST NATIONAL BANK OF BRYAN,
Bryan, Tex., May 28, 1947.

Hon. OLIN E. TEAGUE,
House of Representatives,
Washington, D. C.

DEAR OLIN: In view of the world situation at the present, the state of the military services at the present, the almost total disintegration thereof, the fact that everyone recognizes that in all likelihood next time we won't be granted a year or two for this country to get ready, it would seem to me that the most important thing that the Congress could possibly find to do would be to immediately bring up, decide, and settle the question of the unification of the services.

Then the Army, Navy, and Air Forces could present their plans to Congress, get an allocation of men and money, go ahead and begin to put our military house in order. Until then they will still remain in a state of disintegration.

Surely everyone in the United States has come to know by this time that the cheapest insurance that this country and its people can possibly have is a first-class army, navy, and air force. We can't get it until this unification matter is settled is conceded.

May I urge you with every resource I could command and present to you that you take an immediate stand for it immediately being brought up and settled.

With kindest personal regards, I am,
Sincerely yours,

TRAVIS B. BRYAN,
President.

"Barefaced Grab" of Hungary Shows How the Reds Work

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Brooklyn Eagle of June 3, 1947:

"BAREFACED GRAB" OF HUNGARY SHOWS HOW THE REDS WORK

A concrete example of just what former Under Secretary of State Acheson meant some months ago when he referred to Soviet diplomacy as aggressive and expansionist, to the great indignation of Moscow, is provided by the fate of Hungary. The swift developments of a dramatic week end have placed Hungary, whose resistance to Soviet influence had been steadfast, securely within Russia's sphere of direct control.

This is a coup which illustrates anew the determination of Moscow to dominate Europe and which brings forcefully to the attention of the American people the necessity of either sustaining whatever democratic strongholds may exist in Europe or else becoming reconciled to the ultimate capture of the Continent by communism.

In Hungary the Communist Party numbers about 650,000 members and in the most recent election polled 720,000 votes, only 18 percent of the total. However, it managed to control key positions in the government and in consequence exercised an influence out of proportion to its numerical strength. This is a familiar technique. Through it, aggressive and resourceful Communists are enabled to dominate not only governments but also labor unions and political organizations in which they may hold but a meager representation.

In the case of Hungary, it seems, the Communists were helped through the treachery or the lack of courage of the Premier, Ferenc Nagy, who was vacationing in Switzerland during the crisis and who seems to have been preoccupied with personal interests, including the safe departure of his son from Hungary and a pension for himself.

Through what was distinctly an easy operation, Communists, although a minority of the people of Hungary, are in complete control of the government. The tie that binds them to Russia is indicated by the events that have occurred and also by the news that the Hungarian Army will be trained and equipped by Russia. Actually, Hungary is now something more than a Soviet satellite. It is a Russian province, as completely under

the will of Moscow as if it were one of the Soviet states.

Unofficially, the change in control of the Hungarian Government is described in Washington as a "barefaced grab" by Moscow. Furthermore, pending clarification of developments, suspension of the unused half of a $30,000,000 Hungarian credit for buying American surplus property was announced by Secretary of State Marshall. This was a sensible step.

Communist domination of Hungary is an accomplished fact and Russia has demonstrated once again that it does not intend to be restrained from advancing its purpose of continental dominion by the agreement of Postdam, which provides that nations shall be free to establish governments of their own choosing.

This bold and successful stroke in Hungary gives urgency to a disturbing question. How long will Italy and France and other countries of Europe where Communist voting strength is far greater than in Hungary be able to resist the aggressive and expansionist diplomacy of Moscow?

Housing

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I am inserting an article which appeared in the New York Times of June 3, 1947, entitled "One Million Homes—Maybe":

ONE MILLION HOMES—MAYBE

Federal Housing Administrator Creedon's prediction that a million dwelling units will be completed this year if Federal controls are continued for a few more months might make careless readers believe our housing crisis is subsiding. It really is not. Of the million, 610,000 are permanent dwellings now under construction. Another 150,000 represent a reasonable assumption that this many new permanent units will be started and finished before the year is out. The remainder are conversions, trailers and temporary units, which furnish temporary relief for the shelterless but do not solve the problem. And Mr. Creedon does not predict even this much if Congress approves a House proposal to take the lid off nonresidential building, for which he estimates there is now a $2,000,000,000 pent-up demand. If this demand is released, he fears, the resulting scramble for materials would leave the little fellow trying to build a home out in the cold both literally and figuratively. Presumably new moderately priced rental housing could not compete, either.

However much most of us would like to see an unhampered building industry, the truth remains that there must be some governmental interference if millions of people with low or moderate incomes, including a large percentage of the veterans, are not to suffer. Housing is not merely a business—it is a social service. Rent control, which the Senate yesterday reconsidered and voted to extend, is a palliative. What we need are more houses. The least Congress can do is not to make the veterans' situation worse. The best it might do is to pass the Taft-Ellender-Wagner housing bill, favorably reported last April by a 7-to-6 vote of the Senate Banking Committee. This bill is aimed at the goal of 1,500,000 new homes a year for 10 years, a total of 15,000,000, of which 500,000 would be subsidized. Private enterprise, with various governmental aids and encouragements, would do the rest. Senator TAFT thinks he can get this measure through the Senate at this session. But it will take concerted pressure from those who realize the evils of the present shortage of homes to get it through the House.

Tax Reduction and Economy

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Chicago Daily Tribune of Monday, June 2, quoting and commenting on a recent speech by my colleague, Hon. NORRIS COTTON, of New Hampshire, on the subject of tax reduction and economy.

It is really remarkable that the statement of a new Member of Congress should merit such justifiable national recognition, and as a neighboring Representative from New England I take pride in inserting this editorial in the RECORD for I agree with its content as well as with the speech to which it refers:

HOW TO CUT SPENDING

NORRIS COTTON, a Republican Congressman from New Hampshire, went home recently to report to some of his constituents. While this is his first term in Congress, Mr. COTTON is a veteran of legislative and congressional affairs. He was once secretary to Senator Moses, and later speaker of his State house of representatives.

He dwelt at some length on the desperate lobbying and propaganda campaigns by the Government departments to escape the economy ax. He noted that while his mail continued to demand economy, these campaigns were beginning to bear fruit. Four months in Congress, Mr. COTTON confessed, have forced him to abandon the theory he held on fiscal policy when he went to Washington.

"I had a beautiful theory about the budget and tax reduction," he said. "I believed that we should reduce Government expenditures first, balance the budget, make a start toward retiring the national debt, and then—and not until then—consider tax reduction.

"I still maintain that this is logical and sound. The only trouble with it is that it won't work.

"The Government will spend all the money it can get. The only way to reduce the cost of Government is to reduce the revenue of Government. * * * After watching the vain efforts of earnest and honest men in Congress to reduce expenses to balance the budget, I concluded that we must first cut taxes."

This, it happens, is the program that the Tribune has recommended since the Republican victory last fall. It is the program that Congress is coming to accept, haltingly and incompletely, by its acceptance of the income-tax reduction. We welcome Mr. COTTON'S conversion to the cause. It is a conversion based upon close contact with the problem of Government spending.

The Government, any government, will always spend every penny it can lay hands on. The only way to cut spending is to withhold the means of spending by cutting taxes.

Completely Free Press Not Yet Established in Japan

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. BENDER. Mr. Speaker, under leave granted me, I wish to include in my remarks the following article by Mr. Ralph J. Donaldson, of the Cleveland Plain Dealer:

COMPLETELY FREE PRESS NOT YET ESTABLISHED IN JAPAN
(Article 10)

If the seeds of democracy are to thrive in Japan, there must be a free press which will be the impartial purveyor of news and the fearless champion of freedom and human rights. This objective of the occupation, however, has not yet been achieved. By American standards, the press in Japan is not free.

In the first place, Japanese newspapers are restricted by censorship; in the second place, they are dominated by labor unions. A free press cannot thrive under either of these conditions.

When the occupation authorities arrived in Japan there was a feverish activity in the newspaper shops to organize labor unions. Part of this was due to the natural exuberance of being released from the despotic Japanese Government controls; part, no doubt, was due to the natural desire of the Japanese to please the Americans, who, they were led to believe, wanted them to organize.

But instead of organizing one union of printers, one of pressmen, one of stereotypers, one of editorial workers, and so on, they formed vertical unions which covered all employees of each newspaper. Then, in some cases, they proceeded to seize the plants, throw out the management and operate them under "production control." In other cases the owners were put in jail as war criminals for inciting Japanese aggression.

Each newspaper then became a battleground between the rightists and the leftists. Editorial policies were determined by the group which predominated. There were numerous instances of the compositors refusing to set in type editorials and news stories with which they did not agree. The Communists, of course, moved in wherever they could.

In one newspaper, Yomiuri Shimbun, which has a circulation of approximately 1,700,000, the Communists were ousted, after an internal fight which is described as follows by the publication's present managers:

"In 1945, as a result of internal reform, wartime leaders of the paper, including the president, vice president, managing editor, and several others retired en bloc. Later another major personnel shake-up has occurred. With the support of a majority of the present employees, Mr. Baba (the new president) carried out this major shake-up among the staff occupying key positions in the editorial department.

RADICALS ARE SQUELCHED

"The reason for this change was that the key men in the editorial department were changing the editorial policy into one that was extremely radical, with actual incidents of violations of General MacArthur's press code taking place.

"At the time many workers in the plant opposed such actions and resorted to strike

with the result that the paper was forced to suspend publication for 4 days. However, this incident was cleared up as the strike proved futile due to the fact that the strikers were in the minority."

A similar story of internal strife would apply to virtually every newspaper in Japan, except that Communists and leftists are still in control of many of them.

Even Yomiuri does not dare to fire unnecessary employees, since the labor unions will not permit any reductions in the staffs of newspapers. Yomiuri is restricted to four pages, due to the paper shortage, yet it has 900 editorial employees. (That figure is 600, not 90.)

Asahi Shimbun, which publishes three newspapers in different parts of Japan, claims to have 2,581 staff members in its Tokyo offices alone, yet it publishes only one edition consisting of one sheet, or two pages. On special occasions it gets out a four-page paper.

The editorial offices of these newspapers resemble a New York subway train during rush hours.

We did not inquire about the financial condition of Asahi, but Yomiuri, in spite of its overloaded staff, is making money. It has an income of 9,500,000 yen a month from subscriptions and 3,500,000 from advertising. Its operating costs are 12,000,000. Profits are impounded, however, due to occupation restrictions. The company would like to be able to spend 20,000,000 yen to replace two buildings that were burned out during the war.

It is obvious that, under the chaotic labor conditions, the policy of each newspaper depends on which union is in control. There seems to be no doubt but that the labor policies of the occupation authorities are largely responsible for this condition. They encouraged vertical unionism, according to the CIO pattern in the United States, with the result that there has been labor dictation of editorial policies, through intimidation, threats, and actual violence.

Under such circumstances, it is impossible to have an objective free press to further the aims of democracy in Japan.

Resolution on National Health Insurance by Textile Workers Union of America, CIO

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a resolution adopted by the Textile Workers Union of America, CIO, on Sunday, May 24, 1947, at the Bradford Hotel, Boston:

NATIONAL HEALTH INSURANCE

Whereas the inadequacy of medical and dental care for millions of American citizens has been increasingly apparent through the years and is now assuming the proportions of a national disgrace; and

Whereas the Nation's need for more adequate care is most strikingly emphasized by the fact that 4 out of every 10 men called up for military service in World War II were rejected for physical reasons; and

Whereas experience and research have shown that the most effective and realistic way of raising the national health standards is through a broad national health-insurance plan; and

Whereas the President of the United States has urged that the Congress pass a long-range, comprehensive national-health bill which would include expanded maternal and child-health care, more medical and dental research and education, more hospitals and more doctors, and hospital and sickness insurance; and

Whereas although the Textile Workers Union of America, CIO, has been able to negotiate health protections for well over 200,000 of its members, voluntary plans such as this still lend themselves to improvements. Moreover, millions of our fellow citizens have no protection whatever: Now, therefore, be it

Resolved, That this conference, representing 90,000 workers in northern cotton mills, wholeheartedly endorse President Truman's national-health program and call upon Congress to desist from making this issue a political football and enact the plan forthwith.

Evacuation Claims Commission

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith a copy of a letter which I have addressed to Hon. JOHN W. GWYNNE, the chairman of the subcommittee which has under consideration H. R. 2768. I was familiar with the condition that this bill is intended to correct before I ever came to Congress. I have been very much interested in it. I urge that all Members of Congress examine this bill, and I am sure that they will recognize the real merits of it. I am quite sure that when this bill reaches the floor of the House of Representatives it will pass by a large majority.

The letter follows:

HOUSE OF REPRESENTATIVES,
Washington, D. C., June 4, 1947.

Hon. JOHN W. GWYNNE,
House of Representatives,
Washington, D. C.

MY DEAR COLLEAGUE: Now that the hearings on H. R. 2768, a bill to create an Evacuation Claims Commission under the general supervision of the Secretary of the Interior, and to provide for the powers, duties, and functions thereof, and for other purposes, have been completed, I urge that this bill be reported out of the House Committee on the Judiciary as early as possible. It is my sincere hope that this bill will reach the floor of the House of Representatives during this session. I am sure that the majority of Members of Congress would welcome an opportunity to vote favorably on this bill.

As I have indicated to you in my several conversations on the subject, it is my feeling that the loyal Americans of Japanese ancestry merit the economic adjustments contemplated by H. R. 2768. The Japanese-Americans surprised everyone by their unusual heroism during the war, not alone in Italy and other European theaters of war, but in the Pacific. It has been demonstrated that the evacuation of these people was unnecessary, as there has been no evidence of any sabotage or subversive action. A mistake appears to have been made, and I am sure that the people of the United States would like to provide proper reasonable compensation.

Trusting you and the other members of the committee will give H. R. 2768 precedence over less important legislation, I am,

Sincerely yours,

ROBERT J. TWYMAN.

Filipino Veterans' Rights—Comment of Vicente Villamin on a Statement of the Veterans' Administration, Making Suggestions in a Friendly Spirit

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks on the Filipino war veterans, I include a statement of Mr. Vicente Villamin, distinguished Filipino lawyer and economist, commenting in a friendly fashion on a press release, dated June 4 by the Veterans' Administration.

Mr. Speaker, it appears that the Filipino veterans' question, which is really an American question, is not yet settled to the satisfaction of the Filipinos. I, for one, desire to know fully what the question is—its different aspects and ramifications. I can well imagine that it is quite involved and complicated. I am glad that Mr. Villamin, with his analytical mind and his power of effective expression, is tackling the subject matter. Congress wants to be informed and Filipinos should inform Congress, for it is Congress that could provide the remedial measures. Our friends, the Filipinos, should speak up and speak up clearly and soon.

I know that the American people would like to see that full justice is meted out to the Filipinos who so bravely and loyally fought the Japanese enemy under our flag and leadership. But they and their Representatives in Congress must know what the specific complaints are of the Filipino veterans. The question involves enormous amounts of money and we cannot go by generalities or silence on the part of the Filipinos. I am confident that Mr. Villamin and his Filipino associates will give us the necessary information and develop general interest in the Filipino veterans' question. His statement that I am including in these remarks is illuminating in content and temperate in tone, and as such it is a valuable contribution.

Mr. Villamin's statement follows:

In a statement released on June 4, the Veterans' Administration gives plain information for Filipinos who served with the American Army in the last war. That constitutes its policy under the law. Anyone who has a different interpretation of the law is at liberty to state it and work for its adoption. In my contacts with officials of that Administration, I have found them courteous and willing to hear suggestions as well as being broadly sympathetic to Filipino

veterans. As long as that situation prevails the Filipino veterans will have not only a square deal but also an intelligent treatment.

The statement relates to pensions for disability or death. This is one of the two rights—the other is insurance—left to Filipino veterans after the First Rescission Act of 1946 deprived them of the other veterans' rights by declaring that they were not in the active service of the United States armed forces.

The Veterans' Administration statement begins with the assurance that "Filipinos who served in recognized guerrilla forces in the Philippines during the Japanese occupation of the Islands are potentially eligible for benefits under the United States compensation and pension laws for veterans."

The next sentence will aid Congress in formulating possible new laws, for it gives the approximate number of potential beneficiaries. It reads: "Although more than 1,000,000 persons already have claimed service with guerrilla units in the Philippines, the War Department has estimated that only about 338,000 will be recognized officially. Only a small percentage of this number can be expected to qualify for compensation and pension benefits."

In this connection, it should be stated that it is the right of any person to prove that he was a guerrilla, but he must not be disappointed if the Army authorities should disapprove his claim on the basis of the evidence. Those whose claims are not clear should be slow in taking the time of the screening authorities for the sake of the claimants with more valid cases, otherwise delay and confusion will ensue to the injury of all. Here is where plenty of good will and good faith are needed, and Filipinos have them.

The statement says next: "Those who qualify may be entitled to compensation for disabilities due to injuries or disease suffered while serving with guerrilla units. In the event of death incurred in such service, their dependents may be entitled to pension rights. Awards will be based on the regular rates applicable to other veterans of the United States armed forces generally, except that payment will be made at the rate of one Philippine peso for each dollar awarded."

At present one Philippine peso is 50 American cents, but in the future it might be more or less than that, for under section 342 of the Philippine Trade Act of 1946 "the value of Philippine currency in relation to the United States dollar" may be changed "by agreement with the President of the United States." Hence, if the intention is to pay Filipino beneficiaries at the rate of one half of that of the American, the law should be rendered more specific, otherwise a peso could cost the Veterans' Administration either $1 or 25 cents, most probably the latter figure, which would be disadvantageous to the Filipino beneficiaries.

The statement proceeds as follows:

"To be eligible for benefits, the person must have served with the United States armed forces, and his service must either be a matter of record or be certified by the United States forces. If he served in an irregular guerrilla force, his service must have been under the command of a commissioned officer of the United States Army, Navy, or Marine Corps, or of the Commonwealth Army recognized by and cooperating with the United States forces."

In enforcing this rule, the authorities are compelled to depend on incomplete or nonexistent records. Even when trying to be liberal and helpful to rightful claimants, their difficulties in arriving at just decisions could be imagined. A person who claims that he was a guerrilla should at least know his officer and, even more important, his officer should know him as a part of his command. A person who threw a stone at the head of a passing Japanese soldier, or stabbed him while ransacking his house, or gave food or shelter to a guerrilla, or tipped a guerrilla off on Japanese movements—that person is a hero, but not a guerrilla entitled to veterans' benefits. It is hoped, however, that the authorities will be most liberal in dealing with claims and sparing in the application of technicalities adverse to the claimant.

The next paragraph of the statement reads: "Unless the record shows that he received a physical examination at the time of entrance upon duty with the United States forces, he is not entitled to presumption of soundness accorded by statute to veterans who were in the active service of the United States Army or Navy in establishing that a disability is service-connected. In all cases, it must be shown that the disabling injury or disease, or the veterans' death, occurred while he was serving in recognized service as defined in the foregoing paragraphs."

If this rule is to be applied literally, few, if any, guerrillas could qualify for disability benefits, for the guerillas simply joined the armed forces or organized themselves into groups without regard to the state of their health and, in fact, there was neither time nor facilities to determine it. If the law is as stated in the paragraph quoted, it seems it should be modified by Congress, taking into consideration the special conditions and circumstances surrounding the organization and operation of the guerrilla forces.

Pertinent to this point is the statement made by Representative JOHN RANKIN on the floor of the House on August 2, 1946, on the administration bills (H. R. 6508; S. 2235) which he sponsored, but did not become a law. He said: "The existing law is more liberal, by far (to Filipino veterans) than S. 2235 as to benefits for service-connected disability or death in that the former authorizes the application of liberal presumptions both as to sound condition at the time of entry into service and service connection of chronic diseases such as tuberculosis. Eligibility requirements under the bill are made more restrictive, first by requiring a screening through new certificates by the War Department and, second, by requiring that disability must have resulted from disease or injury or aggravation thereof directly resulting from the performance of active service. Under existing law and the bill S. 2235 the same general group of persons is involved. However, due to the screening process employed the load of potential eligibles would be considerably reduced under the bill."

It must be clearly borne in mind then that Filipino veterans are now under the existing law, the bill sponsored by Mr. RANKIN having failed to pass. According to him, repeating for emphasis, the existing law "authorizes the application of liberal presumptions both as to sound condition at the time of entry into service and service connection of chronic diseases such as tuberculosis" from which many Filipino guerrillas suffered.

The Veterans' Administration statement ends with this sentence: "Persons taken prisoner and later paroled by the Japanese are not considered as having been in the active service of the United States during such period of parole." This involves a separate matter for possible new relief legislation by Congress. It is under the War Department. It concerns section 1288 of the Revised Statutes and the War Department Circular No. 400, issued on December 10, 1942. It belongs in the domain of American generosity and reasonableness.

We Filipinos would respectfully and earnestly ask the United States Congress for a redefinition of the rights and benefits to which the Filipino veterans are justly entitled as formerly part of the personnel of the American forces by military order of the President of the United States acting by virtue of an act of Congress. What already has been given is deeply appreciated. The American Government could give more. We ask it to do so.

The Trouble Truman Foreign Policy—a Report From Turkey

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 23, 1947

Mr. BUFFETT. Mr. Speaker, a few days after President Truman made his speech to the House asking for intervention in Greece and Turkey, I took the floor to point out how his proposal seemed to play right into Stalin's hands.

Many developments since that date have tended to confirm that appraisal. In this connection, an on-the-spot report by Sefton Delmer in the London Daily Express of May 12 is enlightening. Pertinent excerpts from Delmer's analysis follow:

AMERICA'S LOAN IS BUILDING THE TURKS A VERY FINE TOMB

ANKARA.—If I remove the mosquito netting from my bedroom window I can step out onto the terrace outside.

From there I can gaze at the long, green serpent of bare treeless hills that lies coiled possessively round the fresh white shells of this squawking, hooting and hammering new-old city of Ankara.

They're a fine sight, those hills. But there is one ridge in particular which I like to contemplate. I call it Trouble Truman.

It first caught my eye because I noticed they were building on it what seemed to be an extensive fortification. Or perhaps, I thought, it was a kind of anti-atomic air-raid shelter.

When I took a taxi and drove out to look at it, I found it was neither. The building on the ridge is a super-luxury mausoleum which is being erected as a memorial to Kemal Ataturk, founder and first dictator of modern Turkey.

Half a million pounds have already been spent on it. And, the young, German-trained Turkish engineer in charge of its construction informed me proudly, it will cost well over £2,000,000 before it is finished in 3 years' time.

I call it Trouble Truman because I cannot help thinking that before long the President is going to have bother with this memorial and regime.

The regime, as a consequence of a 23-year absence of parliamentary opposition and criticism, has permitted unrealistic expenditure of this kind to become typical of its budget policy.

Two million pounds, after all, is a handsome slice of the £25,000,000 loan to Turkey (some say it will end by being a gift) which, as the cornerstone of his resist-Communist-imperialism policy, the President is now piloting through Congress.

There is another £7,500,000 being spent on Ankara's supersuper Parliament building and a further £5,000,000 on an Ankara 16-story hospital skyscraper.

Only £1,000,000 a year is at present being spent by the Government on roads and bridges. Transport-starved Turkey needs these more urgently than all else if she is to reduce her uneconomically high costs of production and living and become, as the Americans wish, a sounder proposition militarily and strategically.

Turkey today has a total of only 26,875 miles of roads, and of these only 8,125 are all-weather roads. It is easy to see that Truman's £25,000,000 loan is only a tiny down payment on what looks like becoming a heavyish commitment, especially if any more heroes require mausolea.

Yes; it's Trouble Truman, all right, this ridge, and all it stands for in Turkey. And conversely, it's Comfort Molotov.

I am pretty sure that behind Molotov's policy of delay and procrastinating obstruction, brilliantly carried out at Moscow, there is the shrewd expectation of dividends from the effect on United States taxpayers of such little things as this £2,000,000 mausoleum. All this apart from the general over-all aim of aiding Communist world revolution by refusing to allow the capitalist world to settle down to peace and security.

"Truman," I can almost hear Molotov saying, "has led off his campaign on a very high note. He cannot go much higher without going to war. Soon he will have to sing lower. A revulsion of public opinion will set in which we shall be able to exploit."

NO COMMUNISTS IN TURKEY YET, REPORTS DELMER

I appreciate the difficulties of the Turkish Government's position under the constant barrage of hostile agitation from Soviet Russia.

But it is no use blinking the fact that the suppression of opposition newspapers—and the fact that the Turkish Government refused to guarantee that any complaints made by opposition observers of the poll shall be investigated—may prove embarrassing to Turkey's new American sponsors.

Even more dangerous, however, is this policy to Turkey's internal safety. It is only natural that, after 23 years of one-party rule, there is a great deal of criticism of the government among the people.

There are no Communists to speak of in Turkey today. But if public opinion is not allowed to assert itself in free elections, it is not impossible that Turkey's Communist neighbor will exert some attraction on the oppositionists.

Ataturk's mausoleum would then become the mausoleum of modern Turkey and of Truman's hopes of checking Soviet expansion into the eastern Mediterranean and the oil wells of Iraq.

Brooklyn Neglected in Federal Building Program

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Brooklyn Eagle of June 3, 1947:

BROOKLYN NEGLECTED IN FEDERAL BUILDING PROGRAM

The lawyers are pointing out that Brooklyn is being neglected in the Federal Government's building program, while the eight States which together contain less than Brooklyn and Long Island—Arizona, Nevada, Wyoming, Delaware, Vermont, New Hampshire, Idaho, and Utah—are doing handsomely by themselves in public works, probably because they rate, under the Constitution, two Senators.

Brooklyn is not complaining about the two Senators. But we have a complaint about what we pay in income tax—and don't get back. None of the States above tops our payment. So it is with no surprise that we learn the Federal Bar Association is on the move to demand an amelioration of this grievance.

Too few people seem to realize that our port makes it possible for farmers in Nebraska to have radios and electric ice boxes. Or ranchers in Wyoming or poultry raisers in Delaware to doll their women up in what we have every day on our advertising pages. Or, for that matter, Texans who like to think they run the country. High time it is for us to speak up, as the Washington largess goes elsewhere.

A new Federal courthouse is a drop in the bucket. Long Island and Staten Island are also pitching in with their taxes and deserve consideration for some more of the same. We are not suggesting that improvement expenses should be prorated. We are, however, insisting that the heavily taxed should be getting back a little more than the town, say, of Crow Creek, Ark., or Grass Valley, Mont., in proportion. We are glad that the lawyers have had their say. We think they are right in this matter of a new courthouse and other Federal improvements we are paying for, elsewhere.

Wind in the Flag

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. ANGELL. Mr. Speaker, apropos of Memorial Day services just past, I include in my remarks an editorial appearing in the Portland Oregonian which is published in my congressional district, in its issue of May 30, 1947, which is worthy of consideration by all of us. It is a beautiful tribute to the services of the men and women of our Nation who have answered the call of their country in times of great emergency, to bear arms for its protection.

The editorial follows:

THE WIND IN THE FLAG

Then do not think of them as being yonder in alien earth with little white crosses above. They are not there. For these were boys who loved the homeland—her fields and forests, lakes and streams, her villages and cities. These were the boys who went to school here—and would they stay away when they were mustered out? These were the boys who fished our creeks and climbed our mountains; the boys who plowed our fields and harvested our wheat; who manned our factories and each enterprise of peace. It is not right to think of them as being where they seem to be. It isn't fair. Often they used to talk of going home, and surely—when death set them free—surely they came. Now we who knew them well must know they are not there who are forever here, inseparable from the land for which they died. No troopship brought them home, for they came home the quicker and the shorter way. Is it the wind that stirs the flag?

Nor should we think of them as being beneath the sea, where the plane plunged or the wounded ship went down, fathom upon green fathom. They are not there. For these were boys whose laughter scarcely hid from us the consecration which they felt, and when they said that they would soon get it over and come home, they meant it, every word. She called them from their classes and the ball grounds, she called them from the desk and lathe, and from the homes that meant as much to them as to any that ever loved his home with the full mesure of devotion.

They never thought to see the world, at least until they might be middle aged, but soon they saw it, island after island, port after foreign port, and many an island was fenced round with flame, and there was one port that they did not fetch. They died too soon to reach it and to hear the bands and speeches. But we who knew them, surely we must know that they were here before that, for they had said they would come home the moment that they could. And so they aren't there, but here. The ship came back without them, if it came at all, but they were here, not there. Is it the wind that stirs the flag again?

And where they kept the bargain, they who died for land and liberty, it matters not at all, nor where they seem to rest—under the little white crosses or under the sea, or namelessly in the deep jungle. For they were boys who would not stay away when they were done with service, since often they had told themselves the first thing they should do would be to hasten home. And home they must have come. Where the trout rises or the grouse leaps into flight, or at the ball park, or along the seashore, these were the places that they loved—these that forever are our country, and to which they, by their passing, have confirmed our title. They are here surely enough, and shall be for so long as liberty and America are one, and the flag means still what they knew it meant—though they didn't say much about it. That was something they left to the orators and the politicians, and the editors. Do not think of them as being elsewhere. For they are not there—who are here. Look. The light wind stirs the flag as though it caressed it, fold after fold. Look.

Iowa Farmers Against Controls

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. HOPE. Mr. Speaker, for several weeks past the House Committee on Agriculture has been conducting hearings on the matter of long-time farm policy. Numerous witnesses have been heard and many suggestions and ideas have been advanced. The committee is, of course, interested not only in having the views of experts and leaders in the field of agriculture, but in getting the viewpoint of men and women on the farms.

Recently the Iowa Farm and Home Register, which conducts the Iowa farm poll, submitted to a representative cross-section of Iowa farmers a number of practical questions covering some of the issues which have been discussed in the committee hearings.

I have received from Mr. Henry J. Kroeger, the director of this poll, a report on the poll which was carried in the June 1 issue of the Iowa Farm and Home Register. I am sure that the results of this poll will be of great interest to Members of Congress and I include the same herewith as a part of my remarks:

IOWA FARMERS AGAINST CONTROLS

Most Iowa farmers prefer abundant production rather than a return to prewar farm production controls, according to findings of the Iowa poll.

The poll also discloses that most Iowa farmers strongly favor keeping a program of farm price supports and guaranties.

These conclusions are indicated by answers from a representative cross section of Iowa farmers.

A majority of those farmers who expressed any opinion on parity prices think parity on basic crops should be brought up to date.

(Parity prices are those which will give crops the same purchasing power as they had just before World War I. Most Government support prices are now set at 90 percent of parity.)

A 68-percent majority of the farmers questioned agreed that the farmer has had to deal with too many Government agencies, and that many agencies overlap.

At the same time, 62 percent of Iowa's farmers believe they would get better service if all national farm programs were handled through the extension service.

Edward A. O'Neal, president of the American Farm Bureau federation, testified recently before the House Agriculture Committee that Congress should wipe out duplication and overlapping in the Government farm program.

O'Neal said farmers are confused by the numerous Government farm agencies. He contended that a more efficient farm program would result if all Government farm activities were channeled through the extension service.

Field reporters for the Iowa poll asked a representative cross section of Iowa farmers the following question:

"So far as you can tell now, which would you rather see, a farm program based on loans, production and acreage controls, something like the prewar AAA, or a farm program based on unlimited farm production coupled up with some plan of expanding markets to keep farm surpluses from driving prices too low?"

	Percent
Prewar production controls	34
Abundant production	56
No opinion	10

Secretary of Agriculture Clinton Anderson recently proposed a long-range farm program based on an organized, sustained, and realistic abundance rather than a return to the prewar production controls of the Roosevelt administration.

Present farm price supports are guaranteed through 1948. Through the following question, Iowa farmers show their sentiments for continuing some such program:

"In general, do you favor continuing and keeping a program of price supports and guaranties?"

	Percent
Yes	80
No	11
No opinion	9

Rank and file opinion on the present parity plan was measured through the following:

"Laws we have now will base corn loans and other price supports of basic crops on relation to parity—the price level where farm products will buy as much as before the First World War. What should Congress do about this parity plan? Leave it as it is? Bring parity up to date? Use some other plan?"

	Percent
Leave it as it is	18
Bring parity up to date	38
Use some other plan	9
Undecided	35

Among the 9 percent who want another plan, the majority is indefinite on the type of plan they wanted. However, a few name lower parity, supply and demand, less production control.

The Iowa poll's next question read:

"It has been said that the farmer has to deal with too many Government agencies, that these agencies double up and overlap. Out of your own experience, do you agree or disagree?"

	Percent
Agree	68
Disagree	18
No opinion	14

The farmers speculated on whether these agencies would render better service to the farmer channeled through the extension service in answering this question:

"Do you think farmers would get better service from these Government agencies if all national farm programs were handled through the extension service?"

	Percent
Yes	62
No	15
No opinion	23

Something To Watch

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 4, 1947

Mr. LATHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Boston Herald on Tuesday, April 15, 1947:

SOMETHING TO WATCH

Now that the military have vacated the Common and we've had our fill of buzzing war planes, martial music, and the grim presence of war machines, it may be well to ponder one of the more subtle threats to our liberties. It is the threat of the "military mind," and no small threat it is in a world in which the greatest exterior menace to our Nation is a totalitarian regime, whose war plans are made secretly, and whose attacks in an age of atom bombs and bacteriological warfare would surely maximize the element of surprise. In such an age of excessive jitteriness we are all in awe of the military who must protect us. Therein lies the danger to which we have reference here. It is the possibility that we may forget our traditional subordination of the military to the civil authority.

We must not let our fear of the Communist menace blind us to the danger of military domination. For the thing that could most surely end civil liberty in America would be for the Army General Staff to gain such control over the Nation's civil government as to make us all vassals of the "military mind." One has only to recall the history of the German General Staff to know how true this is.

The principal techniques through which the German general staff managed to dominate the German people were the relentless pursuit of power; the development of a highly efficient propaganda medium; universal military training; and centralization of all of the nation's fighting forces under the army general staff.

First, with regard to universal training. A purpose of the Army-week program was to expedite voluntary recruitment in an effort to make unnecessary universal training or continued reliance upon the draft. We wish the War Department well in this endeavor, but we also hope that if and when universal service should become essential to national security, it be set up in such a way as to keep it largely under the control of our civil government.

As for propaganda, there can be no doubt that the War Department maintains one of the most expensive and effective machines for this purpose of any Federal agency. Moreover, with an ex-Army President, we can be sure that what the General Staff whispers to the White House rings a responsive note. The War Department is also still represented on some wartime interdepartmental committees so that it continues to have a strong voice in the making of foreign policy. General Marshall, the Secretary of State, is himself a lifelong soldier.

And, it hardly need be added, even freedom of speech and of the press might find in the military mind its greatest enemy if an unrestrained General Staff deemed that public discussion of foreign policies threatened our security by tipping off the enemy.

Finally, as to unification, the Herald believes that command unity of the armed forces is essential to efficient conduct of our military establishment in battle. But it seems important, despite the essentiality of unity of command at the top, that the identity of the respective services should be ruggedly maintained. For example, the Marine Corps, thus far a largely autonomous service, although under Navy command, should be clearly perpetuated as a separate fighting force in any service-unification law that may be passed. The Army and the Navy should hardly be insulted by the statement that the Marine Corps is our elite fighting service, always on the alert, and not unknown to have done some of the bitterest fighting to ease the ultimate victories of our combined fighting forces. Organizational autonomy also should be preserved for the Army Air Forces and the Navy Bureau of Aeronautics with the hope that efficiency and economy can be enhanced by mutually agreeable coordination at the top.

The greatest need is, of course, for greater emphasis on military research, and for whatever civilian pressure may be necessary to shake admirals and generals out of traditional habits of mind which tend, unconsciously, of course, to sabotage our effective defense in an atomic age. And, by all means, great pains should be taken to protect the secrecy of military research and its products. We want no repetition of the Canadian atom scandal here.

This is not to say that there is any pat solution to the dilemma of a people striving to maintain civil liberties and democratic processes in an era of devastating weapons and totalitarian government. There just isn't. Therefore, it behooves us to be more on guard than ever lest our combination of fear and zeal for powerful defenses should cause us, unwittingly, to mirror the thing we profess to detest.

The Die Is Cast

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 4, 1947

Mr. HAVENNER. Mr. Speaker, the foreign relief bill, the Greek-Turkish loan, and similar measures have occupied a large part of the time and attention of Congress during the last few weeks. Despite the fact that the recommendations of our State Department have been approved by overwhelming majorities in each instance thus far, a surprisingly large number of those Members who voted in favor of the so-called bipartisan foreign program have been extremely frank in their expressions of uncertainty and doubt about the ultimate results and effects of these measures.

These doubts and uncertainties are due to the fact that the American Nation is

embarking upon a new and unprecedented course in world affairs. We have abandoned, finally and irretrievably, our traditional policy of isolationism. We have shouldered a major share of responsibility for maintaining the future peace of the world. In this tremendous undertaking we have no past experience to serve as a practical guide, no precedents of our own upon which to rely. But the tragic lessons of recent history have made this epochal change in our foreign policy inevitable and inescapable.

Twice in the last 3 decades the soil of Europe has been drenched with American blood. After the First World War, despite the decisive part our armed forces had played in the defeat of Germany, the Congress of the United States refused to join the League of Nations which had been created by President Wilson. At that time a majority of the American people, including the present speaker, supported our congressional leaders in adhering to the policy of George Washington and declining to participate in "entangling foreign alliances."

The abstention of America rendered the League of Nations internationally impotent. The League degenerated into a mere debating society whose futile efforts to preserve world peace soon became the object of open scorn by the military dictators who sprang into power in the bankrupt areas of Europe.

A famous American Senator, now dead, told me of a conversation he had with Mussolini soon after the Fascist leader seized control of Italy.

"What do you think of the League of Nation?" the Senator inquired.

Mussolini's reply was a roar of laughter.

Emboldened by their belief that America would never interfere with their ambitions, the German and Italian dictators proceeded with their program of world conquest. They enlisted the support of Japan. Great Britain attempted a policy of appeasement. The result was World War II and finally Pearl Harbor.

Then the die was cast with respect to our foreign policy in the future. The American people determined, with invincible unanimity, that never again would this Nation refuse responsibility for maintaining the peace of the world. We invaded Africa, Europe, and the islands of the Pacific. Italy collapsed. Germany was completely crushed. Japan surrendered.

But for the intervention of our armed forces the outcome of the war would have been totally different. Russia would inevitably have been subjugated by the Axis attack. England could not long have survived. All of continental Europe would have remained under Nazi domination. Japan would have completed her conquest of Asia, Australia, and the islands of the Pacific, including the Philippines. And today this country and the entire western hemisphere would be in imminent danger of attack by the mad enemies of democracy if, indeed, the attack were not already under way.

Members of Congress realize that America, having twice been compelled to conquer the greatest threats in all history to the democratic way of life, is now irrevocably committed to the maintenance of peace throughout the world, by whatever means are necessary. Failure in this commitment is unthinkable. It would be a betrayal of our countless hero dead who gave up their lives on battlefields in all parts of the earth in the sacred belief that they were making peace possible for future generations of mankind everywhere.

The reason why such a great majority of the Members of Congress have thus far supported all measures of foreign policy which have been presented to them since the war is that they know that the peace of the world depends upon strong leadership by the United States of America, and that the only way our leadership can be made strong is to back it up with all of the vast resources of this Nation. They are determined that no present-day dictators abroad shall be permitted to scoff, as Mussolini did, at America's interest in world peace.

It is well that our heroic dead cannot envision the situation which exists around the so-called peace tables of today. America has tried to keep faith with them by organizing the United Nations, and has pledged its tremendous financial, economic, and military resources in an effort to make that organization an effective instrument of peace. America has not sought to acquire any conquered lands for commercial or political exploitation. On the contrary America has restored the Philippines to complete independence. Our only territorial acquisitions when the final peace treaties are signed will be minor islands in the Pacific which are virtually valueless except for our future national defense.

But American efforts to establish a permanent and stable peace have been constantly obstructed by certain of our allies in the late war who, but for our military aid and financial and economic support, would now be enslaved by the Nazi tyrants. Despite the fact that we rescued them from certain national destruction, these erstwhile allies have maintained an attitude of hostility toward us in all of the peace negotiations. They have openly resented our assumption of any responsibility for the reconstruction of Europe—a responsibility which we cannot and will not relinquish. Their policy appears to be basically anti-American. They have striven deliberately to make it impossible for us to cooperate with them, except on their own terms—terms which, in many instances, the American conscience cannot accept.

They ignore the fact that while the war was in progress they eagerly subscribed to our declaration that we were all engaged in a common fight to make the world safe for democracy. Now that the war is over—won for them by our arms and our blood and our aid—they repudiate our democracy and set themselves up as the sole arbiters of real democratic government.

I assert that no government is a real democracy which denies civil liberties and suppresses individual freedom by a sovereign dictatorship. I have been deeply concerned many times by utterances on the floor of Congress which sought to restrict civil liberties in America, but those were merely the utterances of individuals with a warped conception of the American way of life. The Constitution is the supreme law of our land, and the Bill of Rights in that Constitution is the greatest charter of democracy which the world has ever known.

Patrick Henry dramatized and immortalized the American concept of democracy in a single phrase: "Give me liberty, or give me death."

Other nations are attempting to substitute mass social security for individual liberty. Modern American liberals are demanding social security with liberty.

Many Members of Congress frankly confess that there are various aspects of our present foreign policy which they regard with deep misgivings. The United Nations represents the first great attempt in all history—an American attempt—to establish a peaceful world. We must be ever mindful of the fact that not all of the nations which are embraced in this new organization are themselves democratic, and we must endeavor in every proper way to treat their opinions on world problems with deference and respect. We have a right to expect them to treat our opinions in the same manner.

Many Members of Congress regret that our leaders of state did not see fit at first to submit the question of aid to Greece and Turkey to the United Nations. Their explanation is twofold, that the United Nations is not yet able to finance such an undertaking, and that the proposal would be foredoomed to a veto because its frank purpose is to check Communist aggression in the Middle East.

It seems to me that the paramount problem in the United Nations and in the whole scheme of foreign affairs today is to establish a practical working relationship between the United States and Russia. We should employ every honorable means to achieve this objective. Our diplomatic representatives say this cannot be accomplished by a policy of supine appeasement on our part, and in this position they are supported by the tragic lessons of recent history and by the overwhelming preponderance of American public opinion. But I hope that the United Nations will be preserved and strengthened by American leadership in a mutual effort on the part of all the member states to understand and respect each other's aims and aspirations.

All nations in this postwar world are interdependent economically, therefore there must be a world economic plan. Peace is essential, or civilization will be destroyed. To achieve these two all-important objectives America must assume a spiritual leadership which will prove to the world that there can be good will among men, even when they hold different political and economic opinions.

Liberals in Congress who voted for the Greek-Turkish aid bill—and most of them did so—have been bitterly assailed by the extreme leftist who profess to be the only exponents of real liberalism in

this country. The burden of this attack has been that these Congressmen have divorced themselves from the liberal cause, that by this single vote they have betrayed their late leader, Franklin Roosevelt, and have been false to his foreign policies. It is historically interesting to remember that most of these radical leftists, who now profess to have inherited the political mantle of Roosevelt, were bitterly opposed to his policies prior to the time when Germany attacked Russia. The validity of claims by any persons that they, and they alone, are carrying on President Roosevelt's foreign policy today was recently discussed by Mrs. Eleanor Roosevelt. On May 16, in her syndicated column "My Day," Mrs. Roosevelt said that none of her late husband's followers or associates could be sure what his policies would actually be today:

When people talk about his policies in connection with the future or with situations which have occurred since April 12, 1945, they are guessing, pure and simple. Anyone who knew my husband knew that, while he had definite objectives always in mind, he met each situation as it arose and he took into consideration the immediate factors involved.

In view of this statement by Mrs. Roosevelt, it would not be surprising if the militant leftists should proceed solemnly to expel the President's widow from the ranks of the only true followers of Roosevelt in this country today.

Taft-Hartley Bill

EXTENSION OF REMARKS
OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 4, 1947

Mr. BLATNIK. Mr. Speaker, I realize that it is a waste of time for me to speak out against this NAM sponsored antilabor proposal. It is folly to appeal to reason when all reason has been discarded and only the hysteria of the lunch mob prevails. Let there be no doubt in our minds on this score.

My deep feelings on this issue compel me to speak out today, even though I know that a majority of the House have already made up their minds in favor of taking this blind and fatal step whereby the basic rights of millions of Americans will be trampled underfoot. In the name of basic human rights, I must protest against this vicious measure which strikes at the fundamental rights of labor.

During the course of debate on the Hartley bill, I heard many of my colleagues make the claim that they were not really against labor, but were friends of the workingman, and then proceed to give their support to H. R. 3020 which is one of the worst antilabor bills ever to reach the floor of Congress. These same people argued that they were supporting the Hartley bill to protect the worker from labor racketeers. These suggested that if the truth were only known most workers were for the bill.

WILL BREAK UNIONS

Such claims seemed naive to me at the time, and in a speech before the House I stated that the Hartley bill was aimed at destroying the American labor movement by taking away from the worker his only protection against ruthless employers, namely his union and his American right to organize, bargain collectively, and strike. At the same time, I also stated that the Hartley bill would fail to give America industrial peace, and would only increase industrial strikes and labor unrest.

Since the House passed the unwise and antilabor Hartley bill, there has been a storm of protest from all sections of the working population. Aroused citizens all over America have taken time off from their work to protest the tide of antilabor legislation which has been running high in Congress.

In Cadillac Square, in industrial Detroit, some 250,000 people gathered to express their protest against the break-labor bills now being passed. This was, I understand, the greatest outpouring of people in the history of Detroit.

LABOR PROTESTS

In agricultural Iowa, men and women workers all over the State declared a defend-labor holiday. Over 40,000 of them assembled in the State capitol. When Republican Governor Blue of that State told them that the Iowa Legislature was not unfriendly to labor, their reaction was a cry of derision.

In Chicago, packing-house workers at one rally, and workers from other industries throughout the State at another, made their voices heard. In New York City 75,000 workers marched to Madison Square Park, carrying banners urging the defeat of the Hartley-Taft bills.

Every labor organization in America—the American Federation of Labor, the railroad brotherhoods, and the Congress of Industrial Organizations—has condemned this antilabor measure. These three great labor organizations represent 14,000,000 workers. Every labor local in my district has passed resolutions against this bill which we are considering today.

I might add that opposition to this effort on the part of Congress to "butcher" labor is not confined to labor itself. Businessmen, farm groups, church organizations, citizens and veteran groups, and men and women of good will throughout America have decried this effort to place labor in a strait-jacket whereby labor is regulated and controlled in the interest of the employer.

There is a tendency, not only among the spokesmen of industry but in Congress itself, to discount these symptoms of unrest. Unfortunately, these signs of mass protest cannot be dismissed so lightly. When citizens are willing to leave their jobs in a body, and prepared to give up a day or a half-day's pay to let the Nation know that they will not allow themselves to be pushed around and robbed of their rights, we cannot just ignore it.

BIAS DEMONSTRATED

Some people have said, "Oh, that's just labor raising its voice." They try to give the impression that labor is just a malignant growth on the body politic, and is something separate and apart from the general public. This is an untenable position.

It is time for the Congress to stop thinking of labor as an irritation or a disease which must be stamped out. It is high time the proponents of this antilabor measure forget their promanagement bias and start considering labor as a group of honest, loyal, and patriotic citizens who have the same rights, hopes, and fears as any other section of the population. Labor is the most numerous section of our population. Labor, together with the farmer and small businessman, make up some 95 percent of the American people. As such they most certainly deserve equal consideration to the corporate interests and industrial giants in America.

The majority in the House has consistently favored corporate interests at the expense of the worker and the farmer. This unwise Hartley bill is nothing more than a codification of the legislative recommendations of the National Association of Manufacturers. At the same time the small businessman who is being crushed by the chain stores and monopolies is ignored, as legislation designed to strengthen the present antitrust laws remains in committee. Legislation designed to help the people of America—a large number of whom can be classified as labor—also remains buried. If we in Congress would show the same urgency and consideration for social legislation, the problem of housing, the high cost of living, as we do for legislation which is favorable to that segment of our population which we call industry, labor unrest would rapidly decrease.

STRIKES MEAN LOSS

Workers do not strike because they like to do so; every strike means a loss in wages to the laborer. The men of labor strike because it is the only device available for gaining and maintaining a decent standard of living for themselves and their families.

The recent country-wide demonstrations against the present antilabor legislation should give pause to every thinking Member of Congress. We must realize that such demonstrations were made by individuals and not by some extraneous force known as "labor."

It is said that the Hartley bill was aimed at doing away with industrial strife. The recent demonstrations should make the record clear that it will do just the opposite. Legislation which is designed to destroy the labor movement and to force the worker into a condition of serfdom, will not eliminate labor unrest. Forcing the laborer to submit to every whim of his employer or of an unsympathetic Government is not the way to industrial peace. This is the road to serious industrial strife.

Mr. Speaker, this slave-labor bill violates every principle of Americanism—it violates the rights of the people under the Constitution and the Bill of Rights. It is designed to take away the fundamental rights of labor to organize, to bargain collectively and to strike. It is

an instrument of industrial slavery. It is designed to destory the American labor movement and sacrifice the living standards of the people on the altar of corporate profits. It will not make for industrial peace, but will precipitate conflict between labor and management.

In closing my address, I want to condemn this measure as an effort to impose the hand of tyranny upon a free people. As such I must vote against it.

Resolution Adopted by Delegates of Textile Workers Union of America in Boston

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a resolution on minimum wage adopted on May 24, 1947, at the Bradford Hotel, Boston, by the Textile Workers Union of America, CIO:

MINIMUM WAGE RESOLUTION

Whereas the Republican Party is now in undisputed control of the Congress of the United States, and many New England Representatives and Senators are among the most influential Republicans in Congress, including Representative JOSEPH W. MARTIN, Jr., Speaker of the House of Representatives; Senators LEVERETT SALTONSTALL and HENRY CABOT LODGE, Jr., of Massachusetts; Senator WALLACE H. WHITE, Jr., of Maine, majority floor leader of the Senate; Senator OWEN BREWSTER, of Maine; Senator STYLES BRIDGES, of New Hampshire, and others; and

Whereas the Republican-controlled Congress has seen fit to pass legislation placing severe restriction upon the activities of labor unions, thus effectively restricting the improvement of the living standards of workers and the organization of the unorganized, particularly in the predominantly unorganized South; and

Whereas New England Members of Congress will easily recall the postwar years of World War I, when cut-throat competition brought about by low wages in the Southern textile industry closed scores of New England textile mills, made ghost towns of many Northern textile centers and ravaged the economy of whole communities; and

Whereas New England textile manufacturers and Members of Congress, no less than New England textile workers, must look with grave apprehension upon the least possibility of a return to such conditions; and

Whereas the Interstate Commerce Commission, with the approval of the Supreme Court of the United States, recently approved an equalization of freight rates as between the North and South, a ruling that will cancel a substantial cost advantage hitherto enjoyed by Northern manufacturers; and

Whereas an increase in the legal minimum wage from the present 40 cents an hour to 65 cents an hour immediately and 75 cents an hour within 2 years is the least action that Congress can now take to prevent a return to the chaos and insecurity to which the Northern textile industry was subjected in the 1920's and the early 1930's; and

Whereas enlightened self-interest must impress the logic of this position upon Northern textile manufacturers and Republican Members of Congress, entirely aside from the vast social benefits that would derive from an immediate increase in the legal minimum wage: Now, therefore, be it

Resolved, That this conference, representing 90,000 New England cotton textile workers who are members of the Textile Workers Union of America, CIO, call upon every United States Senator and Representative from New England immediately and forthrightly to endorse the 65-cent to 75-cent minimum-wage bill, work for its speedy enactment, and vote for its passage; and be it further

Resolved, That this conference call upon all other divisions of the union, in every industrial field, to make similar demands upon their own Representatives and Senators; and be it further

Resolved, That copies of this resolution be forwarded to every New England Member of Congress.

Health Hazards of Workers in the Foundry Industry

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. SADOWSKI. Mr. Speaker, we often hear of so-called labor abuses. Under this carefully planned misrepresentation the most repressing kind of legislation is now being pushed through Congress. The abuses by industry are not very often mentioned these days. It is only when such dramatic events as the mine explosion occurs or a chemical plant blows up, that we think of the risks under which men and women work. I trust, Mr. Speaker, that my colleagues in Congress will weigh carefully the speech by R. J. Thomas, vice president of the United Automobile Workers, CIO, which I am inserting in the RECORD together with a resolution passed by the foundry workers organized in the UAW, as follows:

SPEECH OF R. J. THOMAS, VICE PRESIDENT AND DIRECTOR, COMPETITIVE SHOP DEPARTMENT, READ AT THE NATIONAL FOUNDRY COUNCIL AT CLEVELAND, OHIO, APRIL 25–27, 1947

I regret very much that the pressure of business at the international executive board meeting in Detroit might make it impossible for me to attend this First National UAW-CIO Wage and Hour Foundry Council meeting. Though I may not be able to attend this council meeting, you may be sure that I will not neglect to carry out the express desires of the delegates to this foundry council.

I should like at this time, to report to you concerning the resolutions adopted by the international executive board as they relate to the foundry workers. In accordance with the mandate of the Milwaukee foundry conference for the establishment of a permanent wage and hour council, I introduced a resolution at the New York meeting of the international executive board calling upon them to approve the establishment of an industry-wide foundry council. I am pleased to announce to you that in compliance with your resolution and in accordance with my suggestion, the international executive board has authorized the establishment of a permanent national foundry council together with geographical subcouncils.

Only yesterday, the international executive board acted favorably on all resolutions referred to it by the Milwaukee foundry conference There will be a more detailed report on this later. I wish only to say at this time that the executive board has acted favorably upon your recommendation for the calling of a national CIO foundry conference to be composed of delegates from foundry locals within the UAW-CIO, the United Steelworkers, the United Electrical Workers, and the mine, mill, and smelter workers.

Other matters which had been discussed at the Milwaukee conference have been taken up directly with the various departments and regional directors of the UAW-CIO. Your resolutions concerning fair employment practices and discrimination in the foundry industry were called to the attention of the UAW-CIO fair practices department some time ago, with the request that that department undertake a special campaign to eliminate racial, national and sex discrimination in that section of our industry in which discrimination is so viciously apparent. Every regional director of the UAW-CIO has been called upon to make a special survey of foundries in his region—particularly nonferrous foundries—for the purpose of conducting an intensified organizing drive.

At your last conference in Milwaukee, you will recall that I urged the delegates to pay particular attention to the problems of health and safety in the foundry industry. The events of the past few weeks have served to emphasize the importance of health and safety conditions in industry and the need for the complete mobilization of organized labor to fight the wholesale butchery of workers by the monopoly employers of industry.

The American people were shocked by the revelations of the committee that investigated the Centralia mine disaster, in which 111 of our brothers in the United Mine Workers Union lost their lives. That investigation proved conclusively that the Centralia mine had for months been declared unsafe, but that the mine operators refused to install safety equipment because they did not want to spend the few thousand dollars involved. And this flagrant violation of the law was winked at by State mine inspectors because the owners of the Centralia mine were heavy contributors to the Republican Party campaign chest.

In the recent explosion in Texas City, Tex., hundreds upon hundreds of our brothers and sisters—some of them members of the National Maritime Union; others, workers at the Monsanto Chemical Co.—lost their lives because the hazardous safety conditions—which had been called to the attention of the employers by the workers—were never corrected. There can be no question but that the captains of American industry do not intend to show to their workers even the same care and consideration they show to their machine.

In 1946, American industry received $3,000,000,000 in tax rebates from the United States Treasury. In 1946, American industry made a fantastic total of $15,000,000,000 in profits. But American industry could not afford a cent to save the lives and preserve the health of the workers from whose labor those profits were made.

I most earnestly urge that the delegates to this council draw up suggestions for a proposed Federal health and safety code for the foundry industry. The monopoly employers of industry have no intention whatever of taking any action to safeguard the health and safety of the workers. We must—and will—take that action ourselves. I recommend upon adoption of a suggested Federal health and safety code for the foundry industry—together with provisions for regularly monthly inspections of all foundries—that a committee representing the foundry workers of the UAW-CIO go to Washington to meet with the United States Bureau of Labor Standards and Members of the United States Congress to demand enactment of the required legislation.

There can be no question but that conditions in the foundry industry are as hazardous as they are in any industry in the country. An explosion in a coal mine is spectacular, and the miners die swiftly. In the foundry industry, the workers die the slow and lingering death of some form of silicosis. In both cases, disease or death is the inevitable lot of the workers; and in both cases, responsibility for the existence of the hazards that lead to disease or death rests directly on the shoulders of industry.

These conditions must be—and they will be—wiped out. But their elimination will require the unity of all of organized labor and its militant determination to fight the employers and their reactionary agents in Congress and the Administration until the battle has been won.

You have my best wishes for a constructive and a successful meeting. I am sure that the foundry workers can be counted on now—as they have always been counted on in the past—to meet the problems that face the labor movement with fighting courage and militance.

RESOLUTION 2 OF FOUNDRY WORKERS ON HEALTH AND SAFETY

Whereas current hazards in the Nation's foundries are annually exacting a tremendous toll in deaths, disabilities, and occupational diseases; and

Whereas in the main this dastardly condition stems from the haphazard controls loosely exerted by the various States; and

Whereas the aforementioned condition closely parallels that existing in the mining industry: Therefore be it

Resolved, That this conference go on record in petitioning Congress and the proper officials in the Dominion of Canada to establish a bureau of foundries, with the express direction that said agencies establish a minimum of working conditions with a policing force to guarantee its observance; and be it further

Resolved, That a committee representing the foundry workers of the UAW-CIO go to Washington to meet with the United States Bureau of Labor Standards and members of the United States Congress, as well as the equivalent authorities in Canada, to demand enactment of the required legislation; be it further

Resolved, That copies of this resolution be sent to all UAW-CIO locals, the Department of Labor, the Senate Labor Committee, the House Labor Committee, and/or the equivalent authorities in Canada, and the international union.

Labor Bill Conference Report

EXTENSION OF REMARKS
OF
HON. W. HOWES MEADE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 4, 1947

Mr. MEADE of Kentucky. Mr. Speaker, I am casting my vote for the conference report for the reason that I am a friend of the laboring man.

I voted against the Hartley bill H. R. 3020 when it passed this House 308 to 107 with a majority of the membership of both the Democratic and Republican Parties voting for the bill. This bill in my opinion was vicious. The reason for such a lopsided vote of 308 to 107 was that the public was demanding labor legislation. In my opinion, the public was influenced by unfair labor practices such as jurisdictional strikes and secondary boycotts. These instances received wide publicity and influenced public opinion.

This bill as reported by the conference is in no way related to the original Hartley bill. This bill will, in my opinion, cure the cases that cause the bad publicity and therefore help the great labor movement. This bill will not in any way hurt any of our hard working laboring men. It will help them by weeding out radicals and wrongdoers who create unnecessary disorders. It will strengthen all legitimate labor unions.

I am interested in the coal miners in this country. Their life is a hard one. In too many cases their life is a short one because of the lack of proper enforcement of the safety laws. This bill will have only one effect on them: If, when a strike is called in the coal industry, the President deems that the strike will endanger the Nation's health and safety, he can order the Attorney General to seek an injunction for a period of 80 days. At the end of the period of the 80 days the men, by secret ballot, vote whether or not the last offer of the coal industry should or should not be accepted. If a majority of the mines vote against acceptance the strike goes on. If the majority vote for it the terms of the offer will be accepted.

A fund of $150,000 is provided for the study of labor-management relations. If there is anything in this bill that should react in a way to hurt rather than help our labor movement I will be the first to demand its repeal.

Federal Gasoline Tax

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 4, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith a copy of Senate Joint Resolution 16, passed by the Sixty-fifth General Assembly of the State of Illinois:

Senate Joint Resolution 16

Whereas there was imposed by the Revenue Act of 1932, enacted by the Seventy-second Congress, a tax of 1 cent upon every gallon of gasoline sold in the United States; and

Whereas this excise, although originally imposed upon the people of the United States as a measure to endure only for the period of the depression, has not only been continued until the present day but was actually increased by 50 percent in 1941; and

Whereas both the economic depression which was cited as justification for the original levy, and the war emergency under pressure of which the tax was increased, have for all practical purposes ceased to exist; and

Whereas it is an accepted principle of political economy that funds obtained from taxation of gasoline and lubricating oils are to be used only for improvement of roads and motoring conditions; and

Whereas the receipts from this tax are not allocated to a special fund, appropriation from which is restricted to the purposes mentioned above; and

Whereas by its action the Federal Government has tapped a source of revenue which has always been regarded as a State prerogative and has usurped powers which the Constitution reserves to the States and the people: Therefore be it

Resolved by the Senate of the Sixty-fifth General Assembly of the State of Illinois (the House of Representatives concurring herein), That we hereby petition and memorialize the Eightieth Congress of the United States to repeal immediately those provisions of the Revenue Act of 1932, as amended, which impose a tax upon the production and distribution of gasoline; and be it further

Resolved, That copies of this resolution be prepared by the secretary of state and forwarded to every Member of Congress from the State of Illinois.

Adopted by the senate March 12, 1947.

HUGH W. CROSS,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Concurred in by the house of representatives, May 22, 1947.

HUGH GREEN,
Speaker of the House of Representatives.
FRED W. RUEGG,
Clerk of the House of Representatives.

Labor Legislation

EXTENSION OF REMARKS
OF
HON. J. HOWARD McGRATH
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES

Thursday, June 5 (legislative day of Monday, April 21), 1947

Mr. McGRATH. Mr. President, our distinguished colleague, the senior Senator from New York [Mr. WAGNER] prepared an address on the subject that is now before the Senate, which was delivered on his behalf at an American Federation of Labor rally at Madison Square Garden last night, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My friends, on numerous occasions it has been my privilege to speak from this same platform, in behalf of great causes, in the interest of justice, in defense of fair play. Frequently, I have had the honor of addressing you, the members and friends of organized labor, for you have been most steadfast and loyal in defense of all the freedoms that add up to America.

The fact that labor is under attack is nothing new. It has been going on since working men and women of this country first undertook to organize in defense of their inalienable rights.

The labor act which is about to be passed by Congress tries to do to labor what all the enemies of labor have tried so hard to accomplish during the last century and, more particularly, during the last decade.

"Oh, no," cry those who are urging the passage of this act. "We are your friends, we want to help you, we want to free you from the strange hold of your leaders, we want to equalize things. After all, you don't want to have an unfair advantage over your employer."

My friends, imagine saying this to the workers when real wages have been on the decrease since the end of the war while prices have skyrocketed.

Imagine saying that labor has too much power, when labor and its friends couldn't even succeed in persuading this reactionary Congress to maintain price control, or increase the minimum wage, or pass a health and educational aid program, or legislate more effective control and regulation of monopoly, or enact an equitable tax program, all of which would be of great benefit not only to labor, but to the whole American people.

Such hyprocisy should come as no surprise. It was shown up by George Meany, one of your ablest leaders, a few days ago. He referred to the Republican platform of 1944, which stated: "The Republican Party accepts the purpose of the National Labor Relations Act, the Wage and Hour Act, and the Social Security Act, and all other Federal statutes designed to promote and protect the welfare of American working men and women and we promise a fair and just administration of these laws." Mr. Meany quoted the promise of the 1944 Republican Presidential candidate to continue the National Labor Relations Act a "good and necessary law".

My friend and your friend, Franklin D. Roosevelt, in his famous speech before the International Brotherhood of Teamsters in Washington in 1944, summed up this hypocracy when he said: "I cannot talk out of both sides of my mouth at the same time."

Today, my friends, the enemies of labor have done a little streamlining. Once upon a time, people who were against labor unions and the rights of labor admitted it. They publicly denounced unionism. But that failed.

The new approach is simple. No longer do the enemies of labor confess to what they are. They now call themselves "moderates". They now say that they are really the friends of labor, striving desperately to prevent the opposition from "going too far".

Let me warn you again these self-styled "moderates"—these men who want to walk in the middle of the road so that they can curry support from both sides at once. They are all the more dangerous because of their devious ways.

They are the ones who say that it would be going too far to chop off the heads of labor unions. They want to be more gentle and kill labor unions by degrees.

They are the ones who say that it would be going too far to shackle labor hand and foot. They only want to tie the workingman's hands behind his back, put a blindfold around his eyes, and leave his feet free so that he will have a chance to run for his life. This is what they consider fair.

Beware of these soft-spoken gentlemen, who are trying to persuade labor that, if not for their efforts, things would be worse. They are just trying to use the stiletto instead of the blackjack. But these double-talking politicians sometimes give themselves away in an unguarded moment—as, for example, when one of them said recently that the labor bill was now just perfect, and that he and Senator Taft saw eye to eye to it. I do not need to name names—you know what is going on, and nobody is going to pull the wool over your eyes twice in a row. Once was enough.

Now what does this foul labor legislation before Congress today actually do? It substantially removes the safeguards of the Norris-LaGuardia Act, by allowing injunctions in a variety of situations. It imposes hundreds of restrictions upon the administration of the National Labor Relations Act. It allows company unions to reappear on election ballots. Under the pretense of giving the employer the right of free speech, it prohibits the use of anything an employer says as evidence against him.

It outlaws secondary boycotts aimed at defeating sweatshop conditions. It makes the Government the sole arbiter of jurisdictional disputes. It forbids or removes collective bargaining on such vital issues as the closed shop, the union shop, the check-off and health and welfare funds. It requires unions, as a condition of seeking legal redress, to file reports so detailed and burdensome as to paralyze effective action. It makes it illegal for a union to expel from membership a labor spy or one who has stolen the union funds, or one who has led wildcat strikes. It eliminates the power of a union to remain internally strong and united.

It strengthens the power of communism within the trade union movement by visiting the penalty for having a Communist officer upon all the members of the union—Communist, non-Communist, and anti-Communist alike. It weakens the Department of Labor by breaking it up. In 73 pages of text our labor policy is warped and distorted to make the Government a strike-breaking, union-busting instrument.

This foul bill makes sure that you, who believe in rewarding your friends and punishing your enemies, can't penalize those who vote for this outrageous law. It would prevent any expenditure by a labor group for any political purpose whatsoever that had to do with the election of a Federal officeholder.

My friends, the National Labor Relations Act, which the current labor bill will so emasculate, is engraved in the hearts of our people. It is more than print in a statute book. When I wrote the law, I explained it in eight words. I said, "This is a law to make men free." Under the National Labor Relations Act, millions of men and women have breathed that freedom into their daily lives. Let those who would now destroy it learn first to legislate blood out of men's hearts. I make no plea for the National Labor Relations Act just because my name is on it. Its wisdom has been attested to by the highest judges in this land. I merely venture to warn, out of no despair but in full confidence in our people, that the course the present Congress is about to pursue is an attempt to root out industrial self-government—and this miserable effort will fail.

My friends, I stand before you today to predict that if the legislation now before Congress should become the law of the land, that day, too, "will live in infamy." Such confusion and chaos and such clashes between employer and employee, and ultimately, yes, between class and class, may come to pass that American industrial life and democracy as we know it, and as my dear, departed friend and our greatest President, Franklin D. Roosevelt, envisioned it, may well be destroyed—perhaps never to be resurrected.

It is up to you, the American working men and women, to stop it.

You have a stanch friend in the White House—in Harry Truman. I do not believe that he will ever sign this monstrous bill. But you must marshal all your forces to make sure that the reactionary Congress does not ride roughshod over the wishes of President Truman and all other decent men.

I call upon you to rise up in your just indignation and smite down your oppressors and betrayers.

Disarmament Must Come Eventually

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an article by Mr. Norman Thomas, which appeared in the June 2, issue of the Progressive. It is timely, it is challenging, and Mr. Thomas' approach to the problem is very realistic. I commend it to all Members of the House.

THE PRICE OF PEACE

(By Norman Thomas)

It is a desperately hungry world. Before the war it was commonly said that at least half of the world was ill-fed, by any proper standards of nutrition. Today the United States, Canada, and a few small countries are the only nations that can be said to be well fed, and in the United States we have by no means ended the reproach that "one-third of our people are ill-fed, ill-clothed, and ill-housed."

Yet Hanson Baldwin in his sensational survey (published in the New York Times, May 12, 1947) tells us that almost 19,000,000 men are in the armies of the world; that the total cost of getting ready for the next war is at least $27,400,000; and that the nations after "total victory" over the "war-loving"—but now disarmed—Germans and Japanese "are spending perhaps $10,000,000,000 more on armament than they did on the eve of war in 1938." Of the Big Five, Russia and the United States spend most. The tremendous Chinese armies are caught in civil war, and poverty-stricken France in the midst of her own internal crisis sends 1-year conscripts "to replace casualties" in her infamous colonial war in Indochina.

It is fantastic nonsense to talk economic rehabilitation, international cooperation, or lasting peace under these conditions. Already our only hope of peace seems to rest upon mutual fear of rival armaments. This is a situation out of which ambitious rulers of the nations will almost certainly blunder into the kind of war which may literally be the end of the human race.

The final price of peace is something more in our quarreling world than universal disarmament. But universal disarmament under effective international control is the absolute and initial condition for solving the problems of hunger and of war.

The readers of the Progressive are aware that ever since the war's end I have been a man with a specific cause, and that cause, disarmament. I am increasingly puzzled and frightened at the lack of response to a proposal whose benefits would be so tremendous and so obvious. Many men in more or less high position have spoken more or less clearly in favor of disarmament. But very few have tried to make it an immediate and pressing issue.

Take Henry Wallace, for example, the self-appointed champion of peace. He has said some vague good words for disarmament, but he had made no major issue of it. Instead, he seems to put his trust in a negative opposition to the Truman doctrine of military aid to Greece and Turkey—an opposition which I share for rather different reasons; an uncritical and much too optimistic faith in the United Nations as it is now organized, and an exhortation to the United States to devote billions of dollars to world rehabilitation. He has also favored some sort of international control over the world's supply of petroleum.

Can he not see that these economic proposals, good in principle, are fantastically utopian so long as all nations, big and little, devote a very large part of their revenue and their attention to competitive armament?

Let us put it bluntly. There might be a sound case for a large American loan to Russia, despite the difference between us, if both nations were disarmed and prosecuting what conflicts may arise between them on a nonmilitary plane. But so long as the Soviet Union devotes a high percentage of its entire national income to armies and armaments at

tragic cost in poverty to her people; so long as she uses her own armies and those of her satellite nations for the kind of imperialism she practices in eastern and central Europe, it is unthinkable that the United States will or should lend her vast sums for economic rehabilitation and industrial progress that would release Russian resources for more and better armaments.

It is equally absurd to assume that nations which have not agreed on the international control of atomic energy will agree on any sort of pool of petroleum resources under the auspices of the United Nations or any other international body. There may be some pious talk about this sort of thing; there will be no effective action until at least there is agreement on the elementary proposition that a hungry world cannot afford the present race in the manufacture of weapons for its own probable destruction. Disarmament is the preliminary condition for every other approach to true internationalism or lasting peace. But somehow that elementary fact has not captured the popular imagination as it ought.

On this matter I speak with authority born of much experience. I have spoken on the subject across the continent, over the radio, and on the platform. I have written articles about it—one of them in the Progressive; the Postwar World Council has circulated my pamphlet on this theme, and Henry Holt has published my book, Appeal to the Nations.

In forum discussions, letters, and reviews of my book, my plea for effective disarmament has met with comparatively little direct opposition. Skepticism is perhaps the one word which best describes the attitude toward it. Usually that skepticism is born of fatalistic acceptance of atomic war, appalling to contemplate. Rarely do the skeptics offer any alternatives to my proposals for universal—not unilateral—disarmament under effective international control, which necessarily involves the rapid liquidation of all forms of imperialism. Nor do they try to answer in any detail my argument that disarmament is the essential next step.

The exceptions to this statement are the enthusiastic advocates of world government as an immediate possibility and necessity. These critics are at one and the same time too optimistic about the possibility of genuine and full-fledged world government now, and too pessimistic about the values of disarmament, not only as an immense beginning in the establishment of lasting peace, but as containing in the controls it would require the seeds of a desirable growth of world government.

I, too, believe that the right sort of world government is the ultimate guaranty of lasting peace, but no one can look realistically at the attitude of men and nations and believe that it can be achieved in any near future except as it conceivably be imposed by ruthless force. Conceivably, Communist and non-Communist nations or blocs of nations may live in one world without war. However sharply rivalry and ambitions for power may divide them, they do have a common interest in the continued existence of the human race.

The degree of international control necessary to supervise and enforce disarmament and to police a quota system would still leave each nation free to carry on its own way of life. Gradually, through functional cooperation and the growth of world citizenship, true world government might be established. But I cannot imagine being willing to risk the destiny of America or the cause of world peace and human progress in any conceivable federation in which the preponderant voting power would be Russian and Chinese. Nor can I imagine Stalin or even Chiang Kai-shek taking a risk on coming under the rule of a world assembly organized on the pattern of any of the schemes of weighted representation which American advocates of immediate world government have proposed.

Meanwhile, it may sound hard-boiled and realistic to say, "If you can't get world government, you can't get disarmament." It is probably true you can't keep disarmament without growing toward fuller world government, but logically it is absurd to say that all the difficulties in the way of world government apply equally to world disarmament under the limited controls that it would require.

By no means do the main obstacles to disarmament arise from a few extreme advocates of world government now. Usually, they arise from men and women who say, "Stalin won't agree." The specific formula which the American Government employs runs something like this: Agreement on international policing of atomic energy and of general security must precede universal disarmament. Since it is clearly the Soviet dictatorship which holds up such agreement, it is useless to discuss disarmament.

That is a negative approach, far from persuasive. A better psychological approach would be an American plea for the positive advantages of disarmament which would in turn require international supervision and control. Disarmament, we ought to proclaim, is our goal. It is vital to peace. It requires certain agreements for controlling atomic energy and protecting international security. They must be worked out as an essential part of the process of disarming, even if certain changes are necessary in the San Francisco Charter. The failure of the piecemeal approach we have tried with regard to atomic energy and a workable international police force is in itself an argument for this different emphasis and approach.

Maybe Stalin won't agree to a properly organized plan. His very failure would show us where we stand and on whom and what we have to count.

In any case I am becoming more and more persuaded that consciously or unconsciously a great many Americans say "Stalin won't agree," when they mean, "We don't want real disarmament."

I don't think that as yet America is either a militarist or an imperialist nation, but there are strong militarist and imperialist forces among us. When the President's budget would set aside 30 cents out of every taxpayer's dollar for armed forces and armaments, it means that getting ready for war is big business.

It is, I still insist, possible that the Soviet dictatorship in the interest of its own people might agree to that disarmament to which Molotov and Gromyko have already given lip service, even although it would require an effective form of international control to which heretofore they have objected. No people would gain more than the Russians were they free to use their manpower and resources for the business of building up their vast territories and relieving their desperate poverty of consumer goods.

If Stalin should reject effective controls of disarmament, it would be for various reasons. Whatever Communist propagandists tell the Russian people, the rulers probably count on the fact that there is enough decency in the United States to make impossible a preventive war while we still have the monopoly of atomic bombs. Stalin also in his mind believes that we are heading, as indeed we are, for a depression—a depression of such magnitude that we shall be preoccupied with our own domestic troubles.

More than all this, every ruthless dictatorship needs to be able to threaten its people with a foreign enemy to justify its own grim tyranny. Only so, the dictators say, can you have security. (One of the chief objections to military aid to Turkey is that in the minds of most Russian people aid to their ancient enemy, right across the mountains from their oil fields, will seem to justify their rulers who cry out against the danger of Russian "encirclement" by "Anglo-American imperialism.")

In view of these considerations I do not plead for an American appeal for universal disarmament because of an easy assurance of Soviet agreement. I plead for it more than ever in the light of the Truman doctrine, because if America should make this appeal she would light a fire of hope and determination in the peoples of the world which no dictatorship could crush out. She would clear the air and line up the nations on a basic principle. She would do more to check Communist aggression than by any other means.

Make no mistake about it. Europe and much of the world regard us with a degree of suspicion, justified perhaps by the history of imperialism, even if it is not altogether fair to our own American record and present intentions. You can't blame the European peoples for a desperate concern for peace and a steadfast determination not to be drawn into war against their mighty Soviet neighbor.

Henry Wallace's reception in Europe is only one bit of evidence that the Truman doctrine is regarded with suspicion as a more likely breeder of war than a guarantor of peace. Still less can you blame the colored races for a deep-seated mistrust of Anglo-American imperialism and racial arrogance. They know full well what Jim Crowism has meant in America and how much worse is white supremacy in South Africa.

There is one way and only one way to break down this mistrust and to prevent clever and unscrupulous Communist propaganda from exploiting it to achieve a steadily growing moral isolation of the United States. That one way is for America, temporarily the strongest of nations, to propose universal disarmament (with which must go the liquidation of imperialism) under entirely practicable forms of international control.

Such disarmament—I repeat it again and again—must include far more than the international control of atomic energy. It will require the universal abolition of peacetime military conscription; the demilitarization of narrow waterways and island bases; the reduction of armed forces and armaments on land and sea and in the air to a police level for maintaining internal order, and the liquidation of all forms of imperialism which in the last analysis rest on armed might.

Comparatively simple reforms in the United Nations would permit it to set up satisfactory systems of inspection and control. (These reforms I have discussed at some length in my book Appeal To The Nations. Ely Culbertson has discussed them from a somewhat different angle and at greater length in his Must We Fight Russia?)

This sort of disarmament would automatically settle questions like the problem of the Dardanelles. It would enormously reduce the tension over strategic boundaries and the ownership of oil wells. It would greatly simplify the difficult problems of rehabilitation and world trade. It is the only alternative to the mad effort to get peace by one or the other opposite follies of appeasement or preventive war. It is, in short, the essential next step for peace, a step for which there is no substitute and without which other proposals, desirable in themselves, will either fail altogether or do little to still the fears, the hates, and suspicions which sweep us toward the doom of atomic war.

President Truman, if only he had made universal disarmament his doctrine, would have won a place in the affection of mankind that he cannot win by American military intervention, allegedly to stop Communist aggression. It is not yet too late if only the

people of America—yes, of the world—will demand immediately of their rulers this guarantee of life for their children. Let America lead in this appeal to the nations, and no Soviet dictatorship can forever keep its people from following that lead.

The Closed Shop—Analysis of Section 8 of H. R. 3020

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Thursday, June 5 (legislative day of Monday, April 21), 1947

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an analysis of section 8 of the bill now pending before the Senate, House bill 3020.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

AN ANALYSIS OF SECTION 8 OF H. R. 3020 AS PASSED BY THE SENATE OUTLAWING THE SO-CALLED CLOSED SHOP

The 7,500,000 members of the American Federation of Labor are divided up into approximately 40,000 local unions affiliated with the national and international unions or directly affiliated with the American Federation of Labor.

Four million members of these 40,000 local unions are now working under union-shop contracts. In a number of instances union-shop contracts are entered into between the employers' associations and the national or international unions covering the affiliated local unions on an industry, regional, or local basis.

Most of the local unions have business representatives and maintain offices, which is the focal point for their membership. Day-rooms are maintained where unemployed members can congregate daily for the purpose of finding employment. The business representative acts as the counselor and employment agent.

The practices referred to herein would be wiped out completely by H. R. 3020 as passed by the Senate. Employers would be prohibited from making agreements that would permit this practice to continue. In its stead, provisions are made for union-shop contracts where anyone may be hired with a provision that he join the union in 30 days and where a majority of workers affected vote for same, under the supervision of a National Labor Relations Board. This, in itself, is a highly impractical feature, one that cannot possibly be carried out and one which, if attempted, would bring a tremendous financial burden to bear upon the taxpayer. Where today a union may enter into a union-shop agreement with a large number of employers through the employers' association, under the terms of H. R. 3020 passed by the Senate, labor elections would be necessary in each shop.

It is inconceivable that a bureaucracy could be created that would adequately supervise the elections of the literally tens of thousands of contracts to be entered into. All of existing contracts would have to thus be supervised, and elections, in connection therewith, held.

The bill further provides that the union under a union-shop contract is compelled to take into its membership anyone the employer places to work on the same terms as the other members of the union were admitted to membership. This precludes the possibility of the union maintaining discipline by placing fines upon its membership for infractions of union rules, such as strike-breaking or lesser infractions. It opens the way for the strikebreaker, the undercover spy, and the Communists to infiltrate into labor unions to which they would otherwise be ineligible. One glaring inconsistency is that it provides that unions must take into membership Communists who are hired by employers who can in time aspire to office in the union, under the democratic procedure of the unions in the American Federation of Labor, and once in the position of an officer of the union such union's rights as a bargaining unit are nullified under the terms of this bill.

Radio Broadcast on Housing Situation

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 3, 1947

Mr. LANE. Mr. Speaker, I would like to include herein a radio address which I delivered over Station WMEX, Boston, Mass., on Thursday, June 5, 1947:

HOMES FOR THE DISPLACED PERSONS OF THE U. S. A.

Ladies and gentlemen of the radio audience, the present housing shortage is not only a critical problem for millions of Americans but is also a national disgrace. The most powerful nation in the world, with a wealth of material and construction skill, is making very little progress toward the solution of this No. 1 need.

People can do without certain articles of clothing and can sacrifice some items of food which are beyond their reach, but they cannot endure lack of decent shelter.

Outside the normal increase in population, other factors have worsened the situation. These include demobilization of large numbers of veterans, less intensive use of housing accommodations, the trend away from construction of rental units, and the change from tenant to owner occupancy.

In 1945 over 6,000,000 veterans were returned to civilian life. Through 1946, the number was increased by 5,600,000. Up to the end of February, this year, 200,000 more were demobilized. The delayed impact of 12,000,000 veterans coming back to a housing shortage that was already severe gives some idea of the size of this peacetime emergency. When you add to this the fact that more than half the veterans are married and want to establish homes of their own, you can readily see that the veterans who saved the Nation have become its displaced persons. While our hearts and our purse strings have been opened on a bountiful scale to the peoples of other lands, we have not succeeded in providing for the shelter needs of our own big family here in the United States.

At the beginning of this year there were 2,200,000 married couples in nonfarm areas who were doubled up in homes with other families, and about 300,000 married couples were living in hotels, rooming houses, tourist camps, shacks, garages, and chicken coops. The net number of new families which will be formed during 1947 will come to 500,000. Even allowing for the most optimistic figures as to the number of dwellings which will be completed this year, it is plain that by next winter more than 2,000,000 families will still be without homes of their own.

Real-estate boards blame the uncertain price situation, which has already gone far beyond the reach of many people who want to build their own homes, for the lag in building. They also claim that a continuance of rent control is holding some available space out of the market. On the other hand, a few real-estate operators wish to see rent control continued because they fear that without controls there will be a speculative boom and bust which will be disastrous to tenants and owners alike.

Be that as it may, we know that there is a great imbalance in the use of such housing as is available. During the war years many families enjoyed large increases in income. One result of this was a less intensive use of housing accommodations. The Bureau of the Census estimates that in the year 1945 over 29,000,000 dwelling units were occupied by four or less persons per unit. This was nearly 4,000,000 more units than were so occupied in 1940. To put it in another ratio, 54.9 percent of all occupied dwelling units in the United States had three persons or less in 1940, while in 1945, 60.2 percent contained three persons or less. Some people were using more housing space than formerly, and would not make room for returning veterans.

As a result, veterans have been forced to double up with other families or in-laws with consequent loss of privacy, which leads to friction. Oftentimes young husbands and wives are forced to live apart in order to get any kind of accommodations. In either case the social dangers are serious. The young veteran and his wife and his children have no chance to set up a normal home life, which is the very foundation of individual and national security. He fought to preserve this for all of us, but he finds that the door to decent housing is closed to him. Small wonder that many have become bitter and more disillusioned by the Nation's failure to solve this domestic problem.

Last year exhaustive hearings were held on the Taft-Ellender-Wagner housing bill. Testimony pro and con on this and related measures has continued through the present session of Congress. With adjournment coming closer every day, it is unlikely that the Congress will enact this remedial legislation unless a vigorous expression of public opinion demands action. The housing shortage is critical. It will be worse next year unless the Congress adopts a comprehensive national housing policy. You, the people, must write to your Senators and Representatives, insisting that this be done before the national legislature goes into recess. The character of family life, the conditions under which our children grow up, and the attitude of the people toward our system of Government are influenced by the environment in which they live.

The over-all shortage of decent accommodations has been with us a long time. Only recently has it become desperate. Millions of American families are compelled, for reasons beyond their control, to live in substandard housing and in slums and blighted areas. For many, many years, the volume of house construction has not kept up with replacement needs. Apart from the need for more housing, it is estimated that a minimum of 6,000,000 houses are firetraps or disease breeding, so dark and crowded and unsanitary that they promote delinquency and crime. These must be torn down and replaced by decent structures.

In the light of this, the housing problem becomes a twofold challenge. The current shortage must be overcome, and new construction must accommodate the annual net increase in the number of new families. At the same time we must try to eliminate slums and run-down areas, replacing them with decent housing for the people who live in such places and at prices they can afford to pay.

To do all this, we must build at a rate of 1,500,000 houses a year over a sustained period. The size of the job is emphasized by the fact that the highest previous peak

of construction was reached in 1925, when 937,000 dwellings were started. To meet present and increasing needs and at the same time replace the backlog of bad housing, we must produce a yearly goal which is 50 percent greater than the building totals reached by the all-time high established in 1925.

An over-all attack on this problem is imperative.

Spokesmen for public housing and for private industry have admitted that neither one alone can measure up to the task. It is impossible to build a new house or a new apartment for the lowest-income group without subsidies, and that applies to the Government as well as to private industry.

The two must work together as a team.

It is important for Government on the local level to revise antiquated building codes. It is advisable for the building industry to abandon restrictive practices which have held back the production of homes. It is necessary for both to give every aid and encouragement to the technical improvement of home-building methods. Housing stands almost alone as an industry in which we hang on to handicraft techniques little changed from the past. The United States is able to produce more quality goods at lower prices than any other country in the world because it conceived and developed the mass-production method. There is no reason whatever why housing should not be produced by the same modern industrial means as clothing, household appliances, automobiles and most of the other things that we buy. Factory production of houses, to be assembled on the site, will not mean the end of conventional home building. It will simply reach lower in the income scale than present building methods do. Mass-production means lower prices and volume output. Houses which are being produced today, along conventional lines, are priced beyond the reach of the veterans and workers upon whom our national economy depends. Tailor-made houses alone will not solve the problem. We need to take bold and imaginative steps to modernize the home-building industry, to bring it up to the production levels of other industries. The A. F. of L. and the CIO have both endorsed the move for mass-produced houses for it would stimulate employment in the production of houses at the factories and in their erection on the building sites.

To meet the present emergency, we need the grass-roots enterprise of the people of Meriden, Conn. It is the same community spirit as that evidenced by the people of another New England city—Newburyport—in their approach to a different problem. In Meriden, Conn., however, the people are dealing with a commodity—houses—which they have had for a few years and will have for more years to come. Their immediate problem was how to utilize and expand what they had.

This community organized and planned. A survey was made to get figures on the housing needs. This was followed by a share-the-home campaign. Taking advantage of the State's offer to give a dollar for every dollar raised by the community for emergency veterans' housing, Meriden bought 40 quonset huts.

Then came the job of converting unused space into living units. Any owner who allowed the city to take over an attic, garage, empty wing, etc., and convert it into an apartment could lease this space to the city for 5 years without cost or profit. At the end of 5 years this renovated space would revert to the owner. For the 5-year wait he would get $4,000 to $5,000 worth of improvements scot free. Rentals over the 5-year period would return to the city its half of the investment. The State contributed the other half.

Here we have a perfect example of how one community helped to solve a good part of its emergency housing problem. Hand-in-hand with this, we must start on the basic long-range solution.

As a Representative in Congress from an industrial district, I am aware that the problem is most acute in the cities. The urgent demand is for rental housing on a multiple scale which private builders will not undertake. In the blighted wholesale and warehouse areas there are many unused and presently unfit buildings. Here and there you will find empty lots where dilapidated structures have been torn down to save taxes.

With this in mind, I am introducing a bill to encourage private builders in replacing slum areas with modern low-rent housing. Where the need is established by local authorities, I propose that the cities seize these run-down areas by eminent domain, paying proper values for what they take. The sites will be cleared, utilities put in, and the locations resold to private interests for immediate rental developments. The margin of loss suffered by a city in such exchange would be made up by Federal contributions to the amount of two-thirds. The cities would give lenient tax appraisals to stimulate the building of such private housing projects. All initiative and control would be on the local level.

Housing is a neighborhood crisis. The resources of the Federal Government should be used, in part, to underwrite the risks which must be taken. However, democratic enterprise and cooperation, teaming up local governments, civic-minded groups, and individuals, must be the prime movers.

The Congress of the United States wants to assist your community efforts. But it requires local leadership, expressing your city's needs and plans. Home-town get-up and go is necessary to solve home-town problems. And housing is the first of these.

Occupation Troops In Germany

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, June 5 (legislative day of Monday, April 21), 1947

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a timely and informative report on the status of our occupation troops in Germany, prepared by my friend Col. Julius Klein, of Chicago.

Colonel Klein is a cool reasoned man with highly developed powers of analysis. He is a veteran journalist, editor, and military man who served in both World Wars.

As a correspondent and soldier he has won the admiration of his superiors and commanders. He is a graduate of the School of Military Government of the University of Virginia. He commanded troops in the South Pacific and in the Philippines.

He holds the Oak Leaf Cluster to the Legion of Merit, the Bronze Star, the Soldiers Medal for Heroism, and the Philippine Distinguished Service Star. Recently he has been notified that the Government of the French Republic has honored him with the rank of Chevalier of the Legion of Honor. He was also assistant to the Secretary of War and the author of the first combat public-relations plan for the War Department, and is thoroughly familiar with the German problem, especially as related to subversive activities, as he conducted the first subversive activities investigation in the Middle West in 1933 and 1934. That investigation produced the first dossier of subversive elements in this country. Colonel Klein was at the time of this investigation a member of the Illinois National Guard, during which period Secretary of State George Marshall, then Colonel Marshall, was instructor for the Illinois Guard. I have great faith in the authenticity of his facts and the authority of his comments on this very vital subject.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

OCCUPATION TROOPS IN GERMANY

A recent public opinion survey,[1] conducted by the American Military Government in Germany, indicated that 19 percent of Germans are nationalists, 39 percent are anti-Semitic and 22 percent are racists. Previous surveys, polls and intelligence reports yielded equal, if not more sinister, evidence in regard to the postwar status of the German mind.

It is not my objective to raise the question as to how these figures could be reconciled with the educational program of the United States Military Government in Germany, a program of significance not only for the Germans but for all the world. It is beyond me to say whether such extremely slow progress in the reeducation of the Germans was to be expected. I am, however, occupied with questions of lesser magnitude but of immediate grave concern to the American people: How do our soldiers, officers, and civilians fare amidst an atmosphere of such dangerous prospects? Have they been oriented for a democratic mission in a demoralized, totalitarian-minded country? Do they export democracy or are they likely to import divisive matter of un-American nature?

Most of our troops in Germany are callow recruits of an average age of 19, living comfortable lives, exposed not only to the dangers of venereal disease and involvement in black-market activities, but above all, to the danger of being victimized by the Germans on every intellectual front.

In daily and cordial contact with Germans, many of our men are totally incapable of the conception that the people they "occupy" seek pity for profitable advantages. While many Germans are only too willing to make concessions to the vanity of their juvenile masters, they feel no compunction in disseminating sly propaganda, in discrediting other occupation forces, in summarily stigmatizing DP's as immoral and thievish, and in representing the Jews in a degrading light. Reveling in conflicts and clashes among the allied nations, the Germans merchandise invectives against our former allies and overlook no opportunity to deepen religious and racial divergencies of our troops.

At times with rare subtleties hardly perceptible to our soldiers and at other times with audacious frankness, the Germans blend fact and fancy in regard to their own guilt. Steadily bickering for benefits in their contact with our troops, the Germans generate disunity and suspicion with practiced skill.

The most dangerous bearers of confusion are German girls. Four to seven years old when Hitler took over, they never cut themselves adrift from ideologies which had been part and parcel of their childhood. Their influence on our soldiers is alarmingly great and becomes greater every day as long as

[1] Chicago Sun, May 4, 1947.

they remain ensconced in important positions in military installations and administrations. I do not strive to examine the value or the curse inherent in the fact that our troops associate widely with German females. Neither would it be within the scope of this brief to superimpose the 1946 figure of 21,000 German women afflicted with venereal disease in the United States zone upon the unknown but certainly remarkable figure of sex relationships between United States soldiers and German women. Yet, if we add those facts to others—to the fact, for instance, that nearly 3,000 men in Germany have applied for marriage licenses; or to the fact that some United States soldiers were willing to throw away their United States citizenship in order to be able to wed the fraulein of their choice—then the question as to how this fraulein-rule affects our young occupation troops emerges with frightening emphasis.

The answer, in a nutshell, is given by one of our foreign correspondents[2] and underlines squarely the findings and impressions of many other competent observers:

"Many GI's with whom I spoke thought that Hitler had not been far wrong in his destruction of civil rights and his persecution of the Jews. Some of their officers are openly pro-German. 'We fought the wrong people' is a comment frequently heard."

Let me say once more that I fully appreciate the endless difficulties encountered by our education missions in Germany in their task of dusting, rearranging, and removing some of the mental furniture of the Germans. Yet, while affirmative attitudes toward German recovery are understood and approved, it would be tragic indeed should we permit our young men's mental health to succumb while we are so unsuccessfully trying to educate the demoralized people of an unregenerate Reich.

The outcome of inquiries of many on-the-spot observers, my own investigations, and dispassionate corroborations such as undertaken by the veterans' relations department of the Antidefamation League—all point toward just such a disastrous possibility. If we consider that in the course of a 10-year occupation about 1,000,000 young Americans will come in contact with the Germans and their cleverly cloaked resurgence of lethal ideologies, we can assume with safety that a considerable percentage of our men will become indoctrinated with perverse ideas which we had to fight at such a heavy price.

If we plan for the future safety and health of America, we cannot afford to reckon with a yearly return to this country of veterans poisoned with racial and religious hate fermented in Germany. We cannot afford to have these veterans picked out, victimized, and proselytized by our home-made subversive demagogues. We cannot afford such a sibility, and particularly during the coming years, which more emphatically than ever before in our history call for unity.

Whatever changes in our occupation policy may be contemplated in the future, whether the status quo will be upheld or whether control of the United States zone will be transferred from military to civil authorities, the War or the State Department will have to carry the responsibility for the mental health of our young men in Germany.

This responsibility is one of the highest importance. At present this obligation is being shouldered by the War Department special staff, Information and Education Division. So far, considering the terrible odds with which those hard-working and conscientious men are faced, their accomplishments have been admirable. Realistic and hard-hitting education programs have been worked out utilizing round tables, radio discussion groups, Army talks. Distinguished civilians have contributed educational material of highest quality. In fact, the entire I. & E. output is better now than it has ever been before.

Yet, the men heading I. & E. realize full well that no matter how many courses, radio transcriptions, and films are developed, nor how excellent they may be, the program is doomed to failure as long as it is not thoroughly applied to grass-root levels in Germany itself. What the soldier at grass-root level receives today is little more than the same staid, conventional lectures, chockful of cliches, devoid of inspiration, boring, and certainly not potent enough to prevent any dangerous warping of youthful minds.

Where, then, is the bottleneck? The answer, well known to I. & E. is this: There is a severe shortage of officers willing and qualified to implement the splendid output of higher levels into low and lowest grass-root spheres. Furthermore, the number of personnel authorized to engage in orientation work is inexcusably small in consideration of the great and indispensable task. The number of orientation personnel serving overseas is hardly sufficient to service one single battalion. And, finally: I. & E. assets have been reduced to bare bones.

Difficult as these obstacles appear, they should never be permitted to become the excuses for educational failure. The big issue, let me repeat, is not a brilliant improvement of existing educational subject matter. The big issue is the lack of efficient officers capable of implementing the program in lower echelons in Germany.

In an attempt to alleviate this need, one should consider that many possibilities remain inexhausted. Red Cross and USO have never been approached to join wholeheartedly in the Army's educational drives abroad. The columns of troop unit papers and the Stars and Stripes were in the past but sporadically used as educational auxiliary forces. Civilian lecture tours in Germany—and there were some very effective ones—were likewise marked by the same regrettable irregularity. And the manpower, initiative, and ingenuity of the Chaplain's Corps were hardly tapped in connection with educational projects.

The need for an effective innoculation of hundreds of thousands of our young and inexperienced men against the onslaught of hitherto undefeated ideologies is a pressing one. To assure success of this work, every facility must be placed at the disposal of the men entrusted with this weighty assignment.

[2] Winter of Discontent, by Arthur L. Mayer, March 10, 1947.

Lagging Federal Aid Bill

EXTENSION OF REMARKS
OF

HON. HAMILTON C. JONES

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 4, 1947

Mr. JONES of North Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Charlotte Observer of May 31, 1947:

LAGGING FEDERAL AID BILL

With several bills for Federal aid to education lagging in committees, it might be well to remind the Members of Congress that in the present conflict for survival between communism and democracy, which may well continue throughout the present century, an educated American citizenship will be no less important in swinging the balance in our favor than the rehabilitation of non-Communist countries.

The children now in kindergarten will wage the final contest of ideas and wits to determine whether our western civilization is to emerge victorious over the eastern civilization that is bent upon destroying it.

Russia has realized the importance of this battle of ideas and is spending 8 percent of its national income on education. We in America apparently have not realized it, because we are spending only 3.5 percent of our income for the same purpose. On that basis the next generation of Russians stands a chance of having what may be a determining advantage over the Americans pledged to preserve our western system.

Whether the intellectual preparation of our future citizens for that struggle is the business of the States or of the Federal Government, or both, should be decided by the answers to these questions:

Is not the citizen of North Carolina and of Alabama also a citizen of the United States on an equal footing with the resident of New Jersey or California?

As such, is he not entitled to the same training in citizenship as his fellow-American of New Jersey or California?

Both of these questions, we submit, must be answered in the affirmative. Since the North Carolina or the Alabama child will, on coming of age, hold a dual citizenship, State and Federal, it is the business of both the State and Federal Governments to see that he is properly trained in the responsibilities that will devolve upon him in both categories.

If, however, the whole responsibility for this training is left to the States, the child fortunate enough to be born in New Jersey or California will have almost twice the training for citizenship as the child born in North Carolina or Alabama.

That discrepancy is no stigma on the States that spend the smallest amount in actual money on education, for those very States are the ones that work hardest at educating their children. Income payments to individuals in New Jersey in 1945 averaged $1,373; in North Carolina, the average was $732. In California in 1945 the average income of individuals was $1,480; in Alabama, $700.

Hence, North Carolina and Alabama were spending a larger percentage of their income on education, making greater sacrifices to provide their children with schools, than were New Jersey and California, though they spend in actual money less than half as much as the two richer States.

The American citizen living in North Carolina has the same responsibilities to his country as the American citizen living in New Jersey; he should have the same training to meet them. If the State is not rich enough to give him the same training, it seems obvious that the Federal Government should make up the difference, just as the State makes up the difference between its richer and poorer counties.

Federal aid to education is nothing new or revolutionary. Since 1787, more than 150 bills for Federal aid to education, in one form or another, have been passed by Congress—one for nearly every year of the country's life—and they do not include the large sums spent by PWA on buildings and equipment, by NYA, and through the GI bill of rights.

Under the bill introduced by Senators TAFT, HILL, and others (S. 472), States' rights would be adequately safeguarded, because this bill prohibits Federal intervention in the local administration of the schools.

We have seen, therefore, that our system of dual citizenship entails dual responsibilities on the part of both citizen and government. The citizen has his responsibilities to both the State and the Federal Governments, and they in turn have the joint obligation to train the citizen in the discharge of his duties.

The cost of Federal aid under S. 472 would reach a maximum of $250,000,000 annually by 1950, a little more than half of what we have just voted to stop the penetration of

communism into Greece and Turkey. But, as a weapon against communism, an educated American citizenship will be worth 10 times as much as any grants we may make to foreign countries.

We cannot, however, win this battle of ideas as long as the average American 20 years of age never gets beyond the ninth grade in school.

The Taft-Hartley Labor-Management Bill

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1947

Mr. MASON. Mr. Speaker, much has been said pro and con about the Taft-Hartley labor-management bill. Its backers claim it is a bill of rights for labor. Its opponents call it a slave labor bill. The truth is it is a labor bill that seeks to place labor and management on a par as to their bargaining powers; to bring peace to the troubled field of labor relations; to eliminate many unlawful labor practices that have developed under the National Labor Relations Act; and to make paramount the interest of the general public over that of any minority group, whether employers or employees. The Taft-Hartley labor-management bill attempts to do just that and nothing more.

Representative CHARLES HALLECK, the majority leader of the House, an active, well-known champion of the rights of organized labor during his 13 years in Congress, in the House debate on the Taft-Hartley labor bill said:

It is sane, fair, decent, reasonable—yes, courageous—legislation dealing with the problems of labor-management relations. * * * It preserves the guarantee of the Wagner Act giving labor the right to organize and to bargain collectively. * * * It provides remedies for activities and practices by labor and by management that almost everyone condemns. It forbids boycotts, jurisdictional strikes, violence in strikes, strikes in violation of contracts, strikes to compel employers to break the law, coercion of employees by unions. It imposes upon unionism restrictions far less stringent than those in the Railway Labor Act, under which the railroad brotherhoods have flourished for years. It preserves the constitutional guaranty of free speech. It provides for separating the function of the Labor Board, requires the Board to decide cases before it according to the facts, and gives to the courts real power to review the Board's decisions. And it puts the public interest in maintaining output so essential to our national well-being above the selfish interests of employers or of employees.

Now these are not provisions that destroy unions. Those who say they will destroy unions say, in effect, that unions, in order to exist, must be free to coerce workers, to engage in violence, to break their contracts, and to break the law, even the very law that protects them. I say this is not true. The great trade-union movement, which protects so many of our people and which has contributed so greatly to raising their standard of living, can and will thrive under the bill now before us. That is my conviction.

Mr. Speaker, because I agree with Congressman HALLECK'S analysis of the bill, I voted for its passage.

Under unanimous consent heretofore given I include in my remarks an editorial from the New York Times of Thursday, June 5, 1947, which gives an excellent analysis of the Taft-Hartley labor-management relations bill:

THE LABOR BILL

The overwhelming vote of 320 to 79 by which the House yesterday placed its stamp of approval on the Senate-House conference labor-relations bill adds fresh, if redundant, testimony to establishing one point beyond cavil. In the light of that vote, climaxing as it does a series of others only slightly less decisive, it can hardly be longer doubted that the Eightieth Congress considers itself under a clear mandate from the people who elected it last November to enact legislation for the general reform and modernization of the Nation's labor-relations machinery.

This vote in the House did something else, moreover, that is important from the standpoint of the current controversy regarding the character and merits of the pending legislation. It disarmed the more extreme and unreasoning of its critics (who, needless to say, are also the noisiest) of the weapon which up to this point has been their chief reliance. Or perhaps it would be more accurate to say that it revealed that weapon for what it really is—a mere stage prop. These critics, whose favorite term of denunciation of the legislation is "slave labor," have depended up to now on a peculiarly insidious form of misrepresentation. For the most part, they have built their attack on sweeping generalizations, but when pressed to cite specific examples of the antilabor character of the legislation they have invariably extracted one or two of the more extreme provisions from the original House bill, and, after garnishing them generously with exaggeration, offered them as typical of the spirit of the legislation that was going to be sent to the President for his signature. They were able to do this by grouping the House bill and the Senate bill under the hyphenated title, the Taft-Hartley bill, and by deliberately refraining from pointing out that the vicious features to which they always alluded had no counterpart in the Senate (Taft) bill, the pattern of which has been accepted almost without a change by the conference committee, and which everyone at all familiar with the progress of the legislation has known from the outset would have to be accepted.

Now that the House-Senate conference has agreed on a single amalgamated measure, and now that this measure has received the blessings of the House (the one Chamber where it might conceivably be expected to run into serious criticism), we have for the first time a bill that can be referred to as the "Taft-Hartley bill." It will no longer be possible for critics of the legislation to invoke the ghost of the original House (Hartley) bill, for now not even the ghost of that measure remains. It was buried in conference committee, and yesterday the House chanted over its grave an impressive benediction.

As to the bill which has finally emerged as a result of the more than 4 months of painstaking work dating from last January 23, when committee hearings began in the Senate, what basis does it provide for the loudly trumpeted charges that it is slave labor legislation, that it constitutes a blow at the labor union movement, and that it marks a return to government by injunction? In the first place, this measure is not simply an anti measure. True, it seeks to curb the more obvious abuses of labor's new-found power by imposing upon the unions responsibilities commensurate with that power—responsibilities which many unions have steadfastly refused to impose upon themselves. But it provides, as well, new protection for union minorities and individual workers and for a general overhauling of the administration of the labor laws proposed.

In looking for a basis for charges that the pending bill would deprive labor of its established rights one would seek it naturally in those provisions dealing with the right to organize through its own unions, to bargain collectively and to strike in the case of grievances against management, or for the attainment of its demands, when such issues could not be received at the conference table. It was the avowed purpose of the Wagner Act, which the proposed law would supplant, to achieve and preserve these basic privileges for labor.

Does the proposed Labor-Management Relations Act of 1947 forbid labor to organize through its own unions? Not at all. It does prohibit the closed shop, the essence of which is that no one will be admitted to employment in a given unionized shop unless he is already a member of that particular union. It prohibits it on the ground that it is too great a barrier to free employment to be longer tolerated. But to say that this is a return to the open shop, where one might elect to join the union or not, as he saw fit, is a complete distortion of the facts. If a simple majority of the workers in a plant wanted a unionized shop, and so voted, every nonunion employee would have to join the union within a stated period. This is not a blow at the labor movement; it is a blow against monopolistic union control of work opportunities for the individual.

What about collective bargaining? Is labor deprived of that right under the pending legislation? Not at all. On the contrary, one of the principal purposes of the proposed law is to see that labor not merely retains the right to bargain collectively, but assumes a duty to do so. In other words, it places on labor in this respect the responsibility placed unilaterally upon management under the Wagner Act. It says that unions, as well as management, are under an obligation to bargain in good faith and not merely to go through the motions of doing so. It provides, moreover, that having arrived at an agreement with management through bargaining (whether supplemented by a strike or not) a labor union is expected to live up to the terms of its contract—that failure to do so makes it liable to action for damages by management. Such suits, however, may be enforced only against the assets of the union, as such, and not against its individual members. The Wagner Act listed a number of practices on the part of management as unfair, and prohibited them. The proposed law would place labor unions under an obligation to avoid certain unfair practices on their part, such as jurisdictional strikes and secondary boycotts, and these decisions would be enforceable, where necessary, by the Labor Relations Board through the injunctive process.

As to the right to strike, it is forbidden in one case only—that of Government employees. As a logical corollary to the encouragement of collective bargaining, however, it is discouraged in the case of others, except as a last resort. The new measure would provide that either party wishing to open up or terminate an existing contract must give 60 days' notice of his intention to do so, offering to meet for negotiations. If no agreement has been reached at the end of 30 days, the Federal Mediation Service would be notified. During this period or until the contract expires both sides would be committed to refrain from use of the strike or the lock-out. In the case of strikes which threaten the public health or welfare the President might order the Attorney General to postpone strike action by injunction, but this would be limited in its effects to 80 days.

In short, the invasion of labor's rights under the Taft-Hartley bill is not an invasion

at all. It is an attempt rather to see to it that organized labor, in the exercise of its rights, does not trespass, as it has been doing so flagrantly in recent years, upon the rights of management, the individual worker, and the general public.

Friends of the Land

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 5, 1947

Mr. CANNON. Mr. Speaker, under leave to extend remarks in the RECORD I desire to include a notable address delivered by Mr. W. Ed. Jameson, of Fulton, Mo., before a farm meeting sponsored by the Fulton Rotary Club.

Mr. Jameson is one of the outstanding agricultural authorities in Missouri. He is not only an extensive landowner and has financed an exceptionally large number of farmers in the acquisition of farms, but he has contributed more effectively than any other private citizen I know to the conservation of the soil and the practical development of scientific farming.

In the course of his address before a representative group of Callaway County farmers he said:

As chairman of the agriculture committee of the Fulton Rotary Club it gives me real pleasure to welcome the men of the Hatton community to this banquet.

I want to talk to you a while on the most vital subject that has to do with our people today. Not only the farmer who tills the land but the merchant, doctor, preacher, and the mechanic all depend on the land for existence—the city man even more than the farmer. The farmer can always have something to eat and it is the surplus he raises that furnishes the food that the city man has to eat. I want to tell you in a few words what is happening to our precious soil and the most effective way I can bring it to your attentio is to tell you what I have observed from the airplane.

A few months ago I made a 1,200-mile trip together with the other members of the executive committee of an organization known as Friends of the Land which exists solely to bring to your attention what is happening to our country.

Twelve of us flew in a private plane from central Texas to Chicago. We flew low enough to see just what is happening to the country and it is both tragic and disheartening to see how terribly eroded the land is in a large part of the country. Many thousands of acres are ruined beyond repair.

To bring this home to all of you I chartered an airplane and spent one afternoon up in the sky. I covered the county backward and forward from east to west, north to south. You can't conceive without seeing it yourself the injuries that have already been done to hundreds of our farms. It will pay any man, who has a good-sized farm, to spend $5 flying over his own land. It would only take an hour of your time and cost no more than $5 to bring home to you what is happening.

It is said that the top soil from 40 acres of land is being washed away every minute down the Missouri, Ohio, and Mississippi Rivers to the Gulf of Mexico.

To begin with, we only had about 450,000,000 acres of arable land in the United States. Already approximately 50,000,000 acres of this land has been totally ruined, and another 50,000,000 acres is well on the way to ruination, and another 100,000,000 acres need attention right now to save it from eventual depreciation. That means that there is no more than 3 acres of arable land for each individual in the United States, and while the land is deteriorating the population is growing. To make you visualize what might happen to us, think what did happen to civilization after civilization that went totally out of existence because they did not preserve the land. That is why you hear of buried cities back in Mesopotamia. Even a large part of the Sahara Desert was fertile at one time and supported a large population. This all presents a dark picture. Within my own memory, back 50 or 60 years, I know of 10 or 12 families living on contiguous farms and making, at that time, what was thought to be a good living. Eventually all these farms were worn out and abandoned, and no families lived on any of them. I will tell you later what has happened to these farms.

Fortunately there is something we can do about it. The Government has been unusually kind to our county. It established the McCredie demonstration area, one of only four in the State. Everybody living in that area will testify to the good that has been accomplished. Then again the Government located the experimental farm under the Soil Conservation Department of the United States Department of Agriculture in this county on Highway 40, about 2 miles east of Kingdom City, this being operated in conjunction with the agriculture department of the State university. Then the Government acquired 13,000 acres in the west part of the county known as Cedar Creek Forestry and Pasturage Projects. It is in this project that the farms mentioned above are located, and you can't imagine unless you see it how successfully the Government is reclaiming this land and is furnishing good pasturage for thousands of head of cattle. This is a pattern that can be followed by any good farmer, and I am glad to say hundreds of our farmers are becoming conscious of the fact that they can save their land if they will only try. This is done by pulling in ditches, terracing and contouring, liming, building ponds, and other good farming practices.

On my trip yesterday afternoon I could see the contrast where one farm had been terraced and saved and another had been totally ruined by erosion. Another evidence that our farmers are awaking to the seriousness of this matter is the result of our election in organizing our county into the soil-conservation district when the vote was 860 to 1.

It is said that it takes 400 or 500 years to create one single inch of topsoil. Our average soil over this part of the county was from 6 inches to 7 inches deep in its virgin state, so when an inch is washed away it is gone forever so far as our generation is concerned.

Now to come back to the one outstanding organization that is attempting to do something about this matter I want to call your attention to the organization known as Friends of the Land. This is a national organization and I am a member of its board of directors and am on its executive committee. We meet twice a year in different parts of the United States. We pay our own expenses with the hope that we can awaken our people to the necessity of doing something right now about the matter.

There are four classes of membership in this organization. The annual dues for class 1 is $2,500 a year and you would be surprised to know that we have a good membership in this class. Class 2 is $500 a year and we also have a lot of members in this class. Class 3 is $100 a year. We have more members in this class but class 4 is only $5 a year which makes up the great bulk of membership.

We hope to have several hundred members in this county. We already have a good many members and I am proud to say I have never asked one single person to join the Friends of the Land who declined to do so and it is my purpose some time in the near future to organize a Callaway Chapter. I know it can be done because any county that can maintain a cattle feeders association for 25 years without missing a month—where from 75 to 100 of us sit down together and discuss our problems and where the Kingdom of Callaway Supper can be maintained for more than 40 years without missing a year, even during the war—can maintain a good chapter of the Friends of the Land. People who will volunteer to join will save me the trouble of coming to see you. I don't believe there is a more progressive set of people anywhere in the United States than right here and we can do anything we try if we have the will to do it.

It is a pleasure to be back up home with you good people and I assure you that the Rotary Club will enjoy every minute of our time with you.

Mary Must Wait

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 5, 1947

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes:

MARY MUST WAIT
(By Thomas L. Stokes)

On the same day some years ago, the United States Supreme Court handed down one decision killing the anti-child-labor law and another which did something right handsome by the railroads.

This provoked the late Oscar Ameringer, the battling Oklahoma editor, to sit down and pour out his indignation, beginning something like this:

"It's a pity little Mary isn't a railroad."

This incident is recalled in a recent piece by McAlister Coleman in discussing a similar ironic situation today, not in the Supreme Court, but in Congress. This finds Congress passing the Taft-Hartley bill to restrict labor's rights and then preparing to put through the Bulwinkle-Reed bill to exempt railroads from the antitrust laws. Thus would be removed a measure of protection to the public as consumers and shippers and at the same time further entrench the industrial-financial monopoly that controls the railroads.

It would be interesting to know what happened to Mary, who was involved in the child-labor-law test case. We may imagine her, though, as a grown woman with a husband and family, one of the millions of housewives who pinch their pennies as they try to provide for the family in this era of inflated prices.

It's a pity Mary and Bill, her husband, are not a railroad, or a private power company, or a big taxpayer. For the Republican leadership in Congress, with some help from conservative Democrats, is taking good care of these interests and people. The railroads, by the Bulwinkle-Reed bill; private power companies, by curbing expansion of public power which has given the Marys and Bills cheaper electric rates; the big taxpayer, through the tax bill that would give him quite substantial cash relief and give Mary and Bill—if theirs is a large family of low income paying

$100 a year now in income taxes—a saving of $15 a year.

It does seem slightly ironical that the Senate, just as Congress sends the labor and tax bills down to President Truman, prepares to take up the railroad bill. Instead, for example, of pushing ahead on its calendar such measures to improve the lot of labor, such as housing, health, and education bills and to raise the minimum wage—all of which President Truman has coupled with labor-regulatory legislation in his recommendations. Or instead of using the machinery of the Employment Act, to do something about prices and inflation.

Railroad lobbyists claim the votes to put through their bill. They undoubtedly are right. It is a powerful lobby operating here. It knows its way around and is skillful in the technique recently revealed in this column, of enlisting the support of important constituents back home to bring pressure on members here.

A back-to-the-wall stand against the bill will be made in the Senate by Senator TOBEY (Republican, New Hampshire) and a small group of western Republicans and western and southern Democrats. In the last Congress, after the House had passed the bill, they prevented a vote in the Senate by threatening a filibuster in the crowded closing days of the session. Time was on their side then. The situation is less favorable now.

It looks as if Mary and Bill might as well fold their hands and sit back, as patiently as they can, until the railroads and the other interests ride by in review and get theirs from a generous Congress.

Our City and the Atom

EXTENSION OF REMARKS
OF
HON. ROBERT TRIPP ROSS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 5, 1947

Mr. ROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of June 4, 1947:

OUR CITY AND THE ATOM

It is a measure of the fearsome nature of our age that we must give serious thought to the possibility of Washington's overnight annihilation. The latest American to discuss this danger is Lt. Col. David B. Parker, an Army expert on atomic weapons. Writing in the Coast Artillery Journal, he reminds all of us again that our great and beautiful Capital City would be a top-priority target in another war and that it could be erased within a matter of minutes by A-bombs, radioactive gases, germ sprays, or a doomsday combination of the three.

This is a fact that rests on the testimony of many others besides Colonel Parker. His views are not new. They represent merely a local footnote to broader and more comprehensive security studies, like the report of the President's Advisory Commission on Universal Training—a report making grimly clear how vulnerable is the whole of urban America. Looking at the problem solely from the standpoint of Washington, Colonel Parker says that virtually every building in the city would have to be rebuilt to give reasonably complete protection, and he suggests that perhaps we ought to abandon the Capital and disperse the Government over a wide area.

Reconstruction, however, would be only a palliating safeguard at best, and its cost would be prohibitive almost to the point of impossibility. As for dispersing the Government, that, too, falls apart for practical reasons: No modern nation, with all the problems of the modern age to handle, can govern itself effectively from dozens of different places; it must have a central seat. Colonel Parker is on more realistic ground when he limits himself to such suggestions as that we should start "right now" to build underground facilities for our most vital Federal units. A limited program of a similar kind—aimed at protecting our key industries—has been advocated by the United States Strategic Bombing Survey and the Commission on Universal Training.

Every protective measure within reason must be taken. Here in the capital, for instance, besides the setting up of special safeguards for important Federal operations, it may be advisable for Congress to consider legislation designed to cope with what would happen if this city—including most Government officials from the President on down—were really wiped out one day. Throughout the Nation at large industrial dispersion and underground construction should be carried out to the greatest extent feasible. Above all, there must be preparedness of a kind that will make any potential enemy think long and hard before attacking us. Still, even as we undertake these and similar measures, we ought not to delude ourselves. We could spend hundreds of billions of dollars decentralizing our urban civilization, but even then our vulnerability would remain great, and the desolation among us would be unimaginably terrible should there be a war with A-weapons.

In short, without the kind of international control and peace that will insure men against the horrors of their own genius, we can have only palliatives. This is the towering fact of our time. It has a life-or-death meaning not merely for our own city, but for all the cities of America and all the cities of the world.

The Transfer of the United States Employment Service

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 5, 1947

Mr. LYNCH. Mr. Speaker, under leave to extend my remarks I desire to include a letter with reference to the President's Reorganization Plan No. 2 to place the United States Employment Service permanently in the Labor Department. Mr. Loysen is a career man who has served under both Democratic and Republican Governors of New York and whose experience and familiarity with unemployment problems has been of inestimable value in framing both National and State legislation in the field of unemployment and of unemployment insurance. His letter follows:

STATE OF NEW YORK,
DEPARTMENT OF LABOR,
New York, N. Y., June 3, 1947.

Hon. WALTER A. LYNCH,
Old House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: I am very much afraid that the proposal contained in the President's Reorganization Plan No. 2 to locate the United States Employment Service permanently in the Labor Department will make permanent the administrative handicaps under which we are now working.

The close and logical link between the employment service and unemployment insurance programs was recognized when the unemployment insurance program was first undertaken; at that time Federal responsibility for both was vested in the Social Security Board.

Each program naturally supplements the other. The requirement that unemployment insurance claimants register for employment with the Employment Service brought into the public placement offices for the first time a true cross-section of job seekers; the overnight creation of this pool of available labor also brought to the Employment Service for the first time a true cross-section of employer orders for personnel. As a result, the Employment Service was equipped, because of the volume of its business, to administer the unemployment insurance work test in a realistic and satisfactory manner; and the employment offices were able for the first time to operate as bona fide community employment exchanges through which workers could be sure of prompt access to employment opportunities, and through which employers could be sure of access to the best personnel available. These results have been of real dollars-and-cents value to every community in the Nation.

During the period of federalization of the State employment services, first under the jurisdiction of the War Manpower Commission and, subsequently, of the United States Department of Labor, unemployment was negligible. The undesirable results of the separation of unemployment insurance and employment service administrations were therefore not generally apparent. Nevertheless, there was a perceptible growing apart in understanding and cooperation that is essential to the success of both programs.

Since last November 16, when the Federal Government relinquished its control of the State employment services, the employment service and unemployment insurance operations in each State have been consolidated, as coequal programs, under a single administration. The natural and mutually helpful relationships that prevailed before the war have been resumed.

We are handicapped, however, by continued separation on the Federal level. In administering the New York State Division of Placement and Unemployment Insurance we must carry on budgetary negotiations with three separate agencies: The Bureau of Employment Security of the Federal Security Agency for unemployment insurance purposes, the United States Employment Service of the Department of Labor for employment service purposes, and Veterans' Administration for servicemen's readjustment allowance purposes. The readjustment allowance program is of necessity a separate undertaking, since we act only as agent for Veterans' Administration. However, separate relationships with respect to the other two phases of our program are unnecessary and have resulted in costly duplication of headquarters and regional office services, demand an unreasonable amount of time which should be devoted to solving administrative problems and improving the system in the States, and handicap us seriously in planning.

The compelling reasons for integration of the two operations were presented by President Roosevelt in his message to the Seventy-sixth Congress on April 25, 1939:

"The Social Security Board is placed under the Federal Security Agency, and at the same time the United States Employment Service is transferred from the Department of Labor and consolidated with the unemployment compensation functions of the Social Security Board in order that their

similar and related functions of social and economic security may be placed under a single head and their internal operations simplified and integrated.

"The unemployment compensation functions of the Social Security Board and the employment service of the Department of Labor are concerned with the same problem, that of the employment, or the unemployment of the individual worker.

"Therefore, they deal necessarily with the same individual. These particular services to the particular individual also are bound up with the public-assistance activities of the Social Security Board. Not only will these similar functions be more efficiently and economically administered at the Federal level by such grouping and consolidation, but this transfer and merger also will be to the advantage of the administration of State social security programs and result in considerable saving of money in the administrative costs of the governments of the 48 States as well as those of the United States. In addition to this saving of money there will be a considerable saving of time and energy not only on the part of administrative officials concerned with this program in both Federal and State Governments, but also on the part of employers and workers, permitting through the simplification of procedures a reduction in the number of reports required and the elimination of unnecessary duplication in contacts with workers and employers."

The reasons advanced by the President at that time are equally sound today. I believe, however, that consideration of return of the Employment Service to the Federal Security Agency should be the occasion for reexamination of the status, in the FSA, of the combined employment service—unemployment insurance operation.

As you know, the principal operating divisions of the Federal Security Agency are the Social Security Administration, the Office of Education, and the Public Health Services. Direct responsibility for the unemployment insurance program is vested in the Bureau of Employment Security which is only one of four bureaus of the Social Security Administration, the others being the Bureau of Old-Age and Survivors Insurance, the Bureau of Public Assistance, and the Children's Bureau. Thus, by far the largest program of the entire Federal Security Agency, affecting a very large percentage of the population of the country on a continuing day-to-day basis, is two steps removed from the administrator of the agency and is allied, by its position in the hierarchy, with the concepts of welfare and relief.

The time seems to me to be opportune to recognize that no relationship exists between the employment-unemployment insurance program and the welfare operations of the Social Security Administration; and that the size and importance of the employment-unemployment insurance operation call for commensurate status for the responsible administrators who must represent the States and present their fiscal requirements to the Bureau of the Budget and to the Congress.

It seems entirely appropriate that the employment-unemployment insurance program be removed from the Social Security Administration; that a new office or administration be established within the Federal Security Agency to be responsible solely for unemployment compensation and employment service functions; and that this new office be established on a level with the other operating arms of the FSA—the Social Security Administration, the Public Health Service, and the Office of Education.

Sincerely,

MILTON O. LOYSEN,
Executive Director.

Merchant Marine Crisis

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 5, 1947

Mr. BRADLEY. Mr. Speaker, the editorial which follows, from the Long Beach Press-Telegram of Long Beach, Calif., of May 22, 1947, sets forth the current difficulties of our intercoastal shipping so well that I believe it worthy of insertion in the CONGRESSIONAL RECORD.

The American public must act to bring about a change in the attitude of the administration—the President and the Bureau of the Budget—if we are to avoid disaster in our merchant marine on the high seas. The Interstate Commerce Commission must act if we are to continue intercoastal service without the payment of heavy subsidies.

MERCHANT MARINE CRISIS

World Trade Week was picked this year by a well-known maritime publication as the occasion to tell shipowners, in effect, that they might as well open the sea cocks and take to the boats.

With some allowance for the fact that conditions have put too much of a strain on the maritime editor's nerves for him to weigh his language carefully, the quoted statement is timely warning that the American shipping industry is in a bad way and, unless there is prompt action by Congress, it soon will be worse.

History is repeating itself with tragic accuracy as the United States, following World War II, stumbles along the way it took after World War I, sacrificing the great merchant marine it built with magnificent energy and skill and at prodigious cost. It is losing the maritime supremacy it gained, while other nations steadily develop their merchant marines.

Shipowners whose vessels are in coastal and intercoastal trade are in worse plight than those whose ships are in foreign trade. A dozen lines engaged in offshore traffic are subsidized by the United States Government, and they are secure. There is no subsidy for the domestic merchant marine.

The American domestic merchant marine has been permitted since the war ended to drift toward disaster, and it is so near the rocks now that the men operating it can hear the pounding of the surf.

To avoid disaster by providing enough time to work out a plan of successful operation for the domestic merchant marine, Congress is urged to extend Government operation of the ships beyond its present dead line of June 30.

The situation is easy to state briefly and understandably: Under present economic circumstances and with the volume of freight now available, not less than $40,000 is lost with each 90-day coast-to-coast trip by a ship.

The Government, under a wartime arrangement, is operating the intercoastal ships now, with the shipping lines as agents. The Government pays the deficit. The shipowners cannot, and would not if they could, continue to run the ships at a loss of $40,000 a trip.

Between the present time and June 30, all concerned must make up their minds what is going to be done to meet the shipping emergency. The problem is so complicated and difficult that a permanent and constructive policy probably cannot be evolved in the intervening weeks. More time is needed, which can be provided by congressional action to extend for a reasonable period the authority of the Maritime Commission to operate the domestic merchant marine with the shipping lines as agents.

Unless the United States is going to weaken itself by surrendering the economic advantage of a domestic merchant marine, and the military advantage of having one ready at outbreak of war, it will have to make operation of the ships profitable either by adjustment of rates or by Government subsidy.

Freight rates will be considered by the Interstate Commerce Commission at a hearing in San Francisco May 26. Adjustment of rail and sea rates is an essential part of the problem. It is apparent, however, that the Commission will not get far with the problem before June 30, when, as the law now stands, coastal and intercoastal ships will be turned back to their owners. More time is necessary to save the merchant marine, and Congress alone has the power to grant the time.

The Panama Canal

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 5, 1947

Mr. BRADLEY. Mr. Speaker, I submit herewith for the CONGRESSIONAL RECORD the press release of our late colleague, the Honorable Fred Bradley, which he prepared in April, immediately upon his return from the Panama Canal:

Eleven Members of Congress returned to New York today after a brief inspection of the Panama Canal and the Canal Zone. The purpose of this visit was to learn and study at first hand suggested plans for the expansion of the Canal which will require hundreds of millions—possibly several billions—of dollars to complete. In addition, the congressional group investigated problems concerning the administration of the Canal Zone and living and employment conditions there.

Members of the congressional party were: Fred Bradley, Republican, of Michigan, chairman of the Merchant Marine and Fisheries Committee; David Potts, Republican, of New York, chairman of the Subcommittee on the Panama Canal; Raymond Burke, Republican, of Ohio; Frank Maloney, Republican, of Pennsylvania; John Brophy, Republican, of Wisconsin; Willis Bradley, Republican, of California; Herbert Bonner, Democrat, of North Carolina; James Domengeaux, Democrat, of Louisiana; Emory Price, Democrat, of Florida; John Fogarty, Democrat, of Rhode Island; and Henry Larcade, Democrat, of Louisiana. Accompanying the party were Marvin Coles, counsel for the committee, and Guy LaBounty, the committee's investigator.

During this visit to the Canal Zone, the committee inspected the Canal from the land, water, and air, and discussed all phases of Canal operations with its administrative, engineering, and labor personnel. Models of proposed changes and improvements in the Canal were seen, and engineering plans were discussed with the engineering group now examining proposed expansion plans as provided by an act passed by the Seventy-ninth Congress authorizing such study and appropriating money therefor. Plans for the expansion of the Canal include as possibilities: (a) improvement in the present locks, (b) removal of the Pedro Miguel lock, (c) construction of a third set of locks, or (d) conversion of the present canal to a sea-level route.

Security problems and the defense of the Canal were discussed with Army and Navy officials, and an inspection of existing defense installations was made. In addition, housing conditions, employment problems, relations with the Panamanian Government, and questions of outlying defense bases were all studied and discussed.

Upon his arrival in New York, Congressman Fred Bradley, chairman of the Merchant Marine and Fisheries Committee which has jurisdiction over all legislation affecting the Panama Canal, made the following statement: "This visit to the Canal Zone has been most educational and helpful. The complexity of Canal operations makes it impossible to understand them unless they are seen at first hand. For in the Canal Zone, our Government is running not only a waterway for world commerce, but has established a small paternalistic state for the thousands of Canal Zone employees and their families who live there, supplying not only employment but housing, food, and even clothing. My own impression is that, as a result of this visit, our committee will be in a position to save the taxpayers of this Nation millions upon millions of dollars, as we have already learned enough of Canal operations and needs to insure our being able to insist upon considerable cuts in expenditures and still maintain essential operations. For instance, in the course of our visit we discovered that the Canal is now employing almost 75 percent more personnel than it did in 1939, despite the fact that actual traffic is substantially no greater. Governor Mehaffey has been making efforts to reduce this force, but progress has been too slow. I believe that our committee will insist that further reductions be made promptly and in substantial number.

"One thing which must be immediately corrected is the inadequacy of fire protection in the present structures. For example, one large schoolhouse has recently been constructed of wood without a single outside fire escape being provided. Such construction would not be tolerated in any State, county, or city in the United States. Many of the Canal Zone communities, built originally as temporary construction camps, but long since carried on as permanent, are veritable tinder boxes of the worst type. Fire-fighting equipment is, I am informed, not adequate, with no ladders available to reach the top floor of the two-story houses. I am also informed that the Panama Canal fire-fighting units, the Army's fire department, and the Navy's fire fighting force are not even connected on a single alarm system and do not use the same size or thread of hose connections. Only by the high and constant humidity, a highly efficient and well-trained fire department, and by the greatest of good luck have we heretofore avoided a truly calamitous major fire. But the menace is ever present.

"Before making any decision on legislation authorizing further expansion of the Canal, I believe that our commitee must wait upon the reports of the engineering group now engaged in this study. There is a serious questio in my mind as to the feasibility of making any large-scale expenditures for improvements because of defense problems which have arisen. In view of the reluctance of the Panamanian Government to grant us defense bases which are needed for the protection of this vital waterway, I do not at present feel that I could in good conscience cast my vote to authorize the expenditure of a single penny for Canal improvements. I wouldn't put money in a bank unless I was sure that the means to protect it were present; and I could not recommend putting the taxpayers' money into a canal until we first have the basis necessary to protect our investment."

David Potts, of New York, chairman of the Subcommittee on the Panama Canal, made the following statement:

"Like Mr. Bradley, I believe that this trip was of great value and will be of inestimable help in our future consideration of legislation concerning the Panama Canal. Most of us had little knowledge of the problems there involved prior to our trip. Now, however, we have a sufficient background to be able to study requests for expansion and the authorization for new developments against the background of our first-hand knowledge of existing conditions. As a result of the trip, we are now infinitely better qualified to consider the proposed authorizations to expend hundreds of millions, if not billions, of the taxpayers' money on this waterway and its administration.

"During our visit we discovered certain conditions existing in the Canal Zone which require correction. Much improvement in housing conditions is necessary, but rents charged Canal Zone employees are so low that they will probably require some upward adjustment in order to amortize future Government investments in better and more permanent buildings. In addition, costs of construction are so high that some method must be arrived at by the Canal Administration to provide better buildings at a lesser cost.

"Additional study must also be made by our committee concerning the employment of aliens on the Canal. While I believe the Panamanians should be employed, I do not feel that they should be permitted to displace American citizens in the vital jobs on this waterway. Moreover, when Panamanians are employed, I feel that the wage differential granted to American employees as an incentive to work in the unattractive climatic conditions, should not similarly be extended to the natives of this area.

"Canal problems are closely allied with military and naval needs. The importance of the Canal is not only to serve the commerce of the world but to furnish an essential link in our Nation's defenses. Our consultations with the Army and Navy, both in Panama and in Washington, were most helpful and gave us a close view of the problems involved, the changes which have already occurred because of developments in modern warfare, and the problems relating to the future defense of this waterway against new weapons.

"Because of the many problems covering the Panama Canal which will be before our committee and subcommittee during the coming months, I feel this visit to the Canal Zone was imperative and timely. This is particularly true because of certain differences in ideas which have arisen as to the best means of expanding the Canal capacity and its defense. Now that we have seen the workings of the Canal and its organization, I feel that we can face these problems in such manner as will best insure both the military interests and the protection of the American taxpayer."

Double Negative

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 5, 1947

Mr. LYNCH. Mr. Speaker, under leave to extend my remarks I am including an editorial which appeared on June 3 last, in the Home News, a progressive and forthright newspaper published in Bronx County, New York City, where I reside. It is well worth the reading. The editorial follows:

DOUBLE NEGATIVE

We have been urging a positive and constructive policy upon the administration. But this week we hope the President recalls that a double negative makes an affirmative.

We refer to the necessity for exercising the veto power over the tax bill and the anti-labor bill.

Of the two, the tax bill is in many respects the more vicious.

If it becomes law our present and future are both seriously imperiled.

It possesses none of the virtues claimed for it, and all of the defects charged against it.

Its effect would be to reduce our operating revenues by several billion dollars annually, without even having the virtue of materially lightening the tax burdens of a vast majority of wage earners and voters.

It is a gift to those corporations and individuals aptly dubbed economic royalists by the late President Roosevelt; but it is a gift at the expense of vitally needed expenditures to maintain our own economy and revive that of the world with which we trade.

Even the armed forces, traditional favorites of the conservatives, have been so woefully crippled they cannot discharge their minimum functions with respect to our security. The Congress has wholly disregarded reality in its political hypocrisy, and has insisted on snatching at pennies today which will cost us dollars and probably lives tomorrow.

The bill should be returned to its makers, with a sharp reminder that our obligations as Americans transcend the dubious political values of false economy.

The antilabor bill contains several features which, though severe, may be upheld as justifiable and even necessary to curb the arrogance of a few labor dictators who, like John L. Lewis, have set themselves up as a power above the people, and against the common good.

Other provisions, however, notably the effort to prescribe the political beliefs essential to union officership, are so unwise and so dangerous as to make veto highly desirable.

The Home News has been vigorous in its appeal to unions to rid themselves of the stranglehold obtained by Communists over the executive and administrative branches of many locals and a few national organizations. But it is a matter for union membership action, and not for special legislation which could set a precedent for outlawing all minorities.

There is a vital difference between the right—and the duty—of the Government to reject public employment of Communists—or Fascists—and the right of Congress to limit the prerogatives of unions, without placing the same limitation on all privately organized and supported bodies.

If we mean to withdraw the privileges of citizenship from all Communists, by all means let us do so, boldly and forthrightly.

Meanwhile, the Presidential veto should save us from the farce of creating a greater danger by approving this ill-advised method of combatting a lesser one.

This Is the Law

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 5, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, the following is the law of the land and shows the source:

No part of the money appropriated by any act shall, in the absence of express

authorization by Congress, be used directly or indirectly to pay for any personal service, advertisement, telegram, telephone, letter, printed or written matter, or other device, intended or designed to influence in any manner a Member of Congress, to favor or oppose, by vote or otherwise, any legislation or appropriation by Congress, whether before or after the introduction of any bill or resolution proposing such legislation or appropriation; but this shall not prevent officers and employees of the United States from communicating to Members of Congress on the request of any Member or to Congress, through the proper official channels, requests for legislation or appropriations which they deem necessay for the efficient conduct of the public business.

Any officer or employee of the United States who, after notice and hearing by the superior officer vested with the power of removing him, is found to have violated or attempted to violate this section, shall be removed by such superior officer from office or employment. Any officer or employee of the United States who violates or attempts to violate this section shall also be guilty of a misdemeanor and on conviction thereof shall be punished by a fine of not more than $500 or by imprisonment for not more than 1 year, or both. (July 11, 1919, ch. 6, sec. 6, 41 Stat. 68; 18 U. S. C., 1940 ed., sec. 201.)

Mr. Speaker, if this is the law why in time is it constantly violated by people holding high office in the administrative branch of our Government? Does this law apply only to the individuals in the lower brackets, while the men in high places are immune?

Additional Wool Facts

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 5, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, since only 20,000,000 of the 140,000,000 Americans live on farms, a fair set-up for the American farmer is difficult to attain and to maintain. The suggested wool bill submitted to the House by the Secretary of Agriculture was evidently a needless proposal. Day after day was spent on hearings, and when the legislation reaches the stage it now finds itself in it becomes more apparent that the introduction of the bill was not necessary except from a political standpoint.

The wool program was set up by the present administration, and after they find themselves all balled up with a 412,000,000-pound stock pile, and after they find themselves in a mess, they evidently desire to pass a hot potato over to the present Congress to straighten out, even though the administration has the authority and power to straighten it out without any further legislation whatsoever. Though much political capital is being made out of the present bill, and though many metropolitan newspapers have been offered an opportunity to express themselves on the tariff issue, the fact still remains that the proposed legislation was unnecessary. I again repeat that the only conceivable reason for suggesting the legislation was that the present administration either did not wish to face the issue or solve the problem or else they proposed the bill for political reasons.

Why do I say that the proposed wool legislation was unneeded and uncalled for?

First. Because, under section 336 of title III of the Tariff Act of 1930, President Roosevelt, on August 22, 1941, increased the duty on "crab meat prepared or preserved in any manner, including crab paste and crab sauce packed in airtight containers, from 15 percent ad valorem to 22½ percent ad valorem, the rate found to be shown by the investigation to be necessary to equalize such difference in costs of production." This report is No. 147 of the United States Tariff Commission. President Roosevelt's proclamation can be found on page 55 of this report.

After all the bad statements made by New Dealers about the Tariff Act of 1930, or the Smoot-Hawley Act, is it not surprising to know that the New Deal was willing to use the legislation?

Since the duty on the crab products was actually increased by 50 percent, the limit of increase provided by the Smoot-Hawley Act, just exactly how can anyone on either side of the aisle make much of a case out of the wool bill? The wool bill in fact gives the President the authority and power he already has at his command in regard to duties. Did you ever wonder where the State Department was and what it was doing when this crab meat 50-percent increase in duty was put into effect?

First. Did you ever ask where the State Department was when the embargo on wheat was put in operation? Did you ever hear of any vocal or written protest on the part of the State Department? Was the President wrong when he increased the duty on crab products by 50 percent? If President Roosevelt was right then what would be so wrong to give President Truman powers that he already has and that President Roosevelt used? How many sides of the street can you expect to continue to work? And how long? The Smoot-Hawley duty of 42 cents per bushel was implemented by an embargo on imports without protest from the groups now so critical of the wool bill.

Second. Why no protest from the State Department when two embargoes were placed on cotton imports? One of these embargoes was recently put in effect too. Why have not some of our metropolitan papers ever protested this action?

Third. Why no protest when the tobacco-seed embargo was put in operation? Why no protest when tobacco export subsidies were paid? Where were the State Department and the metropolitan press when this took place?

Fourth. Why no protest when the duty on crab meat and crab products was raised 50 percent? Where was the State Department then?

There are more wool producers than there are crab packers, and why, I ask, do we have all this noise about the wool bill?

Are not the wool growers entitled to the same treatment as the crab packers, especially if it has been shown by the investigation to be necessary to equalize such difference in costs of production?

First. The wool facts to date then are: The wool bill does not give the President any more authority or power than he already has under section 336 of the Tariff Act of 1930—a provision of law which had already been used by President Roosevelt.

Second. Whose bill is the wool bill? It was sent to Congress by Mr. Clinton Anderson, Secretary of Agriculture. Since the President had the power and authority to correct the problem, why was the bill submitted?

Third. The administration made a "mountain out of a mole hill" with its propaganda about this wool bill which was sent to the Congress by a member of the President's own Cabinet in the first place.

Fourth. If the administrative branch of the Government is to dictate legislation, then the representatives of the people are not living up to their obligations. This may be Democrats in action but not democracy in action.

Fifth. Since the world wool monopoly, known as JO, controls 85 percent of the world's wool, does not dare set up shop within the confines of the United States because of the provisions of the Sherman Antitrust Act, Mr. Clayton should not be allowed to be conniving with it some place outside the United States of America.

Sixth. The American producer is up against something he never faced before. He is not now competing with producers of other lands. He must compete with world monopolies and dictator nations. He should not be compelled to compete with world monopolies any more than he should be subjected to the machinations of domestic monopolies.

Russia Grabs Our Inventions

EXTENSION OF REMARKS
OF
HON. RICHARD B. VAIL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 5, 1947

Mr. VAIL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hon. J. PARNELL THOMAS from the American magazine for June 1947:

RUSSIA GRABS OUR INVENTIONS

(By Hon. J. PARNELL THOMAS, chairman of the Congressional Committee on Un-American Activities)

(We have been letting Soviet agents walk away with hundreds of thousands of our vital industrial and military patents. What is Moscow up to?)

Before World War II Hitler hypnotized the German people with a philosophy which, even to those highly scientific people, seemed logical. We soon learned, however, that he did not mean what he said. He was merely using his platform, Mein Kampf, as an implement of war.

Today Russia, through its international Communist front (which still exists in spite of the Soviet Union's pretense of having dissolved the Comintern, its global revolutionary organization), is teaching another utopian philosophy to the world—a philosophy so logical to the inexperienced mind and so rich

in promises of peace and abundance, that even many fairly well-informed Americans fall for it. It is particularly popular with those who have never met the realities of the world head-on.

But anyone who falls for the Marxist philosophy, as promulgated by the Kremlin, would do well to be more aware of the actions than of the words of the Soviet Union. Like Germany and Japan before they were brought to their knees, Russia appears to want the world. Like Hitler, Stalin is using a utopian philosophy as an implement of war, a method of recruiting.

While the Russian leaders accuse us of greed, aggression, and imperialism, their agents creep about through our Nation today, peering and listening like enemy spies, for our every secret. Meanwhile they pretend to be our friends.

Recently it came to my notice and that of the Un-American Activities Committee of the House, of which I am chairman, that the Soviet Union since 1943, acting through her agencies in the United States, has succeeded in obtaining practically every industrial, chemical, and military patent from our Patent Office—hundreds of thousands of them—dealing with every phase of our technological development. They have ordered as many as 60,000 in one request. And what have we received in return? Nothing. Since 1927 Russia has refused to give us a single patent, yet we have obligingly handed to them in this one-way "exchange" our industrial and military know-how.

The procedure was legitimate, as far as I know, because our laws permit the Patent Office to sell, for 25 cents each, descriptions of all patents filed for protection. The suspicious element in the Russian procedure lies in the fact that Russia has used dummies and stooges to obtain the patents, when, at the height of her popularity during the World War, she could have obtained them by a forthright request from her Embassy in Washington.

Russia obtained these patents, for example, by having one of their front agencies in the United States flood the Patent Office with orders for patents. One order from a dummy agency dated January 2, 1945, called for all patents for the year 1942 and part of 1943—60,000 patents in all—and the order was accompanied by a check for $6,000. This agency—known as the Four Continent Book Corporation, of 253 Fifth Avenue, New York—is described on its letterhead as being importers from the Union of Soviet Socialist Republics of new, old, and rare books. This corporation was registered before the war as an agent for a foreign power—namely, Russia. Its director is a known Communist, and probably will be called upon to testify before our committee before we complete our investigation.

Other patents were obtained by having the Amtorg Trading Corp. of New York, official trading agency of the Soviet Union in the United States, place orders for thousands of patents in every field.

The Soviet Purchasing Commission of New York also filed huge orders for patents, and other orders were made by the Russian Embassy in Washington and the Soviet Legation in Ottawa, Canada. I have many of these orders in my possession. How many orders were placed by other Soviet agencies I have not yet ascertained, because such information can be had only by checking every call made upon the Patent Office since 1943.

Here are some of the things upon which patents were requested by the Soviet Union fronts and delivered by our Patent Office: airplane, parachute and parachute pack, deicing device for airplane propellers and wings, portable emplacement for machine guns, military rank, bullet-resisting glazing unit, gunfire control apparatus, bomb-dropping device, float for aircraft, bullet-resisting armor, method of making explosives, mine sweeper, ship torpedo protector, projectile, gyro-drift control. Other orders requested such patents as bomb sights and range finders.

One request from a Soviet organization asked for a list of all patents applied for by the General Cable Corp. Such corporations made parts of the atomic bomb in its earlier stages of manufacture. Perhaps to lend a little comic relief to their sacking of our inventive genius, one request was made for many of the distilling processes and packing processes of the Schenley Distillery Corp.

Why has Soviet Russia through so many years of industrial development failed to ask for these patents before? Why her sudden and frantic interest? To my mind, it is no coincidence that her sudden interest in all of our patents on industrial development was simultaneous with our atomic research and development. Through our coddling policy of giving Russia our patented knowledge, she may well be on her way to the discovery of many—if, indeed, not all—of those thousands of industrial processes and secrets which constitute the great secret of the atomic bomb. How many of these pieces of the jigsaw puzzle she now possesses I do not know, since we have not yet asked qualified scientists to examine the patents she has already received. However, it is most significant that one of the patents she has obtained concerns the recovery of vanadium from ores of compounds. In the Smythe report it is significant that this statement is made: "Uranium (beryllium) is always found with radium, although in much larger quantities. Both are often found with vanadium ores."

It is obvious that this requested patent would be of incalculable value in enabling Russia to recover uranium from ore compounds, because uranium is the very basis of the atomic bomb. You may see from this how sly and oblique is Russia's approach to our great secret.

All inventions dealing with atomic energy now, under our laws, are referred for safekeeping to one Army officer. In his care some 12,613 patents were placed on a secret status, but all but 1,165 have been released. They are now considered not vital. Alone, they may not be vital, but, coupled with the inferences and clues which the Russians may find in the great volume of patents they have already taken from us, they may enable the Soviet Union not only to manufacture the atomic bomb, but to beat us to the more important goal of atomic energy for purposes of peace.

Under our present laws an invention pertaining to our national defense may be withheld from the general public, upon being patented, only by removal of the patent from sale and from the bound volumes of the Patent Office. Even if this is done a description of the patent remains in the Patent Digest, which has a large subscription. This Digest may be obtained at the New York Public Library and at other libraries throughout the country. During the war the War Department requested the withholding from public inspection of six patents—the Northrop "Batwing" airplane, a radio-locating and following system, a cathode ray deflection apparatus, a method of manufacturing primary carbon, a process of making a carbon-black product, and an instrument suspension system. These patents were withdrawn from sale but were not withdrawn from the bound volumes of the Patent Digest displayed in the Patent Office and the public libraries. It is safe to assume that the Russians have these secrets.

It is now public knowledge that the Russians, through their legal espionage system, have obtained from our Patent Office all of the industrial and chemical secrets we took from Germany as part reparations. Our committee gave this information to General Marshall, Secretary of State, before his recent departure for Moscow, and he was thus enabled to outpoint Foreign Minister Molotov on the question of reparations.

More amazing to me than a presumably friendly nation's clumsy attempt to wrest from us the world's vital secret, is the carelessness or stupidity of those Americans who, for years now, have assisted Russia in plundering the Patent Office without even informing the investigative officials of the Nation that the thing was going on. If Joe Doaks, of Grand Rapids, Mich., had requested all the patents filed in 1942 and the first 21,533 filed in 1943, as the Soviet Union did, he no doubt would have been investigated before his order was filled.

The filling of such an order must have swamped the limited staff at the Patent Office. The physical work of removing thousands of patents from the files, alone, must have been tremendous and have required extra employees or double shifts. But if the bizarre requests elicited any wonderment from anybody connected with the Patent Office, nobody heard of it.

It may be said, however, that when the mass requests were made, the average Government worker in Washington might have taken them for granted, considering the fact that Russia at that time was being coddled by the administration. It is high time the coddling ceased. Before we finish our investigation of Russia's flagrant and greedy raid on our national storehouse of ideas, we shall subpena at least one former high Government official, who, on good authority, once wrote to the Patent Office urging it to expedite the filling of the Russian requests.

It is not only through our patent laws that we are making suckers of ourselves. The Russian Government now has in this country under legal protection 3,867 agents, including 700 engineers. In Russia we have 220 American citizens, including 2 engineers. Why this disparity in the exchange of personnel? The principal reason is that Russia does not want Americans in Russia. She intends to keep her own secrets and take ours.

One of her newest plans to utilize our genius without obligation is to enlist in one of her Communist-front organizations some of our best-informed scientists. Recently, the following letter was received by a scientist at the National Bureau of Standards, of the Department of Commerce, who is entirely cognizant of the processes of manufacturing the atomic bomb:

"It has been suggested by Dr. Condon (Dr. Condon is Director of the Government Bureau of Standards), who is a member of our executive committee, that you might be interested in the activities of our society and membership in same."

This letter was sent by a representative of the American-Soviet Science Society, affiliated with the National Council of American-Soviet Friendship. This latter organization is one of the best-known and strongest Communist fronts in America today. Dr. Condon, by the way, heads the list of the board of directors of the Soviet Science Society. The National Bureau of Standards, which he heads, has worked hand in glove with the men who developed the atomic bomb. One of the functions of the Bureau of Standards is to test our patents applied for, and it was deeply involved in the testing of the atomic bomb.

It would appear that the Russians, through their Science Society and other organizations, are attempting to make "Brother Elks" of our scientists who know the secrets they want. There is no law against this procedure, any more than there is against buying a description of a patent. But we would be unforgivable fools to fall for it.

Before we finish our investigation, we shall subpena Dr. Condon to explain to our committee his connection with the solicitation of members for the society.

The travesty of legal espionage and propaganda does not end here. We have in our

possession a book, compiled by the Russian Government while we were losing men and ships to defend her, which might well be described as "a manual for bombing and sabotaging the United States." This book, called by the Russians, American Construction, was published in 1946 by the Amtorg Trading Corp., an official agency of the Russian Government. It is illustrated with photographs of all of the important bomb targets in the United States.

Understand, the Russians do not call them bomb targets; no doubt they submit them as models for Russian builders and industrialists. The book, written in Russian, is divided into five parts: First, the industrial construction and transportation system of the United States; second, housing and public construction; third, sanitation; fourth, mechanization and organization of our major buildings; fifth, output of the building supplies made here in the United States. The book contains airplane views of some of our great power dams and factories, as well as pictures of all the great bridges in the United States, including the Golden Gate Bridge in California and the George Washington Bridge in New York. The whole TVA project is mapped and described.

Japan, for years before she made war on us, mapped our industries and public utilities and studied our production methods. We permitted it, and almost paid the penalty of losing a major war. Now another nation is boldly doing the same thing, and we are doing nothing about it. As a matter of fact, this "bomb-target" book was paid for by American businessmen who profited through purchases made by Amtorg or lend-lease supplies sent to Russia, or who hoped to profit from future transactions with Russia. They bought 175 pages of advertising, at $230 a page.

It logically follows, if we are going to permit Russian visitors officially to inspect our plants, to photograph and publish and analyze the defense plants of this country, to map and pin point our basic economic structures, what kind of reciprocity do we have? How much authority do we have to go around Russia and visit her plants, to collect pictures of them, etc.? These are logical questions which occur to realistic men.

What are we going to do about it? It is futile, of course, to exhort Americans to everlasting vigilance in times of peace. We are not by nature a suspicious people. We cannot surround our bridges, industries, and waterworks with police, as the Japanese did their own. We cannot do it except at vast expense and incessant international conflict. Every Boy Scout with a camera cannot be tossed in jail for taking a water-front scene, nor can we draw an iron curtain upon the Patent Office. In denying Russia our patents we would be denying our own students, scientists, and industrialists. To keep our patents in secrecy would discourage inventive genius. Sales would be fewer and invaluable time would be wasted upon duplicate or overlapping researches. It is right that every student of physics in America should know of and understand atomic energy. If one generation of children is denied such information, the ultimate liberation of mankind from back-breaking toil may be deferred perhaps for centuries. The very man who may successfully apply atomic energy to industry may be a schoolboy in one of our cities today.

But what other course may we pursue when imperialistic conspirators persist upon this earth? It would be immoral of us to deliver into the hands of paranoid politicians secrets which, if used against mankind, might annihilate the earth. I see no other course than to impound all patents pertaining, even remotely, to the atomic bomb until the world is completely stabilized, and if we play ball with Russia we've got to see to it that Russia plays ball with us.

The Preservation of Peace

EXTENSION OF REMARKS
OF
HON. ABE McGREGOR GOFF
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1947

Mr. GOFF. Mr. Speaker, on last Monday, June 2, I attended the annual commencement exercises of the University of Idaho, of which I am a graduate. The commencement address was delivered by the Honorable Kenneth C. Royall, Under Secretary of War, and his speech so impressed all who heard it that I feel it is worthy of being brought to the attention of every thoughtful American. General Royall's speech was as follows:

For American citizens as a whole, and particularly for our young men and women, the prevention of war should, and I believe does, rank today as our first national objective.

We have freshly and graphically in our minds the costs, the devastation, and the grief of the greatest of world-wide conflicts. It is impossible to estimate how much in dollars World War II cost the world—in dollars actually spent, dollars to repair destruction, not to mention other dollars which cannot buy back the human effort which has been irretrievably lost.

We in America do know this war cost our Nation alone nearly $350,000,000,000 in actual expenditures, and before this cost can be fully paid a half century may elapse, and the aftermath expenses and the interest may double that figure or more.

Many of you here have seen the scars of war in Europe and Asia—the ruined cities and towns and ports, the shattered railroads and ships, the scorched lands—all of them examples of what could come to America in any future war in which we happened to be involved and unsuccessful. No one who has seen this desolation across the seas can fail to realize that normal life as we know it—business and home and comfort and pleasure—cannot exist under the ravages of war, or for many years thereafter.

But more saddening still is the destruction of human life—young human life. The military and civilian dead of all nations in the last war totaled more than 22,000,000. Our United States fought only half the war and then kept the battle from our shores. We were victorious on all fronts. And yet we ourselves lost in battle more than 300,000 of our best young men, with another million wounded.

These are the lessons of the past. They are enough in themselves to make us hate war—to cherish peace. But there is another and perhaps an even more impelling motive—the hopes and dreams for a safe and progressive future in which we can enjoy tranquillity and reap the full benefits of our great land of opportunity—a future in which you young men and women can pursue your chosen occupations without fear that your plans will be shattered and your lives interrupted by the terrible blight of war.

I have sometimes heard the remark that an occasional war is necessary for maintaining the courage and virility of a nation. I do not subscribe to that view. Despite the ease of American life, despite the oft-repeated cry that American youth was becoming soft and spineless and decadent, our young men in World War I, and again in World War II, successfully passed the final examination of manliness by furnishing—on ground, sea, and air—as courageous a group of combat soldiers as this or any other nation ever furnished.

No; we do not need war; we do not want war. The question then—the only question—is how best to achieve the permanent peace that all Americans so earnestly and desperately desire. This is the same goal that has challenged the wisdom and political skill of men and nations through the ages. After each new outbreak of armed conflict generations of decent men have embarked on a fresh and determined quest for peace. They have always failed.

But we must try again—try diligently and intelligently. We must use every means at our disposal. The mere wish for peace—an apathetic faith—has always failed. Action is needed—affirmative and constructive action—and realism. We must face the facts of international life.

Let us, then, look at the world as it is today. Let us consider, first, one aspect of history over the past century. A hundred years ago the power and politics of the world were almost entirely matters of European balance of power—with England, France, Russia, and the German and Italian states largely controlling the activities of the world. Our Nation was rapidly coming to the front, but it had not quite arrived. The Far East was still disorganiz d and exercising only provincial influence.

Two generations later—with the first decade of the twentieth century—the United States had risen to a position of military and diplomatic power, but there were numerous others who shared this position with us—England, Russia, Germany, Japan, Italy, France.

How different is the situation in 1947. Italy and Japan are defeated and subdued countries, deprived of colonies and of the controlled territory upon which they depended for strength and growth—and even for food. Germany is devastated and conquered—and to date still dismembered. France is no real factor from a power standpoint, and there is small chance she will became such a factor within a generation or more.

China is moving toward a united government, toward a realization of its great potential—but it is moving slowly and haltingly. India is still further from real strength. The smaller countries of the world are years away from military or political importance.

Unfortunately, England, our stanch and sure ally of the past and present and future, cannot approach her military strength of World Wars I and II. She is no longer mistress of the seas. The federation of her empire is loose, and even if it were strong, this empire does not have the military or industrial or economic power that it once possessed.

So we come squarely up against the rather obvious fact that today there are in the world two—and only two—great military and political powers, the United States and Russia. There are unlikely to be more for decades to come.

The influence which these two countries can wield—for peace or war—is immeasurably greater and wider in scope than was the case with ancient Persia or Greece or Rome or Carthage or any combination of them. This influence is not now confined to any continent or continents, and there is no sector of the globe so unexplored or inaccessible as to remain unaffected by the actions and attitudes of our Republic and the Soviet. Such is the history—the current historical fact—which leaves a new and unprecedented situation in world affairs.

But it is not this history alone which makes our age unique and distinctive. Geography plays its part—geography coupled with the advances of science and invention. Old geographical facts have taken on new meanings. Until recently the polar regions, including those in the north, were almost

mythological. Their cold veil had been pierced by occasional daring adventurers, but the ice cap of the world bore no real relation to our private or national or international lives.

For practical purposes we thought of the world as a cylinder more than a sphere. Our maps were flat projections, which ridiculously magnified Greenland and northern Canada and the Arctic distances—magnified them far beyond their true proportions. On these maps it was hard even to visualize the great circle measurements which we had learned about in high school.

But today when we think of world geography we think of a real globe, a globe on which we see that every major country in the Northern Hemisphere, including Russia, is within 5,000 air miles of almost every large city of the United States, and that by the same token almost every leading center of that Northern Hemisphere is less than 5,000 miles from our own northern borders.

In terms of modern aircraft this means that today a plane can travel without stopping from here to there or from there to here and back again, travel at speeds of 250 miles an hour. Soon newer and bigger planes will be able to travel farther at still faster speeds carrying heavier loads.

With the world thus brought closer together, how easy of attainment could be the peace, attainment by nations who in point of time are neighbors whether they want to be or not, closer neighbors in hours than were Washington and New York a century and a half ago. All that is needed is for these neighbors to deal with each other as neighbors, to be frank and fair, to carry out honestly their agreements and commitments, to covet no territory, to embark on no program of aggression, to impose their wills on no other independent nations.

We must do our full part to bring these two countries and other nations closer together in spirit as well as time, to encourage and promote international good will and free relationship, and to build up the standards of life throughout the world and eliminate as much as possible of existing discontent and discord.

As Woodrow Wilson once said: "The world can be at peace only if its life is stable, and there can be no stability where the will is in rebellion, where there is not tranquillity of spirit in the sense of justice, of freedom, and of right." We must strive to make the universal will for peace and prosperity outmatch in efficiency and resourcefulness the world's progress toward its own self-destruction in war.

The first and most important approach is through the United Nations. In spite of much discouragement, we will continue to utilize this organization—in the hope that under the beneficient influence of America and other peace-loving countries—and as a result of mutual contacts and better understandings—the United Nations will grow in influence and power until the peace is assured.

Another—and an important—way of attaining world concord is through freely-moving international commerce and trade. Nations that buy and sell from each other become to a degree mutually dependent, each on the other, for prosperity and progress. Personal ties develop between representative citizens of the various countries, and frequent visits back and forth promote reciprocal knowledge and understanding.

I believe that, if we could get behind the iron curtain of Russia—not with arms or hostility, but with free interchange of commerce and of ideas, with an unrestricted press and with mutual knowledge by each nation of the other's problems—if their people could learn our way and our people could learn theirs—if these things could be done with Russia and with others, I believe that much of the tension and animosity and danger in the world would disappear.

Today our Nation is working in the Geneva Conference on Reciprocal Trade Agreements and on the International Trade Organization of the United Nations. The work is a work for peace—not only in promoting contacts and understanding but also in raising the over-all standard of living of the world.

During the war—and since—we have recognized that hunger and need and discontent often supply the sparks which set off or intensify a war conflagration. We have sought and we are seeking to meet this situation—to meet it by temporary expedients. These expedients have been and are necessary. But we want a permanent remedy, and nothing can supply it as readily as increased production throughout the world and a free interchange of the resulting products.

These are the peaceful means of defense against war—the United Nations, international trade, efforts at mutual understanding. They are strengthened by the knowledge of all peoples that we Americans sincerely want peace, that we covet no territory, that we have no purpose of aggression or aggrandizement.

I wish that those means and our wish for peace were enough to guarantee peace. I wish that our fair conduct in the United Nations and the other councils of the world would enable us to rely solely upon our sincerity of purpose and action and upon our earnest desire and efforts for world concord.

Unfortunately this is not the case today. In the United Nations we have been met by the arbitrary action of the other most powerful country. We strike a barrier when we seek free contact with the people of that nation. We find plain and increasing evidence of ambitious political forces seeking to impose their power upon small independent nations, and seeking to infiltrate even into our own Government. We see—if we are not blind, we see—that military power and potential military power goes, and must go, to the bargaining table; that the strength of a nation often speaks louder than the void of its negotiator.

How then must we deal with this situation? Must we seek to iron out our differences? Yes. Must we be fair and understanding in our approaches and conferences? Yes. But must we surrender our principles? No. Resort to appeasement, acquiesce in a creeping encroachment of smaller nations friendly to us, sit by and see a military potential built up at the expense of other countries, disarm ourselves without fully protective guaranties? The answer is clear. If it were not otherwise so, the history—recent history—has made it crystal clear.

I cannot dismiss from my mind the mistakes we made after World War I. They are well exemplified by the statement of a leading Cabinet member in 1927. He said: "An earnest desire has been expressed by some of our strategists that we should strongly fortify the Philippines and Guam. Yet it is plain that the adequate fortification of these islands, and the maintenance of naval armament absolutely securing them would of necessity be provocative as constituting a menace of Japan."

This is the same Guam and the same Philippines which lay on the flanks of Japan's march to the south in 1942 and which fell to the enemy in the early days of the war—the same islands whose overwhelming strategic value required their recapture as a condition of our victory. May I ask you to consider how many dollars and how many young American lives we sacrificed in this recapture—dollars and lives that a firm foreign policy could have saved?

And so I recommend to you a final—and I believe the most important—method of preserving peace today, the maintenance of an adequate military establishment—one strong enough to let the world know—know with assurance—that we can protect our Nation against any force that can be launched against it, that we can fulfill our military commitments to the United Nations, that we can stop aggression whether it be sudden or creeping.

Had we worked toward the twin goals of peace and security after World War I, it is entirely possible that our militarily strong and vigilant Nation could have entirely avoided involvement in World War II. In fact, we have persuasive proof from the captured documents of our enemies that if we had had a sufficiently powerful Army in 1939 there would have been no World War II.

Until conditions in the world have progressed further along the paths of understanding and concord, we must maintain such an Army today—an Army, Navy, and Air Forces, a balanced force equipped with the best and most modern weapons.

To protect our hemisphere—we must aid the smaller nations of America—along the lines of the program which the President has just proposed to Congress. This program is one of military collaboration and the standardization of arms, equipment, organization and training of the armed forces of the Western Hemisphere. It is predicated on the sound doctrine that in the event of a future war, there must be prompt and unified action against an aggressor by all of North and South America.

This is another string to the bow of national defense. It is another aid to peace—another recognition of the history-proven fact that military-pacifism of strong nations or continents produces war, that their strength prevents war.

Despite the lessons of the past, there is danger again today—danger that with America's desire to forget a recent and a more terrible conflict—that a pendulum philosophy will once more swing us into a state of apathy and inaction—danger that we will again take the easy and misleading road of unpreparedness.

In conclusion, may I remind you that all these steps for the protection of peace and the avoidance of war require the broad-minded and intelligent support of the leaders of our Nation, especially the young leaders who will be recruited from new graduates like yourselves.

The United Nations cannot succeed if America, the leader of the world, draws into a shell of isolationism. Free world commerce is largely dependent upon mutual unselfishness by all countries involved. It will not succeed, if particular businessmen of the world's principal nation see no further than the ends of their noses—if they erect selfish tariff or other commercial barriers against nations whose commerce and friendship we seek.

And a strong national defense cannot be provided by a penny-pinching attitude—or a return to apathy and complacent normalcy—or by a false sense of military security.

In none of these fields can our Government authorities—our Congress, or our President, or the executive departments—rise above the will of our people, the expressed will. There will always be some men and women of limited vision, and others who are too visionary and blindly hopeful. The salvation of America's peace—the world's peace—lies in the greater influence and the more compelling voice of thoughtful and patriotic citizens who seek the actual facts and are prepared to meet them. I bespeak for each of you such vision, such influence, and a forceful expression of your views.

Some Suggestions To Relieve the Boxcar Shortage

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 5, 1947

Mr. CURTIS. Mr. Speaker, it is predicted that the shortage of boxcars will be most severe this summer, especially at the time when a very large wheat crop is being harvested. Inability to move the grain because of the lack of cars works a great hardship on the farmers and everyone connected with the handling and processing of this grain. To have this grain dumped on the ground to deteriorate, at least in a measure, not only brings a loss to the farmers but it is unsound when there are so many people in the world to be fed.

The Nebraska delegation in Congress has, for many months, been giving special attention to this problem.

At a meeting of the representatives of the State authorities of Nebraska, Colorado, Kansas, Missouri, Oklahoma, and Texas, held in Kansas City on May 27, some very good suggestions were made. I wish to extend my remarks by including those resolutions, which are as follows:

RESOLUTIONS ADOPTED AT A CONFERENCE HELD IN KANSAS CITY, MO., ON MAY 27, 1947

Whereas representatives of the State authorities of Nebraska, Colorado, Kansas, Missouri, Oklahoma, and Texas, and representatives of the grain and milling trades of said States in conference assembled have considered the transportation problem presented by the harvesting of a record crop of winter wheat in said States and have determined that the probable supply of boxcars will be inadequate to move the crop by reason of the fact that western and southwestern lines have available fewer cars than they own and that an unduly large proportion of such cars are not suitable for transporting grain and flour: Now, therefore, be it

1. *Resolved*, That by reason of the extraordinary requirements for transporting winter wheat this year efforts should be made to secure an increased movement of empty boxcars to the western and southwestern grain lines to effect a supply equivalent to 115 percent of each road's ownership by June 20, when the crop is expected to commence moving in volume, with a supply to be maintained not less than 100 percent of ownership from August 1 to the end of the harvest movement.

2. *Resolved*, That a greater effort should be made to return, to western roads, home cars to home roads; or, in the alternative, to assure the return of an adequate proportion of cars suitable for transporting grain and grain products.

3. *Resolved*, That to provide an incentive for the proper return of boxcars the national per diem charge should be increased to $6.15, to be maintained so long as the present penalty demurrage charges are maintained.

4. *Resolved*, That the western and southwestern lines be encouraged to put into service as many special-type cars as possible and that shuttle service use of such cars be provided where conditions make such service suitable.

5. *Resolved*, That Governor Carlson be requested to appoint a committee to be composed of a representative of the railway commission of each Southwestern grain State together with a shipper from each State for the purpose of providing a continuing body designed to protect the interests of southwestern shippers in securing adequate transportation facilities; and further

6. *Resolved*, That said committee shall be duly authorized and requested to carry out the recommendations made herein.

7. *Resolved*, That in the event any permit be established it shall be made applicable to Government agencies as well as to private shippers.

8. *Resolved*, That Commodity Credit Corporation should be urged to provide a satisfactory buying or accumulating program during the harvest movement so as to stockpile sufficient wheat to utilize empty terminal elevator storage space in which wheat can be preserved without the tremendous losses that result from piling wheat on the ground and storing in unsatisfactory bins where quality cannot be preserved. Such program will result in the accumulation and storage of the wheat at the points nearest production and thereby save car days.

Republicans Have Had Bad Public Relations

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 6, 1947

Mr. WILSON of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bedford (Ind.) Daily Times-Mail:

REPUBLICANS HAVE HAD BAD PUBLIC RELATIONS

Recent public-opinion polls have indicated a rising popularity of President Truman. Actually, what the polls indicate is a decline in popularity of the Congress, which now has a Republican majority in both Houses. Republican leaders are concerned about this trend, and are baffled.

From the viewpoint of redeeming campaign pledges, few Congresses in the history of the Nation have had as good a record as the present Eightieth Congress. Fair-minded writers, even those with New Deal tendencies like Thomas Stokes or old-line Democrats like David Lawrence, have given Congress credit for its accomplishments.

The Republican platform last fall had four objectives: To streamline Congress, to cut Federal expenses, to reduce taxes, and to do something about labor. To date, the party has made good on all four pledges. Naturally, this program is not popular with all voters, but it does represent an honest effort on the part of Republicans to make good on their campaign promises. They should be honored, rather than scorned, for their success.

Republicans in Congress complain that Washington newspapermen have not been giving the country a fair record of the party's accomplishments—and there is considerable truth to this statement. Most of the Washington newsmen belong to the American Newspaper Guild, an association of reporters affiliated with the CIO. Unhappily, there is a very strong left-wing element in the guild, and this group has dominated the organization for the past 10 years. During the years of the New Deal, when the CIO was given just about everything it asked for, the guild members came to assume more privileges than were really due them.

It is no secret that most CIO and Guild members are strong New Dealers. The present Congress was elected to correct the abuses of the New Deal. Naturally, the Republican Members are not popular with the men who report their actions to the country. A reporter is a human being, he does try to think objectively, he does seek facts, but also he reports those facts as he sees them. If 10 people see an accident there will be 10 different stories of what happened, all very similar, to be sure, but yet all unlike in some detail.

Reduction of Federal expenses means a reduction in the number of Federal jobs. That hurts in Washington. Clerks begin to worry about being released. A great many of these clerks are women—girl friends or family associates of newsmen. Naturally, they are not pleased with the Congressmen and Senators who would take them off the pay roll. They tell their friends, the newsmen, and some of this resentment is bound to show up in the record of Washington doings. On top of that, Washington businessmen don't relish the idea of pay-roll reductions any more than any city enjoys seeing its pay rolls cut. Those men, especially merchants, have put plenty of pressure on Congress not to reduce pay rolls. Washington business lives on taxes, they are the only source of income the city has. It doesn't like tax reductions, and a good share of the propaganda against tax cuts has come out of the various Government bureaus and business organizations in Washington.

Washington is a peculiar city. It is quite detached from the rest of the Nation. It has no industry, no sales problems, and rarely does it have an employment problem. Someone has said, "The last place to go to find out what the American people are thinking about is Washington." There is considerable truth in those statements. Pay rolls go on in Washington, whether business is good or bad in the rest of the country, whether there are "help wanted" ads or WPA. The popularity of a Congressman depends on how much he will do for the Federal pay rollers. For 14 years the Congress added personnel, increased salaries, made the clerks very happy. Now the situation is changed, and Congressmen are not popular in Washington.

What happens "back home" is not of great concern in Washington, whose inhabitants live in a little world of their own, but what happens in Washington is of vital importance to the folks "back home," the folks who foot the bill for all the hundreds of offices and millions of employees. Our own Congressman, EARL WILSON, is about the most unpopular of all the Republican Congressmen, because he has been the most outspoken in demanding a day's work from Federal employees. A Government clerk told us last month that "it is none of Mr. WILSON'S business what we do." That statement is definitely open to argument. Mr. WILSON represents this district. His business is to see that his taxpayers get full value for their money.

Evidently the people wanted the Republican program. Party majorities surpassed the most optimistic expectations. Voters should not be misled by propaganda. Accomplishments count, and the Republican Congress can "point with pride" to its record, despite any reports to the contrary.

The Soviet Scene

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 6, 1947

Mr. KEATING. Mr. Speaker, Mr. Cecil B. Dickson, chief of bureau, Gannett News Service, Washington, a distin-

guished reporter and world traveler, was selected as a member of the press delegation to the big power conference at Moscow. He has recently returned after visiting Stalingrad, Leningrad, Kalinin, and nearby areas.

So many of my colleagues, particularly those hailing from communities served so ably by the Gannett newspapers, have expressed a desire to hear a factual account of his trip and his impressions of conditions in Russia that I feel it would be of interest and value to include here, under leave to extend my remarks, an address entitled "The Soviet Scene," which he recently delivered at the annual spring meeting of publishers, editors, advertising managers and general managers of the 21 Gannett newspapers.

It is my sincere hope that Mr. Dickson's conclusions are unduly grim as to the aims and objectives of the Soviet Union. Time alone will tell. In any event, we cannot afford to play the ostrich with our heads in the sand. Admittedly the views of this experienced observer deserve our careful scrutiny and serious consideration. To that end his address is set forth in full:

Ladies and gentleman, thank you for honoring me here.

Only recently you witnessed the failure of the four-power conference in Moscow. Its failure was foreordained. The Soviets planned it that way. They used the conference as a forum to spread Soviet propaganda. Molotov and Vishinsky concentrated their appeals on passion and prejudice and unreality. In contrast, the American, British and French foreign ministers sought to resolve the problems of Germany and Austria with reasoning and understanding. They know that the economy of Europe will continue to deteriorate as long as Germany's economy remains chaotic.

Undoubtedly the Soviets know that without an economically strong Germany, the economy of Europe will continue unable to meet the demands of the people and the need for reconstruction. I was convinced that this is a vital point of their strategy. That is, they deliberately refused to permit progress toward any fundamental agreements.

This links with the warning Generalissimo Stalin issued to Secretary of State Marshall at their private conference in the Kremlin. The warning, which to me holds grave implications, was that a compromise will be forced through exhaustion. This means, bluntly, that the Soviets intend to try to wear us down. The Soviets know we want to withdraw our forces and costly relief aid as soon as possible. They believe that we will revert to isolationism, particularly if we have difficult times economically in this country. You recall, of course, what Stalin asked Mr. Harold Stassen in the widely publicized interview at the Kremlin. It was whether the United States was going into a depression. Stalin knows if depression comes again to America, the taxpayers will cry for return of our occupation troops and for an end of Federal outlays for food for our former enemies.

Should this occur, it is my belief, that the Soviets would seize the opportunity to sweep to the English Channel and the Straits of Gibraltar. There would be little to hinder them from taking over all Europe. There would be less to impede them on a sweep through the Middle East to the Suez.

For some time we in America have been aware of the Soviet's activities in China, Indonesia and India. There are 2,000,000,000 people in the world, and three-fourths of them live in Europe and Asia. From what I saw in Russia, I was convinced that they plan to take this huge mass of population into the communistic fold. It is the ambition of those who rule Russia and 12 Russian satellite countries to control, not only the Eastern but the Western Hemisphere. In South America last year I found extensive communistic activities, as I did 2 years ago when I swung around the world for the Gannett newspapers as a war correspondent.

When I returned from that world tour I wrote and said that every country bordering Russia and every country that bordered a country bordering Russia, was fearful of the greed and ambition of the Soviets. Now that the Russians have an even dozen countries under Soviet control, the Soviets' plans are easily recognizable.

In Russia I learned of the many missions the Soviets are sending to most parts of the world. Those missions are to gain economic information and military intelligence as well as to spread and strengthen the communistic organizations.

Only Russians on official missions can leave the country. Private individuals cannot leave for personal reasons. Only recently the Soviet Supreme Council issued an edict barring Russians from marrying foreigners.

This was done to prevent Russian soldiers on occupation duty from bringing brides from countries where living conditions and governments, at one time, had been better than they are in Russia. This is a part of the Russian insulation from outside influences, popularly known as the Iron Curtain. Another part of the Iron Curtain is to hide weaknesses, brutality and other parts of the despotic government of which the Soviet leaders are ashamed.

You have read and heard from the pens and mouths of Communists that the government in Russia constitutes a democracy. It is nothing of the sort. Actually there has been little fundamental change in Russia or the Russians since the rule of Ivan the Terrible. Ivan the Terrible, incidentally, now is being hailed as a national hero by the Soviets in their new campaign to build up Russian nationalism.

Individuals in Russia are slaves to the state. They have no actual voice in the conduct of national or international affairs. Some say, however, that the Soviet State capitalistic system—which really is the system there—is no worse than those of Czarist days. Those in the privileged Communistic Party jobs in government, industry, science, education, and the arts, contend it is better. There is a third group rising, an intelligent group that has begun to question the system, its strict regimentation of thinking and living.

It is true that the Soviets have increased the literacy of the people, the number of schools, physicians, scientists, and those in the arts in their 30 years of reign. In the same period this country and many others also have accomplished equally as much and even more. But they have done little to improve living conditions, compared with our standards. And most of their material improvements, such as irrigation, hydroelectric and housing projects have been accomplished through forced labor.

It has been estimated and left undenied that some 15,000,000 political and other prisoners are in forced labor gangs. In my brief time and trips to Leningrad, once known as the Venice of the North, and to Stalingrad, hailed as the Soviet Detroit, I saw hundreds of groups of men and women slaving at the point of a Red soldier's bayonet.

Some 3,000,000 German prisoners of war and probably a quarter of a million Japanese are contributing labor to the rebuilding of Russia's war-devastated areas. In addition, there is the workhorse of Russia—the woman. What coolies are to India and China, the woman is to Russia. Miserable creatures they are mostly, miserably treated by men. They do the lowliest and hardest manual labor. I've seen them in steel plants, on railroad construction jobs in the bitterest sub-zero weather, as street cleaners and snow shovelers, ditch diggers and sewer washers. I saw them in harness pulling huge wheeled carts and in every other conceivable job performed by man. They work even in the coal mines.

You have read and heard Soviet propaganda that the nurseries and kindergartens of Russia represent great social advances. These government institutions are, as are many others, an economic necessity. For under the so-called Russian incentive plan, few men can support a family on the average wage of 700 rubles a month. The wife must work. Kindergarters and nurseries free her for her labor.

Stalin announced Russia lost 7,000,000 men in the war. Russians say 20,000,000 men, women, and children were lost. It is said 15,000,000 women of marriageable age will never get husbands. Divorce laws have been tightened. The Soviets found that free love was an economic loss to the state. Still the divorce as well as the crime rate is high.

The Communists once said that religion was an opium for the people of the western world. They must have found that the opium of communism was not sufficient to drug the Russians. For, under pressure of war, they reopened some churches, but under government ownership, control, and direction.

What the Russians have now is not democracy but despotism. A small hierarchy of some 600,000 rule nearly 200,000,000. These people in the Politburo, government positions, top military and naval officers, and those high in science, medicine, the arts, are the privileged groups. They have automobiles, summer homes, good apartments, ample food. But the common people live under conditions in cities and on collective farms much as did the pioneers in America. But they do not have the freedom our pioneers had. They work or they do not eat. They are in five major categories. Those classed as A, B, and C do very well, what few they are, but the D's have little, and the E's hardly eat. Employers issue ration cards, which are withdrawn when a worker fails to work. Foods other than in the basic rations, largely bread, potatoes and cabbage, are so expensive few workingmen can afford to buy them.

And that is another thing the privileged classes enjoy over the common worker. Those high in the privileged classes can purchase food in stores operated especially for them and at lower prices than prices in so-called commercial stores. In commercial stores I found eggs selling for $1.50 each. I bought a lemon for $1. In barter markets I saw potatoes sell for $2.40 a pound. Clothing was excessively high. Most of the people were shabbily dressed, many wearing old felt boots. Outside of the cities I saw men and women with wrappings around legs and feet, with thongs—the same as the ancients wore.

In Moscow I visited one old prerevolutionary mansion where eight families were living in four basement rooms and a hallway, all using the same kitchen, the toilet separated from the stove by a thin partition. One of their so-called modern apartment buildings, built in 1938 before Russia began to prepare for war, was equally jammed with families. Dirty, badly in need of repair, it looked like an East Side tenement, with wiring tacked onto the ceiling and the top-floor rooms flooded by leaks in the snow-covered roof.

'Tis said in Moscow that only the roof on the Kremlin does not leak. The attitude of the people is, "Why take care of property that belongs to the government?" As a result Moscow is shabby, buildings other than those occupied by high military and government and party officials need repair.

There is one thing the Russians know nothing about—it is maintenance either of

homes, plants, or factory equipment. Makeshifts predominate in almost everything. Yet the Russians are pretty good at putting on a fake facade to make buildings look strong when they are not.

It is characteristic of the Russian people. They have suffered from ages of inferiority complex. Through their history, possessing but a modicum of inventiveness and know-how, they have had to borrow, buy, and steal brains from Europe, Asia, and America. So, they pride themselves on their acquisition of imported knowledge, brag about any improvement they might have made. Some of their scientists and artists have made contributions to the world. But Russia has been a backward nation and is very sensitive about it. Thus, when it happens to produce an exception it propagandizes the world that the exception is typical.

The Soviets claim all progress made during the last 30 years they have been in power is due to communism. The United States and other countries made advances in the same period without the aid of communism. Even Russia under a regime of a czar would have made some progress.

The economy of Russia was badly damaged during the war. Try as hard as the Russians could to reconvert, they admitted that reconversion was delayed 20 months after VE-day. They are far from having restored many plants and power projects destroyed by the Germans and Russians themselves in their scorched-earth policy. I traveled to Leningrad on the Red Arrow, crack Soviet train, at the terrific speed of 30 miles an hour. The International Car, the best but not the latest on the train, still had old brass oil lamps in place, although electricity had been added. Each car has its own brass heater in the front end and a man to fire it.

If you have a weak heart, don't travel on a Russian plane. I flew to Stalingrad, one of the bloodiest battlefields in history, in a battered old lend-lease DC-3. When we crossed the flooded Don, we were so low, spray struck our windows. We could see spots on goats at our 150-foot elevation. We landed on a battle-marked dirt field with only a windsock and a shack at the so-called airport.

Called the Detroit of the Soviet Republic and once with half a million population, narrow Stalingrad stretches 40 miles along the Volga. Its three main sections were destroyed 98, 97, and 85 percent. Today, 4 years after Marshal Paulus surrendered 90,000 Germans remaining out of 330,000, Stalingrad is less than 5 percent restored.

A visit to the famous tractor plant, still badly wrecked, showed the Russians producing 35 tractors a day, 3 shifts, 8 hours each, 6 days a week, with the aid of German, Rumanian, and Hungarian prisoners, and Russian speed-up boys called Strakonovites. Cincinnati-made lathes, with big War Production Board priority signs abounded, women working most of them.

In the Red October steel plant, production of 500,000 tons a year, half of prewar level daylight seeped through the bomb- and shell-punctured roof. Within the plant stood rusting German tanks, exactly where they were stopped. Most of the other plants lay crumbled and rusting and idle, great brown ghosts of prewar production power. Industries on the outskirts of Leningrad were in about the same condition, although the huge electric equipment plant was operating at about 70 percent of prewar capacity despite severe damage. Many other plants there and in Kalinin were rusting, burned-out hulks.

Tremendous efforts are being made by Russians to restore their coal mines and industrial plants, especially throughout the Donbas and other eastern parts overrun by the Germans. One electric unit of the Dneiper Dam has been restored to operation. But there is a tremendous shortage of steel, brick, cement, etc., while war wreckage covers thousands of acres, and burned-out passenger trains and boxcars strew the railroad lines. The current 5-year plan sets a 22,000,000-ton steel goal for 1950.

The Ukraine last year suffered the worst drought in many years. Starvation stalked the war areas. Stalin was forced to send hardboiled trouble-shooters there to keep the situation controlled. The Government is concentrating on building up the food supply. Two years of good crops are needed to relieve Russia from rationing of basic foods.

So desperate did the situation become last year that in October an edict was issued reducing basic rations for the common people. Since employers issue ration tickets, this forced millions to work two jobs a day—16 hours—to get enough basic rations for their families. This is part of the Soviet incentive system. It's called increasing the norm. The Soviets claim there is no poverty problem for them. What they mean by that is that those who can't produce don't count. There are millions of poor, underfed. Tuberculosis is common because of lack of proper and adequate food and crowded living conditions. Beggars ply their trade on trains and subways and on streets. In the open barter markets I watched dirty, hungry, cold old men and women, children, and crippled soldiers trying to trade broken cups, worn rubber, ragged clothing, and junk for something to eat.

Inflation is so severe that while the legal rate of exchange was 5 rubles to the dollar, the black-market rate was 70. The diplomatic exchange rate is 12 to the dollar. Actually the ruble should be about 50 to the dollar.

Every store is Government owned and operated. Therefore, the cost of production does not figure in the sale price. At commercial stores, where goods are unrationed, the prices are beyond conception. Prices are set to drain off individuals' wartime savings made possible when there were no consumer goods. In these stores there is loot from Germany, everything from Dresden china to old upright pianos. There are more German than Russian automobiles on the streets of Moscow.

A prominent Communist in Moscow told me Russian Communists have little respect for American and other foreign Communists; that the Russians look upon them as dupes and tools to be used. He said:

"Yes, we are Communists, but you must remember we are Russians first. If we should ever take over your country, do you think we would trust the American Communists and parlor pinks, as you call them?

"We would not. We Russians trust no traitors to their countries. We would have to eliminate them first, for if a man is a traitor to one country, he could be a traitor to another country."

I was amused when Stalin recently was quoted as saying, "Let us not criticize mutually our systems. Everyone has the right to follow the system he wants to maintain."

At another time Stalin said, "It is inconceivable that the Soviet Republic should continue to exist for a long period side by side with imperialist states. Ultimately, one or the other must conquer."

And again, he said, "Words have no relation to action; otherwise, what kind of diplomacy is it? Words are one thing, actions another. Good words are a mask for the concealment of bad deeds. Sincere diplomacy is no more possible than dry water or wooden iron."

I wish I had time to tell you of the philosophy of deceit, as followed by the Russians since the time of Ivan the Terrible in international matters. But it took Lenin really to put it into practical form, the form in which you see it practiced by the Communists the world over. They say one thing, do another.

The Russian rulers trust no one, not even each other, and their words are untrustworthy. They take pride in being able to deceive and consider fair play a weakness to be exploited.

If the Russian rulers were confident of their despotic government, why should they have a police system that puts a spy in every family, and a secret police force that is larger than any army in the world today, except the Soviet Army?

How any American, except a frustrated crackpot, can go to Russia and see that despotic government, cruel in conception and brutal and ruthless in execution, and then support it, is beyond my comprehension. The Soviet government portrays itself as possessing the greatest ideals and plans for the common man. Yet it drains so much from the slaving public, it leaves little for that common man.

The economic condition of the Russian people is terrible from an industrial and food standpoint. Russia is in no position now to conduct a successful aggressive war. Yet, under the Soviet economy, with 3,500,000 men and women in the army, 2,000,000 secret police, 15,000,000 in forced-labor camps, 3,000,000 German prisoners, it does have the ability to concentrate the nation's entire resources—men and materials—on one objective, such as war.

One can sense this power in Russia, feel its impact. The Communists there think they have the system for the world. They are planning to impose on the people of the earth by trickery or by force. I don't believe they can succeed in their avowed world conquest, but I'm fearful that Communism is to stay in Russia and many satellite countries for a long, long time. Under their police system, control of communications and transportation, as bad as they are, a despotism like that of the Soviets can extend itself indefinitely. It rewards those who serve it, not with lands and monopolies, as did the czars, but with automobiles, better houses, more food and rubles and more clothing.

Russia now is busy building up nationalism, against Lenin's internationalism, and is pressing for a greater war potential through science, industry and food. It is forcing wartime office workers to community farms to increase the food supply, especially Red army reserves.

Later, if not sooner, we in America are going to have to face the issue. Russia is conducting a global war of subversiveness against us; yes, even in our own country. The Communists are clever, unprincipled, ruthless, and ungodly.

It is my unqualified conviction that the greedy and sinister rulers of the Soviet government are determined to destroy our capitalistic system and saddle upon the world's people the deceptive cloak of communism.

I have but one appeal. It is: If we believe in our system, we should not lack confidence in it or the courage to fight for it and all its benefits that have made this Nation the richest and its people the least fettered of all the world.

We need a new conception of duty and loyalty, a deeper faith and love of our form of Government. If we continue to work, produce, and stay united against our social, economic, and potential war enemies, we can resist all enemies within and without.

Certainly, we should have confidence in ourselves and our Government equal to the respect and envy all other peoples and nations have for us.

Argentina Gets Truman Nod as Good Neighbor

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 6, 1947

Mr. O'KONSKI. Mr. Speaker, President Truman yesterday gave the signal for return of Argentina to good-neighbor standing and at the same time cleared the way for an early mutual security pact of all Western Hemisphere nations. To me, this is one of the most encouraging signs of the past few years. Argentina, unfortunately, has been the victim of a most unscrupulous smear campaign by the Communist press and by the Communist fellow travelers in America. I am happy to see that the Communists are no longer determining the policy of the United States of America toward Argentina.

Argentina has always been a good neighbor; perhaps more so than any other country in the Western Hemisphere. Argentina has never been guilty of an act of aggression against her neighbors. Argentina has always played the role of the mediator and peacemaker in the Western Hemisphere.

With this very healthy advent in our policy in dealing with our Latin-American neighbors, I think it is well to review Argentina's contribution to unity and strength in the Western Hemisphere.

For that reason, Mr. Speaker, I include in the RECORD at this point the address delivered by the Chargé d'Affaires of Argentina, Martin Luis Drago, at the Foreign Policy Association of Philadelphia on April 19, 1947. This speech tells the true history of Argentina and its contribution to Western Hemisphere solidarity, unity, and friendship. I am sure that the Members of Congress will want to become acquainted with the past history of Argentina in accordance with the recent decision on the part of our Government.

The address follows:

Gentlemen, it is indeed a great honor for me to be a guest speaker at the Foreign Policy Association. I cannot, however, accept it as a personal distinction, because of my lack of merits, but I can accept it as a homage to the country I have the great honor to represent. Therefore, I express my hearty thanks to you all.

We are celebrating Pan-American Week. We have, indeed, much to celebrate, because we have tangible proofs that the solidarity and friendship among the American nations is growing steadily every day.

I feel very proud to be a citizen of a country which has always supported the ideal of cooperation and brotherhood with the American nations since the early days of its history.

San Martin, our great national hero, did not confine his aspirations to the emancipation of our country. He led his gallant army across the highest peaks of the American Continent to achieve the independence of two sister nations, Chile and Peru. His army was a democratic army, which fought only for freedom, not for conquest. The pattern set by San Martin has been our light and our inspiration. We have always been ready to help our sister nations of America in their difficulties, and, most important, we have never committed an act of aggression against any country.

On the contrary, Argentina has always taken an active part in the settlement of all differences among the American nations.

In 1854 Argentina acted as mediator in a conflict between the United States and Paraguay. This conflict, which was a grave threat to the peace of the American nations, was solved through the ceaseless efforts of an Argentine President, Justo José de Urquiza.

It is worth while to recall that an American President, James Buchanan, wrote on August 10, 1859, a message to Urquiza, thanking him for his successful intervention, and adding that "his services will be always remembered by the American people."

President Buchanan said also in his message of congratulation the following words, which I want to quote, because, although they were written in 1859, they reflect the present spirit of the United States toward Latin America. As you will appreciate, those words could have been uttered in 1947.

Said President Buchanan:

"I might confess that since the emancipation of the Republics of this hemisphere from the mother country I have never ceased to look at them with the deepest feeling and the most profound interest. I have always wished they could enjoy their liberty with the only restrictions of law, and that God bless them with peace, prosperity, and culture. There never can be a valid reason for a difference or a suspicion between them and us. Reciprocal friendship and peace will be our best link."

In 1865 at the time of a conflict between Spain and Peru which was originated by the occupation of the Chinchas Islands by Spain, the Argentine Government acted also as a mediator. A great President of Argentina, Bartolome Mitre, said at this time that Spain should try to prevent any conflict with the American Republics, because "we would be then in the case of fulfilling a painful but inescapable duty." It was also President Mitre who said in Congress the following words:

"Though essentially Argentine, this Government will never cease to be an American Government and a good neighbor."

It is significant that the expression "good neighbor" was first used by an Argentine President in those early days.

The idea of good neighborliness of Mitre was also shared by many illustrious Argentines.

Juan Bautista Alberdi, one of the outstanding men of the past, was much in favor of convoking regular meetings at which representatives of all the American nations would be invited. The work of Alberdi in that sense has not been forgotten. It is gratifying to recall that on the 18th day of May 1945, an American Representative, Congressman Daniel J. Flood, paid a tribute "to one of the first prophets of inter-American solidarity, that great Argentine patriot and philosopher of the democratic ideal, Juan Bautista Alberdi." He added that more than 50 years ago Alberdi foresaw a great political American system in which the various parts would depend upon the whole and the whole would depend upon the parts.

"Today," continued Congressman Flood, "the hopes of that early prophet have become powerful and productive realities; powerful because they insured the common action in wartime; productive because they insured not only the most ample mobilization of the full resources of all the American countries for the successful prosecution of the war, but because they have created a permanent and lasting cohesion and interdependence among the Americas. Now that the war is over, a permanent peace and security are the blessings we expect and for which we humbly pray."

In 1902 Argentina and Chile signed a treaty of naval disarmament. It was the first of that kind in the world, a fact which was recognized by former Secretary of State Henry L. Stimson, in an address he made at the Pan American Union in Washington in 1922, on the occasion of the signing of a treaty of disarmament entered into by the United States, Great Britain, France, Italy, and Japan.

After paying a warm tribute to Argentina and Chile for having presented to the world the first example of a naval limitation, Mr. Stimson added:

"Since I took an interest in naval limitations, I found out that two nations of the Western Hemisphere, better said, two of our sister nations of America, offered to the world the first great example of naval reductions."

If I had not attended the Naval Conference I would perhaps have been unaware of this important fact. In the course of my work in London, I learned that Argentina and Chile showed to the world the importance of the tremendous success that could be achieved through a treaty of naval limitations. And they did it in 1902, that is 20 years before the signing of the Washington Treaty, which is considered the pioneer of naval limitations.

It would be impossible for me to enumerate or to even mention all the instances in which Argentina acted as mediator in disputes or conflicts among the American nations. I will only say that in 1935 the indefatigable work of Argentina, Chile, Brazil, and the United States put an end to a bloody war between Bolivia and Paraguay, which was endangering the peace of the American Continent.

More recently, in 1941 Argentina acted again as one of the mediators in the settlement of the armed conflict between Peru and Ecuador.

This brilliant record of Argentina is in keeping with her noble international conduct.

We have solved all our boundary disputes by arbitration and have never resorted to force against smaller or weaker nations. We are proud of the fact that our armies were never defeated, but we are still prouder of the fact that the Argentine Army has never crossed a border to dominate or to exploit any country. On the contrary, as I said before, the gallant soldiers of San Martin who wrote a saga of epics and courage went to Chile and Peru to liberate those countries and they retired once their mission was fulfilled.

I have talked about the role Argentina played in the past, in what relates to the peaceful settlement of all disputes, conflicts, or wars that arose in the American Continent. I want now to say a few words about our peaceful tradition in our relations with the neighboring countries.

Our territorial dispute with Paraguay was submitted to the arbitration of an American President, Rutherford Hayes, who in 1878 settled the boundary line between the two countries. The award of President Hayes has been ever since scrupulously respected by both parties.

The question of our boundary line with Bolivia was the subject of a very long and arduous negotiation between the two countries, until a permanent treaty was signed on July 9, 1925.

Our limits with Brazil were also settled by the arbitration of another American President, Grover Cleveland, on February 5, 1895.

Our boundary controversy with Chile was submitted to the decision of the King of England, Edward VII, who pronounced his award on November 1902.

We have, as you can see, settled all our controversies by arbitration, and we have always fulfilled the letter and the spirit of those arbitrations.

It could not be otherwise. Argentina is a democratic and peace-loving country, and she resorts only to democratic methods in her international dealings.

I am going now to talk about our contributions in the last war.

The cooperation of Argentina to the nations at war with the Axis took various forms. Some of these measures were in accordance with resolutions of the Rio conference. Resolution III, for instance, provides for appropriate exports to other American countries. Argentina had, prior to the conference, signed an agreement with the United States, by which she undertook the obligation of selling exclusively to this country all her exportable tungsten.

A very important form of aid to the United States was the supplying of food and strategical materials to the United States, Great Britain, and the other American Republics.

In 1940, at a time when the German Army was sweeping all over Europe and the prospects of victory for Great Britain looked very slim indeed, Argentina was giving foodstuffs to England, under a special agreement, which practically was tantamount to lend-lease. We continued our exportations to England throughout the war, so much in fact, that at the end of hostilities, England owed us over £120,000,000 sterling, which was the value of the goods sent to her.

Incidentally, some part of the Argentine meat sent to England was the meat used to feed the American troops stationed there.

It was Napoleon who said the famous sentence, "An army marches on its stomach." Since Napoleonic days, warfare has changed entirely its methods. There were no tanks, planes, submarines, or rockets in his time, but there is something that has not changed and never will. He who fights must eat. No escape from this biological fact is possible. No soldier can keep on fighting without food, so the contribution of Argentina was as vital as if it had consisted of planes or tanks.

On December 9, 1941, within 48 hours after Pearl Harbor, Argentina announced that the United States would not be treated as a belligerent. This step was important, since it meant that American warships could enter Argentine ports for an indefinite period and that American planes could use Argentine airfields. Under international law, a belligerent ship is allowed a maximum of 48 hours in a neutral country, even if its condition demands repairs. When Brazil entered the war, Argentina promptly declared the status of that country to be the same as that of the United States.

All Argentine vessels were mobilized to carry materials of interest to the United States. No Argentine ships went to Europe during the war, and there was not any trade by means of Argentine boats with any other part of the world, except North and South America.

We have complied with all the commitments we entered into at the Conference of Chapultepec. A very well known American authority in international affairs pointed out in a very recent article that the Argentine Government has already complied with its obligations with respect to former Axis schools, institutions, and property.

"With the promulgation of a decree of expulsion against 52 former Axis agents, 13 of whom have already been deported and the remainder of which are being actively prosecuted or sought," added this noted authority, "the Argentine Government has carried out fully its obligations."

The present Argentine Government—that is, the constitutional government which was put into power by the free vote of the people in an election considered by the consensus of the opinion as the freest and fairest ever held in Argentina—has expressly announced its intention to cooperate with its sister nations of America.

In his message to the Congress on the occasion of assuming the Presidency, President Perón said:

"Once an engagement is accepted, it must be legally fulfilled. In this respect Argentina stands as an example, and I will certainly not be the one to break this tradition, but, on the contrary, will spare no effort to reaffirm it."

And on another opportunity President Perón said that "Argentina will be always on the side of the American Nations any time she is needed," reaffirming thus the words he said at the Inter-American Economic Institute of Buenos Aires on April 20, 1945, when he was not even a candidate for the Presidency. He said in that opportunity, referring to the Act of Chapultepec, the following words, which are of special significance:

"The recent declaration of Mexico establishes the legal equality and the economical collaboration as essential premises of the collective prosperity of the American countries. But the prosperity of nations cannot be an abstract theory, wherefore it adds that the American nations consider necessary a just coordination to create an economy of abundance in which the natural resources and human labor are used for the purposes of raising the standard of living of all the peoples of the continent."

As you may appreciate, President Perón spoke about economic collaboration. We have always been in favor and we are supporting now the greatest possible economic cooperation with our sister of the Americas. This fact is proven by the recent agreements that Argentina has concluded with Chile, Bolivia, and Uruguay.

The spirit of cooperation of the present Argentine Government in economic matters will be better understood and appreciated by quoting a few excerpts from a statement made to the press by the President of Chile, His Excellency Gabriel Gonzalez Videla, with reference to the signing of the Argentine-Chilean Treaty.

Said the President of Chile:

"The customs Union signed yesterday between Chile and Argentina constitutes an exceptional and unusual event in America. I don't hesitate to say that it is a step of tremendous importance for the life of our nation and even the American continent. It has been sufficient that two governments eminently popular should understand and interpret the feelings of their people. On behalf of the people of Chile I express my gratitude to the American spirit shown by General Perón, to the Vice President of Argentina Dr. Quijano, and to the Government of the Argentine Republic."

In the speech at the Inter-American Institute of Buenos Aires, which I have quoted before, President Perón made reference to an "economy of abundance" for the American nations. Economy of abundance is the system that prevails in this country, where the common effort tends to improve the condition, both material and moral, of all people. It also proves that the Argentine Government is following the policy of raising the standard of living of the poor classes of the country, which is a truly Argentine policy and conforms to the practices set by this country in the past. Therefore it is not only an Argentine policy. It is also an American policy.

What can we do to promote a closer relationship among the American nations? First, we have to know more about each other. We have to encourage the visit of students, the exchange of professors, and the facilitation of travel.

We have to increase the teaching of English in Central and South America and Spanish and Portuguese in the United States.

When I was the Consular Representative of my country in San Francisco, a club was formed by the name "Club del Buen Vecino." The membership was composed for the most part of American citizens who had a sincere desire to learn Spanish, but who also wanted to learn more about Latin-American customs and culture. The official language of the club was Spanish, according to a very rigid rule, which provided for a fine of 10 cents a word to be levied against any member who spoke English within the club's premises. This was considered the best way to compel the members to learn Spanish.

I wish that a great deal more of these clubs were functioning in this country, and I also would like to see established, throughout Latin America, many similar clubs which would be named "the good neighbor," where the official language would be English, and where a fine would be applied to any member who spoke Spanish or Portuguese.

I am proud that the Argentine Embassy in Washington has inaugurated recently an American-Argentine cultural institute where Spanish is taught without charge to Americans. We have already many students, a great deal more than our space would permit, and the classes are functioning properly. In this modest way our Embassy is helping the cause of pan-Americanism.

Gentlemen, I have presented you with a true picture of Argentina, a nation which has a brilliant record in her dealings with its sister nations of America, and in fact with all the nations of the world, a nation which is always willing to lend its assistance and cooperation in the common task of building a better American continent for all of us.

Enlightened patriotism has understood at last that in a continent blessed with immense wealth, where there is a vast reservoir of untapped resources, power and richness are not to be looked for in conquest or aggression, but in collaboration and solidarity which will improve the standard of living throughout this hemisphere, which will give work to all, which will mobilize the unexploited resources of the continent in an effort to improve the condition of the people. People in the Americas understand moreover that this continent, because of the various nationalities of which it is composed and because of its devotion to the principles of democracy, will be a shining example of what good neighborliness and spiritual collaboration can achieve.

In finishing, let me repeat again the words of President Perón: "Argentina will be always on the side of the American nations any time she is needed." I am confident that every day will see an increase of the cordiality, friendship, and mutual esteem among the American nations.

I thank you.

The Labor-Management Relations Act of 1947

EXTENSION OF REMARKS

OF

HON. SAMUEL K. McCONNELL, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 6, 1947

Mr. McCONNELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio ad-

dress made by me over Station WMAL, Washington, D. C., on June 5, 1947:

The newspapers and the air waves have been filled with statements concerning the labor bills of the House and the Senate. Considerable feeling has been stirred up.

When the Eightieth Congress convened in January, it had been apparent for some time that conditions in the field of labor-management relations were not satisfactory; that strife was occurring too frequently, which, by affecting vitally needed production, was disturbing the economic life of all the people.

In such an atmosphere the Labor Committees of both Houses began their hearings, and after many weeks brought out bills designed to correct some of the trouble. The House and Senate both passed their own bills by large majorities, and they were then sent to the conference committee to iron out the differences. Yesterday, the House passed the conference committee bill. Tomorrow the Senate votes on it, and if passed, as anticipated, it will then go to the President.

The bill is known as the Labor-Management Relations Act of 1947. It amends the Wagner Act of 1935, and adds some new features. My time will permit me to describe only some of the main parts of this 73-page bill.

The National Labor Relations Board is continued, except that it shall consist of five instead of three members. In addition there shall be a general counsel of the Board, who shall be appointed by the President, by and with the advice and consent of the Senate. He shall investigate charges, issue complaints, and prosecute such complaints before the Board, which will hear the cases, and act in a judicial capacity. The purpose of these provisions is to divide the functions of the Board, which, in the past, acted as investigator, prosecutor, and judge.

Employees continue to have the right to organize or assist labor organizations, and to bargain collectively through representatives of their own choosing.

Unfair labor practices are designated as follows:

"It shall be an unfair labor practice for an employer—

"(1) To interfere with, restrain, or coerce employees in the exercise of their rights mentioned previously.

"(2) To dominate or interfere with the formation or administration of any labor organization, or contribute financial or other support to it; except that subject to regulations of the Board, an employer may permit employees to confer with him during working hours, without loss of time or pay.

"(3) By discrimination in regard to hire, or tenure of employment, or any term or condition of employment, to encourage or discourage membership in any labor organization. This section bans the closed-shop agreement, but a provision permits an employer to make a union-shop agreement provided a majority of employees eligible to vote in such an election authorize a labor organization to make such an agreement.

"(4) To discharge or discriminate against an employee because he has filed charges or given testimony under the act.

"(5) To refuse to bargain collectively with the representative of his employees."

A new section states that it shall be an unfair-labor practice for a labor organization or its agents—

"(1) To restrain or coerce employees in the exercise of their rights mentioned previously, provided that a labor organization shall have the right to prescribe its own rules with respect to acquisition or retention of membership therein.

"(2) To cause or attempt to cause an employer to discriminate against an employee in violation of the section dealing with an open shop, or union shop, whichever prevails; or to discriminate against an employee whose membership in a labor organization has been denied or terminated on some ground other than failure to pay dues or initiation fees.

"(3) To refuse to bargain collectively with an employer provided it is the representative of his employees.

"(4) To engage in, or induce, or encourage, the employees of any employer to engage in a strike or concerted refusal to use, manufacture, process, transport, handle, or work on any goods where the object is—

"A. Forcing an employer or self-employed person to join a labor or employer organization; or any employer to cease using, selling, or handling the products of any other producer, processor, or manufacturer, or to cease doing business with any other person.

"B. Forcing or requiring any other employer to recognize or bargain with a labor organization as the representative of his employees, unless such organization is the certified representative of such employees.

"C. Forcing or requiring any employer to recognize or bargain with a particular labor organization as the representative of his employees, if another labor organization has been so certified.

"D. Forcing or requiring any employer to assign particular work to employees in a particular labor organization, or in a particular trade, craft, or class, rather than to employees in another labor organization, trade, craft, or class, unless such employer is failing to conform to an order or certification of the Board.

"Nothing in this section shall be construed to make unlawful a refusal by any person to enter upon the premises of any employer, if employees of such employer are engaged in a strike approved by a representative of such employees.

"(5) To require of employees covered by a union-shop agreement the payment of a fee which the Board finds excessive or discriminatory under all circumstances.

"(6) To cause or attempt to cause an employer to pay or deliver money or other thing of value for services which are not performed or not to be performed."

The bill states that collective bargaining is the performance of the mutual obligation of the employer and the representative of the employees, to meet at reasonable times and confer in good faith with respect to wages, hours, and conditions of employment, or the negotiation of an agreement. Where a contract is in effect, the duty to bargain collectively shall also mean that the party proposing to modify or terminate it shall:

1. Serve written notice upon the other party 60 days prior to the expiration date, or, if no date exists, then 60 days prior to the date of the proposed change;

2. Offer to meet and confer with the other party for the purpose of negotiating a new contract or modifying the existing one;

3. Notify the Federal Mediation and Conciliation Service, within 30 days after such notice, of the existence of a dispute, provided no agreement has been reached by that time; and

4. Continue in effect, without resorting to strike or lock-out, all terms and conditions of the existing contract for a period of 60 days after the original notice is given, or until the expiration date of the contract, whichever occurs later.

In order to be eligible for certification as the representative of any employees, a labor organization is required to file annually with the Secretary of Labor detailed reports showing:

1. The name and address of such labor organization.

2. The names, titles, and compensation and allowances of its three principal officers and its other officers or agents whose total compensation and allowances exceeded $5,000 for the preceding year.

3. The manner in which those officers and agents were elected, appointed, or otherwise selected.

4. The initiation fee or fees which new members are required to pay.

5. The regular dues or fees which members are required to pay.

6. A detailed statement showing procedure followed with respect to membership qualifications, assessments, fines, and other union matters.

7. A report showing all receipts and the sources of such receipts; its total assets and liabilities, as of the end of its last fiscal year; disbursements made by it during that fiscal year, including purposes for which made.

8. All members of such labor organization to be furnished copies of the financial report.

The bill creates an independent agency to be known as the Federal Mediation and Conciliation Service. It shall be under the direction of a Director appointed by the President, by and with the advice and consent of the Senate. The Service may proffer its services in any labor dispute affecting commerce, either upon its own motion or upon the request of one or more of the parties to a dispute. If the Director is not able to bring the parties to agreement by conciliation within a reasonable time, he shall endeavor to induce the parties voluntarily to seek other means of settling the dispute without resort to strike, lock-out, or other coercion, including submission to the employees in the bargaining unit, of the employer's last offer of settlement for approval or rejection in a secret ballot. Neither party is under compulsion to act on these suggestions.

The strikes that give the greatest concern to the public are the so-called national emergency strikes. Whenever, in the opinion of the President, a threatened or actual strike or lock-out affecting interstate commerce will imperil the national health or safety, he may appoint a board of inquiry to investigate the issues involved and make a written report to him within such time as he shall prescribe. The report shall include a statement of facts, but shall not contain any recommendations. The President shall make its contents available to the public.

The President, after receiving the report, may then direct the Attorney General to petition any United States district court having jurisdiction of the parties, to enjoin such strike or lock-out. If the court finds the national health or safety is or will be imperiled, it shall have jurisdiction to enjoin such strike or lock-out. The order or orders of the court shall be subject to review, by the appropriate Court of Appeals and by the Supreme Court.

Whenever the district court issues such enjoining order, it shall be the duty of the parties to the labor dispute to make every effort to adjust and settle their differences, with the assistance of the Mediation and Conciliation Service.

Upon the issuance of such order, the President shall reconvene the original board of inquiry. At the end of a 60-day period, if the dispute has not been settled, the board shall report to the President the current position of the parties, and the efforts which have been made for settlement, including a statement of each party of its position, and a statement of the employer's last offer of settlement. The President shall make such report available to the public. The National Labor Relations Board, within the succeeding 15 days, shall take a secret ballot of the employees of each employer involved in the dispute on the question of whether they wish to accept the final offer of settlement made

by their employer. The results shall be certified to the Attorney General within 5 days thereafter.

Upon the certification of the ballot results, or upon a settlement, the Attorney General shall move the court to discharge the injunction. The President shall then submit to Congress a full report, together with such recommendations as he may see fit to make for consideration and action.

Suits for violation of contracts between an employer and a labor organization, or between labor organizations, may be brought in any United States district court having jurisdiction of the parties. A labor organization and an employer shall be bound by the acts of its agents. Any such labor organization may sue or be sued as an entity, and in behalf of the employees whom it represents, in the courts of the United States. Any money judgments against a labor organization shall be enforceable only against the organization as an entity and against its assets, and shall not be enforceable against any individual member or his assets.

Boycotts, jurisdictional strikes, and strikes to force recognition of another labor organization, after a labor organization has been certified as the bargaining agent, are declared to be unlawful and whoever shall be injured in his business or property by such actions may sue therefor in any United States district court.

The Federal Corrupt Practices Act of 1925 is amended to prohibit political contributions by labor organizations just as it prohibits contributions by any national bank or corporation.

I recognize the fact that we are dealing primarily with human relationships. Laws alone will not solve many of our labor-relations problems. In the final analysis, the solution rests upon individual action. Furthermore, I realize the fact that if our currency continues to weaken and lose its purchasing power, all the laws in the world will not prevent unrest and friction within the ranks of labor. An employee is a human being, and he fundamentally is working for material rewards. Therefore, I believe it is most essential that we stabilize our currency and do everything possible to reduce the unnecessary expenses of the Government so that the cost of living can be reduced for all the people.

Record of the Eighteth Congress to Date

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, June 6 (legislative day of Monday, April 21), 1947

Mr. WILEY. Mr. President, I ask unanimous consent that there be reproduced in the Appendix of the RECORD the text of an address by me which is being broadcast today over Station WIND in Chicago. The subject of the address is the outstanding record of the Eightieth Congress to date.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CONGRESS' INSPIRING RECORD

I am grateful to this station for the opportunity to address you briefly on the subject of the bright and inspiring record of the Eightieth Congress.

This is a matter which you, as a citizen, are vitally interested in. You know that Congress has an obligation to the American people to handle adequately the problems of America in this atomic age. I believe it is fulfilling its obligation. It has over 5,000 bills pending before it, and it is doing a splendid job in evaluating them.

UNFAIR CRITICISM OF CONGRESS

During the first months of the Congress there was, however, a considerable amount of unfair and New Deal inspired criticism of the Congress' accomplishments.

Let us look at the record and let it speak for itself on just what your 435 Representatives and 96 Senators have been doing since they opened up shop on January 3, 1947. Let us seek the truth, which, as we are told in the Book of Books, sets men free—free from unjust criticism, free from doubt.

Let us first bear two facts, however, in mind.

POLITICAL REORGANIZATION

(A) Let us recognize that the Eightieth Congress had to completely reorganize itself politically before it could even begin to get down to its big work. For the first time in 14 years the Republicans were the majority party. This meant that they had to assume responsibility for committee machinery, for numerous congressional officers, and for other matters. It meant that the Republicans had to make various selections among their own ranks and that those men selected to handle the various legislative duties had to become accustomed to their tasks. I think that this job of political reorganization has been done well, as attested by the record of accomplishments on other fronts.

LEGISLATIVE REORGANIZATION

(B) Secondly, let us bear in mind that the Eightieth Congress, before it could do a single day's work on legislation, had to completely reorganize its legislative machinery, its committees, its procedures, in accordance with the Legislative Reorganization Act. You will remember that act was passed in the Seventy-ninth Congress. It instituted the most complete overhaul of the congressional apparatus in 150 years. This reorganization, too, was a tremendous job, but the Eightieth Congress performed it smoothly and efficiently.

With these two reorganization efforts completed, Congress was then able to sail into the larger problems that confronted us. Let us look at what those problems are and how Congress has handled them:

FULL-TIME JOB

We in Congress have not been working on any 40-hour week. I, personally, like most of my colleagues, work around 80 hours a week and I'm proud and happy to do so in the service of our people. I take work home with me almost every night as do my associates. That is the only way we can get our job done.

Now, let us look at some of the fruits of our toil.

PORTAL-TO-PORTAL PAY

First, one of the most urgent congressional problems was the matter of elimination of the fantastic portal-to-portal mess. You will remember that this involved some $6,000,000,000 of suits filed by certain union organizations against American business for alleged portal-to-portal time. Had these suits been sustained by the courts, American industry would have been crippled and mass unemployment would have resulted.

But within the elapsed time of 4 months, the United States Senate and House held complete and exhaustive hearings on this matter, shaped a bill to eliminate these claims, passed this bill and sent it to the President. Our Chief Executive accepted the only reasonable choice open to him and signed this measure into law. Thus American industry was freed from the spectre of these disastrous suits. Accomplishment No. 1 of the Eightieth Congress.

LIMITATION ON PRESIDENTIAL TENURE

Now, second, we note that Congress has passed a constitutional amendment to limit Presidential tenure to two terms. This amendment has been submitted to the States for ratification and has already been approved by over a third of the final number necessary to enact the amendment.

It was not passed by the Congress or these State legislatures in a spirit of vindictiveness or partisanship. It was passed in a spirit of liberty as a move against too-long one-man control and one-party control which make for dictatorship. You and I know, that power, even when it is in the hands of angels, corrupts.

So, accomplishment No. 2 of the Eightieth Congress was the amendment limiting Presidential tenure.

BUDGET REDUCTION

We turn now to a third front of congressional action—budget reduction. You and I know that the President submitted a padded and bloated $37,500,000,000 budget. This budget gave many agencies even more money than they had lavishly spent during the war. Congress resolved to reduce the budget.

In doing so, it knew it would be fulfilling the people's will. For years the people have been clamoring for economy in Uncle Sam's handling of his business. They have wanted Government to start cutting corners in order to save the taxpayers' money. This meant that Congress would have to go over all of the executive departments' requests for funds with a fine-tooth comb in order to save money wherever possible. This, the Congress has done.

The House and Senate have effected economies in the various appropriations bills approximating one-third of all the money which the agencies requested. Of course, many of these budget cuts hurt some citizens and groups. It isn't easy to cut out Government functions which have been performed for a long time without causing some need for readjustment somewhere. Nevertheless, Congress is seeking to do an honest and efficient job in applying these economy cuts where the agencies can best stand them, by wiping out unnecessary functions and personnel. This is a job that is still continuing in the various appropriations bills before the Congress. Eventually it is hoped that a substantial reduction will be able to be made in the President's $37,500,000,000 budget. Accomplishment No. 3 of the Eightieth Congress.

TAX REDUCTION

Tax reduction goes hand in hand with budget reduction. That is why Congress is submitting a 10-, 20-, 30-percent tax-reduction bill to the President, in fulfillment of its promises of last November.

In the postwar era, it is absolutely essential that private enterprise be encouraged to full production rather than punished through burdensome taxes. Following exhaustive hearings in the Senate and House on this subject, legislation for a 10–20–30 percent tax cut has been prepared. But this is only the beginning.

Hearings are under way in the House of Representatives for a complete overhaul of our entire tax set-up. Congress wants to modernize and streamline and reevaluate all our taxes—inheritance, gift, excise, social security, income, and every other breed of taxes. That is what the people want, too

Tax reduction and the beginning of tax revision, accomplishment No. 4 of the Eightieth Congress.

LABOR REFORM

Another of the real challenges to the Eightieth Congress was meeting the labor situation head-on by enacting long overdue reforms in the public interest. Again after exhaustive hearings, the Senate and the House have fashioned legislation designed to curb racketeering abuses in the ranks of labor. This legislation is not designed to be antilabor nor promanagement. It is only designed to be propublic, to protect the welfare of all of us.

Time does not permit me to examine at length all of the various provisions of the labor bill, with which I am sure you are familiar. You know that the bill seeks to eliminate secondary boycotts, jurisdictional strikes, coercion in labor disputes, control of unions by crooks or Communists, abuses of welfare funds, excessive initiation fees in unions, the closed shop (but not the open shop). It seeks to prevent strikes against the public safety through Federal injunction and to make for better mediation of disputes.

Ring up accomplishment No. 5 of the Eightieth Congress if we can get this labor bill enacted into law.

FOREIGN AID

But my friends, we have seen Congress' accomplishments only on the domestic front so far. Let us recognize now that Congress has been adequate to its responsibilities on the international front, too. With speed and adequacy, Congress made its historic decision to render $400,000,000 of aid to Greece and Turkey in order to halt Russian aggression against those countries. This was a decision by the Congress for peace. It was a decision for liberty. It was a decision for our enlightened self-interest.

But Congress made another decision—to extend humanitarian aid to stricken peoples abroad. It enacted the bill for $350,000,000 of aid to Greece, China, and other war-ravaged countries.

The men and women of the Congress want America to play the role of the Good Samaritan, helping other peoples to help themselves. We don't want to squander America's resources abroad. We don't want to waste the taxpayers' hard-earned money, but we do want to help other peoples back on their feet so that they can help themselves.

Foreign aid, accomplishment No. 6 of the Eightieth Congress.

OTHER BILLS

Time prevents me, my friends, from reviewing the other important legislation already considered by the Congress. Suffice it to say, however, that several score public laws have already been passed—laws which the public wants and laws which the Congress enacted with speed and accuracy.

COMMITTEE WORK

The reasons for Congress' fine record thus far can be found in the excellent work of its committees. As you know, there are some 50 committees in the Senate and House with some 150 subcommittees who do the spade work, who hold the hearings, dig out the facts, prepare the reports.

I would like to tell you a bit about the work of one committee—the Senate Judiciary Committee of which I am honored to be chairman. This committee has received more bills than any other committee in the United States Senate. If you were to pick up what is called its calendar you would find a document 256 pages long listing over 550 bills received, a considerable proportion of them already acted upon. You would find that this committee has held hearings on almost a score of matters. Taken up among those hearings were the portal-to-portal bill which it studied intensively. Another job performed by the Senate Judiciary Committee was the constitutional amendment to limit Presidential tenure, about which I have also already spoken. Still other work has been performed on the matter of eliminating wartime controls. A dozen or so of the nominations by the President for judgeships have also been considered.

PROBLEMS AHEAD

But my fellow Americans, I don't mean for you to assume that all of the legislative problems of the American people have already been handled to date. You and I know that would be impossible. We know that the abnormal wartime conditions have left us a difficult heritage which will take time to resolve. The housing shortage is still with us, but legislation alone cannot solve that problem. We still have high prices brought about by underproduction. We have the problem of the proposed merging of armed forces confronting us. We have the problem of the proposed enactment of the great St. Lawrence waterway, on which I have been holding hearings in a Foreign Relations Subcommittee. We have problems of foreign affairs and domestic affairs.

These, the Congress will take up, I am sure with the same speed and adequacy it has evidenced to date, but may I repeat that legislation will not provide the solution without work and production.

CONCLUSION

My fellow Americans, we have reviewed six specific phases of congressional actions: Its portal-to-portal law, its Presidential limitation, budget reduction, tax reduction, labor reform, and foreign aid. We have seen the work of congressional committees and looked briefly at the problems still up ahead.

I have shown you that on the basis of the record, the American people are justified in their faith in the Eightieth Congress. Your Congress and mine is handling first things first and doing a good job at it, with the welfare of the American people at heart. May the example of this hard-working Congress inspire all of us to do the job which is before us.

In Defense of Juries

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Friday, June 6 (legislative day of Monday, April 21), 1947

Mr. MAYBANK. Mr. President, recently there were many critics of the jury's verdict in South Carolina, and many articles appeared in various newspapers throughout the country, both pro and con.

One of the best editorials I have read on the subject appeared in the News and Courier, of Charleston, S. C. It states what I believe to be true that most of the critics did not follow or study the trial.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IN DEFENSE OF JURIES

Many persons have severely criticized the jury that acquitted the 28 men who were indicted for the murder of the Negro, Willie Earle, in Greenville County. The critics did not hear the law charged by the presiding judge and the sworn testimony of the witnesses. The critics have not been sworn as jurymen. The News and Courier cannot say what would have been its verdict had it been a member of the jury.

Do the critics wish the jury system abolished? What would they substitute for it? Would they have indicted persons tried by judges, by kings, by commissars, by political bosses, by newspapers?

Are they contending for the passage of a law that would transfer trials of criminals in South Carolina to Federal courts? If that they advocate, why do they not so say?

The News and Courier is a believer in the right of the State to try criminals. It would not have South Carolina converted into a province governed by proconsuls appointed by authority in Washington or in Moscow.

Juries are composed of men. Men are fallible. An act of Congress sustained by the courts that murderers and other felons be tried in the Federal courts would intensify "race prejudice" in South Carolina. It would incense ruffians, incite them to do murder. Ignorant Negro ruffians would, of course, think that Uncle Sam would protect them no matter how beastly their deeds might be. The Federal Government could apply force to halt them. It could send to South Carolina an army of occupation. That would not be new to South Carolina.

One can think of a jury as ignorant or corrupt, or both. It is not for the News and Courier to describe any jury as of that character or want of character. The News and Courier is a believer in the jury system and a defender of it. It is a believer in the right of the State of South Carolina to try accused persons. It is a defender of that right. Therefore it refuses to join in denunciations of the Greenville jury, and leaves it to persons who think of themselves as specialists in that duty.

Communist Influences in the Motion-Picture Industry

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, June 6, 1947

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks, I include therein a report of a subcommittee of the Committee on Un-American Activities investigating Communist influences in the motion-picture industry, which report was filed with the full committee on May 28, 1947:

UN-AMERICAN ACTIVITIES

On the 22d day of April the chairman appointed a subcommittee of the Committee on Un-American Activities, consisting of the following members: Hon. J. PARNELL THOMAS, chairman, Hon. JOHN MCDOWELL, and Hon. JOHN S. WOOD, to proceed to California for the purpose of making an investigation and taking executive testimony relative to the Hans Eisler case and the alleged Communist influences and infiltration in the motion-picture industry. The subcommittee arrived in Los Angeles on May 5, accompanied by the chief investigator, Robert E. Stripling, and Investigator Louis J. Russell.

The subcommittee was met by the press and the chairman issued a statement in which he stated that the subcommittee had a twofold purpose of being there. One was to complete certain phases of the so-called

Hans Eisler case, which the committee has been working on for the past 4 months; that there would be no public hearings by the subcommittee in California on the case, but that it was expected that the case would be presented to the full committee in Washington in the early part of June.

The chairman stated that the subcommittee was in California to initiate an extensive and all-inclusive investigation of possible Communist activities and influences in the motion-picture industry. The chairman explained to the press that the committee had been beseiged with demands and requests to investigate the situation. He emphasized, however, that the investigation would require a minimum of 4 months and the services of a trained and competent staff, and that all the committee wanted were the facts and that there would likewise be no public hearings in California on this subject; that the subcommittee was there for the purpose of securing the cooperation of the parties involved, in order that the best job possible would be done.

HANS EISLER

On May 9, agents of the committee served two subpenaes on Han Eisler at his residence, 108 Malibou Beach, Pacific Palisades, Calif. One subpena called for his appearance before the subcommittee at its chambers in the Baltimore Hotel on Monday, May 12, at 11 a. m. The other subpena called for Eisler's appearance before the full committee in Washington on June 16, 1947, at 10 a. m.

On May 12, at 11 a. m., Hans Eisler, accompanied by his attorney, Ben Margolis, appeared in the committee's chambers. The committee was sitting in executive session and Mr. Eisler was sworn and permitted to read a brief statement to the committee, which appears in the official transcript.

The chief investigator explained to Eisler why he was before the subcommittee and proceed to ask him questions relative to the committee's inquiry. The witness' answers were evasive and in many cases contrary to documentary evidence which was in the possession of the subcommittee. He was repeatedly counseled by his attorney, Mr. Margolis, to "answer the questions in any way you see fit." The committee thereupon concluded that due to the witness' noncooperative attitude and evasion, no good purpose could be served in further questioning him in executive session. He was therefore instructed to appear in Washington on June 16 before the full committee in open session, and to refresh his memory on certain vital questions which had been propounded to him. He informed the subcommittee he would be present on June 16. The subcommittee's investigation of Eisler's activities in California, however, disclosed very important information which will be revealed at the hearing on June 16.

COMMUNIST INFLUENCES IN THE MOTION-PICTURE INDUSTRY

On May 8 and 9, members of the subcommittee and the committee's staff conferred with a number of individuals concerning the situation in Hollywood. Following these conferences, the members of the subcommittee decided to bring before them a number of witnesses from the motion-picture industry who would represent a cross-section of the industry and to question them under oath concerning the allegations with reference to the Communist influences in Hollywood. Accordingly, the following individuals were invited to appear before the committee:

Roy E. Brewer, international representative of the International Alliance of Theater and Stage Employees. He was accompanied by Mr. B. C. DuVal, business representative of Local No. 44 of the IATSE in Hollywood, and Mr. Harry Schiffman, business representative of Local No. 787 of the IATSE.

James K. McGuiness, executive of Metro-Goldwyn-Mayer Studios; active in Hollywood for the past 20 years as a screen writer, producer and executive.

John Charles Moffitt, motion-picture critic and reviewer for Esquire magazine; member of the Screen Writers Guild and professional screen writer.

Robert Taylor, actor.

Richard Arlen, actor.

Leia E. Rogers, active in Hollywood since 1915 as a writer, actress and producer, and manager of her daughter, actress Ginger Rogers.

Henry Ginsberg, executive producer and general manager of Paramount Picture Studios; active in Hollywood for the past 16 years.

Adolphe Menjou, actor.

Jack Warner, studio executive at Warner Bros.

Leo McCarey, director and producer.

Rupert Hughes, writer.

Howard Emmet Rogers, screen writer.

All of the above-named witnesses appeared before the subcommittee and were sworn and testified in executive session. They were frank and cooperative. They revealed a very serious situation and manifested deep concern over the inroads that the Communists had made in this important and powerful medium of propaganda and education.

These witnesses gave the subcommittee the names of writers, actors, directors, and producers from the moving-picture industry whom they considered to be Communists. One prominent actor who has been in Hollywood 27 years described Hollywood to the committee as "the hub of Red propaganda in the United States." Another testified that the Communists have infiltrated many talent agencies, so that their hiring will favor party liners who can kick back funds to party causes.

The subcommittee has decided not to analyze the testimony of each witness in this report to the full committee, but recommends that each member read the entire transcript which is contained in 4 volumes, and which will be available to each member. However, the subcommittee would like to give the full committee the benefit of some of the important disclosures which were made before the subcommittee and which we feel deserves the immediate attention of the full committee.

Based upon the testimony and evidence submitted to the subcommittee it was disclosed:

(1) That scores of screen writers who are Communists have infiltrated into the various studios and it has been through this medium that most of the Communist propaganda has been injected into the movies. These writers belong to the Screen Writers Guild, which has a membership of some 1,300, and which, according to the testimony of competent witnesses, is under the complete domination of the Communist Party. These writers receive anywhere from $500 to $5,000 per week.

(2) That some of the most flagrant Communist propaganda films were produced as a result of White House pressure.

(3) That Communist screen writers, directors, and producers have employed subtle techniques in pictures, in glorifying the Communist system and degrading our own system of Government and institutions. (The subcommittee was furnished with a complete list of all the pictures which have been produced in Hollywood in the past 8 years which contain Communist propaganda.) The committee was fortunate in having before it a prominent and experienced screen writer and critic who analyzed these pictures from the standpoint of Communist propaganda and degradation of American institutions.

(4) That the National Labor Relations Board has given great aid to the Communists in their efforts to infiltrate and control the motion-picture industry.

(5) That up until recently, there has been no concerted effort on the part of studio heads to remove the Communists from the industry, but that in fact they have been permitted to gain influence and power which has been reflected in the propaganda which they have been successful in injecting in numerous pictures which have been produced in the last 8 years.

(6) At the present time there is a rebellion within the industry on the part of a number of top actors, directors, and producers who are refusing to play, direct, or produce pictures that contain Communist lines, or which were written by a well-known Communist, or in which well-known Communist actors have been given a role.

(7) That the Communists have succeeded in preventing certain good American pictures, which sought to glorify America and the American system, from being produced.

CONCLUSIONS

Since 1938, the Special Committee on Un-American Activities, and the Standing Committee on Un-American Activities has succeeded in amassing voluminous information concerning Communist elements within the motion-picture industry. Unfortunately, however, up until the present time, there has been no inclination on the part of the industry itself to cooperate with the committee in ferreting out these influences. Today the responsible people in the industry seem to be aware that they have been misled and misused by the Communists, and are anxious to rectify this situation. The cooperation which the subcommittee received was evidence of the indignation which responsible people in Hollywood now feel toward Communists and the injury they are doing to this great entertainment agency. In the opinion of the subcommittee, there is no question as to the serious inroads that the Communists have made in the motion-picture industry, and it presents a problem which can only be corrected by complete exposure on the part of the Committee on Un-American Activities and prompt action by the studio heads. Therefore the subcommittee makes the following recommendations:

(1) That the full Committee on Un-American Activities intensify its investigation of Communist influences in the motion-picture industry with the view of holding a public hearing in Washington before the full committee at the earliest possible date, and bring before it all the necessary witnesses to give the American people the full facts and information on this dangerous situation.

(2) That the committee subpena to Washington Communist actors, writers, directors, and producers, and confront them in public session with the testimony and evidence against them.

(3) That an investigation be instituted to determine the responsibility and extent of the influence and interference on the part of Government agencies or officials in the production of flagrant Communist propaganda films.

Death of White Youth in Effort To Rescue Negro

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, June 6 (legislative day of Monday, April 21), 1947

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a story from

the Raleigh News and Observer giving an account of a very heroic act on the part of a young white youth, Chic Shaheen, who lost his life in an attempt to rescue and save the life of a young Negro boy who was drowning in a lake near Raleigh.

In this day, when there is so much publicity about lynchings and other racial disturbances, and especially if these happen to occur anywhere in the South, it seems to me that it is worth while for the other side of the picture to be presented, and that due publicity should be given to the act of this young man in sacrificing his life in an effort to save the life of his Negro companion. Of course, this story would not gain headlines in the sensational press, because so often this type of journalism is interested only in fanning race prejudice and in flaunting what it describes as race discrimination in a great section of our country. This act of heroism on the part of this southern white boy in undertaking to save the life of this Negro youth, should make wholesome reading for the entire country.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHITE YOUTH DIES IN TRYING RESCUE—PANIC-STRICKEN NEGRO YOUTH PULLS WOULD-BE RESCUER UNDER IN LAKE TRAGEDY

A Raleigh white youth, disregarding his own safety, went to the rescue of a drowning Negro boy here yesterday and lost his life in the attempt to save him. The Negro, too, was drowned.

Victims of the tragedy, which occurred at Carolina Pines Lake, a mile south of the city on the Fayetteville Highway, were Chic Shaheen, 17, a Hugh Morson High School student, of 214 Lafayette Road, and Thomas Upchurch, Negro, also 17, of 715 Branch Street.

A third boy in the fishing party, Bobby Albright, 16, of 401 South McDowell Street, swam safely to shore when the boat in which all three were riding filled with water.

Coroner I. M. Cheek ruled the drownings accidental and said no inquest would be held. They were the first drownings to occur in Wake County in 1947.

Young Albright, who caddies at a nearby golf course, said he was in a boat when Shaheen and Upchurch happened by and asked to be taken out to fish.

Albright said he was doing the rowing while the other two boys fished. In some unexplained manner, Upchurch fell overboard and came up calling for help.

Without hesitation, Shaheen, fully dressed, dived in and swam to the struggling Negro youth. As he approached, Upchurch reached out and grasped him around the neck, Albright said, and both youths went down. Albright said he kept looking for the two to come up again, but they didn't.

Meanwhile, the partially capsized boat was filling with water, and Albright jumped into the water and swam to shore. There were a number of persons nearby at the time, and Raleigh firemen were summoned. The Red Cross, too, answered a call, with Louis Gray, swim program director, supervising work of several divers.

Shaheen's body was located and brought to shore within about 30 minutes, and efforts at resuscitation at first gave hopes of being successful, but after some some 2 hours' work with a pulmotor, hope was abandoned.

Considerable difficulty was experienced in locating the body of Upchurch, and it was over 2 hours before it finally was brought up. A. L. Murray of Raleigh, Route 3, and city firemen, directed by Chief W. R. Butts and Assistant Chief A. B. Lloyd, recovered the body. Efforts to revive him also were to no avail.

Shaheen was the son of Mr. and Mrs. Leo Shaheen, of Lafayette Road. His mother is the former Miss Idell Cannon, of Raleigh. Besides his parents, he is survived by one brother, Leo, Jr., and three grandparents.

Funeral rites will be held tomorrow afternoon at 3 o'clock at Sacred Heart Catholic Cathedral and the pastor, Monsignor J. Lennox Federal will be in charge. Interment will be in Montlawn.

Upchurch's parents are Mr. and Mrs. Jonah Upchurch, of Raleigh. Funeral arrangements for him were incomplete last night.

All Things to All People

EXTENSION OF REMARKS
OF
HON. C. JASPER BELL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, June 6, 1947

Mr. BELL. Mr. Speaker, on Monday the Washington Daily News printed a consolidation of the reports from all quarters of the globe to the United Press regarding activities of Communists in foreign countries.

Without question there appears to be only a concerted effort for one thing alone by the Communist Party organizations in all countries—support of the Russian foreign policies looking toward the eventual domination of the world by the Soviet International.

It is significant, too, to note that in none of the countries surveyed have the Communist Party leaders advocated collectivism of farms as in Russia. The only really significant land-reform measure has been the breaking up of large German estates into farms owned and operated by the farmer himself.

This indicates a clever strategy on the part of Communist leaders. They do not want to arouse the people into open revolt or even mild antagonism to their program along other lines. That can come later when all of the other pallatives have been accepted into the thinking of the people for then the shock of such so-called reforms would not be so great. Then would come the collectivism of farms and other communistic methods of Government controls. Enslavement of farms would be a step by step process.

The average American farmer, proud of his land ownership and the freedom and independence that go with it, is almost as unsuspecting of the import of these changes in Europe as those behind the iron curtain already under the heel of the Communist dictatorship. The American farmer knows instinctively that something is wrong with the Communist system but he has not yet transposed that knowledge into how the system might possibly affect his position in life if the Communist form of government were established in the United States.

Analysis of the following consolidated report by Mr. Harrison Salisbury, United Press foreign news editor, will indicate clearly the propaganda methods being used by the Communists in Asia and Europe today. At this stage it has outgrown the propaganda stage of early ideological invasion and is penetrating the very fiber of the governments of those countries as clearly shown by the operations of the Tito government in Yugoslavia. Mr. Salisbury's report is as follows:

CAGEY COMMUNISTS RECONVERT "AIMS"

(By Harrison Salisbury)

Communist Party tactics run the gamut from outright revolutionary activity, guerrilla warfare and underground sabotage to mild parliamentary reformism—all apparently depending upon local conditions in the particular country concerned.

Communist Party programs reveal an equal profusion of variants, ranging from full socialization of industry to introduction of elementary democratic rights such as free speech and a free press.

NOT BACKING COLLECTIVISM

In none of the 46 Communist Party government countries of which the United Press made a survey was the party supporting the collectivization of agriculture such as has been effected in the Soviet Union.

The most revolutionary Communist Party program disclosed in the survey was that in Greece, where the party is backing the guerrilla faction in the semi-civil war in progress in that country.

The Greek Communist Party is half underground and has taken the leading role in the open guerrilla warfare against the Greek Government. But Communist leaders there told United Press Correspondent Robert Vermillion they did not expect to achieve the overthrow of the government by this means, at least as long as the United States supports the Athens regime.

A small campaign of violent action by Communists was reported from Spain. But the number of active Communists appeared to be extremely small. In Spain they carry out occasional sabotage, blowing up of bridges, and setting off small bombs in public squares or in front of important buildings.

In the Middle East the Communist Party's announced objective is revolution. But Communist leaders in Egypt, for instance, said the goal was at least 20 years distant.

The initial stated goal in most Middle Eastern and Asiatic countries is elimination of colonial powers, usually Britain, and establishment of what the Communists call bourgeois democracy.

In Iran the Communist and Russian-backed Tudeh Party last year apparently aspired to win control of the Government by revolutionary means, but the movement was reported largely to have petered out both in Iran proper and Azerbaijan.

EVOLUTIONARY SOCIALISM

Most of the European Communist Parties feature the nationalization of basic industries and land reform at the top of their program. In some of the countries, for example in Norway, the party has abandoned revolution as a means for achieving its ends, and in its propaganda calls for achievement of socialism without revolution. The line in Czechoslovakia is described as evolutionary socialism rather than revolutionary socialism.

While calling for land reforms in most countries the Communist Parties are anti-collectivization. In Czechoslovakia, Poland, and Hungary the party stands for ownership of land by the farmer who works it.

In France, the Netherlands, and Belgium the party calls for higher wages and lower living costs. The French party wants to end tax support of Catholic schools. But in Italy the party supported the establishment of catholicism as the state religion. In the Netherlands Catholic authorities announced Communist supporters would be denied the holy sacrament.

In the Balkans, where many Communist Parties are in power, they have generally moved to nationalize mines, large industrial enterprises, public utilities, and so on, but have adopted a hands-off policy toward small business, trades, and professions.

In former enemy countries and occupied countries the Communists continue to press for strict punishment of wartime collaborators and Fascists.

On foreign policy the parties universally favor friendship and good relations with Russia and generally support the Soviet on foreign policy issues. But national disputes, such as that between Italy and Yugoslavia over Trieste, find the parties taking more nationalist lines although usually trying to soft-pedal the issue.

The party program in Germany emphasizes a unified Reich, a fair peace, elimination of Nazis, land reform and nationalization of industry. Land reform has been introduced in the Soviet zone with the splitting up of large estates, and the nationalization of mines and industry has been started.

DIFFERENT AIMS IN ASIA

In Asia and the Far East the Communist Party programs have objectives which differ widely from those in Europe.

The party program in India stresses freedom of speech, assembly, press, religion, trade-union rights, the 8-hour day, union recognition, a month's paid holiday, old-age pensions, maternity benefits, free education, better homes, and better hospitals.

Nationalization of industry is also an Indian objective but is far down the list.

In Siam the party stands for lowered living costs, universal suffrage, free speech, free press, freedom to strike, freedom of religion, better pay, lower taxes, and universal education. In Malaya the program is the same with the addition of a plan advocating equal rights for both sexes.

"BOURGEOIS DEMOCRACY"

The Japanese Communist Party sets as its objective the achievement of a "bourgeois democracy." It wants consolidation of labor unions, abolition of special rights for the emperor and large land owners, abolition of the bureaucracy, nationalization of farms and land, nationalization of banks and self-government.

In China where the Chinese Communist Party controls areas of China with an estimated 100,000,000 population the party program is based on agrarian reform, establishment of cooperatives both in agriculture and industry, introduction of education, health measures, and similar rudimentary reforms.

Think Before Wiring

EXTENSION OF REMARKS
OF
HON. HOWARD A. COFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 6, 1947

Mr. COFFIN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the June issue of the Farm Journal:

THINK BEFORE WIRING

You may be asked, any day now, to "write or wire your Congressman."

The agricultural appropriation bills are before committees, and will shortly be on the House floor. Everybody has a pet appropriation or so. Farm organizations and other groups will be asking their members and friends to tell Congress not to cut their favored items. They are for economy, but not that much.

We have a pet appropriation or so of our own—new crops research, for one. But we are sending no wires.

More important than any single appropriation or any single activity of the Department of Agriculture—more important than the Department of Agriculture, we might say—are these; that the Government of the United States and the American dollar keep their strength; that the mammoth debt be reduced; that taxes be lowered so that men have incentive to produce.

These things can't be accomplished unless Federal expenses are sharply lowered. Expenses can't be lowered except by cutting appropriations, and cutting them hard.

Before any citizen sends his wire to protect some favored activity, let him ask himself whether the reduction of expenses and taxes will not serve him and his country better.

American agriculture managed fairly well for a good many years while the funds of the Department of Agriculture were only one-fifth as much, or even less, than now. Crops will still be harvested, and little pigs will still make pork, whether the Department has two billions or two millions to spend. We believe in the usefulness of the Department of Agriculture, but right now we shall demand no more services from it than a financially bent Nation can afford.

Here is one place where farmers can take the lead to reduce Federal expenses. If we must write or wire the Congressman, why not tell him to keep on whittling the figures down?

Settlement of Telephone Dispute in Virginia

EXTENSION OF REMARKS
OF
HON. THOMAS B. STANLEY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 6, 1947

Mr. STANLEY. Mr. Speaker, under leave to extend and revise my remarks, I wish to insert into the Appendix of the RECORD a communication addressed to his excellency, Hon. William M. Tuck, Governor of Virginia, by the members of the State Corporation Commission of the Commonwealth of Virginia:

COMMONWEALTH OF VIRGINIA,
STATE CORPORATION COMMISSION,
Richmond.

Hon. WILLIAM M. TUCK,
Governor of Virginia,
Richmond, Va.

DEAR GOVERNOR TUCK: Under date of April 16, 1947, Your Excellency issued a proclamation reciting certain events, which had transpired in connection with a labor dispute between the Chesapeake & Potomac Telephone Co. of Virginia and certain employees of the company and culminated in the filing of a strike notice to be effective May 17, 1947. Another proclamation of similar character was issued under date of April 18, 1947, with regard to the dispute between the company and certain of its employees in the city of Alexandria, the county of Arlington, and the town of Falls Church which caused the filing of a strike notice to be effective May 14, 1947. A third proclamation on April 21, 1947, cited the strike notice, to be effective May 20, 1947, filed by certain employees in the territory served by the company in Accomack and Northampton Counties. The proclamations and executive orders entered in each instance signified your intention to take possession of and to operate the company, or so much thereof as might be necessary to render adequate telephone service to the areas affected by the three strike notices. The executive orders designated the State corporation commission as your agent to perform the duties required of the Governor as set forth in chapter 9, acts of the General Assembly of Virginia, extra session, 1947.

The commission made a careful study of the aforesaid act and ordered that the act be printed in sufficient quantity to permit us to send a copy (sample is attached—exhibit A) to each employee of the telephone company.

In accordance with the provisions of section 7 of the aforesaid act, the first duty of the commission was to ascertain from each individual employee whether or not he or she would accept employment by the State in the event the State would actually take over and operate the telephone company on the dates designated. We prepared a form letter (a copy of which is attached—exhibit B) to assist us in securing this information.

We requested and received from the Chesapeake & Potomac Telephone Co. of Virginia a complete list of all management and nonmanagement employees, both active and nonactive, because of sickness, leave of absence, etc. This list contained 7,038 names. The list received did not identify union-member personnel, but simply separated the telephone company employees into four classifications; i. e., traffic, commercial, plant, and accounting and executive. The particular duties of each employee and the location or telephone agency where he or she worked was also shown.

In order to comply with the provisions of the afore-mentioned statute, the commission called in 40 of its personnel from the several divisions of the commission and had them meet on Saturday, April 19, 1947, to receive instructions as to the placing of a copy of the law on the subject and the questionnaire hereinbefore mentioned and attached in the hands of the employees of the telephone company. All questionnaires were serially numbered and a record was kept of their distribution in order that all replies could be properly identified. It was found that it would be impracticable to send a representative of the commission to every telephone office in the State; consequently, we mailed the questionnaire, a stamped self-addressed envelope, and a copy of chapter 9, acts of the General Assembly of Virginia, extra session, 1947, marked in very heavy black type, "Important—read carefully," to the home of each employee, with the exception of those employees living in 16 cities. The employees of the company in the 16 cities received the questionnaires, a copy of the law, and a return stamped envelope directly from the representatives of the commission or by mail, if they were not at their posts. The commission felt that every employee of the telephone company had a right to be thoroughly acquainted with the provisions of this law before signifying his or her intention to work for the State in the event of State operation of the company's facilities.

A portion of section 8 of chapter 9 of the act reads as follows:

"In the event that any person or persons then employed by the utility in any such necessary positions shall fail to indicate an intention to work for the State in operating the utility, when inquiry is made of such person, the Governor shall immediately institute measures to employ another person or other persons to perform the required duties of anyone not indicating such intention."

The commission felt that in all fairness to the employees of the telephone company, this provision should be made quite clear to those employees that had not answered our inquiry. Consequently, we prepared and had distributed widely a statement to the effect that if an employee failed to answer our inquiry his or her silence would be construed to mean that he or she did not desire to accept employment by the State,

and that it would be necessary for the commission to make arrangements to see that his or her duties would be performed in the event of, and during the period of, State operation. The letter described above apparently clarified the situation to some extent because the answers began to come in steadily and the percentage of those answering that they would work for the State never decreased from the first day; but, in fact, steadily increased. As the replies were received, all who answered in the affirmative were sent the attached notice, which is self-explanatory—Exhibit C.

The final report on the answers from the employees was as follows:

Total questionnaires sent out and delivered	7,038
Total questionnaires returned	5,771
Percentage of questionnaires returned	82
Number of employees who indicated willingness to work for the State	5,072
Percentage of employees who indicated willingness to work for the State	87.9
Number of employees who indicated unwillingness to work for the State	699
Percentage of employees who indicated unwillingness to work for the State	12.1

Prior to the completion of the canvass of the company's employees the commission felt that it should take every precaution possible to see that adequate personnel would be on hand in the event of a strike. Consequently, we trained a number of State personnel who agreed to work as telephone operators in the event the State took over and operated the Chesapeake & Potomac Telephone Co. Finally, our plan of operation contemplated the following:

Employees necessary to operate telephone system for an extended work week, where needed, not to exceed 48 hours	4,548
Employees available:	
Regular company employees willing to work	5,072
Former company operators	500
Total	5,572

Therefore, it will be observed that there were available to work for the State 1,024 more employees than would have been necessary to render uninterrupted telephone service to the customers of the Chesapeake & Potomac Telephone Co., without taking into consideration any State personnel who had been trained to work during an emergency.

The State actually took over and operated the company's facilities in the territory of Accomack and Northampton Counties on May 20, 1947, at 6 a. m. and released operations to the company on May 23, 1947, at 6 p. m. This action was entirely without incident of any character.

The following bill, amounting to $6,806.12, is being forwarded to the Chesapeake & Potomac Telephone Co. of Virginia for expenses incurred by the State in connection with its duties hereinbefore recited:

Postage	$440.85
Stationery	50.64
Printing	221.59
To State corporation commission:	
Salaries of employees	4,622.68
Expenses of employees	860.34
	5,483.02
To other State departments:	
Salaries of employees	575.01
Expenses of employees	35.01
	610.02
Total	6,806.12

In addition to the above figure, the company will be billed for the amount of $62.76, which represents 15 percent of the net profits on the company's operations in the counties of Accomack and Northampton during the period May 20–23, 1947, when the State was operating its facilities.

This was a somewhat arduous task, but our labors were made less difficult because of the very close cooperation given us by Your Excellency and the management and employees of the Chesapeake & Potomac Telephone Co. of Virginia. The State was in a position at all times to operate successfully, without diminution of service, the facilities of the company. We are happy to be able to report that events have so ordered themselves that in Virginia telephone employees have lost none of their regular compensation and that, on the basis of an offer made by the Chesapeake & Potomac Telephone Co. of Virginia an agreement has been reached whereby the employees will receive an increase in wages in an amount acceptable to a majority of the members of the unions; and, further, that the public has suffered no inconvenience whatever.

Respectfully submitted.

H. LESTER HOOKER,
Chairman.
HARVEY B. APPERSON,
Commissioner.
L. MCCARTHY DOWNS,
Commissioner.

Consumer-Credit Controls Doing Irreparable Damage

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 6, 1947

Mr. HAGEN. Mr. Speaker, on May 23 I appeared before the House Committee on Banking and Currency to protest against the continuance of consumer credit regulations. I have had letters presenting irrefutable evidence that these regulations are discriminating against the veterans and the laboring man. In addition, it is creating a doubt in the minds of manufacturers as to whether or not they will be able to find a ready cash market for their increased production. These doubts have a tendency to stall the plans for industrial production.

I sincerely hope that my colleagues will take the necessary steps to eliminate these unnecessary consumer credit regulations.

Following are my remarks before the committee:

I have introduced in the House of Representatives H. R. 2542, a bill which has been referred to your committee. This bill has been drawn so existing consumer credit regulations—the so-called regulation W—as prescribed by the Board of Governors of the Federal Reserve System, shall not apply to future consumer credit transactions.

Regulation W is an emergency, wartime regulation. It derives its authority from the Trading with the Enemy Act and the Second War Powers Act. It was intended to restrain inflation and assist in the rationing of goods in short supply during the war. I think all good Americans supported it then.

Now, 2 years after the war ended, we find this war regulation, this specialized, planned-economy regulation still in existence. Under the fiction that we are still at war, the Federal Reserve Board is setting the terms on all installment purchases of 12 classes of durable goods all the way across the Nation. Radios, automobiles, washing machines, furniture, rugs, and such items can be sold by law-abiding merchants only on terms which have been consciously set by the Federal Reserve Board System, in the wisdom of the experts over there, to depress demand and make it hard for the low-income purchaser to buy these products that have become standard parts of the American home.

To interfere with and manage the way Americans spend their money and how American businessmen run their businesses on no basis of law except an emergency regulation put over in wartime and on authority granted by Congress solely for war purposes is bad government, and in my mind detrimental to the economy of our country.

I am glad to find that Mr. Marriner S. Eccles sometimes agrees with me on this point. He has been an outstanding proponent of regulation W during the many months when the Federal Reserve Board's retention of the regulation has been under fire from business, banking, labor and other quarters. However, in reply to an official inquiry from me the other day, he wrote me as follows on May 12th:

"So far as I am concerned, there is no change in my position, which is based on the feeling that regulation of this sort should rest on legislation in peacetime and not on an executive order issued under emergency or war powers. Accordingly, I felt that if the Congress adjourned without enacting the legislation necessary to carry on the regulation, we should recommend that the Executive order be vacated. I cannot, of course, speak for or commit the President."

This is a truly interesting statement. Here a man who has kept a war regulation alive for many many months after the shooting stopped and most war controls were progressively abandoned in the interests of getting back to a peacetime economy now making it clear that the regulation should be abandoned. I wish that he could have come to this conclusion a year ago, as well as today.

I think that, if I understand the feelings and temper of the present Congress correctly, we will never vote the Federal Reserve Board any authority to get permanent power to regulate consumer credit. This Congress wants fewer—not more—controls over the normal life of our people.

Therefore, I have introduced legislation to strip from the Board this wartime power they have retained for themselves in peacetime. In spite of some statements I have no confidence that they will surrender their authority voluntarily because that agency has never operated to seek less power over our credit system but always more. I have no confidence that a request to the White House for the lifting of the Executive order on which the regulation rests will accomplish anything. In fact, the Board does not need to do this; and that puzzles me. The Executive order is permissive, a grant of authority to regulate within the discretion of the Board. If the Board desires, it can certainly lift the regulation tomorrow and end this nonsense forthwith, for it surely must know that Congress will not perpetuate its authority.

Many other Members of Congress agree with me. Your distinguished chairman has made his position clear in opposition to the regulation. Representatives DAVIS, of Georgia, and SCHWABE, of Oklahoma, have introduced bills similar to mine and these are

before your committee. Representatives EBERHARTER, of Pennsylvania; SADOWSKI, of Michigan; HOOK, of Michigan; PRIEST, of Tennessee; and MORRISON, of Louisiana, have spoken out in the CONGRESSIONAL RECORD against this regulation.

I have here clippings from three newspapers on this subject. The New York Times criticizes the control of consumer credit by the Board because:

"The Reserve Board's record in recent years has been such as to create more than a suspicion that it was interested in acquiring power for its own sake.

"The Board has not given convincing evidence that it was prepared at all times to use what power it had fearlessly and without regard to political considerations. And—

"There has been no consistent pattern in the matter of credit policy so far as the administration in Washington is concerned."

Then I have here two labor newspapers, one from the huge Central Labor Union group of A. F. of L. unions in western Pennsylvania, the other the Commercial Telegraphers Journal. Both of these assail regulation W for the manner in which it discriminates against the workingmen in the lower income groups who have always relied on installment buying to equip their homes and get the major items for good living which they need. "Millions of workers should not be barred from the market for durable goods because they must use credit," this labor editor writes.

I could cite many other articles opposing this regulation but it is not necessary, even if time permitted.

I find the American Bankers Association, the Chamber or Commerce of the United States, the American Finance Congress, the National Electrical Wholesalers Association, the National Electrical Manufacturers Association, the Retail Credit Institute, the National Automobile Dealers Association, the National Used Car Dealers Association, the Consumer Bankers Association, the National Association of Credit Jewelers, National Consumer Finance Association, Chamber of Commerce of the State of New York, and many local bankers group as well as others whom I have failed to note—all of these important groups of legitimate businessmen, the life-blood of our real American economy, oppose this harmful trouble-making regulation. Furthermore, many labor and veteran groups have adopted resolutions asking that regulation W be terminated.

At this hearing you may hear many technical and seemingly important arguments against regulation W. I am not in a position to cover these as well as some of the businessmen or their representatives who will become witnesses before your committee later.

In closing I want only to read a statement to which I subscribe most heartily from an expert in these matters whose sound judgment and broad thinking I completely respect. I refer again to your chairman, who was quoted as follows some time ago in early opposition to all that regulation W stands for:

"Credit is the lifeblood of the American economy. Reasonably easy credit terms result in mass buying, and therefore mass production, which lowers prices. We are now running into a situation where we are going to have enormous production with a possible cut in domestic markets as a result of the Government controls on consumer credit. There is no point in mass production unless these things can be put into the hands of the people, and it is simply impossible to have mass purchases when the law requires stiff down payments with quick payment of the balance."

I wish your committee the utmost success in the present public-spirited, most important inquiry which you are undertaking.

Striking Similarities of Nazism, Fascism, and Communism

EXTENSION OF REMARKS
OF
HON. FRED E. BUSBEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 6, 1947

Mr. BUSBEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I hereby include the following study of the striking similarity between nazism, fascism, and communism:

STRIKING SIMILARITES OF NAZISM, FASCISM, AND COMMUNISM

(By Hon. FRED E. BUSBEY)

It is important for the American people to note the striking similarity between nazism, fascism, and communism in the following respects:

1. The wiping out of all independent trade unionism with the result that those trade-unions which are permitted exist only under the tolerance of the totalitarian state, to serve as its servile adjuncts.

2. The elimination of political parties except the ruling Nazi, Fascist, or Communist Party.

3. The subordination of all economic and social life to the strict control of the ruling, single party bureaucracy.

4. The suppression of individual initiative, the liquidation of the system of free enterprise, and the nationalization of private property.

5. The abolition of the right to freedom of speech, press, assembly, and religious worship.

6. The reduction of wages and living standards to subminimum levels.

7. The use of slave labor on a vast scale, through the establishment of huge concentration camps.

8. The abolition of the right to trial by jury, habeas corpus, the right to independent defense counsel and the innocence of the defendant until proven guilty.

9 The glorification of a single leader or fuehrer or duce, who is all-powerful and subject neither to criticism or removal through the ballot.

10. The utilization of a special form of social demagogy for the elimination of all opposition and for the concentration of power into the hands of the ruling dictatorship, as for example incitement of race against race, religion against religon, and class against class.

11. The subordination of all economic and social life and the everyday needs of the population to the requirements of an expanding military machine seeking world conquest.

12. The establishment of a system of Nation-wide espionage to which the entire population is subject.

13. The severance of social, cultural, and economic contact between the people of the totalitarian state and those of other countries, through a rigorous press and radio censorship, travel restrictions, etc.

14. Open disregard for the rights of small nations and the sanctity of treaties.

15. The maintenance and encouragement of fifth columns abroad among nations with whom the totalitarian state has treaty relations.

16. The reduction of parliamentary bodies to a rubber-stamp status automatically approving all decisions of the one-party dictatorship and the omnipotent leader.

A Word for Congress

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 6, 1947

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks, I include therein an editorial from the Pontiac (Mich.) Daily Press, of June 2, 1947, an outstanding newspaper of my State, which reveals what I consider to be a common-sense view of the duties and difficulties of Congress. It is for that reason that I want the opinions expressed therein made known to the entire country.

The editorial follows:

A WORD FOR CONGRESS

When things are not going right or the country seems to be stumbling along, it is all too characteristic of Americans to shift the blame to Congress. In fact, the Congress has been a whipping boy in recent years, because the New Deal found that often it refused to go along with its favorite reforms. As a result, the people are inclined to be critical of Congress even though since last November's election it has changed its party complexion.

Congress is not infallible.

It is a human institution.

How human was illustrated just recently when Congressman Fred Bradley, of Rogers City, Mich., complained that a Congressman was handicapped in doing his job because of the constant strain of invitations he couldn't ignore to dinners and cocktail parties and social events. Less than a week after Congressman Bradley made his complaint, he was dead of overstrain from his congressional duties.

A Congressman works hard.

His job is by no means easy.

Yet all too often people who have no conception of what a Congressman does from day to day complain that all their troubles are caused by a do-nothing Congress. Some public servants may loaf on the job, but just to keep in office a Congressman has to do a tremendous amount of work that the people back home do not always realize. Once in a while a Member of Congress rises up, as Congressman Bradley did, to point out some of the difficulties of his job.

Congress makes many blunders.

But it works harder than we think.

In a little-noted speech in Texas recently Speaker JOE MARTIN took occasion to defend Congress and point out some of the unthinking criticisms that are often made against it. People who do not want the American system, and who are plugging for some form of Fascist or communistic dictatorship, he explained, always find their first target in Congress.

They say our American system is slow.

They want quick action.

"They insist," said Speaker MARTIN, "we must have some form of statism or dictatorship of the proletariat. That kind of propaganda actually fools some of the people. Propagandists chant about the failure of Congress to do something." Actually, Congress has done a lot. In fact, it is pretty clear that the main critics of Congress today are the "lame duck" New Deal columnists in Washington whose real complaint is that Congress is doing too much.

This Congress is ahead of schedule.

Actually, it has achieved a record.

"So long as the people maintain their faith in Congress and send men of high character

to it," Speaker MARTIN told his Texas audience, "just so long will the Congress maintain its power and authority to legislate the people's will into law and action. Just so long as the checks and balances are maintained, just so long will we successfully resist all attempts to destroy our American system and reduce us to serfdom under some alien despot."

We should keep in mind the record of the present Congress, and the pressures brought forcibly to attention by Congressman Bradley, before we criticize Congress too harshly for its shortcomings. It is, after all, part and parcel of our American system.

Reduction of Government Expenditures

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Friday, June 6, 1947

Mr. MEYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial by Clyde M. Reed, Jr., of the Parsons (Kans.) Sun. It is entitled "A Train Slows Down" and is so replete with clear thinking as to the need for restoring the Nation's economy to a sound financial basis and so clarifying as to the part Mr. and Mrs. John Q. Public must play in bringing this about that it comes under the heading of "must" reading. The editorial is as follows:

A TRAIN SLOWS DOWN

WASHINGTON.—The Eightieth Congress has thrown a yellow block against the Federal gravy train.

It hasn't halted the spending special by any means, but it is slowing down the train and for the taxpayers that constitutes news of first importance.

Every year since the great depression, civilian spending of the Government has increased. War years are not excluded. Economy long since has been a word erased from the Federal dictionary.

The next fiscal year will be a turning point in that phase of government. The upturn in spending has been halted. A decrease is in sight.

This achievement will be one of the Eightieth Congress' chief claims to fame. It will not be accomplished without a struggle. But when the smoke of battle clears, it will be the spending advocates who will be carried off the battlefield—not the proponents of economy and common sense, as has been the case all too often in the past decade and a half.

Washington, or more specifically that part of it which is not connected with Capitol Hill, is slightly jittery over the slashing of Federal expenditures.

Washington, it need not be emphasized, lives off of the Government. It has experienced its greatest growth in population and wealth since 1933. Every new bureau created, every department expanded meant more tenants for Washington apartment and rooming houses, more mouths to feed for the Capital's restaurateurs, and so on down the line. All at the expense of the remainder of the country.

The Capital City is measuring the current economy drive by the number of Federal workers which will be left when Congress adjourns, not how many dollars in Federal expenses will be saved. And it can afford such a luxury of thought. It has paid high taxes, along with the rest of the country, but has gotten them back the next day and in succeeding days—with compounded interest. That feat, of course, was accomplished through the retail cash register.

So the present edition of Congress is not the most popular of legislative bodies which have deliberated under the Capitol dome, as far as Washington is concerned. It will be glad when late July rolls around and Congress goes home for a spell. Economy talk is wearing on Washington's mercantile nerves.

The most crucial test on economy will not come in Washington, however. It will be in each of the 48 States and all of the counties and cities therein.

The Federal bureaus spend a lot of money on operation, but as compared to the entire Federal budget, that is more or less chicken feed. The greatest part of the budget, on the civilian side, goes for Federal-aid projects of all descriptions from airports to waterways.

These projects originate "back home," or at least the pressure for them originates there. It was the original New Deal, back in the depression days, which brought to the Nation on a wholesale scale the idea of pouring Federal funds into State and community works.

The Federal Government, too, has been generous with the farmer. Subsidies of various kinds have been paid. These also have a hard-times background. The farm income rocked along for many years out of kilter with the rest of the Nation's economic endeavor. The aim of Federal help was to eliminate that disparity, or at least minimize it.

The farmer today, as a class, ranks among the Nation's most prosperous citizens. Several years running of good crops, plus an unlimited demand, has raised the economic status of agriculture to where it belongs.

The result will be a tightening of Federal purse strings as regards agriculture. The House appropriations committee has made sizeable reductions in next year's Federal farm outlay. Some of the cuts may be restored, but the emphasis definitely will be on economy in the farm side of Government as elsewhere.

It will be these matters that will be Government saving's most severe trial. Congress can reduce expenditures only as long as it has the support of the country as a whole.

If there are demands for continued spending along the line of "I'm for economy, but don't cut out my project," then there will be no budget balancing or permanently lower taxes. Saving in Government costs can be made only on a total basis, not by sparing favorite projects here and there. The latter course, known as logrolling, can only add up to a prolongation of the spending jag.

That will be something to watch. The headlines currently may be on the bureaus and agencies. The struggle will be won or lost on flood control, farm benefits, waterways, airports, school lunches, hospitals, highways, and a hundred more assorted items.

It will be a test of self-denial. The Nation has become accustomed to looking to Washington for benefits of every sort because "they won't cost us anything." Communities the country over, under the economy plans which are gathering speed, must foot more of the bill themselves or else be content to go without.

That, or a continuation of high wartime taxes. Today's spending can't be paid for on a pre-war-tax level, nor can the $5,000,000,000 annual carrying charge on the Federal debt—not to mention a reduction of the principal—be met each year with wishful thinking.

At least, a start has been made in the direction of Federal economy. It will be up to the country to say how far it shall go and how much of the presently heavy burden of Federal taxation, in turn, can be lifted from its shoulders.

C. M. R., Jr.

The Tax Bill

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, June 6, 1947

Mr. MASON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by John O'Donnell in the Washington Times-Herald of Friday, June 6, 1947:

CAPITOL STUFF

(By John O'Donnell)

When the tax bill, passed overwhelmingly by the present Congress, reaches the White House desk for approval or veto, Harry S. Truman as President of the United States and Democratic candidate for '48 will find himself battling with Harry S. Truman, Senator from Missouri in 1944.

In February of 1944, Senator Truman followed the banner of revolt which Democratic Leader ALBEN BARKLEY, of Kentucky, waved in the face of the war-dictator President Franklin Roosevelt.

Roosevelt, for the first time in the history of the Republic, vetoed a tax bill passed by the Congress and thereby took another slash at the supposedly coequal powers of Capitol Hill and the White House. F. D. R. lost.

Since the days of the founding fathers, the powers of the purse had been gripped firmly in the hands of Congress. Then came Roosevelt. Then, for the first time, a major tax measure was vetoed by a President. Then Senator, now President, Harry Truman, rose in revolt against this White House grab for power. With his vote he backed up BARKLEY when the White House Senate spokesman denounced the White House by saying that Roosevelt's veto of a congressional tax bill was "a calculated and deliberate assault upon the legislative integrity of every Member of Congress."

Senator Truman then joined with 38 other Democratic Senators to beat Roosevelt over the head by triumphantly overriding his veto. The boys on the Hill were in an ugly mood. Democrats controlled both Houses. The President was at the peak of his wartime prestige and popular acclaim. In the face of this, 39 of the Democrats in the Senate and all but 1 Republican united to override Roosevelt's veto of a tax measure backed by a majority of the Congress.

As both Republican and Democratic leaders expressed it, this unprecedented White House veto of a tax bill was even more important in its far-reaching implications than any surface display of wartime unity and one-man leadership by Roosevelt.

In this instance, the President simply overreached himself. House and Senate administered a public and humiliating rebuff to the White House.

And to all of this congressional nose-thumbing in the direction of the White House, Senator Truman gave his rousing assent.

Now of course, the shoe is on the other foot. Congress has passed a tax bill that former Senator Harry Truman, now President Harry Truman, doesn't like.

Chief reason for Truman's distaste is that he would rather distribute such tax largess to the grateful peasantry next year when the Presidential campaign is getting under way and when thankful voters will remember that such relief came on the recommendation and through the wisdom of Democratic Presidential candidate Harry S. Truman.

If the bill goes through now, the voters will suspect that it was the idea of the Republican majority in Congress. Harry S.

Truman as Senator from Missouri, on the congressional record, agrees that the President has no right to veto a tax bill. But Harry Truman as President and Presidential candidate for 1948 is a horse of a different color. The great minds in the White House are still deliberating.

A Dangerous Move for the United States

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1947

Mr. REED of New York. Mr. Speaker, the United States is known to the people in every country in the world. It is so favorably known that downtrodden persons of every race, and of every color, everywhere, would like to become citizens of this country to enjoy its freedoms and its opportunities. God forbid that the Voice of America as distributed by those promoting this type of international propaganda should disillusion those who in distant lands now have faith in our form of government.

I say that such a propaganda agency as is proposed in H. R. 3342 should be defeated. Is it not known that the State Department is an island of refuge for Communists? Why let this group become the Voice of America? Why not trust a free press which by and large has served the United States in every crisis with fidelity and patriotism?

Under leave to extend, I am inserting an article which appeared in the Evening Star, May 27, 1947:

WORLD NEWS EXCHANGE, NOT PROPAGANDA, IS KEY TO PEACE, COOPER SAYS

CHICAGO, May 27.—International amity can best be attained by international news exchange through the press and its news agencies, instead of through the discredited methods of Government propaganda, Kent Cooper said last night.

Mr. Cooper, who described propaganda as a tool of dictators, was a guest of the twenty-fifth anniversary celebration of the Medill School of Journalism of Northwestern University. He explained he was speaking solely as an individual and not as the executive director of the Associated Press.

He criticized vigorously a State Department plan, now before Congress, for an agency to distribute news abroad, saying it embraced an Old World practice that has been discredited and proved dangerous.

GOVERNMENT WARNED

"I hope our Government will remember that its propaganda can act as an abrasive that can do more harm than good; that it is a maelstrom of international self-seeking where wars are brewed."

He said there could be no successful method of establishing international friendship "that does not provide for complete news exchange between all countries free from the taint of Government handling. The news of one country should not go to the world in the form of propaganda to create prejudice, or to gain converts, but only to inform.

"If they are not hampered, the American news agencies can do far more to bring credit upon America through honesty in news than any Government effort can ever hope to do," Mr. Cooper declared.

The American news agencies' reports, he said, typify what a free press has done for the United States. There existed a practical possibility of making the conception worldwide, he added, "if Government meddling in news dissemination is not too destructive."

WORLD WANTS NEWS

"It is the American conception of forthright honesty in news from the American press that the rest of the world has proved it really wants from us—not seductive propaganda. * * *

"I would risk my country's future upon what its own ideals have developed—like its free press, for example, and truthful, international news exchange through its press, rather than upon the Old World methods of news contamination by governments. America has always been at its best when in its youthful vigor it gives the world a new idea which may benefit mankind. On the other hand, it has never done well when it has adopted Old World practices."

If communism is to be thwarted, he said, "not propaganda but the adhorrent method of military force alone could accomplish it—as in Japan * * * But even if all the vast hordes of underprivileged in all of eastern Europe had radios and thus could hear the Voice of America, I am afraid they would spurn communism and rejoice only if the voice of America were something more than a voice"—military power, food, clothing, land homes, and freedom to enjoy them.

PROPAGANDA DENOUNCED

"If Russian hatred turns against us and leads to solidifying the hold communism has upon them, our propaganda will have had the same effect as the best kind of Communist propaganda.

"If the Government were in the news agency business here at home, its propaganda could at least be under constant observation by the American people who could call it to account. Respecting propaganda sent abroad they are helpless. For they are unaware and have no means of knowing what one single propaganda group in one Government department is broadcasting to foreign lands that may lead us all to catastrophe. A strange phenomenon has been created indeed; the 'Voice of America' (the State Department's name for its foreign broadcasts) is speaking without America itself knowing what it is saying."

Mr. Cooper said the American press was "unanimously sponsoring world-wide news exchange" through its own news agencies and that such exchange offered the best promise of mutual confidence among all peoples.

Appropriation for the Federal Courts

EXTENSION OF REMARKS
OF
HON. LOUIS E. GRAHAM
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 6, 1947

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star for June 5, 1947:

HANDICAPPING JUSTICE

Congress will be doing the cause of justice a grave disservice if it fails to restore to the pending appropriation bill for the Federal courts the funds required to provide essential secretarial and court reporter service. House action in eliminating a $1,800,000 item for judges' secretaries and stenographers and in reducing by $65,000 an $800,000 appropriation for court reporters threatens to handicap the courts at a time when the workload is increasing alarmingly in most districts

A point of order led to dropping of the secretarial item by the House. The contention was made that there is no basic authority in the law for secretaries in the Federal court establishment. This is technically true. But the fact is that Congress for nearly half a century has recognized the need for secretarial and stenographic aid to judges and, in effect, sanctioned these services by appropriating for them, year after year. No question ever was raised over these essential employees until 1945, when the Judicial Conference of Senior Circuit Judges prepared a bill to provide legal authority for employment of secretaries and stenographers in the courts. This bill passed both Houses unanimously, after minor changes, and failed of enactment only because the Seventy-ninth Congress adjourned before acting on the conference report. Similar bills are pending in this Congress. Certainly it is not the fault of the courts that no basic authority for secretaries has been written into the law. And, as a matter of fact, Congress already has given implicit recognition to them in the Administrative Office Act, which specifically includes "secretaries and stenographers to the judges" among personnel under jurisdiction of the Administrative Office of the United States Courts.

As for court reporters, officials declare that even a reduction of $65,000, as proposed by the House, would have serious repercussions. This sum is needed to hire additional reporters necessitated by appointment of additional judges, to correct inequities in pay, and to hire temporary reporters in emergency cases. The work of the courts would be badly impaired if the bill as passed by the House is permitted to become law. The Senate will be averting a real crisis in the Federal judiciary if it restores the items omitted by the House and insists on final appropriation of the secretarial and reportorial funds requested by the administrative office of the courts.

The Labor Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES

Friday, June 6, 1947

Mr. DAWSON of Utah. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's Washington Post:

SLAVE LABOR

In their desperate struggle to remain free of all restraints labor union chieftains are trying to whip up a storm of protest against what they call the slave-labor bill. But not a line can be found in it anywhere to support this extravagant ranting. If the rank and file of citizens, union men included, will study the document carefully, they can scarcely fail to be impressed by its general fairness and moderation. In many instances it will have the effect of emancipating individual workers from tyrannies imposed upon them by some of the very men who are now crying, "Slave labor bill." For those who believe in law and order and fairness for all groups in our society the absurd propaganda which is being loosed against the bill will discredit only those who disseminate it. This applies with particular force to the antilabor bill tirade launched in New York Wednesday by the demagogic Mayor O'Dwyer.

Truman Gibes Benton for His "Art" Exhibition

EXTENSION OF REMARKS
OF
HON. E. (EDWARD) A. MITCHELL
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 6, 1947

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which was published in the Chicago Daily Tribune on June 4, 1947:

TRUMAN GIBES BENTON FOR HIS "ART" EXHIBITION—RIDICULES "MODERNISM" AS DEPICTED BY REDS

(By Arthur Sears Henning)

WASHINGTON, June 3.—Disclosure that President Truman rebuked, albeit gently, Assistant State Secretary Benton for his peripatetic exhibition of so-called modern American art gave a new turn to the scandal of Communist influenced State Department propaganda.

Presidential disapproval was evoked by the examples of "modern art" which Benton purchased with $50,000 of Department funds and sent on a tour to acquaint other countries with the state of culture in the United States. Representative BUSBEY, Republican, of Illinois, charged that the exhibition was Communist-inspired propaganda and identified 24 of the 45 artists as persons with Communist-front affiliations. Mr. Truman, in a letter to Benton, called the so-called modern art "the vaporings of half-baked, lazy people."

On the eve of House action this week on the Mundt bill to continue the State Department's propaganda broadcasting and other cultural activities the White House repudiation stirred speculation that Benton may not be in charge of the reorganized set-up.

BENTON WON'T TALK

Benton declined today, to discuss the President's letter. An assistant felt sure Benton will not resign as a result of the Presidential rebuke.

Center of the furor over the Benton art exhibit was a painting called "Circus Girl Resting," by Yasuo Kuniyoshi, a native of Japan, who came to this country in 1906 and became connected with Communist-front organizations. Representative BUSBEY told the House this picture had "shocked the American people" and with the other paintings had "done our country harm abroad."

President Truman agreed with BUSBEY. When Benton, on March 28, wrote the President defending the art exhibit and other features of his cultural program, Mr. Truman replied under date of April 2:

"I appreciated very much your letter of the 28th in regard to the American art exhibit, which is going the rounds of various countries.

"I don't pretend to be an artist or a judge of art, but I am of the opinion that so-called modern art is merely the vaporings of half-baked lazy people. An artistic production is one which shows infinite ability for taking pains and if any of these so-called modern paintings show any such infinite ability, I am very much mistaken.

MODERN "NO ART AT ALL"

"There are a great many American artists who still believe that the ability to make things look as they are is the first requisite of a great artist—they do not belong to the so-called modern school. There is no art at all in connection with the modernists, in my opinion."

"Without exception," said BUSBEY in his House speech, "the paintings in the State Department group that portray a person make him or her unnatural. The skin is not reproduced as it would be naturally, but as a sullen ashen gray. Features of the face are always depressed and melancholy.

"That is what the Communists and other extremists want to portray. They want to tell the foreigners that the American people are despondent, broken down, or of hideous shape—thoroughly dissatisfied with their lot and eager for a change of government.

"When the taxpayers' money is used to buy pictures painted by Communist artists we not only distribute their propaganda, we also put money in their pockets and thereby enable them to influence efforts to make America Red Communists."

SOUGHT TO PROVE "CULTURE"

Testifying before the House appropriations committee, Benton said the art collection had not been properly handled but the theory of it was to counteract impressions abroad that Americans are a "materialistic, money mad race, without interest in art and without appreciation of artists or music." Many think, he added, that "modern art, so-called, is a better illustration of our current artistic interests than the more orthodox or traditional forms of art."

BUSBEY said he favors an office of information and cultural affairs "but it should be free of communistic, fascistic and other alien influences." Representative TABER (Republican of New York), chairman of the House Appropriations Committee, which cut off the propaganda funds, and other Republican leaders picture Benton as a gullible, big advertising executive who was played for a sucker by the Communists and other left wingers who have dominated the Department broadcasts to Russia and other activities.

Mixed with the news beamed to Russia by Benton's broadcasters, it is asserted, is a vast amount of New Deal and left-wing propaganda disparaging the capitalist system, American business enterprise, conservative viewpoints and Republican leaders, and supporting Russian views of the American press and other institutions. All this is interlarded with silly, childish, so-called news features and other piffle calculated to bring the United States into contempt abroad.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. MAX SCHWABE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, June 6, 1947

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks on House bill No. 2953, by Mr. MCCOWEN, and on all the other bills which provide Federal aid to education and which are before the House Committee on Education and Labor, May 14, 1947, by Merwin K. Hart, president of the National Economic Council, Inc., New York, N. Y.:

I oppose all these bills calling for Federal aid to education because:

(1) They would, I believe, result in Federal control over education;

(2) They would add just so much to bureaucratic burdens already borne by the people;

(3) Their cost would be high at the beginning and would tend to increase almost indefinitely; and, lastly, because

(4) American education is not nearly so good as it ought to be, considering the amount of money we spend on it. Hence the Congress, rather than subsidize education, should thoroughly investigate the kind of education now being given our youth throughout the land.

The passage of any of these bills would weaken the cause of individual enterprise and of the capitalist system which are known quantities on which our whole economy is based, and would tend by just so much to involve us in the morass of collectivism which is the world's greatest threat today.

I shall take up these points seriatim.

I. These bills would result in Federal control over education.

Even though all of them have provisions which assert that the passage of the act shall not result in Federal control of education, yet nevertheless Federal control would result. Federal control is, indeed, an inescapable part of any Federal aid bill this Congress would seriously consider.

Thus in the McCowen bill, section 7 lists certain provisions a State must fulfill "in order to qualify for receiving funds appropriated under this act." This is control.

Every State is required to report to Congress before November 1 each year a detailed statement of the amount received from the Federal Government, and of its disbursements. This is control.

An audit is required from the State covering expenditure of funds received and apportioned to local school jurisdictions; and there must be a system of reports from local school jurisdictions. This is control.

Every State must "make reports to the Commissioner with respect to the progress of education, on forms to be provided by the Commissioner." This, of course, is control.

Every State must send to the United States Commissioner of Education "certified copies of legislative enactments and the official regulations that may be issued by the State authority in connection with such funds." This is control.

Furthermore, it is provided, in substance, that Federal funds shall be allotted only to those States that in any given year spend at least as much, both in total amount and per pupil in average daily attendance, as they have spent in the fiscal year 1947. This is certainly control. And how unwise, because today's school costs may, if the depression so many people are warning us about materializes, be far higher than it will be possible for the country to meet when and if the depression comes.

Of course, the McCowen bill provides that the Commissioner may recommend to Congress revisions of this act "with particular reference to recommendations arising from changing conditions in our national economy." But that means the States have got to keep running down here to Congress for permission to change the method of spending their own money. For, after all, this money comes from the taxpayers back home.

All these provisions spell control. For it is true in politics as in all else in life that "Whose bread I eat, his song I sing." And the Federal bureau in control of education would think of Federal aid as Federal bread.

There is excellent reason to believe that Federal control is the very purpose of those at whose instance these bills have been introduced.

There is a history of at least 10 years of activity behind these bills. Different reasons have been brought forward in different years why the current bill should be passed. At first, the reason asserted was the alleged impoverished financial conditions prevailing among certain States and local governments. Then, during the war when the Federal Government was piling up its huge debt which now stands at $280,000,000,000, practically all of the States which, it had been claimed, were impoverished, were accumulating surpluses and were reducing or even paying off their debts.

Several Senators, in a statement of their minority views on October 14, 1943, said that as of June 1943, after making allowances for the annual surpluses and sinking funds of the States, the debts of all the States amounted to only a little over $1,000,000,000, as compared with the then national debt of $146,000,000,000.

Then the proponents of Federal aid switched to the defense argument; and later on to the plea of the war emergency.

None of the early bills contained provisions against Federal control. As time went on, these, however, were introduced. Yet practically no provision that could be inserted can prevent the exercise by the Commissioner of Education of discretion. And with discretion will come control.

Now of course the proponents of the bill support vehemently the provisions of section 2 and deny that there will be any Federal control. But if they were right, would it be a sound bill from the standpoint of the Congress? Does the Congress think it should approve a large appropriation over which it has no control? Would the Appropriations Committee of this House feel it was doing its duty to taxpayers if it approved expenditures over which Congress or the Administration had no control? Would the voters, who so emphatically last fall registered their objection to socialistic schemes, generally favor such a bill?

The passage of any of these bills would be a step toward national socialism. Under such a system we would "put the culture of a whole nation on an equal footing. This new culture is uniform, unified and welded into a coherent whole." This, Mr. Chairman, is a quotation from Hitler's Minister of Culture in his official Teachers' Manual for German Education. It happens also to be startlingly similar in essence to the expressed intention of this bill more nearly to equalize "school opportunities among and within the States."

Incidentally, this same Nazi manual says that no individual is to think of himself as having a more brilliant mind than his neighbor. Each mind is to be of equal importance; each mind is to be blended into the great state conscience As reported by Dr. Ziemer in his well-known book, Education for Death, the Nazis considered that "the chief purpose of the school is to train human beings to realize that the state is more important than the individual."

I feel certain that under any such law as this, that would come to be the purpose of American schools.

Something very like this happened under the third Republic of France. All powers were centralized in Paris, including the power over education. France was a true democracy in that there was absolutely no appeal to any court from the dictatorial decision of the central government. It was the boast of a French department of education in the 1870's or 1880's that at every hour, in every school in France, every child in a given grade was being taught identically the same lesson. And, under this free play of democracy that always results in totalitarianism, France, as we all know, went down in overwhelming defeat in 1940.

When Pastor Martin Niemöller, distinguished German Minister of the Gospel who defied Hitler and spent 8 years in a concentration camp, was in this country recently, I took pains to get from him first-hand information about the part that public education had played in Germany in recent years. He told me that throughout the history of both the German Empire and the Weimar Republic, that is down to 1933, education had remained solely under the control of the several German states and that the central government had nothing to do with it. But, he told me, when Hitler took over in 1933, he centralized the control of education in Berlin exactly as these bills would centralize the control of education right here in Washington. And thus education became one of Hitler's chief weapons in the regimentation and subjugation to himself of the German people.

I am utterly opposed to Federal aid to education because it would mean Federal control of education. And Federal control of education would be the greatest single gain that the collectivists could possibly make in the United States. From then on Washington bureaucracy would dictate to American education.

II. The passage of any of these bills would add by just so much to the bureaucratic burdens already borne by the people.

You are all doubtless familiar with a resolution that has been passed by the Legislature of the State of Indiana and, I am told, by certain other States, the purport of which is that the people of Indiana have been "fooled for quite a spell with the magician's trick that a dollar taken out of our pockets and sent to Washington will be bigger when it comes back to us. We have taken a good look at said dollar. We find that it lost weight on its journey to Washington and back. The political brokerage of the bureaucrats has been deducted."

Unlike the French people, the American people do not like bureaucratic government. They want just as little as possible. Before we got into World War II there were about 1,000,000 Federal employees. Now, almost exactly 2 years after the defeat of Hitler, there are still 2,300,000.

I am convinced that the majority of the Members of this Congress do not like bureaucrats much better than the people back home, and I know that many of you are trying to devise ways and means of getting rid of many of the bureaucrats we have.

Why, then, lay the foundation for a great new lot of bureaucracy by passing any of these bills?

You will collect the money by taxes out of incomes and savings of the people in 48 States and you will bring it to Washington. Then these bureaucrats will solemnly proceed to split this money up and send it back to the very States from which it came. Naturally, this will cost money. They will take their toll. And it will be an added burden on the people. There will be more rules and regulations, more forms to be filled out. Life will be just so much more complicated for the States and the Federal Government, as well as for the people.

In the very nature of things, most bureaucrats are quite securely fixed in their positions—and they know it. They are under none of the pressures and they have few of the worries that the men and women of the country in various private occupations have to meet every day in their task of making a living. They can, and often do, keep private citizens waiting endlessly for results that any private individual or corporation would attend to in a fraction of the time .They are a drag on the average citizen.

In a certain sense, they are barnacles attached to the hull of progress. They cannot be hurried, and they exercise a tremendous control over those working people who have to earn the money necessary to support not only themselves but the bureaucrats.

Daniel Webster once said:

"There are men in all ages who mean to exercise power usefully, but who mean to exercise it. They mean to govern well, but they mean to govern. They promise to be kind masters, but they mean to be masters."

III. I oppose all of these bills because, whether their annual costs start at one hundred million, or two hundred million, or three hundred million a year, they will be bound to soar.

You gentlemen know that one of the hardest things in the world is to get appropriations down once they are up, and it is characteristic of bureau appropriations that they seem constantly to grow.

Anything urged in the name of education has always appealed strongly to the American people. They want their children to have education, and oftentimes they mistake for education what is merely schooling—the mere going through certain forms and rituals.

Way back in 1932 Gov. Franklin D. Roosevelt, of New York, in his budget message of that year said that the fact that per-pupil cost of education had more than doubled in 10 years was startling. Equally startling is the growing amount of educational machinery. So complicated is the State educational law of New York, for instance, that few people understand it. Few are able to understand the intricate relationship between State and local educational authorities. This is bad enough as it is.

It is responsible in part for the fact that so large a proportion of all the money spent by all the cities and all the States of the United States is spent on education.

But these bills would create additional machinery. If possible, the educational machinery of the country is to be gummed up still further. The increase would not be arithmetical but geometrical. You would have three different sets of educational authorities. The State would continue to dictate to the locality (largely through State aid). And then, through Federal aid, the national educational authority would dictate to both the State and locality.

On May 3 the New York Times quoted Dr. George F. Zook, president of the American Council on Education, as saying here in Washington that the Federal Government should provide a minimum of $1,000,000,000 to the schools.

The States and localities are now spending about $3,000,000,000 a year on education. On March 2 of this year a planning committee of 10 school superintendents, headed by Willard E. Goslyn, of Minnesota, submitted to the Nation-wide Association of School Administrators a plan for a Federal school subsidy of $4,250,000,000 a year. Comparable demands have been made by other educators.

One educator said not long ago that we should not hesitate to spend from four to six billions.

I will leave this phase of the matter by merely observing, in the first place, that any of these bills will be merely the entering wedge for the yearly spending of far greater amounts and, secondly, that the more money that is spent the more the control of education will have passed out of the hands of the locality, out, indeed, of the hands of the several States, and will be centered in a bureau in Washington—a bureau that, by reason of its power of propaganda, will probably be the most important bureau in Washington. And I think it extremely likely that this bureau will be in the hands of radicals committed to the elimination of all vestiges of the Republic of the United States and to the spreading of that "democracy" which was so roundly condemned in the Constitutional Convention of 1787 and was discarded by them when they set up the Republic.

IV. Lastly, I am opposed to all of these bills because, due in part to excessive bureaucracy in the States, American education is not what it ought to be. In many respects it has been deteriorating steadily for years. It has already become, under many of the States, a propaganda machine under the influence of which the real education of the youth has largely been overlooked.

There is one very useful service that Congress could perform—namely, to investigate for itself the quality of education now being administered in the States. It should investigate the philosophy that is being taught and it will find that the general trend is critical of all heretofore accepted American institutions. It will find it is a godless education; that it teaches that the pupil should be prepared, first of all, for change—that John Dewey doctrine which is admirably suited to prepare the way for totalitarianism.

It will find that in many, many cases American schools are falling down in teaching the very elementals of education.

I think this Congress ought, in the interest of the Republic, to find out what philosophy, what ideas, what tenets, are being instilled in our youth.

There is a wealth of evidence in support of these contentions.

My own organization, the economic council, back in 1935, had an educational advisory committee consisting of five outstanding educators. These were: Dean H. W. Holmes, of the Graduate School of Education at Harvard; Dr. William S. Lerner, of the Carnegie Foundation; Mr. Charles R. Mann, of the American Council on Education; Dr. Albert P. Meredith, of New York University, and Dr. Frank E. Spalding, of Yale University. This committee investigated the schools of what they took to be a typical American city, namely, Niagara Falls, N. Y. They published their results in a 52-page pamphlet. In this pamphlet they set up what they called "an operating balance sheet of a typically modern school system." They listed the following among other "items of weakness:"

"1. Too much 'teaching'; too little learning!

"2. Too much class attendance; too little studying!

"3. Too many things attempted; too few things perfected!

"4. Too much value attached to trivialities of immediate interest; too little to knowledge and habits of permanent worth!

"5. Schooling undervalues and frequently retards the development of reading ability.

"6. Instead of promoting, schooling tends to stifle the growth of independence in learning and thinking.

"7. Too much effort to teach many pupils things beyond their understanding; too little insistence that all pupils master as many permanently valuable things as are within their capacity.

"8. Too much emphasis on 'time spent' and ground 'covered'—on the mechanics and the certificates of schooling; too little concern for the essential processes and results of genuine education."

It has been known for some time that even in many of our largest cities the schools have not been adequately teaching the pupils to read. At a conference on education held by the National Economic Council in February 1940 in Albany, N. Y., Dr. John Tildsley, former associate superintendent of schools of New York City, pointed out that about 20 percent of all pupils admitted to one high school in that city a few weeks before were found unable to read well enough to use the textbooks in high school courses and he believed that proportion would hold throughout the city. This, if you please, in a city with probably the highest per-pupil cost of education of any city in the world. He said that to meet the situation WPA workers were brought in and trained to teach these pupils to read.

In fact, at the present time two reading clinics have been set up by New York University in New York City, for both youth and adults, because the schools have done such a wretched job in the teaching of reading. One of these clinics is located on the ground floor at 31 West Twelfth Street, Manhattan.

Not many years ago the parents of a majority of the pupils in the three schools of a large village on Long Island petitioned the school board, asking if they would kindly teach their children to read.

About 2 years ago a survey conducted by the New York Times found that in many schools throughout the country the teaching of American history was being largely neglected.

In the New York Times of April 16, 1947, reference was made to criticisms recently made by the Transcription Supervisory Associates that the city schools were failing to give pupils sufficient knowledge of simple English grammar.

Some years ago a committee of citizens at Binghamton, N. Y., sent out a questionnaire to some 10,000 employers in New York and Pennsylvania asking several questions, the purport of which was whether the product of the schools, as this product came to work for the employers, seemed to them to justify the cost. About 5,000 answers were received, and the overwhelming burden of their reply was that the cost was not justified. Those employers said that they had found that hardly any of the pupils had learned to do anything well.

Nor is this superficiality of education anything very new. In the New York Sun of March 13, 1934, Principal Raynor, of the Alexander Hamilton High School of Brooklyn, is quoted as saying publicly that high schools are "producing criminals, loafers, and social discontents." He said all children are not competent to receive high-school education, and that many of those not competent rebel, become truants, and "eventually drop into the rapidly swelling ranks of crime."

He said that of 413 pupils admitted to his high school last February, only 169 passed the regents' test in elementary arithmetic and only 48 the elementary English test. He said that if this ratio held throughout the city, then 60 percent of the 61,000 entering New York City high schools the previous winter were unfit for high school.

He said further: "Promotion is by the calendar rather than by honest examination" and results in "lumping into the high schools tens of thousands destined to dismal failure and to add to the tax burden."

And John B. Opdycke, then principal of Haaren High School, New York City, was quoted in the New York Herald Tribune of September 24, 1933, as saying:

"Today the average cosmopolitan high school offers from 75 to 100 subjects or R's, and offers them under the highly complex and elaborate elective system. As a result what have we? Well, we have a bewildered student body and a confused and harassed teaching force. We have graduating groups, as the terms go by, who are masters of nothing and not even Jacks of all they have attempted to study. We have let down in student morale and stamina and in teacher health that has meant something very closely approaching an educational crisis throughout the country. And we have wordy warfare among educators themselves about 'what must be done,' and between educators and lay taxpayers about waste and extravagance in educational administration."

Dr. Frank Spalding, the chairman in 1934–35 of the Educational Advisory Committee of the Economic Council, used to say, after a lifetime of experience as a teacher, that for many youth a good job was the best possible education. Yet according to many educators today and for some time past, all youth should be obliged to go through high school—they should be obliged to go through the motions, even if they learn very little.

The four Senators who made a minority report back in 1943 (Messrs. TAFT, WALSH, BALL, and WHERRY, with Messrs. HAWKES and BRIDGES concurring) said, in part:

"It hardly seems that the States are in position to demand relief from the Federal Government. As a matter of fact, they are not demanding relief. No State has come before us confirming its inability to deal with the educational problem. No legislature has passed any resolution requesting assistance. The entire proposal is placed before us by representatives of the teachers and other educational interests who may or may not have exhausted their remedies within the States."

From a fairly considerable reading and a fairly wide observation, I agree completely with the statement that the proposals for Federal aid come largely, if not entirely, from representatives of the teachers and other educational interests. Except I would add to this that the various left-wing organizations are also in the forefront in making the demand.

Much is made by the proponents of these measures of the alleged 7 percent of the Russian national income used for education. But assuming the Russian 7 percent to be accurate (and there is at least some doubt as to its accuracy and reliability) this figure merely represents the high cost of propagandizing an enormous population under a ruthless dictatorship. It is easily possible the Russians are being taught to read, write, and cipher better than the American youth of recent years; but they are certainly being kept in abysmal ignorance of anything happening on this side of the Russian iron curtain.

Though I am opposed to Federal aid for education, yet, of course, I strongly sympathize with those teachers who are underpaid. But they and their friends should address themselves to the States and municipalities—not to the Federal Government. This running down to Washington as a short cut to put something over which would be more difficult to put over through the States and cities should stop. The Federal Government ought to stop trying to play nursemaid to 48 sovereign States and to the thousands of municipalities involved. Otherwise, we'll reach the point France reached, and perhaps go down as she did.

I realize that it will be a more laborious proceeding to sell the idea of more education and even higher salaries for teachers in a number of different States than to sell it at one fell swoop here in Washington. It is relatively easy for the National Education Association and other educational organizations, not to speak of the various other groups—many of them left-wing, all of them more or less collectivistic, to maintain a tremendous lobby here in Washington. There is no great lobby in Washington against these measures. But the proposal is so unwise that the Congress itself, receiving some aid perhaps from a handful of individuals who have opposed the proposals these last 10 years, has thus far been able to stop it.

This year the propaganda for the proposal has been stepped up enormously. A very great and coordinated effort is being made to put it across.

The citizens of all the States having low-cost education are free to do what they think should be done. There, as in the older, supposedly richer States, sound arguments in favor of better education should bring results—even though slowly. If the poorer States are unwilling to go as fast and as far as the proponents of these bills would have them go, nevertheless I am unalterably opposed to the Federal Government forcing them. Perhaps the people of those poorer States do not think the education Washington would jam down their throats is so good after all.

Doubtless many of this committee have read Human Destiny by a great scientist now living in California, Lecompt du Noüy. He draws a contrast between education and instruction, or what might be called schooling. He says:

"It is possible that in certain periods of the past, education was superior to what it is today. It was evidently less general, but the problem is not so much of quantity as of quality. A bad education, or an education based on false principles and widely extended leads to disastrous results. * * * To give children an intellectual tincture, a smattering of 'instruction' without previously constructing on firm, moral foundation the base which must support it is to build on sand; and the higher the monument the more complete will be its collapse."

The illustrations of poor education, which I have quoted above, suggest that something

is wrong with the moral foundation of our education. I repeat the request that the Congress make an investigation of the quality of education in the country today. A great service could be rendered the country and its children by an investigation of this nature, provided it were conducted by people who without bias could test the value of the education our children have been getting.

Such an investigation would find, fortunately, that we still have a great aggregate amount of good sound education at the hands of those teachers imbued with the value of the old American educational traditions and ideals. But it would also disclose a substantial and growing amount of superficial education of the kind I have described above.

Having made this investigation the results could be referred back to the States for their consideration.

I hope this committee will refrain from approving any Federal-aid bill of any nature.

Statement by Hon. Lister Hill, of Alabama, on the National Soil Fertility Policy Bill

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Friday, June 6 (legislative day of Monday, April 21), 1947

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by me before the Senate Committee on Agriculture and Forestry, on the national soil fertility policy bill, Monday, May 26, 1947.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The soil of a nation is its most precious material resource, for the fundamental strength of any civilization is the fertility of the soil that supports it.

Here in America the abundance of fertile soil—the rich bottomlands of the South, the vast fertile prairies of the Midwest, and the fruitful soil of the Pacific coast—has led our people for generations into extravagance with their land. We looked upon it as a never-ending resource. As the land became worn out, we moved on to new acres.

In recent years we have come up against the stark fact that we cannot go on endlessly exploiting the land, draining its fertility without ever replacing it. We finally turned to conservation practices and research into soil nutrients. But war and world reconstruction have interrupted these programs and hastened the depletion of the soil.

To supply the tremendous demands for food and agricultural products, during the war and the reconversion, the Nation's farmers postponed soil-conservation practices. They put off rotating their crops. They placed emphasis on the use of fertilizers that stimulate crop growth rather than rebuild the soil. They mined their soil.

Today we are removing about twice as much plant food from our soil through cropping, erosion, and leaching as we are returning through fertilizers and soil-building crops. Even the richest man will soon face bankruptcy if he draws out of the bank twice as much each year as he puts in. That is what is happening to our basic natural resource—the soil. We are facing soil bankruptcy.

The purpose of the bill before us today is to halt this trend, this soil bankruptcy.

Present fertilizer production and present fertilizer practices are about as out of date as a 1925 automobile. As we know, much of the fertilizer purchased today is filled with sand, sulphates, chlorides, fillers, and other elements which the farmer does not need and which is of no value to the farmer or to his soil. In short, if the farmer bought his groceries in the same way that he is forced to buy much of his fertilizer, a loaf of bread would be mostly sawdust, such as Mussolini used to provide for the people of Italy.

There is not enough fertilizer of any kind—nitrates, phosphates or potash—to meet present demands and there will not be in the years ahead, unless action is taken at once to enlarge production facilities, modernize fertilizer formulas, reduce fertilizer costs and make use of improved farming methods.

The bill before this committee lays out such a course of action. The bill would establish a national policy with the goal of restoring and maintaining the Nation's depleted soil resources. To make this policy become a reality, the bill provides for encouraging and stimulating production of plentiful high-grade fertilizers at prices the farmer can afford to pay. It provides for Nation-wide demonstration of the value and practicability of using these concentrated fertilizers in conjunction with improved soil-building practices.

The bill provides, and I deem this most important, that this program shall be carried out to the greatest possible extent by the farm people themselves, working with their State and local farm agencies, their land-grant colleges, the extension service, the experiment stations, and through their own farm associations. The role of the Federal Government in the program would be confined to broad national planning, financial aid where necessary, and technical aid and advice.

I shall not go into a detailed explanation of the measure here, except to point out its other main provisions:

1. It provides for setting up a National Soil Fertility Policy Committee, made up of 12 representative farmers, an executive secretary, and the chairmen of the Extension Service and experiment station committees of the National Association of Land Grant Colleges and Universities, who would be ex officio members. State and county advisory committees to carry the program right to the grass roots are also provided for.

2. Provision is made for expanding research and experiment station work, so that every farmer may have the soundest technical advice on fertilizing.

3. With this provision is coupled an expanded demonstration program along the lines of the present TVA test demonstration operations. Not to exceed 2 percent of the total farms in a State would be selected as test-demonstration farms to give a practical showing of the best fertilizing practices as a means of educating all farmers. The program would be carried out under the direction of the land-grant colleges through the Extension Service and experiment stations.

4. The program would encourage the production and distribution of nitrates and nitrogenous fertilizers.

5. The program would encourage the development of phosphate and potash deposits in the South and West through both private and public agencies.

6. To develop modern methods of production of concentrated phosphates an experimental plant would be built by the Government at Mobile, Ala. The plant would be operated as an experimental plant for 5 years, then sold for private operation.

7. Financial aid would be made available to private industry and to farmer cooperatives for construction or expanding production facilities.

The provisions of the bill are clear and reasonable.

Its goal is to enable the farmer to get plentiful fertilizers of the kind his soil needs. The bill would modernize the formulas for farm fertilizers. It would eliminate the wasteful processing of inert matter and the costly transportation charges the farmer must pay on this useless material. The farmer would be saved the fruitless labor involved in spreading fertilizers of low plant-food content. And by getting more plant food in each sack of fertilizer his costs would be materially reduced.

The program should double the use of fertilizers within 5 years. Farmers who saw the benefits of concentrated fertilizers in the demonstration program would buy more fertilizers for use on their own farms. The increased production would mean more business and bigger profits for the fertilizer industry. The bill would definitely benefit the fertilizer industry.

We know that the industry already has benefited from the TVA demonstration program. In the Tennessee Valley the demand for phosphatic fertilizers from commercial sources—from the fertilizer industry—has increased about 5 times as much as the increase for the country as a whole, as a result of the demonstration work done by TVA.

We know that the test-demonstration farm program is sound. I have seen it at first hand in my own State of Alabama. In 13 north Alabama counties in the Tennessee River watershed, there are 5,502 test demonstration farms. Other farmers in the valley have watched the improved-farming practices demonstrated on these farms. Largely as a result of these demonstrations, farmers in the 13 counties between 1936 and 1946 increased their improved pasture land from 10,000 to 100,000 acres; their planting of perennial legumes from 2,000 to 60,000 acres; their winter-legume acreage from 76,000 to 300,000 acres; their small grains from 20,000 to 170,000 acres, and their harvested legume seed planting from 500,000 to 1,500,000 pounds.

The bill would make available to the whole Nation the knowledge and experience gained through such programs—programs which have been wisely authorized by Congress and have been carried on by experiment stations, the Extension Service, and the TVA.

The bill means that Congress is willing to give all the farmers of the country the benefit of programs that up to now have been limited.

The bill has bi-partisan support in Congress from Republicans and Democrats. Both major political parties recognize that protection of the soil is a national responsibility—a national necessity.

The bill is sponsored by the American Farm Bureau Federation and is the key to a soil program based on scientific facts and proven experience.

A special committee of the Association of Land-Grant Colleges and Universities reported in October 1943, after an extensive survey, that "an adequate supply of phosphatic fertilizer is fundamental to the national welfare." The committee added: "A very great expansion of phosphatic fertilizer production is needed if soil fertility is to be maintained in this country."

The inadequacy of fertilizer productive facilities was emphasized again in 1944 when the War Production Board reported that the fertilizer industry would not be able to meet the minimum production requirements for phosphatic fertilizers and the War Food Administration declared that the industry's output would not even replenish plant foods removed from the soil each crop year, much less

provide the vast additional amount required for soil building.

And a spokesman for the fertilizer industry has said: "The need for more phosphorus on our croplands and grazing lands has been convincingly demonstrated by experience and research."

We all know the compelling need for increased production of nitrates and nitrogenous fertilizers.

The program provided in the bill is vital to the American farmer who must preserve the productivity of his soil even while he uses it. The program is vital to the American people and their standard of living. Food from soil rich in minerals would benefit every man, woman, and child by giving them increased nutrition in the bread they eat or the milk they drink.

The bill constitutes a broad move by the people, acting through their Government, to protect the Nation's security and health by protecting the basis of its strength—the soil.

We must not forget the part that food will play in building world peace. The importance of food to the peace was graphically described by Under Secretary of State Dean Acheson when he said a few days ago:

"The devastation of war has brought us back to elementals—to the point where we see clearly how short is the distance from food and fuel either to peace or to anarchy."

Through lack of food production, America cannot afford to let other nations take the short step to anarchy rather than to peace.

The Congress can no longer delay action to conserve and rebuild the Nation's soil. Today we are all talking about the atomic bomb and we are frightened by its existence. We know that our Nation could be destroyed by it. I tell you that our Nation will just as surely perish, albeit a bit more slowly, if we do not replenish and rebuild our soil.

The investment called for by the bill is small compared to the stake: Conservation of a fertile soil upon which the very life and strength of our Nation depends; the health of a people nourished by a fruitful land; good income and decent living for the farmer and his family; and, finally, the opportunity for lasting peace by helping to relieve the hunger and suffering of the war-stricken peoples of the world.

A Program That Counts Everybody In

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 6, 1947

Mr. JENSEN. Mr. Speaker, I feel that it is my duty to call attention of the Members of Congress to an editorial in the Country Gentleman for the month of June, this year. The editorial is entitled "A Program That Counts Everybody In." My good friend, Don Berry, editor, of Indianola, Iowa, has done much to straighten out our thinking on economic problems.

Carl H. Wilken, economic analyst for the Raw Materials National Council, of Sioux City, Iowa, who has for some time pointed out that each $1 of gross farm income would generate $7 of national income. I know of the skepticism that he has had to meet from economists and the general public, which includes some of the Members of Congress. I am frank to admit that when he first called the relationship to my attention, I didn't know whether to believe it or not.

I know, however, that the Country Gentleman in 1944 checked his research material very carefully and then pointed out his results in an article entitled "Key to Prosperity." At that time they sent a copy to all Members of Congress. I will quote from the editorial which proves to me that they have completely accepted the accuracy of the relationship which Mr. Wilken has pointed out.

The editorial states as follows:

Protection against ruinously low prices for farm products is, of course, a "must" in any farm program. The wage- and salary-earning public ought to be better informed of its own vital interest in this necessity. Every depression this country has suffered has been preceded by a collapse in farm prices. For a quarter of a century the national income has averaged just about seven times the total farm income. Plainly there is a public interest involved in sustaining farm buying power.

To me this seven times turn of the total farm income is the key to prosperity. If we need $180,000,000,000 of national income for full employment and a balanced national budget then our total farm income must first create one-seventh of that amount. This relationship to me is the answer that we have been looking for, the something that would lead the way to a new era of prosperity and peace.

As I have stated, Mr. Wilken has had to face skepticism on every hand but he has not let that deter him from plugging away at the rather thankless job of educating a reluctant public. A few weeks ago Mr. Wilken delivered a prepared statement before the House Committee on Agriculture. It was printed in the Appendix to the CONGRESSIONAL RECORD, page A2244, in the extension of remarks by my colleague from Iowa, CHARLES B. HOEVEN, a member of the House Committee on Agriculture.

I have read and studied this statement and to me it is the simplest, the most concrete, and the most complete analysis of our national economy that has ever been presented before that committee.

In my opinion every committee of Congress, both in the House and the Senate, could benefit from such an analysis. A few days ago Mr. Wilken informed me that in a few weeks he will bring out in book form, entitled "Prosperity Unlimited—The American Way," a complete analysis of the relationship of all the major segments of our economy. He will point out the ratio of retail sales, employment, mineral production, construction, transportation, and so forth, in the same positive manner that he sets out the ratio of $1 of gross farm income and $7 of national income.

For example, in January 1946, in an address before the National Livestock Convention in Denver, Colo., Mr. Wilken pointed out that retail sales would approximate 60 percent of the national income regardless of the national income in the postwar period. We had just finished the year 1945 with approximately $60,000,000,000 of retail sales, the highest in the history of the Nation at that time.

Mr. Wilken at the meeting told his audience that we would have over $90,000,000,000 of retail sales in 1946. This seemed fantastic in light of the past record. But after 1946 had passed away, the Nation according to his prediction enjoyed more than that amount in retail sales.

Last January Mr. Wilken, accompanied by his associate, Mr. Charles B. Ray, of Chicago, met with the Iowa delegation in Congress. At that time the newspapers were full of dire predictions of a depression. In spite of this Mr. Wilken and Mr. Ray projected a minimum of $180,000,000,000 of national income for 1947. A few days ago the United States Department of Commerce released a statement showing that our national income was running at the rate of $180,000,000,000.

At that meeting Mr. Wilken told us that retail sales would maintain their ratio of approximately 60 percent. Therefore I wasn't greatly surprised when I picked up the United States News of May 16 and found that retail sales the first quarter of 1947 had been on a level of $107.4, or roughly 60 percent of the national income of $180,000,000,000.

Knowing these facts and realizing the confusion that exists in an economic way, I would like to express the hope that this Congress in some way or other, through an existing committee, or a committee set up especially for that purpose, make a study of the various factors revealed by the research work of the Raw Materials National Council. I feel that they have done a job of research work that this Nation needs to lead us out of the confusion in which we find ourselves.

I will file the complete editorial from the Country Gentleman as part of my remarks. I hope that you can all take the time to read it along with Mr. Wilken's statement in regard to permanent farm legislation.

To me his analysis means that supporting the price of farm products at proper levels is not special legislation for agriculture. A floor under the price of farm products means a floor under the national income of the United States. It means a floor under our American industry, our factory pay rolls, the value of manufactures, the volume of retail sales, and so forth. It means that we can have a sound economic foundation for our American system and economy supported by agricultural resources which surpass that of any nation.

[From the Country Gentleman]

A PROGRAM THAT COUNTS EVERYBODY IN

Any successful farm program must be one that can be sold to the public as fair and in the interest of all. This is the counsel of a wise country editor, Don L. Berry, of Indianola, Iowa, who has been in the forefront of many of the struggles for farm betterment. He adds: "With the farm population now down to 20 percent of the American people, no farm program can succeed permanently that will not stand up to the test of being in the general interest."

This is advice worth noting by the House Committee on Agriculture, now holding hearings preparatory to drawing up a new farm program. It applies equally to those who appear before the committee with ideas they want included.

Fortunately, the hearings are bringing out proposals that can be welded into a program that would serve both the farm and the public interests. Such a program would

have these three main aims: Protecting farmers from disastrously low prices for their products; providing the American people with a steadily better diet; and insuring the Nation's future food supply.

These aims are not inconsistent. In fact, they can be teamed together.

Protection against ruinously low prices for farm products is, of course, a "must" in any farm program. The wage- and salary-earning public ought to be better informed of its own vital interest in this necessity. Every depression this country has suffered has been preceded by a collapse in farm prices. For a quarter of a century the national income has averaged just about seven times the total farm income. Plainly, there is a public interest involved in sustaining farm buying power.

If this fact is properly made known, the public could hardly object to price floors under farm products that will prevent disastrous slumps. These should not be rigid price supports that would perpetuate surpluses and cost large sums of Treasury money. Instead they should be flexible floors that will cushion price declines and enable farmers to make their own adjustments in production. Such a system should be accompanied by the best possible forward estimates of needs for various farm products. It would also require the continuance of the Commodity Credit Corporation to make purchases or loans when necessary to meet temporary surplus conditions.

If the American people consumed the foods that make the most healthful diet there would be no danger of farm surpluses. Also, if we used all of our farm land in a way to maintain its productivity, no surplus production would be possible. Here are two important facts that involve the public interest to a high degree, both now and for the future. They should certainly represent two major aims of a long-range farm program.

To quote one of the best-known leaders of farm thought, H. E. Babcock: "Our farming must be aimed at producing the most palatable and nutritious food supply possible, and the American people must be sold on the public and personal advantages of the best possible diet for all. That way both will benefit." Such a diet would mean more meat and dairy and poultry products and fruit and vegetables. By increasing the demand for meat and dairy and poultry products, more grain would be marketed through them and more land would be needed in pasture, both lessening the danger of surpluses. The trend in food consumption is already running in that direction. People are eating around 25 pounds more meat a year per person than before the war, using nearly 100 more eggs and drinking 40 quarts more milk. Both public and farm policy should be aimed at encouraging this trend.

One way it can be done in the farm program is by revising the present parity formula to give livestock, dairy and poultry products a fairer price ratio in comparison with grain and other feeds. The changes in food habits and costs of production since 1914 should be recognized.

A good food policy would be furthered by a good land policy. This latter is becoming a national necessity, as clearly demonstrated by a recent Nation-wide survey of land conditions by the Soil Conservation Service. It showed that, out of the 425,000,000 acres now in use as cropland, around 107,000,000 acres are deteriorating rapidly. Unless something is done to protect this land, within a few years the damage will be beyond repair. Another 113,000,000 acres of cropland were found to be in a serious, if less advanced, stage of loss. Included in these millions of acres affected by erosion and other soil damage is some of our best producing farm land.

The public interest is very definitely at stake here, for land is a basic and irreplaceable source of national security. Its productivity must be maintained to insure the Nation's future food supply. A national land policy, with this long-range aim, should be a keystone of the farm program. Other parts of the farm program could very well be made dependent upon it.

Such a land policy would inevitably shift more land into grass and other crops that hold the soil and restore its organic materials. This would reduce the danger of surpluses and encourage the production of the very kinds of food that are most needed for a high level diet.

A program based on these principles would have a threefold public interest. And it would do about as much as can be done to develop a stable and permanent agriculture in this country.

Jim Dan Hill Warns of the Importance of Defense

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 6, 1947

Mr. O'KONSKI. Mr. Speaker, our Nation today is facing the most troublous times in its history. In these troublous times the security and the defense of our Nation should be of paramount interest to every loyal American. To me, there is no problem before the Congress more important than that of security and defense of our Nation. In my judgment, every other problem is of secondary importance to the problem of defense and security.

The Wisconsin National Guard Review for the month of June has in it an article written by Jim Dan Hill, major general, Thirty-second Division, Wisconsin National Guard. I am proud of this distinguished constituent. He is also president of the Superior State Teachers College at Superior, Wis.

This article sets forth the need for some form of universal military training. This article, in my judgment, is one of the most splendid and effective presentations that I ever read in my career as a Congressman as to why universal military training is imperative. As this article concludes, "To refuse it is inviting disaster."

Mr. Speaker, so that every Member of Congress might get the benefit of this article, I include it in the RECORD at this point to permit every Member of Congress and the Senate to read it and study it:

Japanese aggression in five short months swept outward from North China to Alaska, to the doorstep of Hawaii, to the coasts of Australia. It engulfed the Philippines. It rolled over the East Indies and southeast Asia to the Indian Ocean.

A tiny American garrison joined native troops in a Thermopylaen stand at Bataan. All the while, that force received morale building broadcasts offering hope of aid that every schoolboy in the American homeland knew could never be sent. The War Department communiques inferred no aid was possible. Ten days after Pearl Harbor the press said as much in the headlines. MacArthur, with a heroic phrase, abandoned his men to their fate pursuant to a War Department order. The same order, in effect, was America's abandonment of those men.

America has never known such dismay. And in all the mass hue and cry of hurt surprise, bitterness, accusation, and denunciation, none was so loud, vociferous, and articulate as were the very groups whose example, precepts, teachings, and philosophies were most responsible for America's defenseless condition.

These groups were not the realistic students of foreign affairs who recognized Japan's aims and her capabilities. They were not the preparedness minded statesmen, citizens, reservists, National Guardsmen, and soldiers who knew the extent of our unpreparedness. Indeed, these groups said little. They were not so greatly astounded. Some of them had long warned of such a possibility.

Turn back to the newspaper files of early 1942, or just cudgel your own memory. You will find the loudly dismayed, how-can-these-things-happen, hue and cry crowds conspicuously included the unrealistic, pacifistic factions of befogged "idealists." There were also blindly "idealistic" educators who shared the views of the above mentioned pacifists, who joined in the bitter questions.

An idealistic college professor, a charming fellow and a friend of mine who, during the thirties, was much in demand as a speaker to pacifist groups, is illustrative. He used to pooh-pooh the need of an American army. He nearly always got a good hand on: "The combined police and fire departments between Washington, D. C., and Boston run into hundreds of thousands of men. They are more than adequate to defend the Atlantic seaboard against any invader." I once sought to refute his sour logic in one discussion from the floor. Reference was at once made to my National Guard commission, and I was all but booed as a vulgar, saber-clanking militarist. Our paths crossed during the dark days of Bataan. His emotions were as high as ever, but in the other direction. "Those heroes on Bataan must be rescued. Where are our forces?" he all but shrieked. Of course, the obvious answer was that the New York police force was busy directing traffic, and the San Francisco police had not been issued amphibious squad cars. The same professor now speaks against universal military training because the atomic bomb makes all armies obsolete. It is not a poor speech either. His ability at stretching his impressionistic ignorance of both armies and atomics through 45 minutes of forensic plausibility excites my envy. The art of substituting plausibility for facts is an enviable, if dangerous, skill.

Also crying to high heaven, along with the temporarily disillusioned campus idealists, were the erstwhile, rabid, impractical isolationists. Columnists and commentators of the weather-vane type, like Dorothy Thompson, who had always shifted with every popular breeze in the ever eager search for reader-listener popularity, were a small but shrilly articulate and critical group.

And last but not least, was the smug, doting parent, often an influential citizen, who had always thought military training and preparedness might be desirable, but not desirable enough to disrupt his summer plans for vacationing with his own, often spoiled and always precious, contribution to American masculinity. He invariably wanted to know what was wrong with our defenses in this hour of trial.

These are the people who yelled the loudest when America got kicked. These are the emotionalists who in 1942 shouted America had been betrayed. These are the pacifists who in 1936 had protested an afternoon flag lowering ceremony in CCC camps because it smacked of military training. These are the sentimentalists who under the impulse of national charity cried for more and more wastage in fruitless WPA boondoggling, but who protested every dime that created equivalent work in defense projects.

These are also the frightened people who in 1942 wrung their hands and proclaimed to the world it would never happen again. Henceforth they would espouse the most powerful peacetime forces in the world. If America would but pull together so that freedom might be preserved on this earth, they would even endorse adequate universal military training in peacetime.

But now that Japan is in ashes of defeat and nazi-fascism grovels under the heels of three conquerors, the old feeling of smug security has returned. Some of these same people are today the most articulate opponents of military training. They have forgotten their short-lived fears. They have forgotten the war lasted 2 years longer than it should have, granted there would have been a Pearl Harbor had we been prepared. The thousands who have died are dismissed with noble-sounding platitudes. The wounded and disabled are paid off with pensions and hospitals.

These forgetful, idealistic emotionalists of yesteryear, these tearful hand wringers of 1942, have today too often returned to their effervescent, sedative cups of blind idealism, and are openly fighting every form of adequate preparedness. They even oppose forces sufficient to sustain commitments for implementing the very idealistic type of peace which they say they hope to achieve.

Fortunately these false prophets are not so influential today as they were in 1938. Grim experience has greatly reduced their ranks and a not so forgetful public has been giving them less heed. But as time dims memories their numbers increase and the public becomes more receptive of their fallacious ideas.

But meanwhile the selfish, fond parent is again cloaking his true sentiments under the maunderings of the emotionalists described above. He is making common cause with them. All the while he is thanking his stars the war came and went while his son was under age. At the same time he is so unappreciative of what the sons of other parents have done for their country that he beguiles himself into seeing no need for his son to spend a mere summer or two in peacetime military training. He is often sure the Army and the war made a man of his neighbor's son, but making a man of his son is exclusively his job—and exclusively his doting, summer pleasure.

These doting, parental sentimentalists and their mouthpieces, the false prophets of emotional, international idealism, are not today strong enough to defeat universal military training by merely rechanting their old catch phrases of post World War I. But they are hurting America's future.

These groups of recrudescent evildoers, masquerading under mantles of impractical sentiment and idealism, would normally merit only the undisguised disdain of all right-minded Americans; but unfortunately they have been fortuitously reinforced by a postwar, third group. From this new group the old obstructionists are drawing new catch phrases with a scientific twang. Mixed with the choicer gems of their old prewar cants, these articulate neopacifists have been able to compose new lyrics for their old disarmament melody.

This third, or postwar, group of preparedness obstructionists deserve a more sympathetic analysis than do the pseudo idealists and the selfish parents. Their motives are unselfish and honestly challenging. This group is largely composed of real scientists, quasi scientists, pseudo scientists, and conversational scientists who have become so appalled by the devastating effects of the atomic bomb that it has completely vaporized and befogged their thinking on all matters other than actual, fixed mathematical and chemical formulas. And of these mentioned above only the real scientists ever knew any genuinely scientific formulas. And their formulas do not yield answers to diplomatic, social, and military problems. The pseudo scientists are 100-percent speculative. Moreover, the false-prophet pacifists and the pompous parent groups are using the newly found scientific jargon to cloak their motives and emotions.

The first contributions these speculative, pseudo-scientific gentry made to the military and social thought of mankind were: "Future wars are impossible." "With the A-bomb in existence, armies can no longer stay in the field." "All World War II weapons, except the A-bomb, are out." "The next war will be a push-button war." "Armies are obsolete." These are their pet catch phrases which have been eagerly seized by the neopacifists and the other discredited messiahs of yesteryear in their postwar campaign of preparedness obstructionism.

If Vegetius, the great expert on Roman arms, equipment, training, and techniques during the golden glow of Rome's afternoon, had been given a week for examining the arms and equipment that were stored in America's Harper's Ferry Arsenal in 1860, he would have thrown up his hands in horror as to the future of warfare.

He would have fled back to Rome in his time machine, and told the other experts that by 1860 warfare would be impossible. He would have told them that a future generation of mankind was about to blow up the world with a battle flash fire they would call gunpowder. He would have told them that a weapon was possible whereby a leaden pellet could be made to leap from a tube at an invisible speed to a distance of a thousand yards. It would do so with such force that it would penetrate any shield or buckler light enough for the noble Roman infantryman to carry on his left arm. He could have groaned and said, "Gentlemen, the wars of the future are going to be push-button wars." And Vegetius would have been right, for the rifle trigger is the original button for releasing concentrated power.

Vegetius would have further said there was no defense against this powerful weapon to be known as the muzzle-loading, percussion-cap rifle, and Vegetius would have been right. There is no defense against the rifle bullet—if your mental processes are so paralyzed by fear you let the hostile rifleman coolly and calmly fix you in his sights. Certainly there was no defense against a bullet within the concept of Vegetius, for in his day the techniques of concealment, camouflage, cover, and dispersion were unrecognized, if not unknown.

Vegetius would have been justified in saying all these things because gunpowder did destroy warfare as Vegetius knew it. Vegetius would have been wrong in saying warfare was impossible, and that mankind was about to destroy itself with the new flash fire of the battlefield. He would have been wrong in saying man as a soldier was obsolete.

On a battlefield at Waterloo, Napoleon and the Duke of Wellington maneuvered, charged, and countercharged armies the combined strength of which totaled 150,000 men. The battle front from flank to flank was about 5 miles. As quarterbacks of their respective teams, Wellington and Napoleon were often within modern machine-gun range of one another. Across the open, gently rolling plain their mounted command parties were often within view of each other.

Deployed as they were pursuant to the techniques of that era, a modern infantry regiment without bombs or air support, but reinforced by one company of tanks and normal artillery, would have cleared that battlefield of both armies, though they had fought in temporary coalition against the modern intruder.

This is how much warfare has changed since Napoleon's day.

If Napoleon on St. Helena had been given a glimpse of our modern machine guns, tanks, artillery, bombs, and airplanes as they existed prior to Hiroshima, the ex-Emperor would have thrown up his hands in horror and said, "Gentlemen, warfare: it will be impossible. Agencies of destruction within the next 125 years are going to be invented that will wreck civilization." Napoleon would have also said twentieth-century wars, if they occurred, would be "push-button wars." That is what a 50-caliber machine gunner pushes when he launches a burst. Napoleon might have gone a step further and predicted a twentieth century of universal peace because all mankind would be in mortal fear of the dreadful character of the ghastly new weapons.

One wishes Napoleon could have seen these things, could have made such predictions, and could have been right. But we know in the light of history that he would have been wrong. The only factor in which Napoleon would have been right is that warfare as he knew it was impossible. History since his day has shown that warfare with such weapons and of magnitude that would have staggered his imagination have been fought. Citizen soldiers for these wars have been in greater demand than ever before within recorded history.

A common characteristic of all victorious armies, whether in the days of Vegetius, Napoleon, Pershing, or Eisenhower, has been a mass of manpower, well trained, well disciplined, and capable of being coordinated immediately toward a common cause and a common objective.

If warfare is to be more and more a push-button affair, we will always need well-trained and well-disciplined push-buttoneers—soldiers. It may be that the battalion, the regiment, and the division, as we have known them, are obsolete as units of combat manpower. A Civil War major general would never recognize a modern division. But with well-trained men organized into appropriate command units to function, the means of combat can never become obsolete. To argue that it will become obsolete is as silly as arguing that man himself can become obsolete in this modern, man-made civilization.

In time of peace, the only procedure known, in the past or the present, for guaranteeing a supply of such manpower has been military training for a great mass of citizenry. Thus far, no one has found a substitute for some form of compulsory military training. Patriotic societies have offered programs whereby practically all of the universal military training can be acquired in summers. It is less expensive in terms of dollars and time for the young men so trained than any plan that has ever been submitted to any nation.

If the laws of war have proven anything, they have also proven the need for calling into active duty such manpower the moment that danger seems imminent. Without such universal military training, this manpower cannot be invoked in less than a year. The fate of a continent can be settled in half a year.

It is also an irrefutable rule of history that a new war starts with all the weapons and equipment with which the preceding war ended. After that, the new war is a race of scientific and industrial ingenuity combined with rapid creation of additional, disciplined manpower necessary for the clock-like coordination toward the vital objective—victory.

It is thus apparent that notwithstanding the maudlin caterwauling of the revived idealistic, false prophets of yesteryear; notwithstanding the selfishness of doting parents of young men who escaped this war because of victory earned by neighbors' sons, and notwithstanding the dire prophecies of the laboratory scientists, the quasi-scientists, and the pseudoscientists, the American public is better advised when it subscribes to

some form of universal military training. Thanks to the high level of mass education of our young people, the period can be shorter in America than any other nation in the world—but some form of universal military training is imperative. To refuse it is inviting disaster.

Buried Alive

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, June 6, 1947

Mr. CLASON. Mr. Speaker, today I listened to many leaders on both sides of the aisle in the House of Representatives tell how necessary it is that the rest of the world be told of the advantages of living in the United States, our high standard of living, and our great individual benefits. It is all true, and yet there is one field of endeavor in the United States which is not receiving proper attention from our National Government. I hope that legislation improving Federal security for the aged people of the United States will be brought before the House for discussion and action by the Eightieth Congress. As we vote help for victims of the war all over the world, let us give due consideration to our aged people at home. They also need our help. If you do not believe it, read the following article entitled "Buried Alive" from the Woman's Home Companion for June 1947:

BURIED ALIVE—HERE IS SHOCKING EVIDENCE OF NATION-WIDE NEGLECT, BRUTALITY, AND PURE IGNORANCE IN THE CARE OF OUR AGED—PUBLIC AND PRIVATE INSTITUTIONS ARE EQUALLY GUILTY

(By Edith M. Stern)

Unlike some primitive tribes, we do not kill off our aged and infirm. We bury them alive in institutions. To save our face, we call the institutions homes—a travesty on the word. I have seen dozens of such homes in the last 6 months—desolate places peopled with blank-faced men and women, one home so like another that each visit seemed a recurrent nightmare.

But in the heartbreaking monotonous picture some individual figures stand out—the men in cages in the county home in Ohio for example.

The superintendent and his wife the matron didn't want to take me through the little annex a stone's throw from the main building, built before the Civil War and modernized in 1892. But I insisted.

"All right, then," the superintendent said resignedly, "but you're likely to see anything there."

"It's just impossible to keep those men clean," the matron added.

The first room was not unlike the dormitories in the main building. There were the same grimy unadorned walls, the same curtainless windows with cracked torn shades and the same chipped enamel beds with lumpy straw mattresses on which old men in ragged stained clothing lay sprawled. Then my guides unlocked a door and turned a corner.

The stench of that corridor is still in my nostrils. Along each side were narrow cages of cross-barred metal, each just big enough to hold a cot, a chair, a stained toilet or open commode, and an old man quiet as the furniture.

In one cage a fragile 92-year-old, breathing heavily in sleep, lay diagonally across the cot. For bedding there was only a mattress, a rubber sheet, and a dirty brown blanket. And I was startled to see a large vigorous-looking man sitting on the foot of the cot.

I asked what he was doing there. It was Tony's cell, too, the superintendent said. "With that single cot?" I asked. "Yes," the superintendent answered. Of course, that wasn't right, but he had no other place to put Tony. He and the old man got along fine and they both wet and soiled themselves so that didn't bother either of them.

Aside from Tony's incontinence, I couldn't make out why he was locked up; the matron mumbled something about his stealing and breaking things, and there were her husband and herself with two helpers to do all the work and look after 87 people, a dozen of them bedridden. She was more definite about why the old man had to be "taken care of" like that. He had a way of wandering off the grounds, might get run over. She did not add that he was primarily imprisoned for the crime of being old and poor.

I also remember a certain old lady with agonizing clarity, although she could not have been poor. The private room she occupied in an eastern city nursing home staffed with graduate nurses cost $55 a week and extra for medicines, salves, radio connection, and laundry. The room was sizable but wretchedly furnished. The old lady, her hair mussed, her stockings hanging down, sat in a chair, and as the nurse and I passed her door she moaned and beckoned. I paused but the nurse said sourly, "She doesn't want anything," and went on to show me the next room, no more attractive, but with bath, at $65. (I had invented a 78-year-old aunt for whom I was seeking accommodations.)

Down and across the hall was a three-bed room at $45. The sheets and covers of one of the beds were in a heap in the corner and the patient lay with her legs bare almost up to the thigh. There was a bathroom on the floor, but even where patients were out of bed, many rooms contained commodes and the whole place had a permeating odor.

I asked the nurse whether the patients had bells and she said no. How then, I inquired, could they indicate when they needed something? "Oh," she answered, "there's always a nurse passing." But when we went by the old lady's room on our way back, she again moaned and beckoned, and again the nurse disregarded her, and there was no other nurse on the floor.

That old lady has become for me the symbol of all the old folks who ask for help they do not get. And I—and most of us—are as guilty as that nurse. With few exceptions we provide either wretched facilities for our aged or none at all.

Doubtless it will surprise many women, as it did me, to learn that philanthropically supported homes for the aged can care for only a trickle of the torrent of men and women desperately seeking shelter and some measure of protection. The entire capacity of such homes is about 83,000. Nearly a third of them are in 3 States—Massachusetts, Pennsylvania and New York. Some have empty beds because admission requirements are unusually restricted—such as "residence in Georgetown," as Georgetown was defined in 1805. Those with no empty beds have long waiting lists. In fact many will no longer even list new names, believing it a cruel kindness to raise hopes almost certainly doomed to disappointment.

Public institutions are also swamped. In New York City's home for dependents, porches are being used as dormitories; chairs lined up in long, depressing rows touch one another; and in a dining room built for 200, 600 must eat in three shifts. In Cleveland the infirmary had a waiting list of 200 when I last inquired. Even in a small rural-county nursing home I saw a bed in a corridor, and new admissions were closed. In most big-city wards an extra row of beds down the middle is the rule, not the exception. In commercial nursing homes the story is similar.

Last January, 900 patients could have been discharged from hospitals in New York City alone if there had been any place where they could go to get care. In April 1946, St. Paul, Minn., was short more than 600 beds for chronic care. Everywhere I traveled, families and social workers alike were frantic trying to find nursing-home accommodations.

I asked Margaret Wagner, director of the Benjamin Rose Institute, in Cleveland, what on earth happened to the helpless old people who cannot get into any kind of home. With a terrible stark brevity she replied: "They die alone."

But even if they do get into a home—well, come with me to an institution I visited in a midwestern city, a home so typical it might be in any city.

The hard-faced proprietor who opened the door of the decayed Victorian mansion looked much too unrumpled, at 10:30 a. m., for someone who had 22 patients to tend and only one assistant for the housework. But I told her I was calling on behalf of an aged father-in-law. She showed me a men's ward, at $100 a month.

The ward was mussy and cluttered, beds standing every which way. There was no flicker of interest on any of the drawn faces when we went in. I winced when she said loudly, "These are all stroke cases," as if the eight gray-faced humans lying there could neither hear nor feel.

Upstairs, in a hall as drab as the ward, sat the patients able to walk. Downstairs there were two large rooms lush with bright plush overstuffed furniture; but these, the proprietor said, were not for the patients' use.

Visiting time was restricted to 4 hours, 3 days a week. I asked why, since none of these patients was acutely ill. She said, "They like to rest." Whatever else, I felt like saying, was there for them to do?

In other ways too the proprietor indicated her greater interest in sparing herself than in caring for her patients. I asked the rate for a private room; it was occupied now but she'd gladly oust the patient, who was undesirable because he soiled himself. I murmured sympathy, adding, "Maybe he can't help it."

"Oh, yes he can," she said harshly. She also informed me that she did not take cancer patients. In other words, I thought, no one who is any trouble.

Another nursing home proprietor said outright she preferred patients who are no bother. She thought some organization should provide recreation, though she wouldn't pay for it herself because the patients get quarrelsome and gossipy. A third proprietor would not let patients go to the bathroom at night because the noise woke her up.

Sometimes, however, nursing-home abuses result more from good-natured yielding to pressure for beds than from callous selfishness. There was the woman who did a good job of nursing a few patients in her own home. Urged to expand, she added patient after patient in the carriage house of an old mansion until there were a hundred and twenty. Incapable of running so sizable an institution, she fell farther and farther behind financially. Just before she went bankrupt the patients' main meal was weak soup and a cup of tea. The woman was not mean; she was broke.

Bedsores, for which there is little excuse with proper nursing, are a common nursing-home plague. So is malnutrition. And the lack of standard everyday equipment can be shocking.

The higher-priced nursing homes have better equipment than most, but high rates do not guarantee good care. In a $150-a-week

nursing home in New York an old woman was left on the bedpan for 2 hours. When her daughter reported it, the proprietor said she couldn't understand any complaints about that nurse, although she'd had them about another, who was an alcoholic.

A friend of mine placed her semiparalyzed mother in a Washington, D. C., nursing home, recommended by one of the city's leading physicians. But she did not let her stay there long. The room, at $250 a month, was cleaned only twice a week. A part-time cook departed daily at 5 o'clock; so supper, served at 4:30 p. m., consisted of only cake and fruit. There was no nurse or other attendant on duty during the night. But my friend was most appalled to see a nurse who was bathing an emaciated paralyzed patient just leave her, all uncovered, and walk out to attend to some other business.

The invalided aged often get better care in the public homes. But by and large these institutions are still far from anything we associate with the word "home."

The New York City home for dependents has an excellent program and valiantly attempts to make guests feel like individuals. But it cannot overcome the depressing effect of its physical set-up. The gray, thick-walled buildings, erected in 1846 on Welfare Island, look more like a prison than a refuge.

"When I first saw this place, I sat down and cried," the superintendent told me.

During their last years most men and women at the New York home have only a bed and bedstand that is all theirs. Though there is no rule against personal knickknacks, sharing a room with 50 others is likely to kill all individuality. I saw only one pitifully clutching at personalization; a bedstand decorated with pink ribbon and some holy pictures.

Some of the dormitories are nothing more than enlarged corridors, with a single window at one end and an enclosed porch at the other. The enormous dayroom is also the auditorium; it is lighted and partially ventilated by a skylight which lets in birds. Their droppings fall upon the seats—wooden pews discarded by some church. The kitchen, a city block away from where the food is served, has a cracked, uneven floor, heroically being mopped with steaming water when I saw it, but still dirty-looking. Ironically, the only dining room at all attractive is for blind women; it has red chintz curtains. Other ambulant guests eat in great barren halls at big tables without cloths or napkins, the men from battered tin, the women from thick, chipped, and cracked white china.

True, money was recently appropriated for a new institution. But for over a century the great and wealthy city of New York has relegated its needy aged to buildings only slightly less moldy than the grave.

New York City is not alone in its shame. "If you had brought me here blindfolded," said an official from another city, "I would have sworn I was back in my own institution." And I, seeing a hundred-bed barewalled dormitory at Oak Forest, Chicago, had that queer sensation of reliving something. The miles I had covered one-third across the country were annihilated and I seemed to be back on Welfare Island.

Country folk who know their neighbors might be expected to be more sensitive to the fate of their needy aged than city folk. But rural indifference is as brutal as urban—and funds are even smaller. The average county farm or almshouse—though its name today may be nice-Nellied to home—is an obsolete horror.

I tried to avoid seeing the worst county homes. I did not want to report to American women what was exceptional, but what was typical. So I bypassed impoverished backwoods areas, went to prosperous literate regions with a tradition of social welfare. What the suffering of the aged must be in the poorest county homes I do not even want to imagine.

Dilapidation, ragged clothing, thin cotton blankets (for the ever-chilly old), cheerless basement dining-room, backless benches in dayrooms were bad enough. An unventilated unlighted closet-size punishment cell was worse. Worst were the locked cells; some in a building built only 10 years ago; some in a dank centuries-old structure. Nearly always the contemptuously called "undesirables" were in charge of another inmate almost as senile as they.

There are county almshouses without dining-rooms; residents get their food from the kitchen and eat it in their rooms. I did not happen to see any with no bathtubs, no living-room facilities, nor any over 200 years old. I could not see the no toothbrushes, no hot-water bottles, no first-aid supplies, no dental care, no change of clothing, two meals a day. But I have read these things in official reports.

The general run of superintendents are primarily selected for their ability to farm; their wives are the matrons. "Once you get on to the cleaning and cooking, there's not much else to learn," said a matron solely responsible for the health and happiness of about 60 infirm old people. Few have any professional advice to make them understand that institutional care of people differs from barnyard care of animals.

One matron had a mean tight-lipped face and a cold disregard of her wards, but the couple who had the 92-year-old man locked up were well-meaning people, with kind faces. "Mister and I haven't been off this place for 3 years," the matron told me, almost with tears in her eyes. "If I weren't a good Christian I couldn't go on with the work." She, and others like her, are not hardhearted—just ignorant.

Several States—Illinois was the first—are converting county almshouses into nursing homes, open to people who wish to pay their own way, as well as to those who need public assistance. This is excellent, so far as it utilizes badly needed buildings, removes the stigma of the poorhouse and, through painting and remodeling, brightens former rookeries. But a coat of paint and some chintz do not necessarily create a good place for taking care of sick people. Except in its decoration, installations and superficially improved care of the bedridden, one of these converted homes I visited still bore a horrid basic resemblance to its unconverted fellows. Couples were separated; husbands did not even eat with their wives. There were the same blank-faced men and women just sitting, the same lack of any real occupational program.

Another redecorated almshouse, now ostensibly a nursing home, certainly cannot have any real accent on nursing. The minimum personal care required by a bedridden patient is 1 hour a day. Yet here the 1 hour and 20 minutes a day each employee gives a patient includes not only nursing but all the farming, office work, cooking, and cleaning besides. Nursing standards are so much neglected that even diabetics do not get a special diet. "Because," the farmer-superintendent explained, "you can't make old people eat what they don't want to."

Under good management a public home need not be inadequate and dreary. Residents can still live happy lives within its walls. At the magnificent well-run county home in Los Angeles, single residents have private rooms, couples double, decorated as they please. Everyone who wants it gets his own radio with a headset. There are special well-stocked rooms for reading and games. Some residents run canteens, keeping the profits; all who are able enjoy gardening, handicrafts, shows, a band or academic and commercial classes.

A smaller home in Westchester County, New York, is also a heartening place. Dayrooms cheerful with plants are cut up into units not much larger than family living rooms. Each has a piano. In an attractive room equipped especially for the purpose, women guests hold tea parties and may invite friends from the men's section when they wish.

The superintendent knows his more than 700 charges by name, introduces them as Mr. and Mrs. In the sewing-room coffee is served at 10 a. m. "They have breakfast so early," the woman in charge explained sympathetically.

A nursing home does not need to be a place of the living dead, either. One that I visited hummed with life, though it had several patients over ninety, some with terminal cancer. Ambulatory and wheel chair patients had the run of the whole cheerful place and were talking to one another, something I had not seen in any of the dreary places where silence is chronic. The nurse proprietor radiated wholesome sweetness and faces lighted at her approach. But my heart warmed completely when she turned to an 88-year-old semiparalyzed doctor, once prominent in the community, to ask his opinion about cough drops for his roommate.

Such attention cannot be brought about by licensing nursing homes—but licensing, and sufficient personnel to enforce it, are essential to prevent the most flagrant abuses, insanitary conditions and fire hazards. In 28 States, however, the sick aged have less legal protection than patrons of saloons.

It is high time we gave some thought to our old people. Although they are increasing among us, there is no national organization devoted to solving their problems. Even the Townsendites, a most powerful lobby of the aged, have formulated no plans for meeting the most important need—a good home with good care.

Old age in itself is not a tragedy, but a time of life with its own solaces and pleasures, like every other time of life. Only by our neglect and abuse of the aged do we make it a tragedy.

Communism—What It Will Take To Defeat It

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 6, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, the test of our ability to resist the march of communism is the economic stability of this great country. Grants of money scattered over the world for armaments or propaganda are but idle gestures. We must soon understand that fact. For this reason I include as part of my remarks the following editorial which appeared in the Chicago Journal of Commerce on June 5:

HOLDING THE LINE

That tenuous line dividing the Soviet and Western Worlds has begun to emerge, hard and clear. On the left side of it (facing south) lies Hungary, which we have just rebuffed. To the right of it is Italy, recipient of our official blessing.

The rebuff occurred when, following the Communist putsch against Premier Ferenc Nagy of the popularly elected Smallholders Party, the United States cut off the remaining half of a $30,000,000 loan to the Magyar country. Hungary, uneasily lying under the shadow of the hammer and sickle, is deprived at one swoop of her premier and of $15,000,000.

The official blessing was accorded by Secretary of State Marshall, who wished every success to the new government of the perennial Italian Premier, Alcide de Gasperi. His latest venture omits both Socialists and Communists from the cabinet.

"We shall be happy to give aid to the Italian people, who have demonstrated their sincere and abiding faith in democratic processes," General Marshall declared. (Whether Socialist Britain relishes the democratic tag on Italy's Socialist-excluding government is a moot question.)

Iran, too, the oil-laden country which has resisted Soviet incursion, is soon to receive an American reward—a $30,000,000 credit for United States surplus property. Iran's neighbor, Turkey, and Greece have already been voted $400,000,000 by Congress.

Whether the line becomes a battle line is the trillion-dollar question. At present it is a diplomatic frontier between the Communist-dominated part of the map and those under Anglo-American hegemony.

Our negative approach makes more sense than our positive one here. But withholding credits from a regime which has muscled its way into power by force of Russian bayonets is simple logic. Giving aid to a potential enemy, whose present rulers are fanatically opposed to the American way of life, would be an imbecile gesture.

On the other hand, paying a wildly extravagant price to build up a Fascist-minded and antidemocratic autocracy as a rotten bulwark against communism is equally witless.

The breakwaters against communism will not be found in the mountains of Macedonia or the waters of the Dardanelles; on the Iranian plateau or along the Morgan line of Venezia Giulia. They will be found in the ledgers of the Treasury and the Federal Reserve banks, in a financially sound, economically strong United States. They will be found in a flourishing home economy which gives no hope to domestic Reds. Five billion dollars a year—the golden global shower forecast by our Washington weather experts—would sow the wind of inflation and instability at home. If it does, we shall reap the whirlwind of economic and political disaster.

Address by Hon. Douglas W. McGregor

EXTENSION OF REMARKS
OF
HON. TOM CONNALLY
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, June 6 (legislative day of Monday, April 21), 1947

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the Hon. Douglas W. McGregor, the Assistant to the Attorney General of the United States, at Houston, Tex., on Maritime Day, May 22, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Mayor Holcombe, honored guests, ladies and gentlemen, it is good to be back in Houston, and I am grateful to Mr. Gough, the president of the Propeller Club of the port of this city, for affording me the honor of coming here this evening and participating with you in the celebration of Maritime Day. Having lived in Houston as long as I have, having served as the United States attorney for the southern district of Texas, having had the privilege of representing the United States in the approval of the titles for the easements acquired in the construction of the intracoastal canal, and having had over 21 years of admiralty-law experience, I am somewhat familiar with the significance of Maritime Day to this growing and progressive city of ours. To you, Mr. Mayor, I am most grateful for your kind words of introduction. In all sincere humility, I deem myself hardly worthy of all the praises you have given me. You, yourself, have done so much for the maritime interests of our city. It is no exaggeration to assert that your energy, determination, and efforts have constituted one of the greatest factors in building up this port to the eminent position that it now has. None can dispute that you have contributed more than anyone to the building up of the splendid municipal docks, the magnificent highways leading to them, and the superior installations there. You are all familiar with the slogan of Houston, "Where 17 railroads meet the sea." You, Mr. Mayor, and all these men gathered here this evening have done much to make that meeting of the railroads and the sea efficient, convenient, and economical.

As you are all aware, National Maritime Day, by act of the Seventy-third Congress in 1933, has since been celebrated annually over the Nation. The date of May 22 is significant because of the historical fact that on May 22, 1819, the *Savannah* set sail from Savannah, Ga., on the first successful transoceanic voyage under steam propulsion. That event marked the beginning of an epoch in the world's history. Much has happened since that date. When the *Savannah*, often referred to as the steam coffin, made its hazardous crossing from this country to Liverpool, the ship was about one-thirtieth of the size of a modern Liberty ship. It boasted a 72-horsepower engine, about as powerful as the one in your car. It weighed 340 tons. It was fitted with paddle wheels as well as sails. As a matter of fact, it used steam for only 3½ days of its 29-day-and-11-hour journey and sailed the rest of the time. It was reported that she smoked so furiously approaching the English coast that watchers on the Liverpool shore put out in small boats to help extricate it from the fire. Compare that picture with the modern ship.

The world situation today is in marked contrast to that of 1819. Over 2 years ago we achieved a victory in a great war, a victory which we hoped would guarantee to all people the right to life without fear. Instead, most of the peoples of the earth today are still assailed by hunger and starvation, and all people by doubts and fears. Men once more talk of violence and war, and only the dead are sure of peace. It had been hoped that, with victory over the Axis enemies, man would be able to play the game of life unmolested. At no time since the beginning of history have people been confronted with such complex and vexing problems as they are today. There is despair, frustration, hopelessness. All are seeking a solution to the problem—how to build a new and satisfactory way of life on the historical foundations which have become dear to us throughout the ages. The world is crying for peace, bread, and freedom.

It is not idle exaggeration to state that one of the most important elements in securing the future peace of the world is bound up with the future of the merchant marine of our country. As I see it, world peace will depend on the following two factors: First, the maintenance of a strong and powerful United States to counterbalance aggression by other peoples of the world; and, second, the maintenance of a sound economic stability the world over. An efficient, sound, and adequate merchant marine will guarantee both factors.

As President Truman has so aptly stated in his proclamation of April 11, 1947, calling upon the people of the United States to observe this National Maritime Day:

"Whereas the welfare of the American merchant marine is of the utmost importance to our national economy and national defense and our free intercourse with free nations"—

An adequate merchant marine is therefore as necessary to our country in assuring future peace as it was in achieving victory in war.

From what history has taught us, one need have little to say to convince any intelligent person of the necessity of maintaining a powerful United States from a military and naval aspect. A well-prepared, modern, up-to-date, efficient Army and Navy will not only counterbalance aggression by other peoples of the world but will serve as a preventive of war in the future. That the possession of a strong, well-equipped, capably manned merchant marine is an essential constituent element of a powerful Army and Navy, and a modern defense set-up, needs no proof. The contribution that the merchant marine made in the conduct of the recent war is sufficient proof of this assertion on my part.

From Greenland's rocky shores to India's coral sands, from the burning littoral of Africa to the blinding storm-whipped crags of the Arctic, men braved the sea to keep our forces supplied and girded with weapons to enable our country to achieve the victory we did. The men and ships of the American merchant marine were the muscles behind the fist that delivered the blow.

That merchant fleet is now practically intact. The great problem presented is what to do with it.

The first thing we must do is to make sure that we do not repeat the mistake we made after World War I. We must continue to be the greatest maritime Nation on earth. Most of our shipping after World War I was wretchedly inefficient because a great part of it consisted of wooden vessels. This time we were more fortunate. Our shipping in World War II was the best ever built. Germany has lost all of her merchant marine. So has Japan; while Great Britain, the Scandinavian Nations, and Holland have, at the most, only half of their prewar tonnage. To maintain a fleet for defense purposes, the retention of our leadership is absolutely indispensable. But there is another reason why it is necessary to maintain our unrivaled leadership as a martime power in world affairs. There is the second factor I have spoken of—the economic factor.

The United States has now achieved a position of unrivaled leadership in all world affairs. The economy of the United States will reflect the economy of the world. On the economic well-being of our Nation depends the economic well-being of the world; and the economic well-being of our Nation, it may be unequivocally stated, depends upon the character and quantum of the Merchant Marine we maintain. The importance of a merchant marine fleet of our own to our country's sound economy was recognized very early in our Nation's history. George Washington, urging a systematic encouragement of shipbuilding, stated that to do this "is to establish shipyards; is to form magazines; to multiply useful hands; to produce artisans and workmen of every kind who may be found at once for the peaceful speculations of commerce and for the terrible wants of war." This is true because we can only have a sound domestic economy if we develop an increased global trade. The merchant marine is important for our prosperity, and thus resultingly in the maintenance of the peace of the world. It is incumbent upon us to maintain an equilibrium of international trade, and this can only be done by the retention of our leadership as a maritime power. We want an unvacillating, a permanent policy which will supplement the spirit of free enterprise with Government cooperation. As has been so aptly stated, "A country that has turned its back upon isolationism must turn its face toward the sea." For it is an indubitable fact to which all thinkers will give accord that the future economic prosperity of this country is dependent upon the development of foreign trade.

Due to almost miraculous scientific progress made during the past 25 years, the productive powers of man have been greatly increased. It is manifest that all the goods that can be produced in this country cannot possibly be used by the domestic consumers. To live we shall have to export. Experts have estimated that if we carry only 50 percent of our foreign trade on our own ships, we will be able to keep in the sea lanes a full size American fleet, and in this way make it possible to foster the interflow of goods and ideas which makes for stable international relations. Only a full-scale American fleet, carrying goods back and forth over the oceans, will bring the national economy which will promote prosperity and insure millions of workers pay envelopes. At this moment, the United States is the source of goods and materials upon which most of the rest of the world is dependent. Every nation is seeking to recover from the war. The United States was the least scathed, and the United States is the only spot on earth where the material and equipment necessary for the rehabilitation of all people on earth can now be provided.

Also, we should not forget that there are many commodities and materials which we have to import, such, for example, as tin, coffee, and rubber. These imports, as well as our exports, should and must be carried in our own ships. The Department of Commerce has estimated that the United States will furnish about $16,000,000,000 in goods and services to other nations this coming year. Other nations, in return, will provide us with about $9,000,000,000 worth of goods and services. We must resolve that most of it shall be carried in our own ships. American genius for management and organization in labor, as well as industry, can be utilized to that end. British shipyards are already operating at top capacity to turn out ships that will be superior to ours. We must not permit the continuance of this. We must not permit another absorption of our foreign trade by other merchant marine flags. The motto that foreign trade is the keystone to our prosperity should be blazoned to our citizens.

An aggressive world trade policy will be good for the wheat farmer, for the factory and office worker, for the businessman, and the industrialist. It is imperative that countries exchange their products if world trade is to serve as a vehicle of international good will. The Lord has endowed us with many resources. Let us make use of it by the further achievement of American productive genius and give the world the benefit thereof. We cannot permit inaction, indifference, and trust all to the Lord.

In this connection, it is interesting to note that we have always been, during our most prosperous periods, an internationally trade-minded people, and that the foundation of this country's vast economic wealth was built on a merchant marine. We have always been a seafaring nation. During the first year after the migration of the Puritans to New England, shipwrights were busy on the shore of the Mystic River completing the construction of the seagoing vessel, *The Blessing of the Bay*. At that time, the General Court of Massachusetts, which is the official name of the Massachusetts Legislature to this very day, solemnly enacted that shipbuilding was a business of great importance and provided for inspectors to examine every ship to make sure that it was sound and seaworthy. From 1790 to 1855, with the exception of the 10-year period during the War of 1812, we enjoyed what has always been called the golden age of shipping. The whalers that set out from Nantucket to every corner of the globe, searching for precious oil, and the New England clippers which made record voyages to the Orient in search of fine silks and tea, were the foundations of many a fortune built in this country. The Civil War ended this.

We later permitted that shipping supremacy to wane, but in 1936 when we were fourth among the six leading maritime nations in tonnage, sixth in vessels 10 years of age or less, and fifth in vessels with speeds of 12 knots or over, and when dry cargo shipping was at a standstill and most other ships were rapidly reaching the state of obsolescence, President Roosevelt was successful in rallying the friends of the merchant marine in Congress and elsewhere to enact what has been called "the frankest, most expert, and most realistic approach to the problem of supplying the Nation with adequate cargo and passenger facilities yet made." This act, which created the Maritime Commission, has been called the Magna Carta of our maritime policy. It was a great forward step after 50 years of a period when our merchant shipping dwindled to insignificance. It provided for the first time a stable policy in the matter of the merchant marine. It provided a sound approach to the rehabilitation of our then decadent shipping. It can serve now as a guiding post for our future merchant marine policy, for the determination of that policy is one of the most important and difficult problems facing us today. The committees of Congress on the merchant marine are giving this serious matter exhaustive and intensive consideration, and you know, of course, that the President of the United States has appointed an advisory committee to study and report on the problem.

It is not merely the retention of ships which is important. We must have ships, but they must be modern and up-to-date and must possess the most advanced technological and mechanical improvements. We are fortunate in having a fine personnel. The all-out war brought many new faces to our merchant marine and the necessities of the emergency have resulted in a development of instruments and skill second to none. Let us make use of all that.

Moreover, Government help and cooperation is absolutely essential. Private shipping cannot compete with foreign cheap labor and low cost of raw materials. The Government must also help in the development of ports and in aiding in the equipment of such ports with the latest machinery.

Thinking men are saying that if civilization is to survive, we must cultivate the science of human relations, the ability of all people of all types to live and work together in the same world at peace. Our merchant ship personnel can help channelize a proper course in this direction. We can have in these men the ambassadors of good will. Let us show the world the true meaning of a free America, the real truth of American enterprise, the beauty of our way of life. Let us not permit the world to think of us Americans in the terms of a Yankee trader who once said, "Father would never tell a lie, but sometimes in horse trading he was mighty economical of the truth." We have built up much good will for our country during the war. Let us continue to retain that reputation. As an instrument of international relations, the merchant marine can do a lot and can truthfully translate the symbolism of our flag—namely, that this Nation is a union of States standing together for a world striving to find peace and security.

That is why the work of the National Propeller Club is so significant, and that is why meetings of this sort are so meaningful and important to the welfare of our country. Your organization has grown immensely since that little group of men interested in every phase of the merchant marine met at a luncheon on January 24, 1923, in New York and laid the keel of the national organization, in the form of the Propeller Club of the Port of New York, and then on November 9, 1927, with only four of your ports, met at the old Waldorf Astoria in the same city to plant the seed which has now grown into the vast National Propeller Club. You have clubs in the United States, in Europe, South America, in the West Indies, and one even in Hawaii. From that group of four you have grown into about 100 today. You have provided a means by which maritime interests may band together for mutual advancement.

But the greatest benefit that you have conferred upon the people of our country has been in focusing the attention of the average man and woman to the importance of the merchant marine. You have made the public merchant marine conscious. Unless the people are fully informed concerning the essential object of the merchant marine, it is unreasonable to expect now, or in the future, that American citizens will demand that an adequate merchant marine fleet be maintained. You have crystallized the attention of our American citizens on the importance to the Nation, both in time of peace and national emergency, of the American merchant marine, and you have stimulated interest in shipping. You have made the rallying cry of our people, "Ship American, travel American, and support progressive maritime legislation," meaningful and potent.

Particularly notable is your contribution in stressing the importance on the coming generation of its possible influence upon American shipping. You have done this by the formation of the propeller clubs, student ports, in numerous colleges and universities. I am proud that we have one at the University of Texas. By developing amongst the youth a patriotic and common-sense appreciation of an adequate merchant marine as a factor in our national well-being, you have provided a guarantee and an insurance for the future welfare of our country.

You members of the Propeller Club of Houston have done much to carry out the noble purposes of your national organization. Houston, known as the third port in tonnage in the United States, has benefited greatly from your effort. Our city, 50 miles from the Gulf of Mexico, depends for its economic life on the canal that leads to the ocean. Our municipally owned docks, bordering the channel, are as good as any built.

Let us remember that never again can our Republic, rich and powerful as it is, closely interwoven as it is with the political, commercial, and cultural life of other nations, neglect what is still the primary instrument for promoting world trade among the nations. As has been stated, "Properly used, a strong merchant marine can help enrich the people it connects, can promote a true cosmopolitanism of the mind, and can strengthen the fabric of international peace."

Let us also not forget the sacrifices of the men who died while in the service of the merchant marine. Let us resolve that by their death they must have contributed to years of lasting peace and that by the maintenance of a strong merchant marine, we can be free from the perils of another war. We are now living in the Atomic Age. Few of us actually realize the true import of this statement. A new world is upon us. We must meet this new world boldly with courage and vision, and we must do it quickly. The world is moving at a pace so that even a slight delay may be fatal. But with God's help it can be done. As Webster said, "God grants liberty only to those who love it, and we are always ready to guard and defend it." We all love liberty. We have given our blood to maintain that liberty. We must always be ready to guard it and defend it. But we must have vision and courage and determination. Let us always heed the words of the Bible "that where there is no vision, the people perish." In commemorating "Maritime Day" one day a year and in carrying out the messages delivered during the other days of the year, we will not and cannot perish. Let us effectuate the fitting slogan of this day, "For trade, travel, defense—the American merchant marine."

Montana Farmers Union Condemns GOP Slashes in Agriculture Appropriation

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 6, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement by the Montana Farmers Union at a meeting at Fort Assinniboine:

MONTANA FARMERS UNION CONDEMNS GOP SLASHES IN AGRICULTURE APPROPRIATION

HAVRE, June 2.—Directors of the Montana Farmers Union, meeting at Fort Assinniboine, today issued a statement condemning the action of the House of Representatives in cutting Department of Agriculture appropriations. The statement said:

"We consider the present action of Congress, cutting the appropriations of the school lunch, REA, Farmers Home Administration, crop insurance, and triple-A conservation programs, a repudiation of previous congressional promises to the American farmer.

"Such action, done in the name of 'economy,' is destructive of the basic foundations of our national well-being. We feel that this is a grave breach of faith with the American farmer, and that it will result in a loss of confidence and trust among farmers in democratic action programs.

"In view of wartime damage to our soil and the fact that our present annual losses amount to 500,000 acres, a reduction from the promised $300,000,000 to $165,000,000 in conservation funds for 1947, with no funds for 1948, is bound to result in a tremendous increase in loss of soil through erosion, a loss our Nation can ill afford.

"We deplore the attempt to wreck the greatest asset and the best feature of the triple A—its farmer control—by means of drastic cuts in administrative funds allowed State and county committees. Reductions announced for Montana would cut county committees from $399,000 to $217,000 and the State from $110,000 to $32,000. Obviously, it will be impossible for the committees to function properly unless these funds are restored.

"We also fail to see the economy or consistency in reducing the school lunch program from $75,000,000 to $45,000,000. In the face of the impending surpluses and the deficient nutritional standards still prevalent in much of our own country we believe it extremely unwise for Congress to deprive our children of this extra margin of health and at the same time provide 'loans' for military aid to foreign countries.

"We believe opposition to the full appropriation for REA will needlessly postpone the day for many of our farmers to receive benefits of electricity. If the opponents of REA succeed, the resulting delays in construction and expansion could easily seriously set back the whole rural electrification program.

"With reference to the cuts on funds for farm home demonstration, we wonder what has become of the promises to our veterans. This will be the death blow to their hopes of becoming farm owners.

"We are opposed to the contemplated curtailment of the crop insurance program on an 'experimental basis.' It is our considered opinion that, as far as Montana is concerned, crop insurance has worked and should be retained and further extended and improved.

"We call on farmers and friends of agriculture to join with us in our effort to prevent the scuttling of these programs, which we believe beneficial not only to agriculture but to the Nation. While we do not consider present programs the final solutions to national agricultural problems, we do believe such progress as has been made should not be thrown out until improved and better legislation may be enacted."

Proceedings on the Occasion of Unveiling Statue of William E. Borah

EXTENSION OF REMARKS
OF
HON. HENRY C. DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Friday, June 6 (legislative day of Monday, April 21), 1947

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a transcript of the proceedings in connection with the unveiling of the statue of the late Senator William E. Borah in the rotunda of the Capitol this afternoon.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

EXERCISES ATTENDING THE UNVEILING OF THE STATUE OF THE LATE SENATOR WILLIAM E. BORAH, OF IDAHO, IN THE ROTUNDA OF THE NATIONAL CAPITOL, WASHINGTON, D. C., FRIDAY AFTERNOON, JUNE 6, 1947, AT 2 O'CLOCK

Hon. Ray McKaig, of Boise, Idaho, vice chairman of the Borah Memorial Statue Commission, acted as chairman.

The CHAIRMAN. Ladies and gentlemen, we are about to pay tribute to the memory of one of the great statesmen of America. If we lived in Germany, Italy, or Russia, perhaps we would appreciate even better than we do the words "Sweet land of liberty" in the inspiring anthem, America. Those words mean much to those who live in many of the countries of Europe. I ask you to sing one verse of America the way the Canadian sings his national song. Sing it as though you meant it—"Sweet land of liberty." When you say those words, think of the oppression in the Old World. The band will play America, and after it has played the song through we will sing one verse, and then you will please remain standing while the Chaplain of the United States Senate, Dr. Peter Marshall, delivers the invocation.

(The audience stood and sang one verse of America.)

Rev. Peter Marshall, D. D., Chaplain of the United States Senate, delivered the following invocation:

"Our Father, we give Thee thanks for the men and women of yesteryear who have, by their vision, their faith, their courage, and their lives made our Nation great and bequeathed to us our glorious heritage.

"As we honor the memory, the inspiration, and the example of William E. Borah, we know that he being dead, yet speaketh.

"We thank Thee for his qualities of mind and heart that earned for him the respect of his colleagues and the confidence of his people.

"We dare to pray that Thou wilt raise up among us men like him, men of conviction and courage, men of independent mind, not bending to every varying wind, but standing stalwart as oaks for what they know to be right.

"Wilt Thou bless this Nation, which he loved so much and served so well.

"Wilt Thou bless the gracious lady who walked with him through the years, and sustain her in the faith that looks to that resumption of love and fellowship that shall have no end.

"Wilt Thou bless his friends gathered here to honor him, and grant that when they, too, shall have made their contribution of service to our Nation, it shall be remembered and honored as gratefully as that of Thy servant, William E. Borah.

"We ask these things in the name of Jesus Christ our Lord. Amen."

The CHAIRMAN. The chairman is pleased now to introduce the artist who created this statue of Senator Borah. The members of the memorial commission, under whose direction the plan for a memorial to Idaho's great Senator has been executed, feel that the artist has done a marvelous work. He has been cooperative and he has been true. I have the pleasure of introducing the man who will make the formal presentation of the statue to the State of Idaho, the sculptor, Mr. Bryant Baker, of New York City. [Applause.]

Mr. BAKER. Mr. Chairman, Governor Robins, Mrs. Borah, and ladies and gentlemen, it has been a distinct trust and gratifying privilege to execute for the State of Idaho the statue of their foremost citizen, the late Senator William E. Borah.

To work on a subject whose fine character, integrity, and patriotism have raised him to such a prominent position in this great Nation is indeed an honor, but when combined with all this a sculptor has a subject of such outstanding personality and ruggedness, then indeed he is fortunate and so I say to you I am fortunate.

I would like to extend my thanks to Mrs. Borah and to all the members of the commission for their help—they have at all times been very considerate.

I have tried to depict for future generations the forceful and courageous Borah and I hope you will approve and like my work. I now formally deliver to you, Mr. Governor, representing the State of Idaho, this statue which I believe to be well and truly made. [Applause.]

The CHAIRMAN. I take great pleasure in introducing the Governor of our State, Gov. C. A. Robins, who will accept the statue on behalf of the State of Idaho.

Governor ROBINS. Mr. Chairman, distinguished guests, and friends, it is for me, a particular privilege and high honor to accept from you, Mr. Baker, on behalf of the State of Idaho this statue, to the completion of which you have contributed so fully of your time and your artistry. On behalf of the Borah Memorial Statue Commission, may I express thus formally our personal appreciation of your effort and your wonderful cooperation?

Placed thus by virtue of the will of the people of Idaho expressed through their legislature, this statue stands and shall stand through years unnumbered, preserving to posterity the physical characteristics of him who for 33 years so faithfully represented Idaho in the United States Senate.

William E. Borah belonged not alone to his beloved Gem State, he was a citizen of the world at whose passing somewhat more than 7 years ago that entire world paused in reverent tribute to acknowledge greatness such as it has too seldom seen.

It seems to me there is a particular fitness surrounding this entire occasion exemplifying as it does the catholicity of this Government of ours. Here, preserved for the ages, in the Halls of the Nation's Capitol, is placed the figure of a man not from a center of population, not the child of affluence, not even in the strictest sense a partisan, and yet a zealot in his continuous and magnificent efforts to defend and preserve the Constitution of the United States of America. Humbly born, successful in his chosen profession by virtue of a fine intellect, effective study, and dogged determination, he came here representing one of the smallest States in population, yet arose by sheer ability to an eminence attained by few, to have his name become the

world around a watchword significant of freedom, and justice, and humanity. A fellow governor, the governor of his native State, expressed it well in saying, "His life was a living sermon that government is the people's servant and that theirs is the right of freedom and opportunity upon which no agency dares encroach."

Freedom he loved as the basis of human happiness and once decided upon a course of action he stood as immovable as the massive peak in the mountains of Idaho which bears his name.

Once determined that the ends of justice were not served, his labors in her behalf were as ceaseless and vigorous as the force of the tumbling torrents of the streams of his adopted State.

And were there suffering and grief, there came an outpouring of sympathetic understanding, known best to those who knew him intimately, as wonderful as the dawn of a lovely spring morning in the valley of his choice.

Weak words of mine can no more express today the loss which we sustained than they could on that evening in January 1940, when, in San Francisco, my senses were chilled by the cry of the newsboy.

To most of us it is not given to serve in such outstanding fashion, but in our several spheres we have an example of firmness, constancy, zeal, and understanding such as this to emulate.

Prophet, he was, in whose utterances of nearly three decades ago were displayed with remarkable clarity the course of some of the circumstances and events of our more immediate past and of the present. Disagree with him, as we might, we were by the very logic of his argument and by the innate sincerity of the man, forced to respect his position.

Borah is remembered. And while thus preserved in the hearts of his countrymen, we accept this wonderful representation of the physical man; and as Idaho gave William E. Borah to the Nation, so we pridefully give to the Nation this enduring monument to our best contribution, matchless champion, eloquent advocate, and friend. A friend of his youth as well as his later years wrote: "An honest man who dedicated his talents to his country's good, as selfless as ever a man had been in American public life. If that is greatness, he is entitled to don his memorial bronze and live among the immortals of his generation."

So be it. [Applause.]

The CHAIRMAN. Ladies and gentlemen, it is with much pleasure and a great deal of pride that I introduce to you at this time Mrs. William E. Borah—"Little Borah," beloved by all of us. [Great applause; the audience rising.]

In further token of the respect we bear for you, Mrs. Borah, please accept these flowers in the name of the people of the State of Idaho. [Applause.]

Ladies and gentlemen, I now introduce to you a nephew of the late Senator Borah, Judge Wayne Z. Borah, of New Orleans, a judge of the Federal court.

Will you please stand, Judge Borah, and let us see you?

(Judge Borah rose, as the audience applauded.)

Seated by the judge is the future Senator from Louisiana, William Edgar Borah, a son of Judge Borah. [Applause.]

At this time we will have the Idaho State song, which I believe is the most beautiful State song that has ever been written.

(The Marine Band rendered the Idaho State song.)

Thank you, Mr. Orchestra Leader. That was splendid.

Ladies and gentlemen, frequently when I went over the State escorting Senator Borah when speaking at our Grange meetings, he would refer to some of his associates in Congress. Again and again the name of a gentleman from Michigan was given me as one of his dear, close friends. So, at this moment, I know that the Senator would be very happy to have this gentleman address this audience on "Borah—the Statesman." I take great pleasure in introducing to you our friend and a distinguished statesman, Senator ARTHUR H. VANDENBERG, of Michigan. [Great applause, the audience rising.]

Senator VANDENBERG. Mr. Chairman, Mrs. Borah, Governor Robins, ladies and gentlemen, it is a very precious privilege to join in welcoming the return of William Edgar Borah to this Capitol, which within recent memory he dominated with his devoted statesmanship and with his rugged personality and character. We who labored with him here in the thrilling inspiration of his living presence have never forgotten his genius, his integrity, and his flaming patriotism during these 7 years and 4 months and 18 days since he was gathered to his fathers. Nor has his country which he loved and served so faithfully and well. But to have him in this Hall of Fame more intimately restores him to our old associations and to his rightful place in American history. He belongs beneath this dome forever. We are grateful to Idaho for bringing us this eternal memorial of her great son. Thus he joins the rare company of great Americans who have been nominated by their grateful countrymen for this supreme acknowledgment. I fancy the others are proud to receive him in their honored midst. None worthier has ever been added to their roll.

Mortal words can add nothing to the stature of such a man. His life surpassed in eloquence anything that might be said of him. He loved America with deeds and dedications. He proved it with relentless fidelity to liberty under law. He sought the truth and there he stood, even though he stood alone. He "walked with kings, nor lost the common touch." His client was the Constitution of his country. His constituent was the common citizen of the Republic.

There was something in him of the strength of the mighty mountains of the West from whence he came. There was something in him of the spirit of the lonely pioneer who dares against all odds for the faith of his objectives. There was something in him of the divine genius with which God occasionally touches one among us and bids him lead. There was honor—against which no shadow of a syllable was ever lisped. There was power—the like of which has not often swayed "the greatest deliberative body in the world." There was profound scholarship. There was utter simplicity—the badge of a great soul. There was transparent sincerity, and there was the gentle, kindly friendliness which made him as beloved as he was respected and revered. Upon this latter score I hope I may be forgiven for saying that I was one of its countless beneficiaries. He was my greatest friend in public life. He was one of the greatest men I ever personally knew.

He was one of those few statesmen—I can think of but two or three others in our history—who was greater than any President under whom he served, and for whom the Presidency could have added nothing to his stature or his laurels. He was an institution within himself. He has become a part of our glorious American inheritance.

This is not the first time I have used those last few words, my friends. This is infinitely more than a passing, ceremonial salute, so far as I am concerned. Indeed, nothing could satisfy me more than to repeat this afternoon what I said by radio to a hushed and stricken nation on the night following the day he died. I said:

"My fellow countrymen, the darkness of a deep sorrow rests upon the Capitol tonight. It reaches out to millions of American family hearthstones, where the name and the honor and the rugged patriotism of United States Senator William E. Borah have become part of the American inheritance. Idaho mourns the loss of a brilliant son. The Nation mourns the loss of one who was literally one of its greatest institutions. * * * One of the Republic's pillars has fallen. * * * The Constitution's most stalwart and effective friend since Daniel Webster has been gathered to his Fathers. * * * A great heart is stilled. * * * We shall not soon look upon the like of him again. * * * Thirty-three years ago he came out of the West with his first senatorial commission. He gave it back last night—without a spot or blemish on it.

"He grew in stature each succeeding year. He grew in influence which leaped the boundaries of his native land and spanned the earth. He grew in the talents which made him the greatest advocate and orator of his time. He became the Senate's dean—not alone in years of service, but equally in the personal prestige of a unique and mighty character which was worthy of the Senate in its richest tradition since this Government was born.

"He loved America and America loved him. * * * He believed in America with a passion that was the touchstone of his life. America—whether it always agreed with him or not—believed in him. It knew his courage. It knew his shining probity. It knew his soul-deep sympathy with human needs. It knew his deathless dedication to representative democracy. It knew his devotion to the commonweal."

I said that night: "We shall bring the wreaths of our affection to his tomb. They will stay green as long as memory survives. Farewell, great patriot, great friend."

Mr. Chairman, that was more than 7 years ago. Time has not changed the estimate. It only serves to etch the image of the man a little deeper. It becomes increasingly the true measure of his worth. Being human, he was not infallible. But he never hedged; he never was in doubt. He never sought the easiest way. Historians will quarrel for years about some of his judgments. But they can never deny that he wrote the honest verdict of his conscience upon every major issue that arose for nearly half a century, and that in every instance it had its powerful impact upon the affairs of men.

I have been asked to speak particularly of his statesmanship. It must suffice, in this swift survey, to linger briefly only upon three ever-present passions in his dynamic career.

1. He, like millions of us who followed him in those dubious prewar days, resisted every trend which he feared would needlessly transgress the warnings in Washington's Farewell Address and unnecessarily involve us in other people's destinies and other people's wars. He never knew about Pearl Harbor. He did not live to hear its crack of doom. Yet, even in those earlier times, he had a great longing for world peace and made himself the prime champion of the Kellogg-Briand Pact to outlaw war. He hated war. But he hated injustice even more. He never compromised with aggression in his life. Since his passing, events have written new and startling history with a rushing pen. We have no right to speculate on how he would have met these epochal events. But of this we may be sure—he would have met them with forthright courage and strength and fidelity, and with the infinite patriotism which was the habit of his life. We can only ask of Providence that these qualities may be bequeathed to us and to our children.

2. He was the implacable defender of the Constitution of the United States. He was the constant sentinel upon its watchtowers. His guard was never down. He never compromised his vigilance. It was the breath of life to him. He believed with all his being in the literal preservation of constitutional

democracy. He fought every assault, however trivial or expedient, upon the charter of our ordered liberties and upon its checks and balances. In the hour of greatest test, when the independence of the judiciary was the stake, he led the successful forces of constitutional defense in the battle of the century. If fate had cast him in the role of Chief Justice of the United States, John Marshall would have found a worthy and a comparable successor.

3. He hated monopoly and special privilege. He was the people's advocate in the finest sense of the phrase. His zeals defied political convention. He sought always to serve the total welfare of our total citizenship. There was something of Lincoln in him. He was the humanitarian who practiced what he preached. His sympathies were ever with the struggling throng. He trusted the people, and the people trusted him. They knew that he was one of them. His philosophy, in his own words, was this: "As long as I can distinguish between right and wrong, I shall do what I believe to be right—whatever the consequences." No better epitaph could speak for him upon his monument. No better rule could challenge his colleagues who come after.

Mr. Chairman, upon this memorable occasion, when sadness mingles with triumphant glory, I again thank Idaho for bringing William Edgar Borah back to us; and I thank God for having given his living genius to our blessed land. [Applause.]

The CHAIRMAN. It is with profound regret I have to announce that Senator Burton K. Wheeler was called away to South America on business, and could not return in time for these exercises. We had hoped he would speak on the program, because in a way he was one of the closest friends Senator Borah had in the opposing party. Senator Borah was not a partisan in any strict sense of the word. I have heard him speak often of his great regard for a Senator from Georgia of years ago, Senator Bacon, and tell about the friendship he had with that wonderful character.

At this moment I wish to introduce a gentleman who will read a 15-line poem dedicated to Senator Borah. This gentleman was five times a Representative from Kentucky, he lives here in your own community, and he was a close friend of Senator Borah. I will ask Mr. M. H. Thatcher to come forward and read the poem he has written in tribute to Senator Borah, and which we admired so much that we printed it on the program.

Mr. M. H. Thatcher thereupon read the following poem, composed by him:

"WHEN BORAH DIED

"When Borah died, a giant fell;
A trumpet stilled. Death may dispel
The mortal senses and the frame,
But not the glory of a name.
The praise of which death helped to swell.

"In him Isaiah's gift did dwell;
In him the graces did excel.
Alas! Our land seemed not the same—
When Borah died!

"His final place Time's score will tell;
But those who lived within the spell
Of that great voice, are sure his fame
Will burn with primal, quenchless flame:
But oh! the grief, as tolled the bell—
When Borah died!"

The CHAIRMAN. Before the unveiling, two gentlemen will lay wreaths on the statue. First I will call upon Mr. Persio C. Franco, former charge d'affaires of the Dominican Republic, in Washington, who has prepared a little tribute to Senator Borah. I will ask Mr. Franco to come forward and present his token of love from the Dominican Republic because of the fight Senator Borah waged in the Senate for the liberty of that little nation.

Mr. Persio C. Franco thereupon approached the statue and deposited a wreath.

(The tribute prepared by Mr. Franco is as follows:)

"Senator Borah's statements in the Senate and in an historic meeting at Carnegie Hall, in New York City, during the American military occupation of my country, the Dominican Republic, gained for him the eternal gratitude of the Dominican people. True greatness is achieved only through kindness and justice. Mr. Borah was a truly great man."

The CHAIRMAN. It is very fine to think that a small nation such as the Dominican Republic should remember the Senator at this moment.

I now wish to introduce ABE MCGREGOR GOFF, Representative in Congress from the northern part of Idaho, who, on behalf of the Beta Theta Pi fraternity alumni of the city of Washington, will lay a wreath on the statue of Senator Borah.

Mr. GOFF thereupon came forward and deposited a wreath.

Mr. GOFF. It is a great privilege thus to honor a great person. [Applause.]

The CHAIRMAN. We have with us today the successor of Senator Borah, whom the people of Idaho have loved since he was a Member of the House of Representatives, where he served them faithfully 8 years, just before his election to the United States Senate. I introduce Senator DWORSHAK, who, on behalf of the Federal Government, will accept the statue of Senator Borah.

Senator DWORSHAK. Mr. Chairman, Mrs. Borah, Governor Robins, ladies and gentlemen: It is a rare privilege for me to accept, on behalf of the American Congress, the American Government, and the American people, this magnificent statue of Senator Borah. Idaho sent this statesman to the National Capital, and now she sends this token of her enduring love and respect.

In these halls Senator Borah for 33 years exemplified the highest traditions of American public service. His mute presence here will inspire us to follow in his footsteps. Future generations will cherish his memory, because few men have contributed so freely to the preservation of constitutional government.

Senator Borah achieved everlasting renown as an illustrious servant of Idaho and the Nation. He now joins his peers in the Valhalla of our great Republic. The Nation today salutes an American patriot whose fame is eternal. [Applause.]

The CHAIRMAN. It is altogether fitting that the lady who unveils the statue should be here with us today, because she is the daughter of the late Senator John Thomas, who served in the Senate for many years, and who was the closest and dearest friend Senator Borah ever had in Idaho. She is also the wife of the junior Senator from Illinois, the State in which Senator Borah was born many years ago.

I take great pleasure at this moment in introducing Mrs. C. Wayland Brooks, who will unveil the statue. After she has unveiled the statue, eight midshipmen from Annapolis, all from Idaho, will approach the statue snd salute, while the band plays The Star-Spangled Banner. That will conclude the program. [Applause.]

(Mrs. Wayland Brooks thereupon unveiled the statue, while the United States Marine Band played the Idaho State song, Here We Have Idaho.)

(Following the unveiling of the statue, eight Naval Academy midshipmen, all from the State of Idaho, approached the statue and saluted, while the United States Marine Band played The Star-Spangled Banner.)

Our Foreign and Domestic Policy

EXTENSION OF REMARKS
OF
HON. HARLAN J. BUSHFIELD
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 9 (legislative day of Monday, April 21), 1947

Mr. BUSHFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD a very excellent address entitled "Our Foreign and Domestic Policy," delivered by the junior Senator from Michigan [Mr. FERGUSON] before the Economic Club of Detroit, at Detroit, Mich., on June 2, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, I am glad to have this opportunity to talk with you about national policies and programs as we see them in Washington.

Having won the election in 1946, and with eyes on 1948, Republicans are in much the same position as the faithful employee of a Scotch employer who was called in at the end of the year. After a New Year's greeting, the employer said:

"Here is a check for a New Year's gift. We have done well this year. If we do as well next year, bring the check around and I will sign it."

Republicans are hoping to have their 1946 checks signed in 1948.

Meanwhile, Congress faces a rather paradoxical situation. Many good people who loudly demanded less government from Washington in the summer and fall of 1946 are impatient because they are not getting quicker results by way of more Federal laws.

As I scan the Nation's newspapers and talk with people in all walks of life, I gather two distinct impressions about the temper of the country.

First, there is widespread uncertainty about the present and fear of what may happen in the future. This feeling pervades the whole range of foreign and domestic policy. People know there is starvation, distress, and spiritual downcast in Europe today. They see there is no peace throughout the world. They fear we are drifting toward war with Russia. And they are bewildered by the gigantic sums of money we are spending on foreign policies, which make little sense because they have not been well-grounded, consistent, nor clear.

The same feeling of uncertainty and fear marks conditions in our domestic affairs. Recently we had the pleasure of having Henry Ford talk to us in Washington. What he said was exceedingly well-received because he talked with sincerity and simplicity about a subject with which he is familiar—the making of motorcars. He told us about high hopes for his organization and described some of the difficulties they are having with materials, supplies, and production.

With simple directness he deplored the fact that production is only 65 percent of capacity, explaining that "It is simply a case of not being able to get enough of what it takes—steel, pig iron, tin, and hundreds of other things." He rejoiced in the fact that at long last unauthorized work stoppages had fallen off considerably and the number of grievances filed in the last year dropped from 27,504 to 12,196.

Here, we may observe, are two of the basic uncertainties besetting our national economy—failure in the quantity, quality, and flow of materials, and labor problems. To-

gether they keep a huge industry at 65 percent of capacity. This kind of uncertainty, with its dismal result, can be found over and over again in plant after plant, industry upon industry, throughout the Nation. It is supplemented by fears over prices, resentment over continued wartime taxes, and uncertainties over the form and extent of Government interference in the lives and business enterprise of our people. Some commentators in our national affairs are not sufficiently satisfied with all the current uncertainties surrounding them; they have to reach out to the 1950's and 1960's for a major depression which they glibly promise will lay this country low.

I will return to this again because it has a direct bearing upon the state of our foreign and domestic policy. Let me continue here with my second observation on what seems to be the prevailing temper of the country.

The present Congress had scarcely commenced its work when we began to be bombarded with criticism. People expected laws to come faster out of the legislative mill, and they were impatient when we did not drench them with a flood of new Federal laws. They expected Congress to work miracles with production, labor relations, reduction in cost of Government, taxation, and a score of other major problems. They expected Congress to correct all the errors in 14 weeks that had accumulated in 14 years. They charged Congress with playing politics every time a fundamental and honest point of difference was made. They charged us with shunning vital issues because we do not immediately pass legislation to aid schools, teachers, librarians, scientists, veterans, the aged, the sick, and the maimed. They are impatient with us because in the flick of an eyelash we do not pass laws to merge the Army and Navy, to establish universal military training, to commence the St. Lawrence seaway, to set up a gigantic housing program, to cut prices in half tomorrow at dawn, or abolish by law future booms and busts.

Irresponsible and immature as this kind of criticism certainly is, there is no question in my mind but that it is one of the prevailing features in the present temper of the country. Combined with the uncertainties and fears about the future, it marks the paradox of how the Nation could march so magnificently up the hill to war and yet descend so dismally to the valley of peace after thoroughly whipping the enemy.

Uncertainty and fear, criticism and impatience, are apparently the prevailing temper of the country. Whether we talk foreign or domestic affairs, we see the same moods at work. We see it in the press; we hear it in the clubs; it blares forth from the radio; and from a hundred different channels it reaches down to the man at the workbench and the woman in the home.

Now, I submit there is nothing at all unusual about this state of affairs. To make these conditions the basis of our national thinking is absurd, and as perspective gradually reasserts itself (as it most certainly will), these dismal moods will pass. In this mood we must not sacrifice our fundamental principles for immediate expediency.

The reason we have survived as a Republic for over 150 years when all other such attempts have failed is because through our bill of rights we guarantee the security of the individual against government tyranny.

An experience which we had while at Marseilles, France, on a war-investigating trip illustrates this difference in fundamental psychology in government, and is one of the reasons it is difficult to find a common denominator in our thinking with some other countries. The commanding general told of getting complaints from the French farmers about the conduct of displaced persons in a Russian displaced-persons camp near there. The farmers were missing cattle, chickens, and personal property. The Russian colonel in charge was called to the American general's office and asked to investigate. He departed, and returned in about the time required to reach the camp and return. He clicked his heels, saluted, and reported that everything had been taken care of; and when asked "How?" he said "We shot 1 and incarcerated 20." No investigation. Quick government action; but not justice as we know it.

Uncertainty, disillusionment, and fear follow inevitably on the heels of every major war. In the last war almost all of Europe was laid waste. Millions of people were scattered, imprisoned, or killed. Settled boundaries were wiped out, and the governmental stability of Europe was disorganized. Farms and orchards were overrun and impaired. Factories and cities were leveled. Highways and communication lines were blocked or destroyed. Trade and industry sank to low ebb. Food stores were rapidly depleted or confiscated. The rubble of war stretched from Normandy to the Urals.

Surely here are reasons enough for the starvation, suffering, and despair of a great civilization. They explain the desperate plight of the people. They account for much of the civil strife and hatreds which have swept over Europe and parts of Asia in the grim wake of war. They indicate the great magnitude of the task of peacemaking and reconstruction which still lie before us. And they give the lie to those facile critics in our midst who seem to think we can restore immediately the health of a torn and bleeding civilization with a few international organizations, and the mere loan of American dollars.

We did not experience the devastation of war in our own country, but we did not escape the impact upon our lives. Few families have escaped the loss or maiming of one dear to them. Our national debt rose to the fantastic sum of $271,000,000,000. This, and the inflationary effect of more than $23,000,000,000 of money in circulation exerted a tremendous upward pressure upon our price system. The life of every able-bodied person was held at the disposal of the war effort. Factories were practically commandeered when Government controlled materials and production. Wages in some instances rose to fantastic heights because war demands production at any cost, and Government became the prime purchaser. Through unprecedented powers freely granted the President and all agencies of government, the whole of American life was regimented by priorities, controls, and rationing. Annual expenditures of the Federal Government rose from a mere $9,000,000,000 in 1939 to over $100,000,000,000 at the peak of the war effort in 1945. In the same period the number of taxpayers making Federal returns increased from 7,633,000 to 47,111,000. Government bureaus multiplied in droves, while the number of people in Federal employ rose from 920,310 to more than 3,700,000.

No one can begin to describe what the late war cost us in terms of lost lives, swollen Government, disorganization of our economy, and disruption in the lives and affairs of our people. It would be rash indeed to contend that we can return to the arts and customs of peace with the simplicity and suddenness with which a light switch may be flicked on and off. Critics are irresponsible who believe we can pick up where we left off, uninfluenced by the forces heated in the intense flames of a 4-year global war. And those who think we can re-enter our domestic household, give health, security, and abundance to our people, and feed and rebuild the world in the two bewildering years since VE-day, are either colossally naive or downright stupid in their grasp of practical affairs. They do not realize how, after every catastrophe, there must be a clearing away of the rubble and a period of painful readjustment before the healing processes of reconstruction can begin. No amount of fine-spun dreams can gloss over these stubborn realities.

FOREIGN POLICY

We fought the war to stop the march of dictatorial government toward world domination. We fought to preserve liberty and freedom abroad as a necessary step in safeguarding freedom and security here at home. We determined that the practices of aggression must henceforth cease and that nations are to be politically free in the framework of world organizations capable of guaranteeing orderly development, justice and peace. We expressed these ideals in the Atlantic Charter and in the collateral organizations designed for what we hoped would be a different and better world. For these ideals we altered our past foreign policy and our world outlook. We made great sacrifices in war, and we have contributed liberally to alleviate the suffering and devastation caused by war. We asked nothing in loot or territory for ourselves.

During the war, and so long as each was threatened, our allies led us to believe their war aims were the same as ours. They either joined with us in our hopes for future peace, security, and a free world, or accepted our military and economic aid without questioning our expressed assumptions that they were as one with us in desiring a better world.

We followed this policy through all the dark days of war. When the dawn of victory came, when it became apparent that our enemies in the West and in the East could not hold out against us much longer, and when by the same token the fears of our allies began to recede, the ideals for which we fought were thrust against the hard realities of the national interests of those who fought with us in common cause. As Europe sank into chaos in the closing days of the war, we found many of our ideals compromised either in concessions or violations of agreements reached at Teheran, Yalta, and Potsdam.

While we strive valiantly to feed the starving, heal the sick, and restore the enterprise of war-torn people everywhere, we find one of our allies draining their substance, drafting their manpower, quartering her armies on their land, removing plants and machinery and raw materials, and generating chaos wherever she cannot otherwise command and control. International organizations are blocked in what should be their normal functions. Just treaties cannot be written to start the world toward peace. The desperate need for restoration cannot proceed because it seems that chaos best meets the aims of our former ally and friend.

The central fact of the moment is that the destruction of our Nazi and Japanese enemies left a vacuum in the political life of Europe and Asia which Russia seems determined to fill. It makes no difference that Russia fought to prevent similar expansion by the Nazis in Europe. It make no difference that we all joined cause to insure peace, freedom, and justice. It makes no difference that we have done everything possible to guarantee security to Russia and to satisfy her with political concessions, vast quantities of goods, and other material aids. Neither our earnest pleas nor our protests seem to temper the Russian drive to dominate Europe and Asia by her own forces or through agents and instruments under her control.

These were the circumstances which led to a dramatic turn in American foreign policy embodied in the Greek and Turkish loan proposals. Congress sees the essence of this policy to be that at long-last the United States has given notice to the world that we did not rise in our might to crush

one despotism only to make it easy for another despotism to shackle the people of the world.

I supported the Greek-Turkish loan on that basis. I believe the principle is sound: It signifies a return to the ideals for which we went to war. We now in our press set forth in no mistakable terms the simple fact that we are done with the barter of principles and that trifling with the freedom and rights of independent nations is at an end so far as our weight and determination can turn the scales.

It is impossible for me to say I am in equal agreement with the means we have chosen to emphasize the present turn of policy. To me the loan is a stop-gap. We cannot stop communism by cash. The loan is only a symbol of our determination to stand against aggression, to do our part in restoring the economy of the world and in keeping the peoples of the world free. We need to implement this by a foreign policy consistent as a whole, founded on right principle, and clearly defined in its geography, economics, political, and social aspects.

We do not have such a policy today. We take steps as they are forced upon us by circumstances. We often speak and act in contradictory terms. In our international dealings we support measures which we know do violence to every principle we cherish.

Much has been said about "bipartisan foreign policy," as if the great political parties were in singular harmony on all phases of our international affairs. This is not so, and it does great injustice to Republican leaders to have to work under such a popular misconception.

Foreign policy is a combination of the attitude we take toward other countries, of the objectives we seek in furthering our national interests abroad and of the means we use to implement our attitude and objectives. Foreign and domestic policy is and must be closely related. If this policy is to be truly bipartisan, the leaders of the party out of power must be taken into complete confidence of the Administration which conducts our foreign relations. They must be in on every aspect of policy, the attitude we take, the objectives we seek, and the means we employ. So far as I know, we have never had such a bipartisan policy.

We have had a form of very worth while, but extremely limited collaboration between a few Republican leaders and the administration. Speaking with that clarity and candor which has earned for him the great admiration of our people, Senator ARTHUR VANDENBERG, my colleague made this explanation of bipartisan foreign policy. He said:

"What the policy of the State Department is, I am unable to testify. There is considerable amount of misunderstanding about the so-called bipartisan foreign policy in this country. I have tried to make that plain on several occasions. It is very narrowly channeled within very specific things; namely, the minor peace treaties in Europe and the activities of the United Nations.

"I have never been consulted about the Chinese policy or the pan-American policy, or many other policies. * * *"

I feel sure he was not consulted in advance about the so-called Truman doctrine, and I know of no other Republican leaders who have been so consulted. Yet, in true stature as a statesman, Senator VANDENBERG gave of his wisdom to correct the first mistakes of that policy and to make it workable. In this he had the strong support of his party.

Simple common sense should warn us that we cannot play a proper part in world affairs merely by lavish loans or by blaring out words on Voice of America programs. The outpouring of dollars through the Export-Import Bank, the International Fund Bank, relief loans and gifts at the rate of billions of dollars each year can only lead to the draining of American resources and to the return of wartime rationing under some new version of the OPA. Here is where foreign and domestic policy overlap. While these loans and gifts are stated in terms of dollars, they mean nothing unless translated into American goods. This means American food products, industrial raw materials, and finished machinery and manufactured products. It means the products of our farms, our forests, our mines. It means that millions of American workmen are laboring for people in foreign countries. An exchange by which we send $15,000,000,000 abroad in goods and services, and receive only $4,000,000,000 in return, is not a healthy exchange. If continued indiscriminately, it will delude Europe, delay its recovery while our own country grows progressively poorer.

The impact of such loans can be seen in the present difficulties of our home economy. Thousands of producers speak of shortages of materials and rising price of supplies. Housing lags for want of building materials. Farmers need tractors and cannot get them. Over-all is the strong pressure foreign loans exert upon domestic prices.

Take the simple question of wheat prices. We made certain loans to France, England and other countries. Wheat was $1.50 a bushel. By virtue of these loans, each foreign country came into the American market with dollars to purchase wheat. The price rose sharply and is now from $2.64 to $2.73 a bushel. The same thing is true of other foods, raw materials, and manufactured goods. The whole process leads inevitably to a vicious cycle. High wheat prices encourage further production and bring in the marginal producer. When these uncompensated foreign loans dwindle and cease, as they most certainly will some day, we shall be in danger of high cost overproduction, rapidly falling prices, followed by business failures, bankruptcies, and unemployment.

Lavish and indiscriminate loans, as we have made in the past, do Europe little permanent good, and ill-serve American home economy. Political loans that are frittered away in supporting military operations in musical comedy brigades are worse than useless. Food for immediate relief, loans to restore the self-sufficiency of Europe, followed by trade policies carefully planned to result in a balanced exchange of goods and services, and a firm insistence directly to Russia and through the United Nations that we shall not stand idly by while she pours Europe down the Communist drain, are policies Americans might well support. But the administration, while giving the appearance of following such policies, constantly belies them in practice. Congress is rarely consulted in advance. As a consequence, we are time and again faced with the extremely distasteful duty of upholding the administration and accepting the lesser evils flowing from stupidity and mistakes in foreign policy, like the father making good the overdrafts of a wayward son. Don't misunderstand me. I am for genuine bipartisan foreign policy. To call such transactions bipartisan foreign policy is a gross misconception, and the people ought to know that Republicans support no such makeshifts.

When we turn from foreign to domestic affairs, we see a rather curious spectacle. Congress is being violently criticized for carrying out the exact program promised by the winning party in the elections last November.

In my judgment that party campaigned on six basic issues on which they pledged action if given control of Congress. These issues are:

1. Progressive elimination of controls.
2. Reduction in the number of Federal bureaus and employees, especially Communists and fellow travelers.
3. Decrease in Government spending, a balanced budget, and debt reduction.
4. Tax relief.
5. Legislation to redress the balance between labor and management.
6. Return to government by law as against arbitrary use of Executive powers.
7. Maximum preservation of home rule as against centralization in Washington.

The program was intended to stop the undesirable trends and practices of the last 14 years. It was intended to speed our reconversion to full peacetime economy by giving the utmost encouragement and freedom to enterprise consistent with the national interest. It was a program to clear the ground of wartime operations as the first step to future peacetime prosperity.

It was not intended to be a program of social experimentation, lavish spending, huge public works, or a guaranty against all national ills.

I submit that the program undertaken by this Congress is exactly the one pledged, and that it is moving courageously and efficiently toward its consummation. We are doing this in the face of many obstacles thrown in our path by those who resist fair labor laws, tax relief, reduction in government spending, and a decrease in the size of government bureaus and employees.

Let us see what has been accomplished on these six basic issues:

First. Progressive elimination of controls.

All rationing has been removed except rent control. A new rent-control bill will pass this week, placing control in the hands of local boards recommended by the governors. In other words, it returns it to the respective States.

Sugar controls have been modified and will terminate in October this year.

The war powers have been limited and now extend to a few items only, such as foreign trade.

There has been a reduction in the number of Federal bureaus and employees, especially Communists and fellow travelers.

There will be a decrease in government spending, a balanced budget, and debt reduction.

The President and his agencies have submitted 12 appropriations bills for the fiscal year which begins July 1, 1947. He has placed the minimum cost of Government for that year at $37,500,000,000. This would cost the taxpayer more in taxes than it costs them to eat and drink.

In prior Congresses laws were prepared in the bureaus and agencies, and even the White House, and sent to Congress as must legislation to be passed as drafted. This included appropriations.

Things are different now.

For the first time open hearings are being held in the Senate on all appropriation bills.

After days of hearings, wherever possible appropriations are being cut and the cost of government reduced.

Have you ever tried to prune a bureaucracy? Let me give you one example of the pressure that is brought against such pruning, which I shall read from the Washington News. This is a report from a Mrs. Johnston, customs collector at Minneapolis, to her chief, the Custom Commissioner, W. R. Johnson, in Washington. I quote:

"I have written to the importers, to civic organizations such as the chamber of commerce, to the mayors, and to the foreign departments of banks which handle foreign credit.

"The Customs Service Association (employees' organization) wired our two Senators and the chairman of the Senate Appropriations Committee, Senator STYLES BRIDGES, Republican, of New Hampshire.

"The entire customs personnel, members of their families, and friends, are sending letters and post cards to the Senators involved."

So, you see that every time that we try to cut a Government department that department and others go into action and generate all kinds of resistance to these reductions so that it is a very difficult job for us to get the unbiased facts, and to save the taxpayers' money from being lavishly expended.

Similar pressure is applied through practically every agency. Let me give you an example of the way in which appropriations bills were handled formerly: On June 27, 1945, an appropriation bill reached the Senate. A special meeting of the Appropriations Committee was called for 2 p. m. that day. The committee was told that this bill, which appropriated better than $80,000,000,000, had to be passed and signed by June 30—within 3 days—or our Army would be without funds.

TAX RELIEF

Now, what are the facts on personal income-tax relief?

Both Houses of Congress have passed a bill reducing personal income taxes from 10½ percent to 30 percent. A conference of both Houses has agreed on the bill. The House will pass it today, the Senate by Wednesday, and it will be on the President's desk this week for his signature.

Now, what have we done on labor legislation?

Both Houses of Congress have passed a labor relations bill. A conference of both Houses has agreed on this bill. Both Houses will pass the conference bill this week, and it will be on the President's desk before the end of the week for his signature.

The majority party in Congress last fall insisted there were Communists and fellow travelers in government and that they should be thrown out.

This was laughed at by those in the executive branch. In the last month we are told that before we can start the process of getting them out we must appropriate $24,000,000. That is millions, fellow citizens. Then we are told that the top of the agency can use his discretion (after they use this money) as to whether or not they will be ousted from his department.

J. Edgar Hoover has elaborate files and evidence, collected by the aid of your tax dollars, covering these very same "Commies and fellow travelers," and I can tell you a quicker and less expensive way for the Administrator to get ride of them in the policy-making branch of his agency. It is by having him use the phone and ask Mr. Hoover for his evidence.

All this eyewash as to the cost, fair trial, and terrific job it will be to find these subversives in our Government will get us nowhere when the administration of an agency has the sole discretion in the discharge of them.

The investigative function of Congress is another important function of government. The white light of publicity has a very cleansing effect on public officials. It cannot be used by a totalitarian government, and is too seldom used by the party in power in a democracy.

Last week the Senate Judiciary Committee appointed a subcommittee to investigate the Attorney General and the Justice Department as to its investigation of the primary election of a Congressman in Kansas City, Mo., last fall. We only started when we learned that much of the evidence had been stolen or destroyed by safecrackers or others last Wednesday night. So far the evidence shows that the FBI had instructions to make only a preliminary examination, and it was limited to six witnesses to be questioned. On January 6, 1947, the FBI investigation was closed by orders of the Attorney General. You will learn more about this when we hear from the Attorney General and J. Edgar Hoover, whom I have called to testify on Thursday of this week.

It is not the number of laws which are passed by Congress which will determine whether or not Congress performs its services to the Nation as a whole. It is the kind of laws which are passed. It must always be remembered by the people that, as a rule, the passing of laws creates additional bureaus and agencies, and therefore the tax burden of the people back home is increased. It must also be remembered that in the passing of laws, as a rule, the rights and liberties of people are restricted. Therefore it is only when the general welfare of the people demands the passage of legislation that Congress should act.

It is by working together, by making democracy and our society function effectively, that we can best create the conditions which will make America strong internally and respected internationally. Much of the world is still looking desperately to America for leadership. If we put our own affairs in order and demonstrate to other nations that our system is still capable of providing the most good for the greatest number, then we will by that fact alone, enlist their support, we will strengthen democratic tendencies within those countries, and go forward reducing the possibilities that continuing chaos and disintegration in those areas will bring on another world conflict.

Rural Electrification

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. RANKIN. Mr. Speaker, on Wednesday, May 28, Members of the House were limited to 15 minutes to discuss one of the most important items in the 1948 Agriculture Department appropriation bill—an REA amendment. This drastic limitation was on the motion of the chairman of the subcommittee, the gentleman from Illinois [Mr. DIRKSEN], and was imposed over my objection.

The gentleman from Illinois exercised his prerogative to close debate on my amendment for adequate funds for rural electrification.

In his usual manner, he lectured us and gave us "light instead of heat," to use his own words. He told us that I was "greatly mistaken" and adjured us that "we might just as well be honest about it."

Now the gentleman from Illinois has no monopoly on either honesty or knowledge, especially on rural electrification. I have led the fight for REA for the last 15 years, and have seldom, if ever, had the cooperation of the gentleman from Illinois.

When I spoke in support of my amendment to give REA $300,000,000 in loan funds, I specifically stated that while I should like to see the co-ops get the $361,000,000 they say they need, I was only asking for the $300,000,000 the head of the REA asked for.

I was denied the opportunity to defend myself from the unwarranted and meaningless inuendoes thrown at me by the gentleman from Illinois, who refused to yield to me and then proceeded to present as misleading a statement in opposition to my amendment as I have heard on the floor of this House.

Now the facts were more readily available to the gentleman from Illinois, in his capacity as chairman of the subcommittee, than they were to any other Member of the House. Some of those facts, including the truth with respect to this matter on which I was challenged, appear in the printed hearings.

I challenge each and every one of the gentleman's statements made in his closing remarks as they appear on page 6027 of the RECORD.

The printed hearings will show that the aggregate of the cooperatives' questionnaires, filed with the committee, was not $361,000,000, as stated by the gentleman. Mr. Ellis, executive manager of the National Rural Electric Cooperative Association, and a former Member of this House, testified before the subcommittee as to these questionnaires. He stated that 620 systems had reported that they would need $290,404,317 before June 30, 1948. By extending the average to the 900 systems, he arrived at a total of $422,000,000, from which he subtracted the $60,000,000 which he estimated was available to REA for allocations from 1947 funds, leaving a balance of $362,000,000. This appears in detail on pages 1933 and 1934 of the hearings.

Let me say in all seriousness that REA never had a better friend than Clyde Ellis was during his services in this House, and has been ever since he left this body.

I made no mistake in my references to these figures. The record was there and I read it correctly. But this is only a minor example of the inability or unwillingness of the gentleman from Illinois to report correctly facts to which he had complete and ready access. He reported to the House that, "we"—meaning the committee, I suppose—"went to the trouble of analyzing" the questionnaires sent in by the co-ops. And then he told us what was in them by selecting 2 of the more than 600 questionnaires. I have taken the trouble to examine these questionnaires, and I tell you that their contents were not correctly represented to this House.

First, with respect to the Tennessee case, the gentleman referred to it as "a request for a line to cost $6,000 a mile." This reference was completely misleading. The questionnaire of the Forked Deer Electric Cooperative of Halls, Tenn., dated April 2, 1947, was the only questionnaire in the Tennessee group which could have been interpreted as showing such a cost. But the gentleman from Illinois neglected to disclose what the questionnaire actually showed.

This cooperative reported that its needs until June 30, 1948, amounted to $150 000 including $50,000 covered by an application already made to REA for "member service extensions along existing lines." The report did not specify the number of miles of line included in the application which had already been made. But it did indicate clearly and specifically that the $150,000 was required to serve 750 consumers, and that 25 miles of line would be built for this

purpose. The significant fact in this report was not the number of miles of line, but the number of consumers who would be reached by member service extensions for which the money would be needed. The average cost of these extensions, as disclosed by the report, was $200 per consumer, a modest and reasonable figure, as was apparent to anyone who cared to ascertain the truth.

As to the second request presented by the gentleman from Illinois, which he described only as including 115 miles of line to serve 62 consumers, investigation shows that this request was made by the Hot Springs County Rural Electric Association of Thermopolis, Wyo., which serves a very thinly settled area. The request indicated that many of the cooperative's consumers were large users of electric energy. A further check disclosed that this cooperative was already operating 133 miles of line to serve only 122 consumers, some of whom used tremendous amounts of electricity.

None of these pertinent facts were disclosed by the gentleman from Illinois. These two isolated requests were deliberately selected to create as bad an impression as possible, an impression of waste and extravagance when, as a matter of fact, they each represent a perfectly proper estimate of funds to meet legitimate needs in their respective areas.

At page 1502 of the hearings, the gentleman from Illinois, referring specifically to the Tennessee case, said, "This must be an abnormal condition." Well, it was not an abnormal condition, as the gentleman could have ascertained very quickly if he had placed all of the facts in the record that were contained in the questionnaire. If that had been done, it would have been apparent to the members of the REA staff present, and to every other member of the committee that this was not an abnormal condition. The handling of this matter in the committee and his presentation of this case to the House as a sample of the committee's analysis was grossly misleading, to say the least of it. It was calculated to mislead the members in their consideration of the REA appropriation.

The committee had all of these questionnaires available for several weeks. They certainly had the time and the staff to analyze them. If they did make an honest and careful analysis, it was not presented to the House.

It will suffice to show how distorted a picture the gentleman from Illinois presented on the floor of the House if we merely consider all of the replies received from Tennessee and Wyoming in response to the questionnaires sent to the cooperatives in these States. At my request, the National Rural Electric Cooperative Association has tabulated these replies, with the following results:

Nine Tennessee cooperatives replied to the questionnaire. Of these, eight showed needs until June 30, 1948, for $7,533,000 to build 5,249 miles of line to serve 21,430 consumers. The average cost of construction per mile, arrived at by simple division, is $1,458. In addition, one of the eight showed need for $135,027 for system improvement, consisting of rephasing some lines. The ninth system reporting was the Forked Deer Electric Cooperative, one of the two selected by the gentleman from Illinois for presentation, which requested, as I have already stated, $150,000 for service extensions to 750 consumers. Of course the 25 miles to which he referred did not cover all these extensions.

Six Wyoming cooperatives replied to the questionnaire. Of these, 5, including Hot Springs Country Rural Electric Association—the second case selected by the gentleman from Illinois—requested $369,500 to build 295.5 miles of line to serve 369 consumers. The sixth indicated need for approximately $50,000 for initial construction work to serve veterans who would settle 83 farm units being opened up in the Heart Mountain division of the Shoshone reclamation project.

A complete disclosure of all these facts by the gentleman from Illinois and a presentation of a similar analysis of all of the questionnaires which were available to his committee, would have given the Members a much more fair and honest basis upon which to determine their vote on the vital issue before the House.

Ordinary standards of fairness and honesty should also have induced the gentleman to make reference, at least, to the responses he received to his questioning of REA witnesses concerning line-construction costs. The gentleman, as chairman of the subcommittee, sought and received specific answers from the REA Administrator and his associates who appeared before the subcommittee. Those answers which appear on pages 1502 to 1504, an 1537 to 1538 of the printed hearings, definitely indicate that the average cost per mile of line financed by REA were actually lower than the average costs reported by the Federal Power Commission. And anyone familiar with the Federal Power Commission's method of estimating costs, knows that their estimates relate to actual construction costs only, and do not include engineering, right-of-way, clearing, and general overhead costs, which are included in the REA average-cost figures.

The gentleman from Illinois seemed to exhibit something less than the candor that was to be expected when he compared the isolated Tennessee case with the Power Commission's estimate. All of us who are interested in rural electrification know that REA cut rural electric line construction costs by more than half and thereby made the tremendous expansion of farm electrification possible. But the gentleman from Illinois seemed to deliberately close his eyes to this well-established fact when he reached into thin air for something that might be considered damaging in order to defeat my attempt to give the farmers of America the means with which to obtain the electric services they so vitally need, and to which they are entitled.

The gentleman from Illinois was most reckless in his presentation of other so-called facts. I have no quarrel with the committee's action in substituting the Treasury for RFC as REA's banker. Although I disagree vigorously with the 10-percent cut made in the Budget estimate for REA's loan funds, I have already sufficiently stated my very valid objection to this action. I do not intend to take time now to go into this further.

I trust that the Senate will rectify this situation. But I do want to make it crystal clear that I was not at all taken in by the misleading arguments the gentleman from Illinois employed in presenting the $25,000,000 cut as an economy or a saving. During general debate on the bill on Tuesday, May 27, the gentleman on three occasions made the claim that the change in the banking arrangement, brought about by the legislative proviso, made possible a saving or an economy of $25,000,000 in cash. That claim is just so much tommyrot. The Budget provided for a $25,000,000 appropriation as part of the total $250,000,000 to be made available for self-liquidating rural electrification loans. The separate provision was a technicality to permit REA to comply with the provisions of the basic law which limited RFC advances to 85 percent of the collateral put by REA.

Cutting off this $25,000,000 was no more an economy or a saving than the cutting off of any part of the $225,000,000 Treasury loan recommended by the committee would have been. This was no saving or economy. Actually and truthfully, it was a denial to 50,000 farm families of an opportunity to obtain electric service through REA financing. It was a body blow to the hopes and dreams of these thousands of farm people, many of whom are ex-servicemen who had hoped they would in 1948 have an opportunity to participate in the Federal investment in the great national rural-electrification program.

No, the gentleman from Illinois did not pull the wool over my eyes with his unsubstantiated claims of economy. Nor did he fool the people out on kerosene-lamp-lighted farms. If there was anybody mistaken, if there was anybody who was not squarely facing the facts, it was the gentleman from Illinois and not the gentleman from Mississippi.

The 15-minute gag limit on debate, maneuvered by the gentleman from Illinois, may have suppressed the truth on that day. But the truth will out. It is fortunate indeed that there is still time to rectify the mistake the gentleman from Illinois has induced the House to make.

I, for one, will do everything in my power to that end; and I believe when the facts are known to the Members of the other body every dollar I asked for in my amendment will be provided.

Mr. Speaker, I do not need to go to the gentleman from Illinois [Mr. DIRKSEN] for either advice or information on the subject of rural electrification. I have carried on this battle for the last 15 years to try to get this service extended in every farm home in every State in the Union.

When I began this fight practically every other civilized country was ahead

of the United States in rural electrification. We had 10.9 percent of our farms electrified in 1934 while Japan had 90 percent, Germany had 90 percent, France and Italy had 94 percent, and even New Zealand, a new and sparsely settled country, had 65 percent of her farms electrified.

The marvelous progress we have made in this drive toward an electrified rural America is clearly shown by the following table:

Rural Electrification Administration: Number and percent of farms receiving central-station electric service, by States, 1934, 1940, 1945, and 1946

State, division, and territory	Farms receiving central-station electric service, Dec. 31, 1934 [1]		Farms receiving central-station electric service, Apr. 1, 1940 [3]		Farms receiving central-station electric service, June 30, 1945 [5]		Increase in electrified farms from Dec. 31, 1934, to June 30, 1945	Farms receiving central-station electric service, June 30, 1946 [5]		Increase in electrified farms from Dec. 31, 1934, to June 30, 1946	Increase in electrified farms from Dec. 31, 1934, to June 30, 1946	Farms receiving central-station electric service, Dec. 31, 1946 [5]		Increase in electrified farms from Dec. 31, 1934, to Dec. 31, 1946
	Number	Percent [2]	Number	Percent [4]	Number	Percent [6]	Percent	Number	Percent [6]	Percent	Number	Number	Percent [6]	Percent

[1] Edison Electric Institute.
[2] Percent of all farms in State as shown by 1935 United States census of agriculture.
[3] 1940 United States census.
[4] Percent of all farms in State as shown by 1940 United States census.
[5] REA estimates, revised 1947, based on final United States census of agriculture, 1945.
[6] Percent of all farms in State as shown by 1945 United States census of agriculture.

Thus it will be seen that in 13 years the number of electrified homes in this country has increased from 10.9 percent to 57.4 percent; and those of us who are really interested in this cause are determined to move forward toward the electrification of every farm home in America.

Excise Tax on Communications

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, June 9, 1947

Mr. BREHM. Mr. Speaker, certain members of the Ways and Means Committee have informed me that they intend to take up the subject of taxation with the object in view of rewriting the entire revenue act. In my opinion this action is long overdue and our entire revenue producing and social-security program needs a complete over-hauling.

The following exposé by officials of the Chillicothe, Ohio, telephone company, offers one glowing example of the need for tax-revision legislation.

I sincerely trust that members of the Ways and Means Committee will soon get busy on their noble objective and that the following may be given serious and corrective consideration:

The Internal Revenue Code as presently constituted provides for the imposition of excise taxes on communication services at the following rates:

	Percent
Telephone toll messages of 25 cents and over	25
Local telephone service and toll messages of 24 cents and under	15
Domestic telegraph, cable, and radio messages	25
International telegraph, cable, and radio messages	10
Leased wire services	25
Wire and equipment service	8

The excise taxes imposed on the services enumerated above are collected by the communications companies from the subscribers to the services. The companies are, therefore, acting in the capacity of tax collector for the United States Government, remitting collections monthly to the Bureau of Internal Revenue. The tax is not a tax on the companies; in this case it is the subscribers to the services who are the taxpayers. In presenting this statement the Chillicothe Telephone Co. is therefore not seeking any tax relief for the telephone company, nor is it asking for any consideration for such company other than that the elimination of the taxes on the services mentioned would relieve the company of the expense and burden of collecting the tax from the subscribers and remitting it to the United States Government. This statement is, in effect, presented in behalf of the telephone-using public and is a reflection of widespread reaction to excise taxes on communication facilities from customers of telephone companies, and the operating companies as well, all over the United States.

Excise taxes are a deterrent to the use of telephone service. That excise taxes are, in fact, a deterrent to the use of telephone service and, therefore, to the fullest widespread use of communications within the country was recognized by the Government during the war, when it took the position that, if taxes on toll service were increased, they would act as a deterrent and therefore cause less use of equipment and lessen the need for the building of additional toll facilities, and therefore save critical materials.

A study of the history of excise taxes on communications services shows that this form of taxation has been used only in cases of emergency and has been repealed when the emergency has passed.

While it is understandable that high rates of tax were necessary to finance the war which recently ended, it is nevertheless difficult to understand why a social and business necessity should continue to be taxed as a luxury, or why it has been taxed at rates higher than those applied to luxury items—such as furs, jewelry, and toilet preparations, and amusements, theaters, night clubs, etc. These items are taxed at 20 percent, yet toll telephone messages are presently taxed at 25 percent.

Taxes on communications services are not properly classifiable as luxury taxes. Such taxes, as well as the luxury taxes, are selective sales taxes which fall with equal severity on rich and poor alike. They are not distributed equitably nor are they based on the fundamental principle of taxation—namely, ability to pay. They may be easy to administer, but ease of administration should not be a basis for imposition of a tax. There may be jutification for continuing true luxury taxes in times of peace, but there is no such justification for the taxation of necessities, and communications services are undeniably a necessary part of business and social life.

There has been, since the war ended, a great revival, on the part of telephone companies, of the country-wide program for providing and extending rural telephone service. Attention is called to the burden of this tax upon the rural telephone user.

The independent telephone industry, therefore, believes Congress should completely repeal the tax on communications services which are so vital to the business and social economy of the United States. Luxury taxes should not be imposed on necessities. Such a burden of taxation falls heavily upon the people of moderate means as well as upon the poorest classes of the community.

One Would Be Worse

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Monday, June 9 (legislative day of Monday, April 21), 1947

Mr. STEWART. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an editorial which appeared in the Memphis Commercial Appeal on Monday, June 2, 1947, concerning Mr. Henry Wallace. I commend the reading of this short editorial to everyone as a very correct analysis of Mr. Wallace's recent efforts.

I think the editorial is interesting, too, in view of the fact that Mrs. Eleanor Roosevelt is reported by the newspapers to have said the other day that Mr. Wallace's speeches on the west coast had created a great deal of confusion among the people there.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONE WOULD BE WORSE

Henry Wallace is gallivanting around over the country shuddering and shouting over the fearful things that will happen if the world is divided into two armed camps. No one in his right mind wants that to come to pass, but two camps with only one of them armed and able to defend itself might be far worse. It is invariably difficult to tell what Mr. Wallace means, even after the third or fourth explanation of what he says he meant to say the first time. It is not difficult, however, to suspect that Mr. Wallace is recommending a course of action that would result in the part of the world that would be free at the mercy of those who would have it otherwise.

Federal Trial Examiners

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, June 9 (legislative day of Monday, April 21), 1947

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the text of an address which I delivered here in Washington last Friday before the Federal Trial Examiners Conference. The address pertains to the several hundred hearing examiners who will be appointed under the Administrative Procedures Act.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FEDERAL TRIAL EXAMINERS UNDER THE ADMINISTRATIVE PROCEDURE ACT

It is very gratifying to be permitted to address this fine group, and I appreciate the opportunity. I am gratified also to see that the examiners present here tonight, as a group, are apparently keenly conscious of our collective responsibility—particularly since the enactment of Public Law 404, which provides for a new administrative procedure.

VALUE OF CONFERENCE

The organization of this examiners' conference is evidence of an understanding of the challenges inherent in the Administrative Procedure Act and is evidence likewise of a determination to assist in every manner in making the act workable.

At the outset of this discussion, permit me to make it clear that I am not attempting to pose as an expert or authority on the Administrative Procedure Act. I have had the benefit of some of the hearings which have been conducted on this subject in the past, and I have had the benefit of discussion with leaders of the American bar who participated in the original discussion of the act. I do not, however, feel competent to express more than a few limited conclusions with respect to section 11 of the act which, as you know, relates to examiners.

Let me make it clear also at the outset that my comments are solely my own with respect to selection of examiners. They are intended to be constructive, with the public interest in mind. It is not my intention to spearhead any kind of witch hunting.

OUR MUTUAL INTEREST IN ACT

We are all engaged in the same enterprise—making government a better servant of the people. You in the administrative branch of government, and we in the legislative branch, and those who are in the judicial branch, all have a common interest in securing the most effective use of the tech-

niques and standards established in the Administrative Procedure Act.

Our job is to work together and not for any one of us to invade the province of the other. Rather, we must build together a nation of laws which will result in greater justice and liberty for all concerned. Neither you nor I can do the job alone.

Our problem tonight is obviously not to go over the past history of this question, but rather to see what we can accomplish with the help of the Administrative Procedure Act.

NATURE OF EXAMINERS

The examiners are extremely important cogs in the machinery of this act. We know that the administrative process has been defended on the ground that it operated upon judicially tested patterns. We know that the examiners have been considered to be, in fact, the administrative master in chancery.

Nevertheless, we also know that the actual status of the examiners has been surprisingly undefined in an administrative twilight zone.

In recent years, there has been a tendency to batter down the functions of the examiner to an advisory level.

I am told that in the last decades there have been departmental hijacking attempts by some agencies to find substitutes for examiners, or at least to find substitutes for portions of their functions.

Many students of government have, however, felt that the status and the importance and the jurisdiction of the examiner must be maintained at a high level. I am told that in 1941 the Attorney General's committee deplored both the use of anonymous reviewers and also the practice of some agencies of making a marionette show of a hearing with the examiner serving as a sort of puppet.

The Administrative Procedure Act presumably removes the examiner from agency domination in selection and places him in a prominent position in statutory hearing cases, where the examiner is to be carefully chosen and is subject to disqualification upon the filing in good faith of a timely and sufficient affidavit of personal bias.

ACT'S HEARINGS POWERS

The act also establishes certain hearing powers for officers presiding at hearings. They can:

(1) Administer oaths and affirmations.

(2) Issue subpenas authorized by law.

(3) Rule upon offers of proof and receive relevant evidence.

(4) Take or cause depositions to be taken whenever the ends of justice would be served thereby.

(5) Regulate the course of the hearing.

(6) Hold conferences for the settlement or simplification of the issues by consent of the parties.

(7) Dispose of procedural requests or similar matters.

(8) Make decisions or recommend decisions in conformity with section 8.

(9) Take any other action authorized by agency rule consistent with this act.

Earlier in the act, in section 5 (c) we find that in the adjudication function, the examiner is apparently to participate in both the hearing and deciding function, and in section 8 (a) of the bill, it is apparent he could even be authorized to make the final decision.

It is quite apparent that the examiner will, however, function within the entire framework of the whole statute. It is equally apparent that the act endeavors to lay down fundamental requirements for the protection of private rights and the due administration of justice, which means that the function of the examiner in contested cases is extremely important.

SELECTION OF EXAMINERS

This brings us to the question of examiner personnel. The selection of examiner personnel is an extremely vital matter. It has been said that the qualifications to be written are those for administrative judges.

Congress has, of course, delegated the active function of writing these qualifications to the United States Civil Service Commission. The Commission in turn has to write its qualifications not in the shifting sands of administrative expediency, but on the enduring background of the statute and with reference to the objectives which Congress had in mind and still has in mind.

We may assume, of course, that the Commission will require such obviously indispensable qualifications as experience and education, integrity, a judicial approach, and personal efficiency. It is very easy to enumerate these more obvious requirements, but it is a much more difficult job to establish specific objective yardsticks.

We can and must establish objective standards, but in the last analysis it will be the attitude and the spirit which examiners bring to their jobs which will determine their success in this new role. You will remember that Dooley told us that common sense is man's best tool but that "it's the most uncommon sense of all."

We can outline the paper requirements for the examiners, but the issue will still be whether or not we can translate those paper requirements into living, working realities, when they are applied to candidates for positions so tremendously important and so consequential to both the Government and its citizens.

CIVIL SERVICE COMMISSION'S ROLE

We all know, of course, that the act provides for a certification of eligible examiners by the Civil Service Commission, and we know further that the agencies can appoint the examiners from the eligible list.

The Administrative Procedure Act actually gives the Civil Service Commission an opportunity it has not had before. It gives the Commission an opportunity to demonstrate whether it can make its machinery function satisfactorily in this new field—where the public interest is such a dominant consideration and where Congress has been so intent on writing an administrative Magna Carta.

Section 11 of the act gives some very wide powers to the Commission, and Congress is looking to the Commission to exercise these powers wisely and carefully in the public interest.

MAJOR QUESTIONS BEFORE US

All of this brings us to the question of whether or not existing examiners should be reappointed and, secondly, how the new appointments to examiner positions should be made. The first problem is a very immediate one, since many examiners must be appointed in the immediate future, and the second problem is equally important because it can conceivably set an administrative pattern for decades to come.

At the outset we must realize that both the new category of examiner and the new technique of administrative process are going to be tested and under fire as a method of government. The results of that test depend to a large extent on the caliber of the examiners.

The general public has a tremendous stake in the new administrative process and in the selection of examiners. The agencies themselves likewise have a tremendous stake in the selection of examiners because once these appointments are made, eliminations are going to be difficult. If the system fails by reason of incompenent examiners or for any other reason, it is undoubtedly true that Congress would demand a new system.

ELIGIBILITY OF CURRENT EXAMINERS

The basic qualifications—the paper qualifications—must, of course, be adequate. With reference to existing hearing officers, it seems reasonable to conclude that they should be eligible to their positions but only when clearly qualified by experience, and particular fitness to perform the functions which are required under the terms of the new act.

In other words, the Civil Service Commission will probably want to investigate each case—both for present examiners and potential examiners—thoroughly and adequately. It is possible, incidentally, that in connection with these examinations and investigations the Commission may want to utilize its authority to set up advisory committees to secure outside views with reference to particular appointees. The importance of such committees would of necessity depend upon the over-all system which might be established to handle the selection of examiners.

VALUE OF COMPETITION

I do not want to be misinterpreted as even implying that existing examiners should not have proper and adequate consideration given to their experience. In fact, it is for that very reason that so many students of the Administrative Procedure Act have contended that existing examiners should compete with outsiders for these appointments. The existing examiners will, it is true, have an advantage, or presumably in most instances they will be able to produce definite measurable records of extremely pertinent experience.

On the basis of this experience, it would appear that the examining authorities will be able to certify to their qualifications with somewhat more certainty than they would be able to certify to the qualifications of a complete outsider. I believe that honest and conscientious examiners will welcome competition, because it will give them the opportunity to demonstrate that there is no self-perpetuating inner palace guard. It will give them an opportunity to demonstrate also that there is no perpetuation of any one dynasty of political ideology.

It would appear that this kind of competition would be fairer from a national standpoint, sounder from a public standpoint, and infinitely more desirable from an agency standpoint.

NUMBER OF EXAMINERS

I understand that about 200 examiners will be appointed, and I understand that about 150 of the present incumbents will probably meet the so-called paper qualifications, which would mean that if the 150 are found adequate about 50 positions will have to be filled from the ranks of outsiders.

My interest in this matter stems from the fact that the Judiciary Committee originally considered the Administrative Procedure Act, and, consequently, when this question of examiner appointments first came up my committee instructed me to make an inquiry with the Commissioner of the United States Civil Service Commission.

I did make such an inquiry.

MY LETTER TO MR. FLEMMING

In addition, I took the opportunity to communicate some personal sentiments to Commissioner Arthur Flemming on this matter. I would like to quote in part from my letter of April 5, 1947, because I know that you gentlemen are interested in getting a candid reaction on this subject. Some of you may have already noted the contents of my letter, because the American Bar Association Journal in its May issue was kind enough to reprint the letter in full. I quote:

"DEAR MR. FLEMMING: According to advice to me from some of the highest and most unimpeachable sources in the legal profession, it is feared that these hearings examiners will be appointed on a narrow partisan and ideological basis, with the selection largely limited to present examiners and agency staffs, with all members of other parties largely excluded irrespective of their possibly superior qualifications.

"I am determined that this condition which is feared shall not come about; that

the men who fill these administrative examiner posts shall not, as has been well said by the American Bar Association Journal, be 'men of bias, of ideological preconceptions, of partisan fealty, of subservience to pressure groups, of habits of unfairness, of disregard of the true values and weight of evidence.' It seems to me that the burden of proof is on the United States Civil Service Commission that these hearings examiners will not be men of leftist thinking, men who don't have complete loyalty to our constitutional system of checks and balances, men who are not devoted to our system of private enterprise, but rather men of outstanding judicial temperament, who are unalterably dedicated to the preservation of the American way.

"The President has recently issued his loyalty order for the removal from Government pay rolls of persons whose loyalty is open to question. It seems to me that 'we ought in this case to lock the barn door before horses of red stripe can get in, rather than attempt to shoo them out once they get in.'

"Mere generalities that the Commission is going to take ample safeguard against Communists filling these posts is not enough. I am anxious not only that these appointees not be Communists, but that they not be appointees who will offer only shallow resistance to Communistic influences upon them. There are too many who, although they are not Communists, nevertheless lack the moral values with which to combat Communistic infiltration and pressure which is brought to bear upon them.

"I shall be looking for substantial proof that the Civil Service Commission is going to fill these quasi-judicial posts with men of the highest, unimpeachable caliber of the legal profession available, rather than with men who simply have occupied similar positions in the Federal Government today, who largely are of one party, and who may lack the approach of private enterprise in their work.

"Looking forward to hearing from you on this matter at your earliest convenience, I am

"Respectfully yours,

"ALEXANDER WILEY."

MR. FLEMMING'S STATEMENT AS TO PROCEDURE

Within the past few weeks I received a letter from Mr. Flemming on the appointment procedure. In it he said that "in order to provide us with an opportunity to explore in a careful manner the issues which are involved in this matter, the Commission has decided to promulgate a temporary regulation which would have the effect of making it possible for all present hearing examiners to continue to perform their functions after June 11, pending the promulgation of final regulations by the Commission, these regulations to become effective on August 1."

Commissioner Flemming also advises me that in the interval he intends to transmit to all interested parties a tentative draft of the proposed regulations, and he further states that hearings will be held so that various approaches to this problem may be carefully studied. This appears to be a fair procedure.

In the last analysis, I suppose that the greatest problem with reference to examiner appointments will occur in the future, after the initial selection of examiners has been made. These future appointments will provide a testing ground to determine whether attempts will be made to sabotage the statute by evading its intent and policy.

The appointment problems should, however, be temporary in character and I have every confidence that they will be correctly solved. Once they have been solved, it is gratifying to know that the statute gives these examiners security of tenure. We must be equally vigilant in seeing that this security is implemented with adequate regulations to insure its effectiveness in actual practice.

I have of necessity in the course of this rather brief discussion confined my comments to a large degree to those provisions of the act which I felt related most directly to this group.

NEED FOR UNDERSTANDING OF PRIVATE ENTERPRISE

I would not like to leave this group, however, without adding that, in my judgment, the effectiveness of the act will be determined largely by the spirit with which it is administered. I don't want to make any statement which could be construed as partisan, but I thing it is undeniable that on the basis of the most objective studies which could be made many agencies in government have unfortunately demonstrated a deplorable lack of appreciation for the problems of private industry and the private citizen.

Granted that the agencies have frequently had to administer difficult laws, it is still difficult to explain why in the administration there has frequently been an unwarranted degree of bureaucratic arrogance used to sandbag the average taxpayer into submission.

I don't desire to dwell on the past history, but I do know that if agencies are to survive unscathed by further congressional surgery, it will be necessary for them to become keenly and acutely conscious of the responsibility and the challenges which confront them.

I have every confidence that those of us who are assembled here tonight, for example, are aware of these challenges which confront government today.

THE CHALLENGES OF OUR TIMES

We are today engaged in shrinking government from the high tide of necessary wartime regulations to the minimum level necessary for the orderly conduct of business in a peacetime period.

We are today engaged in fighting our way back from a situation in which all too frequently business and private initiative were condemned before they were given a hearing.

We are today fighting our way back from a condition in which all too frequently a single agency of government was both prosecutor and judge.

We are today fighting our way toward an era in which our kind of economy will be tested to a degree yet undreamed of.

We are today fighting our way toward a government of law rather than of men.

INTERRELATIONSHIP OF THREE BRANCHES

Justice Holmes said that the courts are concerned only with the power to enact statutes, not with their wisdom. It is up to Congress to adequately meet its responsibility and its challenge in providing that wisdom, and it is up to the executive branch of government to demonstrate a rare understanding in the administration of statutes which are enacted and not to seek to override congressional policy.

CONCLUSIONS

Gentlemen, you are to an amazing degree an intermediary between government and the people. You hold high and consequential positions of tremendous importance and in the conduct of your offices, there will be engendered either the gratitude or the resentment of the American people. Yours is a tremendous responsibility and yours is a stimulating task.

I trust and believe that all of the hearings examiners under the Administrative Procedure Act will be more than adequate to meet the challenges of the future. I believe that they will be more than adequate to conduct their offices with sympathetic understanding, with the courage and the vision and the impartial fairness which will insure the survival of that which is good in government and will insure the discard of that which is bad.

The Soil Fertility Bill

EXTENSION OF REMARKS

OF

HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, June 9 (legislative day of Monday, April 21), 1947

Mr. STEWART. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD a very timely and well-expressed editorial entitled "The Soil Fertility Bill." This editorial appeared in the Tennessee Farm Bureau News, a monthly paper published by the Tennessee Farm Bureau Federation at Columbia, Tenn., on Thursday, June 5, 1947.

This editorial expresses approval of the National Soil Fertility bill, S. 1251, which was introduced by the Senator from Iowa [Mr. HICKENLOOPER], the Senator from Nebraska [Mr. WHERRY], the Senator from Alabama [Mr. HILL], the Senator from Kansas [Mr. CAPPER], the Senator from Minnesota [Mr. THYE], the Senator from Tennessee [Mr. STEWART], the Senator from Vermont [Mr. AIKEN], the Senator from South Dakota [Mr. BUSHFIELD], the Senator from North Dakota [Mr. YOUNG], and the Senator from Iowa [Mr. WILSON], and points out that all Tennesseans have a vital interest therein because the object and purpose of the bill is to bring about the feeding into the soil of Tennessee and the Nation the needed mineral elements which are necessary to revitalize depleted soils and compensate for other losses of plant food.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SOIL FERTILITY BILL

The national soil fertility bill introduced in the Senate May 8 by Senators HICKENLOOPER, WHERRY, HILL, CAPPER, THYE, STEWART, AIKEN, BUSHFIELD, YOUNG, and WILSON, and its companion bill in the House by Congressman FLANNAGAN, promises to be one of the most controversial measures on the agricultural legislative front of the Eightieth Congress.

On one side of the controversy will be the American Farm Bureau Federation, and a number of other influential groups who favor the measure, and on the other side will be the giant fertilizer industry, most of which will vigorously oppose it. Congress will be in the middle.

The object of the measure is to get the needed mineral elements applied to the land, particularly phosphate and potash, to revitalize the depleted soils and to compensate for crop removal and other losses of plant food.

Studies reveal that we have in the past, and are at present taking out more than we are putting back. Studies also reveal that food grown on mineral-deficient soils are not only expensive, but such foods fall short of mineral content needed to meet body requirements of food consumers. It is also pointed out by those conversant with problems of soil and farm management that mineral-deficient soils have a narrow range of uses resulting in continuous cropping of commodities in which apparent surpluses occur.

Both consumers and producers have an interest in finding some solution to the problem which has a deeper implication than one might appreciate on first thought.

The controversy will in the main be centered around the procedure for obtaining desired results.

It is to be regretted, but we might as well expect the injection of issues which will have for their principal purpose to confuse the minds of the public, and to create prejudice and suspicion. Would that all could discuss the real issues objectively.

Tennesseans have a vital interest in the national soil-fertility bill. The State is very fortunate in having phosphate deposits in the central basin. These deposits are being mined most heavily. The other known deposits are in Florida and the far West. The Florida deposits have been estimated as 10 times greater than the Tennessee deposits. The western deposits, which are by far greater than the Tennessee and Florida deposits, are not being mined extensively.

The demand for phosphate is growing by leaps and bounds in the Midwest and other agricultural sections. War demands and foreign shipments are putting additional pressure on reserves in Tennessee and Florida.

The question is how long can farmers in Tennessee and the South enjoy the proximity of phosphate deposits? Would it not be in the long-time interest of all to start exploratory work in processing of the western deposits to safeguard the source of supply for the areas that have traditionally and must continue to use fertilizer? One of the purposes of the Mobile plant, proposed in the bill, is to develop processing technique applicable to the needs for utilization of the western deposits.

It appears to be poor public policy indeed to permit the removal of reserves in Tennessee and then in time force Tennessee farmers to pay transportation cost from the far West on fertilizer requirements. The same is true of the South. It would appear far better policy to equalize the withdrawal of these reserves and at the same time meet demands of all sections for phosphate materials. Certainly, from a national defense point of view, to which phosphate is most important, we do not need all our eggs in one basket.

Lilienthal: "No Bomb Back-Down"

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, June 9 (legislative day of Monday, April 21), 1947

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an editorial entitled "Lilienthal: 'No Bomb Back-Down,'" from the Washington Times-Herald of June 7, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LILIENTHAL: "NO BOMB BACK-DOWN"

At Lake Success, Long Island, recently, David E. Lilienthal made his first public, detailed statement as Chairman of the United States Atomic Energy Commission. The Senate confirmed his nomination to that post a few weeks ago, after a long and bitter debate.

The Lilienthal performance, we think, was most reassuring.

It was staged before the Control Committee of the United Nations Atomic Energy Commission (which shouldn't be confused with Lilienthal's atom group), reporters asking questions afterward.

The gist of the American atom chief's remarks was that we are not going to back down on our previously stated position regarding the atom bomb, no matter how much we are baited and berated about it by the Russian Government in Moscow and its fifth columnists in the United States, or by anybody else.

Instead, Lilienthal says his Commission is determined that this country shall keep the atomic lead it already has, and shall do its darnedest to increase that lead.

This means, we infer and hope, that we will go on stock-piling atom bombs and make more efficient bombs as the good Lord unveils additional atomic knowledge to us.

BARUCH PLAN—RUSSIAN PLAN

As to the United States previously stated position on the atom bomb, it is entirely clear.

It was set forth months ago in the plan worked out by Bernard M. Baruch and several associates. The Baruch scheme calls for eventual giving up to an international organization of all United States atom bomb secrets—but only after certain conditions have been met.

The most important of those conditions is that there must be a world-wide, workable, foolproof, and cheatproof system of inspection of all nations' nuclear energy activities from uranium or thorium mine to end products.

Next in importance is the proviso that, when it comes to punitive action by the UN against any nation found to be readying an atomic war, none of the big five countries shall have any veto power.

And, of course, the United States will not even enter into such an agreement as this without the consent of two-thirds of the Senate, as in the case of any treaty.

The Russians have been opposed to the Baruch plan all along, for obvious reasons. They have offered, and go on offering, a plan of their own. This one calls for keeping the veto power; for a pious international agreement outlawing the atom bomb; and for the destruction within 90 days thereafter of all existing atom bombs—meaning, of course, ours.

Mr. Baruch has blackballed this Russian plan from the word go. We're more than glad to see Lilienthal, firmly and without double talk, second that black ball. In the present state of the world, the United States would be crazy to lay the atom pistol down with the Baruch guaranties of safety.

Causing the Desert to Bloom

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 6, 1947

Mr. MURDOCK. Mr. Speaker, have you ever ridden by rail or airplane over vast portions of the far West, especially over the Pacific Southwest, that corner of our country from the panhandle of Texas and the panhandle of Oklahoma westward to the Pacific Ocean, including the States of New Mexico, Arizona, and the southern half of California? If you have traversed the far expanses of that region, you saw unfold before you interminable miles of scenery, of strange vegetation, of mountains and deserts, which seem to support mighty little of human or animal life. Perhaps you thought, what was this country intended for; of what was the Almighty thinking when he produced so much apparent wastelands? If you did have such thoughts, you certainly are not the first to think them, for the early American writer, Washington Irving, who crossed the Great Plains to the Pacific coast to where rolls the Oregon declared that the land would be fit only for the Indians, being incapable of supporting civilized life.

About that same time one of the leading American explorers, Becknell, in his travels west of the Missouri River called the vast region constituting more than half of the present United States, The Great American Desert. Now, more than 100 years ago such a view seemed quite logical, but what a libel on our western geography this label implies. Even in the school geographies which our grandfathers used, the maps of the United States had all that vast western half of the United States lying beyond the Great Bend of the Missouri River labeled, The Great American Desert. That name continued to be thus applied in school books even down to our own childhood days.

However, it was found that although nature is cruel in a vast portion of the West, yet nature nevertheless does furnish food for animals, which in turn furnish food for man. This great American desert has been shrinking and is far less forbidding and frightful than we were taught at first to believe. Before the coming of the white man this vast expanse supported countless thousands of buffalo, that great lumbering hump-back creature on which the red man depended for food, clothing and all of his necessities. Yes, those vast areas which supported the countless thousands of buffalo were well suited to support an equal or even greater number of their domestic kind—the white man's cattle. However, it is a slander on the buffalo to call the Texas longhorns his domestic kind, so, not to ruffle the buffalo's feelings, we may speak of the Texas longhorn as the successor of the buffalo. Why do I speak of the longhorn? Because most of our western geography was first occupied by white men who brought in cattle, the first kind being the long-horned creatures from Texas. Of course, longhorns have been displaced by better stock.

The point I wish to make is that the millions of buffalo were supplanted by more millions of cattle, so that about half of the States in the Union were carved out of the great West with the livestock industry as their economic base. It was the grass which grew on the plains, and some on the desert, which supported a greater population of domestic animals than the Indians had known of the wild animals. We have an expression which signifies value, or lack of it, when we use the expression "hay." But "hay" is not hay, when it is harvested by grazing herds, or otherwise, as it is the very basis of animal and human life over a region a thousand miles in any given direction. Such was the West in its heyday. In places the grass grew luxuriously. In other areas where the rainfall was slight, it grew sparsely, but all over the West it grew and it made human life and civilization possible wherever it grew.

We are told that the era of cattle, and especially the period of the trail driving out of Texas through the West, was the period from 1865 to the end of the century. However, the cattle business

reached its height about 1890, and there was a larger cattle population then in all the Western States than at any time prior or most of the time since that date. The greater portion of the land lying west of the one hundredth meridian, lacking sufficient moisture for cultivation of the soil, was utilized thus for grazing, and since much of it has not been homesteaded by settlers, it remained public domain to be had for the using, and the livestock owners used it. Naturally, they overused it and in many cases overgrazed it, so that the carrying capacity of the ranges decreased. Public-spirited citizens saw what was happening, and called a halt.

Such men as President Theodore Roosevelt and Gifford Pinchot took the lead in the saving work of conservation. Much good has been accomplished, but some of the areas worst overgrazed present an impossible task for Mother Nature to replace the vegetation cover. Nature has great recuperative power in restoring grass on even those areas grazed by sheep, which are worse than those grazed by cattle, and some lands have been entirely denuded. Nature will restore some of the native grasses if given half a chance. But that has not been the experience of the West, and many portions entirely overgrazed have too frequently been covered with snake grass and poisonous weeds and other growth not nutritious nor beneficial to livestock. Also some lands overgrazed have become badly eroded. There are today in Federal ownership hundreds of millions of acres of land west of the one hundredth meridian which has been so abused that it will take years for nature to restore it, if nature unaided ever can restore it. What is the hope for such lands?

I think that a wise policy of controlled grazing, coupled with the proper reseeding program, promises restoration of even these worst areas. What is the best process other than controlled grazing thus far discovered for aiding nature to restore those grasslands? I think the best method is by airplane reseeding, using pelletized seed of suitable grasses for each given area. I think the distribution of the seed will have to be by airplanes, and I think the seed will have to be pelletized for the sowing, and I also think the fullest possible knowledge is needed of suitable seed—grass seed adapted to the soil, the altitude, the climate, and the rainfall of each region to get maximum results. Such a method is now being used on 50,000 acres of land in Arizona on Indian reservations. Dr. Lytle Adams has devised this process and has made this beginning, which seems to me so full of promise that I have continuously urged it upon my colleagues in Congress. Let me explain the essentials of this program.

Much of the area that we would like to reseed is rough terrain and cannot be driven over with any implement to work the soil. Neither a team of horses or a tractor with a disc harrow or any other farming implement can scratch the land surface because it is so rough. A great deal of the territory is like that. Therefore, the airplane method of distributing the seed is the only practical method of dropping it over a large area quickly from the air. The seed must be pelletized for several reasons. When the seed is distributed from the plane it must fall in a desired pattern and not be carried by the wind and piled up where it is not wanted. That would be a waste of seed and also ineffective. Accordingly, the seed must be given sufficient weight so that it will stay where it falls and at the same time be given protection and a proper aid in germination.

This is another function of the pelletizing, for the pellets are made of suitable soil and contain the right number of seed, and also in each pellet is a fertilizer element, an insect and rodent repellent, and all the conditions are such that the seed will germinate with only a little moisture, for only a little moisture is required to dissolve the pellets. Even though some pellets fall upon a stony land, the soil in the pellet is sufficient to germinate the seed. An amazingly large percentage of the pellets dissolve on good ground and a remarkable percentage of germination actually occurs.

If this experimentation of reseeding proves successful it is hoped that other governmental agencies will make use of the process on public lands other than Indian reservations, and it is also hoped that private holdings of cattlemen and sheepmen, at their expense, may be treated in the same way. It is known that livestock men are watching this experiment with great interest.

Why have I insisted on this experimental work of 50,000 acres on an Indian reservation in Arizona? Naturally, being Congressman from Arizona, I wanted this done in my State, though I am anxious to get it spread to other States as well. Certainly Arizona Indian reservations need this sort of treatment. Some of our greatest Indian reservations are in the State of Arizona, the largest being the Navajo Indian Reservation, which is as large as the entire State of West Virginia. The Navajo Indians are nomadic. They are essentially stockmen and they live principally on sheep. Sixty thousand Navajos, mostly in northeastern Arizona, but also in the adjoining States, are living on that area the size of the State of West Virginia, where 5,000 white men could not long exist. This is a high plateau area and it has been terribly overgrazed. Perhaps the overgrazing has been more pronounced and the consequent erosion has been greater on the Navajo Indian Reservation than on any other part of the United States. Nothing comparable to it can be found outside China. Therefore, I have earnestly endeavored to get as much of the area of the Navajo Reservation restored to its original grazing possibilities and also to minimize as much as possible the loss of its soil through erosion.

There is a dollar-and-cent value in both of these results, and the least of these values is stabilizing the sheep and wool industry and the economy of these Indian people. I say that animal production is the least of the value, for it is from the Navajo Indian Reservation that most of the silt comes into the Colorado River which is now filling up Lake Mead at an alarming rate. Nearly a billion dollars have been invested in developments on the lower Colorado River, part of it Government funds, part of it California's great investment, and some of it the investments of Arizona and Nevada. But the total of this vast river improvement program is jeopardized by the filling up of Lake Mead with silt faster than it was originally expected. This must be stopped or minimized.

In addition to Indian reservations and Taylor grazing districts, there is a vast acreage in our national forests which might well be reseeded for grass and even reseeded for forest growth. The devices and methods used by Dr. Adams can be equally well applied for spreading of tree seed, and he can also plant tree seed in straight rows or lines if such is desired in a shelter belt program. It is known that the shelter-belt tree planting in the Great Plains States, such as Nebraska, has been very worthwhile, and the planting of the tree seed instead of the small trees would be far less expensive by using the new method.

There is a desert vegetation of great commercial value—barring cost of harvesting—growing on the southwestern deserts which might be harvested profitably as a commercial business if it grew more compactly and was not so thinly and widely scattered. I have particular reference now to yucca, or Spanish bayonet, of which there are several types. This remarkable plant grows at certain altitudes with a very limited supply of water. If the growth and yield of foliage per acre could be naturally increased, such increase probably would mean the difference between a questionable and a certain financial success. I believe that with airplane seeding with pelletized seed, the natural desert areas, where yucca now grows, can be made to produce many times its present natural production.

We started out by saying that vast areas at first seemed unfit for human habitation. I am now contending that the developments of science in regard to the utility of desert vegetation plus the full development of the technique which is now being used to reseed Indian lands in Arizona will before long make comparatively valueless desert areas industrially productive. In such a case those lands which once seemed so ill-favored may become highly valued and a Biblical saying come true: "The stone which the builders rejected is become the head of the corner." Another saying may be made a literal fulfillment in our West of the prophesy in Isaiah: "The Lord will make her wilderness like Eden and her desert like the garden of the Lord."

Use Made of the Committee on Un-American Activities by Members of Congress and Various Government Departments, January 22–May 27, 1947

EXTENSION OF REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 9, 1947

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my re-

marks in the RECORD, I include a breakdown of the use made of the Committee on Un-American Activities by Members of Congress and various Government departments in the period of January 22, 1947, to May 27, 1947:

USE MADE OF THE COMMITTEE ON UN-AMERICAN ACTIVITIES BY MEMBERS OF CONGRESS AND VARIOUS GOVERNMENT DEPARTMENTS, JANUARY 22, 1947–MAY 27, 1947

During the period, January 22, 1947, to May 27, 1947, inclusive, a total of 512 visits were made to the files of the Committee on Un-American Activities by persons who made their own check through records and publications of the committee. The total number of names on which they checked was 8,529. These callers were employees of congressional committees or individual Members of Congress or employees of various agencies in the executive branch of the Government, namely: the Departments of Commerce, Interior, Justice, Labor, Navy, State, Treasury, and War, the United States Civil Service Commission, and the Veterans' Administration.

A break-down of the total number of visits made and the total number of names checked by visitors for each month of the present year shows:

Month	Number of callers	Number of names checked
Jan. 22-31, 1947	48	975
Feb. 1-28, 1947	92	1,462
Mar. 1-31, 1947	128	2,128
Apr. 1-30, 1947	132	2,450
May 1-27, 1947	112	1,514
Total	512	8,529

In addition, the committee staff assisted these callers in cases where they were unable to find information which was known to be available or in cases where they needed to consult source material contained in the files. Sixty-six requests of this kind were filed by members of the committee staff covering information on 47 individual names and 65 organizations.

During the same period of time, Members of Congress made 313 separate requests for information from the files of the Committee on Un-American Activities. In answering these requests, committee employees made a search of files, records, and publications of the committee and furnished Members of Congress with written reports on the 602 individual names and 236 organizations listed in these requests. In many cases it was necessary to check the names of the officers and sponsors of an organization through all sources in order to make a report on the organization, and no record has been kept of the number of names checked in such cases.

The following figures will show the monthly totals for this year of the number of requests received from Members of Congress, and the number of individual names of persons or organizations involved:

Month	Requests from Members of Congress	Individual names listed in requests	Organizations listed in requests
Jan 22-31, 1947	13	18	7
Feb. 1-28, 1947	53	118	21
Mar. 1-13, 1947	71	167	66
Apr. 1-30, 1947	104	140	46
May 1-28, 1947	72	159	96
Total	313	602	236

Weekly Message to My Constituents

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, June 9, 1947

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following message to my constituents:

WEEKLY MESSAGE FROM YOUR CONGRESSMAN, HOMER A. RAMEY

Fellow citizens of the Ninth District of Ohio, Members of Congress returned to their desks this week refreshed and inspired by the Memorial Day services over the holiday. Most of us feel, I believe, that we are entering the last lap of the present session. As you know, under the terms of the Reorganization Act, we are due to complete this first legislative session of the Eightieth Congress by July 31.

This does not mean, of course, that every piece of legislation introduced in the House or the Senate will have been acted upon. It does mean that the most urgent and pressing matters of concern to the voters in the last congressional election have been thoroughly studied. Laws have been passed to provide the machinery, the money, and the men to work out the solution for these major national problems.

The two most important measures sent to the President this week were the labor bill and the bill reducing taxes. As I see it, the many expressions of diverse opinions on these two pieces of legislation furnished an unmistakable indication that our system of government has come out of the war in healthier condition than it was 6 years ago. The two-party system, which has served us well in the past, is coming into its own once more.

Now there may be some of you listening in right now who are shaking your heads and saying: "That's just Homer playing Pollyanna again!" To you doubting Thomases I say, the time to worry about government is the day when you hear nothing but agreement in Washington. When all we hear is "yes, yes" coming out of the congressional halls and the Federal buildings, we have cause to be concerned about the well-being of our great Republic.

Today, in all reverence, I thank God for the healthy signs of disagreement in Washington. I thank God that whether President Truman signs a bill or doesn't sign it, he has a right to try to check the Congress of the United States if he sincerely disagrees with its legislative decisions. I am equally thankful for the comforting promixity of the Supreme Court. Every day as I walk to and from my office, I pass the impressive white edifice which houses our highest judicial authority. Many of you have visited it, I know. Do you ever wonder where this country would be today, with totalitarian governments apparently thriving in many lands, were it not for the ingenious system of checks and balances our forefathers painstakingly built into the framework of our representative government?

Because of our system of checks and balances, the citizens, sources of all the Government's authority, know they will get a square deal. If they think they aren't getting fair treatment, either from the Executive or from the Legislature, they can, as the saying goes, "throw the rascals out." And as long as we have good healthy arguments, a strong opposition, the people can always find, shall we say, "other rascals" to give them what they want in the way of legislation and Government administration.

Seriously, I had planned to discuss some of the advantages we have as citizens of the United States, living today under our free Government. I see that a noted journalist has written along that line in the New York Times magazine published last Sunday. I don't know whether additional copies of that article are to be printed—they should be. Every man and woman, every high school boy and girl in the United States should have a chance to see what Brooks Atkinson wrote. The piece was called America and Russia, Dangers and Hopes. The part about Russia is good, but what impressed me most was his accent on the assets of this country, and his positive approach to our problems of world leadership.

For example, I would gather Mr. Atkinson agrees with the report out this week recommending universal military training. But, he says, "We must be certain that we do not fail at home." He goes on to say: "The peace of the world depends less on the truculence and force of the Soviet Government than on our ability here to fulfill the promises of democracy—which are freedom for individuals, individual opportunity, and a progressively higher standard of living."

This is a newspaperman's way of saying what I meant when, just a month ago, I expressed my belief that "Today we have no choice but to work together to put the American formula for prosperity into effect by finding the means to get more goods for more people at lower prices." I said then, and I repeat, this is the only way to maintain our high standards and use our great natural resources fairly and efficiently.

Most of us have a tendency to fall into one of two ways of thinking (or not thinking) about our country and our Government, and what it means to us. Either we take the great bounty of American life for granted, because we have never known anything else, in which case we fail to appreciate it, or, on the other hand, we say, with Eric Johnson, "The United States of America is the wealthiest, healthiest, freest, best-educated country in all history." If we let it go at that, we fall into a rut of complacency and fail to see all the improvements which must be made if we are to use our God-given land to the greatest benefit of all.

How often do we stop to think that with less than 7 percent of the world's population we are equipped to produce one-fifth of all the world's goods? Are we aware that we have 35 percent of the world's railroads, 70 percent of its automobiles, 45 percent of its radios, and the greatest store of industrial know-how in the world?

We all realize the miracles of production wrought during the recent war by the men and women who worked in our factories. Do we constantly insist that these wartime methods and practices be carried over and devoted to peacetime production? Is it possible that a nation which produced the materials of war, as we did, is unable to build enough houses and apartment buildings to provide decent homes at reasonable prices for all our citizens?

I want to congratulate the Housing Committee of the Toledo Chamber of Commerce on its determined efforts to ease the housing shortage. Next week marks the beginning of their program to promote the remodeling of large houses into duplexes to provide homes for veterans. The chamber of commerce will furnish free-cost estimates made by experts to those of you who have large houses which might be remodeled to give some veteran a warm, comfortable place to live. This is just a part of the complete program, but it indicates the spirit of initiative and resourcefulness which has built up the United States in the past. It is an example of cooperative action to solve local problems, rather than waiting for directions from some Washington headquarters before acting.

Recognizing the many improvements yet to be made in our way of living, we can still take pride in the accomplishments of these United States. We have succeeded in spreading our production over an ever-widening area, so that the average American has more of the comforts and conveniences of life than the citizen of any other nation in the world. We have done this while maintaining the liberty, dignity, and self-respect of the individual. Our job today is to strengthen and improve this tried and true Government of ours. Let those who seek to change its fundamental character come out into the open and show us where any other system of government devised by man has come near to equaling our record. If we are humbly aware of our own accomplishments, sincerely determined to right existing wrongs as fast as possible, we need not spend sleepless nights worrying about the enemy within our gates.

Justice to the Indians

EXTENSION OF REMARKS
OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 9, 1947

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Oliver La Farge at the annual meeting of the Association of American Indian Affairs:

I regret to have to report that we are in serious danger of seeing all the gains of the last 20 years in Indian Affairs wiped out. We are threatened with reversion to conditions just as bad in their way and just as cruel to our Indians as those which obtained when this Association began its fight for justice to the Indians in the early nineteen twenties.

This may sound overdramatic and alarmist. Unhappily it is the case. If all of the legislation now before Congress should pass we shall have a crippled Indian Service, schools shut down, hospitals out of operation, the whole program not only of advancing our Indians into equality but of merely enabling them to exist broken down. We shall have a return to the old days of plunder and to the system by which, in the 50 years before 1930, over a hundred millions acres of land and millions of dollars in capital assets passed into the possession of rapacious white men.

We well know that the largest surviving tribe of Indians, the more than 50,000 Navajos, are at present deprived of even minimal education, health services, even of the means of earning a livelihood, and that this great tribe stands literally on the brink of famine. Yet we see no signs of an intention on the part of the American people to lift a finger to help them.

Up to the beginning of the war, the condition of our Indians generally was steadily improving. There were mistakes and setbacks, there were areas in which our policy was ineffectual or even wrong. But on the whole we were advancing steadily toward the time when Indians would no longer need the special safeguards, privileges, services, and restrictions upon which their present survival depends, we could see coming the time when all of them could fully participate in our American life as competent equals of all other citizens. During the war, naturally, activities decreased. Much of the best personnel of the Indian Service was drawn off into war services. Everything was curtailed. So, also, this association inevitably became less active. We did not see any great danger in this. Rather, we looked toward the postwar period with great hope.

Our hope sprang from two sources. We felt that the conscience of this country was awakened as never before to its duty to apply its democratic beliefs to all peoples within its borders. We also saw, with joy and wonder, how unanimously our Indians rallied to their country's service. We saw their amazing record in the armed services, their devotion in the war industries, the lavishness with which out of their poverty they gave money and goods and effort in the country's need. We knew that one of the men who raised the flag on Mount Suribachi was an Indian, and that shortly after that flag was raised, another Indian died to keep it there. We who served in the war knew that these were truly brothers in arms, men to be proud of, great defenders of their country, thousands of them. We cherished the delusion that in return, their country would pay attention to the Indians' needs as it never had before, and that it would be easy to interest the people of the United States and to persuade the Congress to give them a full opportunity to share in the good things of our way of life.

This was, it seems, mere delusion. Instead of an era of help, hope, and opportunity, the Indians today face a desperate crisis.

Let us begin with the vital matter of appropriations. To understand what is impending, it is helpful to review the manner in which the estimates, the requests for appropriations, are prepared. First, the Indian Office prepares its estimate of its needs. This estimate is reviewed and pared down by the Department of the Interior. Then it is reviewed by the Bureau of the Budget, which makes further cuts. This twice-reduced estimate comes before Congress. This year the request, in its final form, was $54,000,000. At present, unless the Senate subcommittee will give heed to the Indians' plight, in the general reduction of the Department of the Interior's budget, the Indian Service is due to get only about $36,000,000.

That cut means a crippled Indian Service. When the appropriation for such an organization as the Bureau of Reclamation is made, it means simply that certain projects will not be undertaken. The effect is negative. The organization as such is not destroyed. But a drastic cut in the Indian appropriation has a positive, destructive effect, for it means the termination of going activities. It will mean the laying off of personnel when the service is already grossly undermanned. It means that schools can handle even fewer pupils, that hospitals may have to close, and that areas already empty of medical services will remain so deprived. The cry of the Indians for more doctors and more schools, the twin essentials of hope, will go unheeded. Our Indian population, nearly four hundred thousand loyal citizens, will step back toward the old days of ignorance and disease, the wretchedness from which they were so hopefully emerging. All the manifold, essential enterprise such as agricultural extension work, development of resources, the various forms of training, advancement, and establishment of economic strength will be curtailed. We must hope that before the pending appropriation bill is enacted into law, the Congress will see the cruel error of including a service responsible for the living of hundreds of thousands of citizens in a blind, across-the-board economy cut.

We also have pending certain bills, introduced with the best possible intentions, which allegedly are for the "emancipation" of the Indians. Note that word "emancipation." It typifies the erroneous thinking that underlies them, with its totally false implication that Indians are in some manner enslaved.

The essence of these bills is to provide an easy means for the wholesale lifting of restrictions on Indian lands and property. We believe that certain Indians have reached a point in education and knowledge of the world at which they need neither the protection of those restrictions, nor any other special aids or services not enjoyed by the American community as a whole. But we know very well that as a whole Indians are not yet ready to face our competitive and often greedy world without protections. We know from years of bitter experience that if these bills become law, we shall have a new era of the alienation of Indian property, a new crop of Indians despoiled of their only means of livelihood, dumped back in the end, as so many thousands were in the past, as pensioners and paupers to be kept alive by governmental charity.

The goal in Indian affairs is clear enough. It is to give our Indians that education—I do not mean merely schooling, but education in its broadest sense—which will enable them to do without special treatment, so that in the end the Federal Indian Service and associations such as ours will become unnecessary. The goal is competence in its truest sense. The goal is freedom in the only real meaning of the word, the freedom of being fully equipped to take care of one's self and to have an equal status in the pursuit of happiness. You cannot achieve that goal by closing schools, cutting down public-health services, selling property, reducing communities to rural slums. You cannot even effect true economies by such means, for the more helpless, diseased, and ignorant these communities become, the more expensive, in the long run, they will be to the Nation The true, great economy is the one to be made by elevating these people, who are innately intelligent and able, to the level at which they will no longer need special appropriations any more than you or I. Today's orgy of penny-pinching only postpones, perhaps for generations, the achievement of that economy.

The folly and evil of our present policy is illustrated to the point of caricature by the situation of the Navajos. That great tribe, famous for its vigor, its arts, its native literature, and the great charm of its members, has increased to over fifty thousand and is still increasing. Its numbers have grown far beyond what its land can possibly provide with food and clothing. In this it exemplifies, in extreme form, the situation of our Indians generally. Its only hope, its only future, is an ever-increasing proportion of the tribe to be so educated and trained that they can leave the reservation and compete for jobs with the general population. The tribe is well aware of this. I attended the last meeting of its tribal council, and I can testify that the essence of the council's debate was one great cry for schools, schools, schools. Secondarily they asked for doctors and hospitals, and also for the development of irrigation which would enable them to keep on eating while they are being educated, but above all, more even than farming land or money, they asked for schools, schools, schools.

By treaty, too, we are solemnly bound to provide schools with a teacher for every thirty children. We know that we can solve the Navajo problem, perhaps in as short a space as 10 years. We know that by a large but very reasonable investment we can develop enough irrigated land to turn the balance from starvation to a reasonably sound economic life for the present tribe while the process of education goes on.

What are we doing? For lack of funds, old schools have had to be closed because they had become unusable, while no new ones go up. Less than half of the Navajos have ever had any schooling at all, less than half speak any English, few are at home in the language. Thirteen thousand Navajo chil-

dren today have no chance to go to school. Those who do get into a classroom, generally do not get beyond the fifth grade. Hardly 50 can hope to go through high school.

The Navajos are a famous tribe. We think of them romantically. Three thousand of their young men distinguished themselves mightily in the war. Take a look at them. The veterans sit idle and helpless, for there is no land for them to farm, and they lack the education to seek work outside. The people are hungry. Many are already living on the charity of the fortunate ones who have access to enough land to survive on. Before another year is out we shall be making out the relief rolls. If we do not fulfill our treaty obligations, if we do not wake up and move energetically to the rescue, in a few years this tribe will be forced to disintegrate. Illiterate, ignorant, its members will drift across the country as migratory workers, Okies, gypsies, hoboes, sunk to the bottom of the social scale, with all their great tradition and potential contribution as well-equipped citizens gone, destroyed.

We want the Indians free. Technically they are free. They are citizens, they can go where they like, enter into any enterprise, and they can die for their country as readily as the next man. In fact they are not free, nor can they be until they are liberated from ignorance and set upon their feet economically. For 20 years we have advanced toward that freedom, now we are faced with a crisis which may result in a complete setback, and we are literally faced with a flat desperation in regard to our greatest tribe, comprising nearly a fifth of the entire Indian population. Now is the test of this association; what you, all of us, are able to do in this next year will be the proof that we can and will defend the Indians or that we are futile. I believe in the fundamental goodness of the American people. I cannot believe that they cannot be moved, and I have faith in this association's ability to awaken them and to forestall a shameful disaster.

The Taft-Wagner-Ellender Bill

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. BRADLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution from the Los Angeles County Council, Veterans of Foreign Wars:

Whereas the housing problem is the most critical domestic issue facing this country, particularly as it affects veterans; and

Whereas the Bureau of Census survey indicates that among veterans who desire to own their own homes only 15 percent can pay more than $60 per month, while 14 percent can pay less than $30 per month, and 68 percent can pay from $40 to $60 per month; among every 10 veterans desiring to rent only 1 is able to go higher than $60 per month, while 2 cannot afford even to pay $30 per month, and 7 cannot go over $50 per month; and

Whereas the Taft-Ellender-Wagner housing bill—S. 866 and H. R. 2523—presents the means of reducing the cost of housing, whether for sale or rent: Now, therefore, be it

Resolved, That Harry T. McLane Post 1387, Veterans of Foreign Wars of the United States of America, Bellflower, Calif., go on record in support of the Taft-Ellender-Wagner bill;

Harry T. McLane Post 1387, Veterans of Foreign Wars of the United States of America, urges immediate hearings by the House Committee on Banking and Currency on the Taft-Ellender-Wagner bill and prompt enactment of the bill by Congress; and

This resolution be sent to the Los Angeles County Council, Veterans of Foreign Wars of the United States, for approval and transmission to the Department of California, Veterans of Foreign Wars, and that copies be sent to Congressman WILLIS W. BRADLEY and United States Senators SHERIDAN DOWNEY and WILLIAM F. KNOWLAND.

HARRY A. HENDRICKSON,
Commander.
AVERY T. REEVES,
Adjutant.

Congress Represents the People

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Sylvania (Ohio) Sentinel of June 5, 1947:

CONGRESS REPRESENTS THE PEOPLE

Recently the governors of most of the far Western States met and jointly denounced the action of the House in heavily reducing appropriations for the Reclamation Bureau which would have largely been used for the construction of tax-exempt Government electric generating plants and related facilities. The governors announced that they would make a concerted demand on Congress to restore the funds of their original figure, on the grounds that the future welfare and industrial development of the West is at stake.

Here is a perfect example of why economy in Government has become so difficult a goal to achieve. The plain and ominous fact is that we have come to look on the Federal Treasury as a bottomless pit which may be raided at will for any region's pet projects. All of us are strongly in favor of a reduced budget—so long as budget reductions don't affect us. Governors, Senators, Representatives, mayors and a host of minor officials shriek to high heaven whenever a nickel is sliced from an appropriation for their States and towns.

Another plain and ominous fact is that we have lost local independence and local self-reliance. We want the Federal Government to spend billions for purposes which are clearly within the provinces of local government or of private business enterprise. And thus, we are surely and swiftly building a supergovernment with all the threats to freedom and independence that supergovernment inevitably implies.

It is senseless to blame Congress for waste and prodigality when the people at home who cast the votes demand a continuation of unnecessary spending. Congress simply represents a distillation of the voice of the people. In the long run, the people are given what they ask for—and it is the people who must choose between supergovernment, whose end is always some form of dictatorship, or our constitutional government of limited powers with its firm guaranties of maximum freedom for all.

Canada and the Pan American Union

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. KEATING. Mr. Speaker, this week the President visits Canada, our neighbor on the north, with whom we enjoy relations of unparalleled cooperation and cordiality.

In these critical times we cannot overemphasize the mutual benefits which flow from the powerful bond of good will which unites our two countries.

On May 7 I introduced House Concurrent Resolution 48, declaring it to be the sense of the Congress that the Dominion of Canada should be extended an invitation by the Pan American Union to join such union and take full part in its activities. It is my sincere hope that this measure will have an early hearing before the Committee on Foreign Affairs and a favorable response from both the committee and the House.

In this connection, pursuant to leave granted, I include a timely editorial from the Rochester Democrat and Chronicle:

GOOD-NEIGHBOR FENCE

Plans for the visit by President Truman in Ottawa this month are directing attention once more to the increasingly close relations between the Dominion and the United States of America. The border is ceasing to be a division line between two great countries and is being recognized more clearly as a bond of fraternal union between two proud and independent peoples.

Within the last decade; the people of the United States have come to realize more keenly than ever before their need of cooperation with other nations. Not only have the industries of America developed enormous capacities for the utilization of natural products and raw materials outside the United States, but it has become evident in recent months that Pan-American solidarity is essential, if the United States is to achieve at home that security which is necessary if America is to take a leading part in the larger arena of the United Nations.

But of even more immediate importance to the United States is the preservation and development of that close bond of friendly understanding which has prevailed for more than a century and a quarter between the Dominion of Canada and this Republic.

President Truman's visit to Ottawa at this time is an event of far more significance than appears on the surface. It serves to accent the unity of the two great English speaking nations of North America and to remind all the world that peaceful cooperation without a show of force is not only a possibility, but an actuality.

The President and the Labor Bill

EXTENSION OF REMARKS
OF
HON. FRANK L. CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. CHELF. Mr. Speaker, under leave to extend my remarks in the RECORD,

I include the following editorial from the Courier-Journal:

THE PRESIDENT SHOULD APPROVE THE LABOR BILL

It may safely be assumed that both Senate and House will accept the conference report on the Labor-Management Relations Act of 1947. Before the week is out, the adjusted bill probably will be on the President's desk, for approval or veto. This newspaper believes that Mr. Truman should approve it.

Our conclusion is reached after long and diligent study of the measure. The study has been applied not only to provisions of the bill as it has been adjusted, but also to the context of events, experiences, and attitudes out of which it emerged.

One of the most earnest efforts in this connection has been the search for a definite point of attack upon the bill by spokesmen for organized labor. What is wrong with the bill in their eyes? What title, section, paragraph, or line holds a specific danger to democratic freedom? We have become impressed by the lack of any bill of particulars from labor leadership.

We have heard only the impassioned generality that the whole bill was wrong, in spirit, in hostile sponsorship, and in detail. We have heard charges of fascism and epithets, unflattering personal allusions to Messrs. TAFT, BALL, HARTLEY, and others, and particularly the National Association of Manufacturers. It is said the bill would shackle labor in un-American slavery, that it would set social progress back half a century, that it would destroy labor and labor's rights and gains.

We cannot see where it would do anything of the sort. Unions may still strike for the legitimate purposes of better wages, hours, and working conditions. After an 80-day injunction, to hold while fact finding goes on, they may even strike, as before, to bring about a Nation-wide tie-up. The right of collective bargaining and selection of representatives by majority vote remains unimpaired.

The only new stipulation on this point is that labor now must bargain, where previously only management was obliged to bargain. Not one single obligation which previous labor laws placed upon employers has been removed. But to the existing body of laws is added one important particular, and this is the sum and substance of the revisions, as we see them. It is the intention of making unions equally responsible for their actions with management.

Nor are we impressed by the outcry that the Magna Carta of organized labor is being ripped to pieces. What we see in this legislation is a new Magna Carta. It is that of the individual member of the union.

No longer may he be exiled from a union, deprived of his right to work, for questioning the acts of remote officers, or demanding accountings, or speaking his mind or anything other than nonpayment of dues or initiation fees. No longer may a man be denied a union card if he is qualified and applies for membership. No longer may he be barred by unreasonable fees. The law says he cannot be coerced or intimidated to join a union, or pushed around, as many a rebel in Lewis' mine workers has been, once he gets in.

All this means that arbitrary power has been questioned. Simply stated, the bill would put an end to the practice of holding the ranks with rough stuff or threats of expulsion. It provides inducement for teaching the benefits of trade unionism and solidarity. It would put an end to capricious strikes, to strikes in violation of contract, to jurisdictional strikes, and strikes to enforce "featherbedding" practices; that is, to force an employer to pay men for doing nothing except standing by. It would forbid strikes like the paralyzing walkout of seamen last year to force employers to violate NLRB orders.

On this page is printed a summary of the bill's provisions, which tells more completely than can be done in this space, of the legislation's complete effect. We daresay that no impartial reader can fail to see the general point of seeking a better balance of rights and responsibility. We believe most readers will agree with us that the bill should strengthen the process of collective bargaining. It makes this the important thing by forcing both sides to keep at it rather than permitting one side, labor, to walk away from the table any time it pleases and to call out its men.

The bill is not perfect. But we have been impressed by the obvious efforts of House-Senate conferees to make it as nearly so as possible. The suspicion that supporters of the original bills were playing politics, that they wanted to force a veto, has been removed. They obviously want a bill that will work and that approaches the desires of what we believe to be the majority of people of the United States. Some details remain which strike us as possible of technical evasion, like the prohibition against political activity, or as requiring court interpretation, like the ban on Communists. There are vagueness and possible danger in spots. One may foresee a protracted round of suits. But it must not be overlooked that Congress plainly does not regard this as the final word in labor laws. There is provision for a continuing study of its operations and of the need of improvement or revisions.

And this is the big point. We hold it to be unfortunate that circumstances and abuses ever forced the writing of many details in the bill. We feel that this necessity may justly be laid at the door of labor leadership and its refusal to live up to the obligations of power which it acquired. The cooperation and consideration which the leadership refused, both to lawmakers and the public, should now be forthcoming, as an earnest of good intentions. We believe the bill will lead to more effective and intelligent labor-management relations all around. A kind of science in this field may develop, with the prospect of peace through reason. Up to now there have been only rigid, one-sided law and hair-trigger strikes, or compulsion by ever-present threat of strike.

The Budget-Cut Howl

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. BRADLEY. Mr. Speaker, it is with the greatest pleasure that I insert in the RECORD an article from the Labor News, of Long Beach, Calif., one of the outstanding labor papers of the western United States. It must be indeed gratifying to Members of this Congress to realize that our efforts to achieve some reasonable economy in the expenses of government meet with such wholehearted approval on the part of labor in one of the great industrial areas of the Nation. This article appeared on the first page of the Labor News issue of May 30, 1947, and is as follows:

THE BUDGET CUT HOWL

It's getting pretty tiresome to hear the weeping and wailing that attend virtually every cut Congress makes in the budget. We are told (usually by the bureau being cut) that "dire consequences" will result.

In a few cases the pruning was too severe, but where this was clearly pointed out Congress usually restored the funds needed. In most instances, however, the cuts, made after careful study, are justified and long overdue.

When the 11-percent slash in Navy funds was made by the House some Congressmen claimed our sea force would have to be cut by 80,000 men. Reliable Washington reports said that this claim simply wasn't true. But it illustrates the fear psychology used in the effort to block economy.

No one wants to weaken our military forces or any other essential branch of Government. They should get the money they need. But it's time to halt the waste and extravagance that have cost taxpayers billions.

Congress is trying hard to do just that and should have the support of every fair-minded citizen.

Investigation of Election in Kansas City

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

THE ATTORNEY GENERAL'S DODGE

At various times after the vote frauds were revealed in Kansas City and before the evidence was stolen, Attorney General Clark wrote protesting Senators that he had made a "thorough" investigation of the matter.

Another time he used the phrase "full investigation." After being prodded a little more, he turned himself loose and described it as a "lengthy and detailed investigation."

But before the Senate probers yesterday he admitted that nothing had been done beyond preliminary interviews by the FBI, a pro forma business limited to talks with a few reporters and the members of the election board.

The conclusion is inescapable that Attorney General Clark was deliberately trying to cover up, to palm off as a genuine investigation something which he knew was no more than a pretext for not doing what the situation called for.

J. Edgar Hoover knew what was happening and he was careful to see that the FBI was not involved in the whitewash. At Hoover's instance, the FBI specifically stated that "this report does not reflect the results of an investigation by the special agents of the FBI."

Clark failed to do his duty and he misrepresented the facts to cover up his failure. Both he and Sam Wear, district attorney at Kansas City, have shown themselves unfit to be trusted with prosecution of the vote frauds and the ballot theft in the President's home county.

President Truman yesterday was forced into saying that the vote fraud and vote theft prosecutions must be followed to their logical conclusion. The logical conclusion is the conviction of the guilty. If the President expects to achieve this, he can do no less than divest Clark and Wear of all connection with the case and appoint a special prosecutor.

Debt Retirement Versus Tax Reduction

EXTENSION OF REMARKS
OF

HON. JOHN J. SPARKMAN
OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, June 9 (legislative day of Monday, April 21), 1947

Mr. SPARKMAN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article entitled "Debt Retirement Versus Tax Reduction," by Roy A. Foulke, vice president of Dun & Bradstreet, Inc., which appeared in a recent issue of Dun's Review, a publication issued monthly by Dun & Bradstreet.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEBT RETIREMENT VERSUS TAX REDUCTION

(By Roy A. Foulke, vice president, Dun & Bradstreet, Inc.)

On January 20, 1795, Alexander Hamilton sent his last report to Congress closing his official career as the first Secretary of the Treasury. That report on public credit contains Hamilton's philosophy of the Federal debt which Members of every new Congress would do well to review and study. "To extinguish a debt which exists," Hamilton succinctly summarized after his meticulous and exhaustive report to the Senate on the state of the national finances, "and to avoid contracting more, are ideas always favored by public feeling and opinion; but to pay taxes for the one or the other purpose, which are the only means of avoiding evil, is always, more or less, unpopular."

Our own history contains too many examples of legislators who have professed sincere desires to see the public debt reduced rapidly, but whose actions indicated high degree of disingeniousness or the lack of will power to lay taxes for that specific purpose. "These contradictions are in human nature," continued Hamilton, "and happy, indeed, would be the lot of a country that should ever want men ready to turn them to the account of their own popularity, or to some other sinister account."

Six years after Hamilton's last message to Congress, on November 16, 1801, Albert Gallatin, the native of Switzerland who had become the fourth Secretary of the Treasury, wrote a letter to Thomas Jefferson in which he discussed an annuity formula for retiring the outstanding debt. In that letter he touched on this same problem of the urgent necessity of retiring the existing obligations of the Federal Government.

"If we cannot with the probable amount of impost and sale of lands pay the debt at the rate proposed and support the establishments on the proposed plans," he advised the President, "one of three things must be done; either to continue the internal taxes, or to reduce the expenditures still more, or to discharge the debt with less rapidity. The last recourse, to me, is the most objectionable * * * I am firmly of the opinion that, if the present administration and Congress do not take the most effective measures for that object, the debt will be entailed on us and the ensuing generations, together with all the systems which support it, and which it supports * * *" Here is a forecast which could well be made with greater earnestness today with our national debt of $258,000,000,000, than 146 years ago when our debt was only $83,000,000.

These two statesmen were violently opposed to each other in their political life. Both were Americans by adoption. Hamilton was the strong Federalist, the practical analyst, who had made the greatest contributions toward solving the intricate financial problems arising out of the creation of the Federal Union from bankruptcy under the Articles of Confederation. Gallatin was an anti-Federalist, and exerted his influence in every way against strengthening the power of the Federal Government. To Gallatin any national debt was anathema. But notwithstanding their violent differences, the two greatest Secretaries of the Treasury had one fundamental idea in common, plans should always be carefully made and carried out to retire any public debt as rapidly as possible.

GO AHEAD AND DO IT

In the years prior to January 1, 1879, when greenbacks were legal currency and not convertible into specie, Horace Greeley was forever writing that the way "to resume was to resume." Others would discuss the risks, the difficulties, necessities, needs, inflation, deflation, and consider the political implications in the resumption of gold payment. Greeley's formula was simple; go ahead and do it. The old proverb read, "Actions speak louder than words."

And so it is when we come to the reduction in the Federal debt, Hamilton and Gallatin implemented their basic belief and their unquestioned sincerity with action. Hamilton would incur no debt without simultaneously setting up the instruments for its complete retirement. While Gallatin was Secretary of the Treasury, he reduced the Federal debt from $83,000,000 in 1801 to $45,000,000 in 1812, a reduction of 46 percent, and also paid $15,000,000 to France for the Louisiana Purchase. Here also was action, the kind that emphasized results.

In his budget message made to Congress last January, President Truman estimated the Federal revenue at $39,100,000,000 for the fiscal year beginning July 1, 1947, and expenditures at $37,500,000,000, allowing a surplus at $1,600,000,000.

In February, the House of Representatives, after a review of this budget, set a ceiling of $31,500,000,000 on spending, $6,000,000,000 less than the President's estimate for the next fiscal year. The Senate voted a $4,500,000,000 saving. To date, the two Chambers have come to no mutual agreement. One must keep in mind that ceilings such as those voted by the House and the Senate are only an expression of intent. The real job of budget cutting takes place in the specific actions on appropriation bills.

On March 27, the House of Representatives approved by a vote of 273 to 137 a plan to reduce, retroactive to last January 1, (a) 30 percent of the taxable personal incomes (after exemptions and deductions) of $1,000, or less; (b) 20 percent on personal incomes up to $302,000; and (c) 10½ percent on higher levels. These reductions, it was estimated, would cut personal income taxes to the Federal Government by $3,800,000,000 during the calendar year of 1947, one-half of which would apply to the current fiscal year ending next June 30.

Total receipts would be reduced substantially with no clear idea at this stage as to what our foreign commitments and domestic expenditures would be during the fiscal year 1947-48. This bizarre program has not lacked plenty of advocates, but what business executive would apply similar reasoning to his own business? If there were some doubt as to levels of income and expenses of a business enterprise, especially after deficits of 16 years, every possible effort would be made to protect a margin when black ink finally might be used instead of red.

In the original budget for 1946-47 a deficit of $3,600,000,000 was forecast. By January 1947 the estimated deficit had been reduced to $2,300,000,000. Recent Treasury statements indicate a surplus over receipts running around $3,000,000,000. It seems to be the opinion of experts that the current fiscal year will end on June 30 with a surplus, but certain extraordinary expenses to be incurred in this fourth quarter raise some question as to the final result. Any excess of income over expenditures will provide the first surplus in 17 long years, since 1930 when Herbert Hoover was in the White House. From 1930 to 1947, the debt has increased sixteenfold, from $16,100,000,000 to $258,000,000,000, no mean feat without the use of magic.

BALANCE BUDGET, REDUCE DEBT

After 17 years there seems to be a growing realization that a balanced budget and public debt reduction are of some importance before material personal income tax reduction. Fortunately for our own national good, we've lost that sophism of the New Deal. "We owe it to ourselves." Somehow or other that adage seemed to lose its potency as an economic easement for tax increases during the war years. The steady increase in personal income tax rates was a greater reality to the individual than the misty idea that the increases made no difference.

Hamilton forecast the difficulty of raising funds by taxation to reduce the debt, but there seems to be a growing conviction among our legislators and taxpayers that relatively heavy taxation until the immediate future is more clearly seen is less onerous than continued inflation in living costs which originally stemmed partly from deficit financing and the inflation of bank credit by forcing $97,000,000,000 of Federal securities into the banking system. A program of positive debt reduction on a large scale, as the most important feature of Federal taxation and monetary policy, would lend hope and confidence to all classes of the population.

Roswell Magill, of Columbia University, and John W. Hanes, both former Under Secretaries of the Treasury, have supported an across-the-board personal income tax cut of 20 percent on the basis that such a program was necessary to preserve free enterprise and high productivity in industry. The theory behind this view rests on the idea that reduced tax rates for wealthy individuals would remove the barriers to incentives for investments by those who really have the funds to invest. There is cogency to this reasoning. The other side of the picture, however, is stressed by the fact (a) that wealthy individuals now are taxed a maximum of 25 percent on capital gains and not as progressive personal income tax rates, and (b) if funds are used largely to reduce the Federal debt, those funds then get into the pockets of securities holders, individual or corporate, and would at least partly be used for reinvestment purposes.

TAX LEGISLATION OBJECTIVES

There are plenty of reasons why taxes should be reduced and little or no reduction made in the Federal debt at this time. Hamilton forecast them in his many state papers over and over again. There were plenty of reasons why we should not have resumed the payment of gold in 1879. There were sound reasons in 1789 why plans should be made to reduce the Federal debt and there were sound reasons in 1879 to resume payment in specie. It took the will to do it. It took action which cut through the red tape of continued debate and pressure politics.

In the light of the variety of conflicting opinions, the following four basic objectives, listed in the order of their importance, would seem to be the elements of sound business policy for consideration in determining taxation legislation at this time:

1. That Federal personal-income-tax legislation be made to apply from June 30 to June 30 to coincide with the fiscal year of

the Federal Government, and accordingly that no legislation whatsoever be enacted at this time, retroactive to last January 1.

2. That every possible cent be saved in the operations of the manifold departments, divisions, bureaus, agencies, and corporations of the Federal Government. Here is the place for heroic but calmly considered decisions of statesmanlike proportions in both the House of Representatives and the Senate.

3. That the Federal debt be reduced at the rate of at least $5,000,000,000 yearly.

4. That the over-all average reductions in personal-income-tax rates for the fiscal year 1947–48 range between 5 and 10 percent, and that the reduction in 1948–49 be based on the size of the surplus in 1947–48 with an anticipated surplus of $5,000,000,000 for continued debt reduction. In any such legislation, consideration should be given to the equalization of taxes to be paid by individuals with the same exemptions and the same incomes throughout the country by enacting provisions which would be uniform with those of the existing nine community-property States.

DEFICIT SPENDING

During the past 15 years, millions of words have been written about deficit spending. The foremost advocates Lord Keynes in Britain, Alvin Hansen, and Stuart Chase in the United States for the economist and the popular reader, soften their case by emphasizing the fact that at the top of the cycle, when business is good, the national debt would be reduced substantially. In a depression the debt would increase, but over the years, good and poor, there would probably be a fairly even balance provided there was sufficient understanding to raise adequate revenue in times of full employment and high business activity.

If we are not in the top segment of a business cycle today, we never shall be. Now is the time to make hay while the sun shines. Sound reasoning and keen business judgment would dictate the desirability of making the greatest inroad on that tremendous Federal debt in the next few years that we have ever made. That objective should be not a yearly token reduction of $1,000,000,000 or $2,000,000,000, but $5,000,000,000 every 12 months, beginning with July 1, next, $25,000,000,000 in the next 5 years.

Visiting Members of Korean Bar

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. KEATING. Mr. Speaker, a distinguished group of Korean jurists and members of the bar is now visiting this country to survey our method of training lawyers and the manner in which the American judicial system functions. We welcome our legal brethren from this country which is so close to our hearts and in whose future development we have a profound concern and an extensive stake.

My personal interest in this delegation and their mission is enhanced by the fact that their contact with our Department of State has been through a distinguished son of the congressional district which I have the honor to represent, Mr. William Roy Vallance, assistant to the Legal Adviser to the State Department and chairman of the Committee on International Law of the New York State Bar Association. Mr. Vallance is a graduate of the University of Rochester, in the class of 1910, practiced law in the city of Rochester with one of the outstanding firms, then known as Hubbell, Taylor, Goodwin, and Moser, predecessor to the illustrious firm of Nixon, Hargrave, Middleton, and Devans, and in 1918 entered the service of his country in the State Department, where he has for nearly 30 years, with conspicuous devotion, occupied positions of great responsibility.

At a luncheon arranged on May 27 in honor of the Korean delegation, a welcome was extended by Mr. George Maurice Morris, formerly president of the American Bar Association and now Speaker of the House of Deputies of the newly organized International Bar Association, to which response was made by Mr. Justice S. K. Lee of the Korean Supreme Court and by Dr. K. H. Chyun, Secretary of the Korean Legislature.

Under leave granted, I include their remarks on this auspicious occasion:

ADDRESS BY GEORGE MAURICE MORRIS, SPEAKER OF THE HOUSE OF DEPUTIES OF THE INTERNATIONAL BAR ASSOCIATION

All persons interested in the advance of civilization in the path of justice and freedom under law have been concerned about the people of Korea. The sympathy of men of good will for the Koreans in their efforts to achieve self-government has been particularly keen among the members of the legal profession. The familiarity of the members of the bar with the history of governments gives them a realization of the enormous tasks involved in agreeing upon the principles to be incorporated in a system of courts and in the administration of the law. Lawyers know, also, how difficult it is even after principles are agreed upon to see that those principles are put into effect and administered with efficient and even justice for all persons in a community.

We lawyers who are interested in promoting international cooperation among the lawyers of the world are particularly happy in the circumstance that the people of Korea have had the assistance of the lawyers of another country in setting up the judicial and administrative system for the new Korea. Those of us who are practicing law in the District of Columbia are especially delighted that our colleagues, Col. Emery Woodall and Dean Charles Pergler, have played such important parts in this example of how the lawyers of one country may bring aid to the people, the bench, and the bar of another country.

In welcoming our distinguished brethren of the Korean bar here today, we hope that they will henceforth be able to join and continue with the other lawyers of the world in promoting the administration of justice under law among all peoples. The organized lawyers of Korea are sure to be welcomed as members of the International Bar Association. Because of that prospect, we are very happy to have with us Mr. Justice J. K. Lee of the Supreme Court of Korea. We shall be very happy to hear from him, and hope that he will tell us something of the success he and his four colleagues are enjoying in their mission to survey the methods of the training of lawyers in this country and the functioning of the American judicial system.

ADDRESS BY MR. JUSTICE J. K. LEE, OF THE KOREAN SUPREME COURT

Gentlemen, I deeply appreciate your kind invitation today. I am very happy to be here in your beautiful country and to have the opportunity of studying the American judicial system, based upon democratic principles.

We are all grateful to you for the spiritual and economic assistance which the United States has given to our country and our people, and I hope you will continue it in the future. We will do our best so that your favorable assistance will not be in vain.

I have much to say, but I am sorry I cannot express myself fully. Thank you.

ADDRESS BY DR. K. H. CHYUN, SECRETARY OF THE KOREAN LEGISLATURE, ON BEHALF OF THE KOREAN JUDICIAL MISSION TO THE UNITED STATES

Mr. Chairman and officers of the International Bar Association, speaking for the Korean Judicial Mission, I wish to express our appreciation for this opportunity to meet with you. Before describing briefly some of the development of the administration of justice in Korea by officials and judges since Japanese officials in Korea were removed, I want to answer a question which I know everyone will ask: What will happen in Korea? I will answer that question frankly. We do not know. Perhaps only history will reveal. Now, having answered that question, I cannot resist telling you that the administration of justice in Korea is exclusively in Korean hands. Shortly after American occupation began in Korea, all Japanese judges and officials were removed and the courts, prisons, and the Department of Justice were staffed with Koreans. The courts of Korea were completely delivered into Korean hands when Japanese were ousted. Such action by Maj. Gen. A. V. Arnold, then Military Governor of Korea, represented a great deal of confidence in Korean judges. We believe that we have fulfilled that confidence fairly well. The courts have won the confidence of the people and there has never been any serious criticism of the Korean courts since Korean judges assumed office in November 1945.

The Korean people are very grateful to American Military Government for fulfilling General MacArthur's promise in the first proclamation to the Korean people that freedom of speech and freedom of the press would be given to the Korean people in South Korea, where American forces were in control. During the first few days of American occupation, an ordinance was promulgated repealing all of the political thought-control laws under which Koreans had been arrested and tortured for 40 years. Under these oppressive laws the chief prosecutor of our Supreme Court, Mr. Lee Inn, was tortured and, as a result, is badly crippled today. May I add that the freedom of speech and freedom of the press is being fully enjoyed and used by all Korean politicians today.

One of the fine developments of our administration of justice in Korea was the establishment by Military Government during the first few months of the occupation of the national law library of Korea, to which was assigned a very fine building in the courts center of our national capital. The legal library which the Japanese had provided is wholly inadequate. Because no international exchange has been established for Korean currency, it is not possible for us to use our money to buy the necessary foreign law books. We must for the moment trust that our legal brethren in America and other countries will come to our aid with some law books.

The National Bar Association of Korea would be highly honored to have the opportunity to become affiliated with the International Bar Association. In behalf of all the lawyers of Korea, we again express our thanks for this opportunity of meeting with you.

Lowering the Presidency

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of June 5, 1947:

LOWERING THE PRESIDENCY

Harry S. Truman has at last broken his silence on the degradation of democracy in his home county. He doesn't even say that he is against sin.

What the man who occupies the high office of President of the United States does say is that the vote-fraud investigation should be carried through to its logical conclusion—that no one wants to condone a vote fraud.

Could anyone possibly have said less and said anything at all?

Note the circumstances under which Mr. Truman speaks this weak generality. He does not volunteer a statement. He does not come before his press conference ready to take the initiative. He waits until he is questioned. Then he contents himself to say the very least he can.

What a performance for the presidency!

The St. Louis correspondents, as any good reporters would have done, persisted in their attempt to get Mr. Truman on record as to certain vital facts.

Does this "logical conclusion" include a Federal grand jury investigation? The President of the United States cannot answer that. He says he does not know the law, and that if the reporter wants to know, he will have to look it up.

This is a contemptuous remark—contemptuous of the American people who pay Harry Truman to administer the Federal statutes. While it clearly is not beneath him, it is far below the office of the Chief Executive of this great country.

Has the President discussed the compounded theft at Kansas City with his Attorney General, Tom Clark?

Accepting at face value Mr. Truman's answer that he has not, the statement is as amazing true as it would be if it were untrue. Why has he not discussed the case with his chief legal adviser? What sort of thing does he ever discuss with his Attorney General if he does not talk about an outrageous invasion of the free ballot, now made an even greater crime by the theft of the evidence by safe blowers in the dark of night?

Almost at the same time the President of the United States was lowering his great office, the Senate Judiciary Subcommittee was hearing from J. Edgar Hoover that the FBI investigation conducted in Kansas City was limited by imposed instructions.

Why was the investigation limited? On whose order was it limited? We know now that the report the hand-picked district attorney, Sam M. Wear, put before the Federal judges in Kansas City was a whitewash. Why should the FBI be associated with any such political cover up?

This makes it plainer than ever that Attorney General Clark is no man to have anything to do with the Federal prosecution. He should have taken the case to the President if the President did not call him in. The record shows now that the Department of Justice is far less than its name.

But let no one think that ground is not being gained. A week ago the President's press secretary said that Mr. Truman had "no comment," and "there is nothing the President could say."

Now the President recognizes the fact of the vote frauds to the extent that he will vaguely, platitudinously, and contemptuously answer questions about them.

He can be sure that he will be confronted with further questions about a genuine Federal prosecution by a fearless, determined special prosecutor and about a Federal elections law.

Meantime, the country is learning about Harry Truman. It is beginning to see what Missouri saw when as a Senator he handled appointments on a personal friendship-machine basis.

It is beginning to feel what Missouri felt when he handed down, on a certain celebrated occasion, the ukase: "It is Hannegan or nobody."

Socialism by Indirection

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 2, 1947

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the New York Journal-American of June 4, 1947:

SOCIALISM BY INDIRECTION

To say that the Federal Government has a housing program is to speak inexactly.

During a decade and a half 13 housing agencies have been created at Washington which, in President Truman's language, were scattered around in seven departments and independent agencies.

The accumulation of activities is an illustration of the pattern of paternalism in government.

It is also a typical example of the bewildering growth of bureaucracy, which accounts in part for the huge Federal pay rolls and explains in part the difficulty of balancing the Federal budget or of procuring in Congress the enactment of any just or adequate tax reduction legislation.

Recognizing the fact that this is a politically fostered problem that cannot be ignored, President Truman has informed Congress that he intends to do something about it.

Unless Congress instructs him otherwise, he is going to make a change.

The trouble with the President's announcement, however, is that it proposes to dispose of the problem by retaining and perpetuating the whole incongruous variety of housing services, instead of arranging for their reduction and, eventually, their total elimination.

As an emergency measure, under the First War Powers Act, the Federal housing agencies have been loosely and temporarily consolidated in a National Housing Agency.

With the forthcoming lapse of this Agency, the separate functions will revert to their former locations in the Government.

To avert such an outcome, the President tells Congress that he intends to create a Housing and Home Finance Agency, which will supplant the wartime expedient and become a lasting fixture of the national establishment.

If Congress accedes, a huge bureaucratic bloc will be inseparably cemented into the sprawling Federal structure.

It will include what Mr. Truman vaguely referred to as remaining emergency housing activities pending the completion of their liquidation.

The reference would indicate a future reduction of Federal housing agencies.

But it is most unlikely that any important retrenchment will occur.

It is in the nature of bureaucracy to insure its own continuance and aggrandizement: Cessation of one activity usually involves merely a transfer of pay-roll personnel to another one.

Moreover, the actual prospect before the country is an enormous increase—in fact, a multiplication—of Federal housing schemes and expenditures.

The socialistic Wagner-Ellender-Taft bill is still unfinished business in Congress.

The bill would ensconce a virtual Federal dictatorship over housing.

It would commit the Government to a 45-year program of promoting and paying the operating deficits of innumerable local public housing authorities.

It would imply incomputable Federal expenditures estimated by housing specialists at more than $6,000,000,000 a year.

President Truman plainly contemplated the passage of the Wagner-Ellender-Taft bill, for in his message to Congress he said:

"Whatever may be the permanent housing functions of the Government, whether they be confined to the existing programs or supplemented as Congress may determine, they are inevitably correlated."

In other words, the extravagant Wagner-Ellender-Taft scheme would become a component of the New Deal's organization, adding untold billons of dollars to the Government's liabilities and commitments.

Nowhere in sight is there a curtailment of bureaucracy or any official purpose of getting the Government out of business in competition with private enterprise.

And there has been nothing in Federal housing to justify its destructive socialism.

Public housing has not prevented nor even relieved a so-called housing shortage.

At the same time, bureaucratic restrictions and interference with the whole housing industry—including rent controls—are preventing free enterprise from providing what the Government obviously cannot provide, at whatever cost.

Congress can deal with this ominous situation—and further estop the furtive socialization of America—by three simple, commonsense procedures.

First. There should be no more Federal housing programs. The Wagner-Ellender-Taft bill should be rejected.

Second. President Truman's latest proposal is issued under the Reorganization Act of 1946.

That means it will become law by an Executive ukase, unless both Houses of Congress vote to disapprove it within 60 days.

Both Houses should do so.

Third. Congress itself should institute action to liquidate all Federal housing agencies and to get the Government out of a field of business where no government is competent to operate.

Cash for Terminal Leave Bonds

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. ROGERS of Florida. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I wish to include herewith the following editorial from the

Tampa Morning Tribune, Tampa, Fla., on June 8, 1947, and written by Mr. E. D. Lambright, one of the outstanding newspapermen of Florida and of the South:

CASH FOR GI BONDS

Representative DWIGHT L. ROGERS, of the Sixth Florida District, is making earnest effort to enable GI veterans to obtain cash on their terminal leave bonds. His proposed legislation to this end is receiving Nationwide commendation.

Mr. ROGERS first introduced a bill providing that these terminal leave bonds could be redeemed in cash, upon application of the bondholder. This bill met with objection by the Treasury Department, which feared that cashing the bonds might disturb the cash status of the Treasury and possibly prevent balancing the budget.

To avoid these objections, Mr. ROGERS has presented another bill, which provides that these bonds, although not redeemable by the Government on demand, be made negotiable, so that the veterans may sell their bonds, for not less than face value, plus the accrued interest. Under the present law these bonds are not negotiable, may not be cashed until 5 years after discharge, and bear 2½ percent interest. This law is unfair to the holders of the bonds, because some of the enlisted men were paid in cash on furlough and the officers received their accrued leave pay at separation centers, while the other group of enlisted men were forced to wait for their money.

The plan of Mr. ROGERS will permit these veterans to convert their bonds into immediate cash, if they wish to do so, and those who buy them will make a sound investment.

Adoption of the Rogers plan should not encourage veterans to cash their gilt-edged securities for unwise and extravagant expenditures, but it will give them the privilege, if and when they need money, to get it and use it to their best advantage.

We are sure that the holders of these terminal leave bonds heartily approve the bill of the able Florida Representative. It should be promptly passed.

National Heart Disease Act

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 9, 1947

Mr. JAVITS. Mr. Speaker, following is the text of the bill to provide for research relating to diseases of the heart and circulation and to aid in the development of more effective methods of prevention, and so forth, referred to in my address today, and which is endorsed by the American Heart Association, the leading private agency in this field:

H. R. 3762

A bill to provide for research relating to diseases of the heart and circulation and to aid in the development of more effective methods of prevention, diagnosis, and treatment of such diseases, and for other purposes

Be it enacted, etc., That this act may be cited as the "National Heart Disease Act."

PURPOSE

SEC. 2. For the purpose of improving the health of the people of the United States through the conduct of researches, investigations, experiments, and demonstrations relating to the cause, prevention, and methods of diagnosis and treatment of diseases of the heart and circulation (hereafter in this act referred to as "heart diseases"); assisting and fostering such researches and activities by public and private agencies, and promoting the coordination of all such researches and activities and the useful application of their results; training personnel in matters relating to heart diseases; and developing, and assisting States in the use of, the most effective methods of prevention, diagnosis, and treatment of heart diseases; there is hereby established in the Public Health Service (hereafter in this act referred to as the "Service"), a division of the National Institute of Health to be known as the National Heart Disease Institute (hereafter in this act referred to as the "Institute").

SEC. 3. In carrying out the purposes of this act, the Surgeon General of the Service (hereafter in this act referred to as the "Surgeon General") is authorized, through the Institute, to—

(a) conduct, assist, and foster researches, investigations, experiments, and demonstrations relating to the cause, prevention, and methods of diagnosis and treatment of heart diseases;

(b) promote the coordination of researches conducted by the institute, and similar researches conducted by other agencies, organizations, and individuals;

(c) make available research facilities of the Service to appropriate public authorities, and to health officials and scientists engaged in special studies related to the purposes of this Act;

(d) make grants-in-aid to universities, hospitals, laboratories, and other public or private institutions, and to individuals for such research projects as are recommended by the National Heart Disease Council (hereafter in this act referred to as the "Council"), including grants to such institutions for the construction, acquisition, leasing, and equipment of hospital, clinic, laboratory, and related facilities necessary for such research;

(e) collect and make available, through publications and other appropriate means, information as to, and the practical application of, research and other activities carried on pursuant to this act;

(f) secure from time to time, and for such periods as he deems advisable, the assistance and advice of persons from the United States or abroad who are experts in the field of heart diseases;

(g) establish and maintain, from funds appropriated or donated for the purpose, fellowships in the Institute with such stipends and allowances, including travel and subsistence expenses) as he may deem necessary to procure the assistance of the most brilliant and promising research fellows from the United States and abroad;

(h) (1) provide training and instruction in matters relating to the diagnosis, prevention, and treatment of heart diseases to persons found by him to have proper qualifications, and fix and pay to any of such persons as he may designate a per diem allowance during such training and instruction of not to exceed $10, the number of such persons receiving such training and instruction to be fixed by the Council; and (2) provide such training and instruction, and demonstrations, through grants, upon recommendation of the Council, to public and other nonprofit institutions, including grants to such institutions for the construction, acquisition, leasing, and equipment of hospital, clinic, laboratory, and related facilities necessary for such training and instruction;

(i) for purposes of study, admit and treat at the Institute voluntary patients suffering from heart diseases, whether or not otherwise eligible for such treatment by the Service;

(j) adopt, upon recommendation of the Council, such additional means as he deems necessary or appropriate to carry out the purposes of this act.

NATIONAL HEART DISEASE COUNCIL

SEC. 4. (a) There is hereby created a National Heart Disease Council, to consist of the Surgeon General or his representative, the chief medical officer of the Veterans' Administration or his representative, the Surgeon General of the Army or his representative, the Surgeon General of the Navy or his representative, and 12 members appointed without regard to the civil-service laws by the Surgeon General with the approval of the Federal Security Administrator (hereafter in this Act referred to as the "Administrator"). The 12 appointed members shall be outstanding persons who have had wide experience and have demonstrated competence in scientific matters, and 6 of such 12 shall be selected from leading medical or scientific authorities who are outstanding in the study, diagnosis, or treatment of heart diseases.

(b) Each appointed member of the Council shall hold office for a term of 6 years, except that any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed, shall be appointed for the remainder of such term, and except that, of the members first appointed, four shall hold office for a term of 4 years and four for a term of 2 years, as designated by the Surgeon General. None of such 12 members shall be eligible for reappointment until a year has elapsed since the end of his preceding term. Every 2 years the Council shall elect one member to act as Chairman for the succeeding 2-year period.

(c) The Surgeon General is authorized to utilize the services of any member or members of the Council in connection with matters related to the work of the Service for such periods, in addition to conference periods, as he may determine to be necessary.

(d) Each appointed member of the Council, while attending conferences or meetings of the Council or while otherwise serving at the request of the Surgeon General, shall be entitled to receive compensation at a rate to be fixed by the Administrator, but not exceeding $50 per day, and shall also be entitled to receive an allowance for actual and necessary traveling and subsistence expenses while so serving away from his place of residence.

FUNCTIONS OF THE COUNCIL

SEC. 5. The Council is authorized to—

(a) review research projects or programs submitted to or initiated by it relating to the study of the cause, prevention, or methods of diagnosis or treatment of heart diseases, and recommend to the Surgeon General, for prosecution under this act, any such projects which it believes show promise of making valuable contributions to human knowledge with respect to the cause, prevention, or methods of diagnosis or treatment of heart diseases;

(b) review applications from any university, hospital, laboratory, or other institution or agency, whether public or private, or from individuals, for grants-in-aid for research and demonstration projects relating to heart diseases, and certify to the Surgeon General its approval of grants-in-aid in the cases of such projects which show promise of making valuable contributions to human knowledge with respect to the cause, prevention, or methods of diagnosis or treatment of heart disease;

(c) review applications from any public or other nonprofit institution for grants-in-aid for training and instruction in matters relating to the diagnosis, prevention, and treatment of heart diseases, and certify to the Surgeon General its approval of such applications for grants-in-aid as it determines will best carry out the purposes of this act;

(d) collect information as to studies which are being carried on in the United States or any other country as to the cause, prevention, or methods of diagnosis or treatment of heart diseases, by correspondence or by

personal investigation of such studies, and with the approval of the Surgeon General make available such information through appropriate publications for the benefit of health and welfare agencies and organization (public or private), physicians, or any other scientists, and for the information of the general public;

(e) recommend to the Surgeon General for acceptance conditional gifts pursuant to section 501 of the Public Health Service Act for carrying out the purposes of this act; and

(f) advise, consult with, and make recommendations to the Surgeon General with respect to carrying out the provisions of this act.

GIFTS

SEC. 6. The Surgeon General shall recommend to the Administrator acceptance of conditional gifts, pursuant to section 501 of the Public Health Service Act, for study, investigation, or research into the cause, prevention, or methods of diagnosis or treatment of heart diseases, or for the acquisition of grounds or for the erection, equipment, or maintenance of premises, buildings, or equipment of the Institute. Donations of $50,000 or over for carrying out the purposes of this act may be acknowledged by the establishment within the Institute of suitable memorials to the donors.

GRANTS TO STATES

SEC. 7. (a) The Surgeon General is authorized to make grants-in-aid, as provided in this section, to States, counties, health districts, and other political subdivisions of the States for the establishment and maintenance of programs of prevention, treatment, and control of heart diseases, including the provision of appropriate facilities for care and treatment and including the training of personnel for State and local health work.

(b) For each fiscal year, the Surgeon General, with the approval of the Administrator, shall determine the total sum from the appropriation under section 8 (a) which shall be available for allotment among the several States under this section. He shall, in accordance with regulations prescribed by him with the approval of the Administrator, from time to time make allotments from such sum to the several States on the basis of (1) the population (2) the extent of the heart-disease problem, and (3) the financial need of the respective States. Upon making such allotments, the Surgeon General shall notify the Secretary of the Treasury of the amounts thereof.

(c) The Surgeon General shall from time to time certify to the Secretary of the Treasury the amounts to be paid to each State from the allotments to such State, reduced or increased, as the case may be, by the amount by which he finds that estimates of required expenditures with respect to any prior period were greater or less than the actual expenditures for such period. Upon receipt of such certification, the Secretary of the Treasury shall, prior to audit or settlement by the General Accounting Office, pay in accordance with such certification.

(d) The money so paid to any State shall be expended solely in carrying out the purposes for which the grant is made and in accordance with plans presented by the health authority of such State and approved by the Surgeon General. The Surgeon General shall not approve any such plan unless it provides for expenditure thereunder, from funds of the State or from funds of the State and its political subdivisions, of such amounts as may be determined in accordance with regulations prescribed by the Surgeon General with the approval of the Administrator.

(e) Whenever the Surgeon General, after reasonable notice and opportunity for hearing to the health authority of the State, finds that there is a failure to comply substantially with either—

(1) the provisions of this section;

(2) the plan submitted under subsection (d); or

(3) the regulations prescribed with respect to grants under this section;

the Surgeon General shall notify such State health authority either that further payments will not be made to the State under this section (or in his discretion that further payments will not be made to the State under this section for activities in which there is such failure), until he is satisfied that there will no longer be any such failure. Until he is so satisfied the Surgeon General shall make no further certification for payment to such State under this section, or shall limit payments to activities in which there is no such failure.

(f) All regulations and amendments thereto with respect to grants to States under this section shall be made after consultation with a conference of the State health authorities. Insofar as practicable, the Surgeon General shall obtain the agreement of the State health authorities prior to the issuance of any such regulations or amendments.

APPROPRIATIONS AND BUILDINGS

SEC. 8. (a) There are hereby authorized to be appropriated for each fiscal year such sums as the Congress may determine to be necessary to carry out the provisions of this act.

(b) There is also authorized to be appropriated a sum not to exceed $2,000,000 for the erection and equipment, for the use of the Institute in carrying out the provisions of this act, of suitable and adequate laboratory and clinical research buildings and facilities, including necessary living quarters for personnel. The Federal Works Administrator is authorized to acquire, by purchase, condemnation, donation, or otherwise, a suitable and adequate site or sites, selected on the advice of the Surgeon General, in or near the District of Columbia for such buildings and facilities, and to erect thereon, furnish, and equip such buildings and facilities when funds are made available. The amount authorized to be appropriated in this subsection shall include the cost of preparation of drawings and specifications, supervision of construction, and other administrative expenses incident to the work: *Provided*, That the Federal Works Agency shall prepare the plans and specifications, make all necessary contracts, and supervise construction.

GENERAL PROVISIONS

SEC. 9. (a) So much of the funds appropriated pursuant to section 8 (a) for a fiscal year as are allocated by the Surgeon General during such year for grants-in-aid under section 3 for research and training (including construction in connection therewith) shall remain available for such purposes until the end of the fifth fiscal year following such year.

(b) This act shall not be construed as superseding or limiting (1) the functions, under any other act, of the Surgeon General or the Service, or of any other officer or agency of the United States, relating to the study of the causes, prevention, or methods of diagnosis or treatment of heart diseases; or (2) the expenditure of money therefor.

(c) The Surgeon General shall perform his functions under this act under the supervision and direction of the Administrator. The Surgeon General with the approval of the Administrator is authorized to make such rules and regulations as may be necessary to carry out the provisions of this act.

(d) As used in this act, the term "State" means a State or the District of Columbia, Hawaii, Alsaka, Puerto Rico, or the Virgin Islands.

(e) The Surgeon General shall include in the report for submission to the Congress at the beginning of each regular session a full report of the administration of the act, including a detailed statement of receipts and disbursements.

Reading the Signs

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1947

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Upton Close from the New York Journal-American:

READING THE SIGNS

(By Upton Close)

How President Truman expects to fight communism in Greece with an initial $250,000,000 "take" from American taxpayers became somewhat clearer when word leaked out that his State Department had demanded that Greece release political prisoners, apparently as a condition for getting the money.

The political prisoners in question are highly revolutionary Communist leaders. To think that they would become law-abiding citizens within the measurable future is absurd.

These prisoners were among the Greek resistance groups whom we supplied surreptitiously with arms during the Nazi occupation there. Our own Army Intelligence knew that these revolutionaries whom we glorified under the name of Partisans, held their best fighting units and arms in hiding, instead of throwing them against the Nazis.

As Hitler's forces withdrew, the Partisans rose up and sacked Athens, burned and blasted trains, and anti-Communist Greek cities and police barricades.

As soon as the Red army, swinging across the Balkans, reached the Greek border, it began supplying the now-imprisoned Red revolutionaries with arms and in some instances with men.

For the United States to insist that Greece release these enemies of the state, while that country is in a condition requiring American military equipment and advisers, is indeed a queer way to fight communism.

What confidence, that we are really going to aid threatened anti-Communist governments, will remain in Greece and the other border countries?

How long will the American people put up with an administration which talks one way but acts another, which makes a big show of fighting communism to get money from Congress, then spends the funds furthering the cause of communism?

The State Department said it must have power to withhold exports and other aid arbitrarily from any country. The Department spokesman gave the impression that the purpose of the new policy would be to deny aid to Communist countries, while throwing our weight to the anti-Communists.

But 3 days later the Department said Spain would be the first target. Spain, being strongly anti-Marxist, conventionally Catholic, is the object of the most intense hatred on the part of Communists—including many an employee in our State Department.

This is the same Department which even yet is pressuring Chiang to make his Chinese Government democratic by taking in the revolutionary Communists, and permitting the Communist wing of the proposed government to maintain its own Red army.

And, though Brazil virtually outlaws its Communist Party and Mexico's President declares against the Reds, our State Department resents efforts to force the firing of our Latin-American diplomatic fixer, Spruille Braden, ardent pro-Soviet.

George C. Marshall himself comes in for a rap, as John Foster Dulles, who accompanied him to the Moscow conferences, reveals that the hardened, former soldier talked too softly to the Muscovites.

What is back of all this double talk about fighting communism?

The answer is American New Deal Marxism. And you may translate that word "communism" without shaving it much.

New Deal Marxism has so thoroughly colored the thinking of the administration for so many years that we need expect little as long as this administration remains in the White House.

The Antilabor Bill

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, June 9, 1947

Mr. FORAND. Mr. Speaker, under leave granted me, I include as a part of my remarks a reprint from the Chicago Times which appeared in the St. Louis Post-Dispatch for April 24, 1947. It follows:

A NEW LABOR BILL, BUT—

(Republicans are playing politics with labor bill, editorial charges; says President would have to veto any extreme legislation; this would be unfortunate because it would prevent badly needed labor reforms; warns Congress against return to an era of union-busting strife.)

(From the Chicago Times)

The House of Representatives has passed what the United Press news service terms "the most rigid union control bill in American labor history." The measure now goes to the Senate, whose labor committee has approved a much "milder" labor reform bill.

Washington observers have little doubt that President Truman will be forced to veto whatever measure the two Houses finally agree upon.

The reason: Republicans who control Congress are playing politics. They are wrapping good and bad labor legislation in one package and presenting it to President Truman on a take-it-or-leave-it basis. In order to get reasonable legislation the Nation needs the President would have to approve other measures he considers harmful. Thus the Republicans want to put President Truman on a spot. When he vetoes the bill, they'll scream he is sidetracking needed labor reforms.

FAIR CHANGES ARE NEEDED

It is unfortunate that the Republican leadership has decided to play politics with labor legislation. It is unfortunate because the country needs some labor reforms. But it needs changes—like the Securities and Exchange Commission law passed to keep Wall Street on the straight and narrow—which are designed to restrain certain questionable practices of some unions and are not rigged to strengthen employers at the expense of all unions.

How a measure works out often depends on its interpretation in the courts. The Wagner Act, for example, was supposed to bring industrial peace. But Congress didn't cover all the possible situations which arose under it. The Supreme Court was forced to make decisions which seemed to exempt unions even from laws prohibiting monopolistic, trade-restraining, and even criminal practices.

Some unions have used their power to force employers to agree to "featherbed" practices. These practices—paying for labor not performed, forbidding use of new materials and processes, etc.—increase the cost of merchandise and services to the public. They have greatly retarded the housing program, for one example.

Former Federal trust-buster Thurman Arnold recently advised Congress that legislation ought to be passed outlawing these union practices:

1. Economic restraints or coercion to prevent use of cheaper material, improved equipment, or more efficient methods.

2. Any sort of coercion designed to compel hiring of useless and unnecessary labor.

3. Any sort of coercion to fix prices for any commodity or service except wages.

BAN ON FEATHER-BEDDING

These are among the clarifications of the Wagner Act enlightened businessmen and fair-minded union leaders want to see Congress enact. The House bill includes a ban on featherbedding. But President Truman couldn't O. K. it without also approving legislation which the Supreme Court might be forced to interpret as a virtual repeal of the Wagner Act. Such a repeal probably would bring a return to the dog-eat-dog, labor spy, bloody bust-the-unions era. Such a period of chaos would be an invitation to Communists to reap a harvest.

Unions have demonstrated ability to lead the way on many occasions. A recent criticism of the present Federal law calling for a 30-day cooling-off period is in point. The Illinois State Federation of Labor pointed out that under the Smith-Connally Act, "upon failure to settle within 30 days, the question of a possible strike must be immediately put to an official vote. That's crazy, of course."

As we have said before, the State federation's opposition to considering strikes as one of the first items of business instead of as a last resource shows a maturity of thinking manifested all too little by congressional reformers who are rushing in with bills to save the workers from the big, bad unions.

Some of the Congressmen might better study the steel agreement as evidence that a big union and a big industry can get together when there's a real will to reach agreement.

A Plea for the Small Taxpayer

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, June 9, 1947

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include the following article by J. K. Lasser, well-known tax expert, which appeared in the New York Times magazine:

Ever since the first lawmakers solemnly gathered together to think up the first tax, a basic canon has been "The tax shall be proportionate to the ability to pay." Every time the American Congress squares away to draw up a new tax schedule this old maxim is waved in the oratorical winds.

Sometimes it is interpreted as a mandate to "soak the rich"—because their ability to pay is highly visible. More generally, the principle is one of taking a little from those who have a little, a lot from those who have a lot.

That is why our income-tax forms are a phantasmagoria of exemptions, deductions, graduated surtax brackets, computations of capital gains and losses, percentages piled on nets and all those other minutiae which are designed to make sure the tax burden is equitable.

The only trouble with it all is that it isn't equitable. The well-intended hair-splittings leave important factors in the tax burden unfairly imposed. And, contrary to general belief, most of these inequities fall upon the lower-bracket taxpayers.

EXCUSE FOR TAX INJUSTICE

The excuse generally given is that in dealing with 40,000,000 or so taxpayers arbitrary lines must be drawn somewhere. But it is a grave question whether simplicity in statute and alleged difficulties in administration are reason enough for the shortcomings in the law. I think not.

Let us examine some of the more obvious tax discriminations.

Uniforms and the cost of maintaining them ought to be a tax deduction when they are part of the requirements of a job. A couple of court decisions have said that, too. Contrast these costs with those of the fortunate group who wear their street clothes to work. But tax collectors are niggardly. They still refuse to allow the few dollars for even a nurse's uniform.

Similarly, the cost of transportation is often a very heavy item in family budgets. Yet the Treasury persists in refusing to allow it as a deduction on the income-tax return. That is tax injustice at its worst.

A businessman may wine and dine prospects to build up future years' income and get a tax deduction for it. It seems fantastic that the salaried worker cannot take off the measly cost necessary to get to and from his work.

UNFAIR TO THE HOUSEWIFE

The high cost of living has forced many a housewife from her domestic duties. Yet, when a skilled housewife makes best economic and social use of her talent she is severely punished by our tax laws. The cost of a household substitute to do her domestic work cannot be deducted on her tax return.

A real inequity exists in the denial of educational costs. Expenses of a doctor in taking post-graduate courses—however necessary to keep posted in his work—cannot be deducted on his return. By some strange logic, the Treasury considers these expenses to be personal expenses. Yet these expenses produce the very income of these people that are taxed.

Strange are the workings of the medical and health deductions. Medical expenses, up to the first 5 percent of one's income, must be borne as a personal expense. What is equally bad is that there is a maximum limit to the deduction. Many a man who has accumulated his ills over years of labor finds that his medical expenses pile up at the wrong time—near the end of his journey.

The Government certainly subscribes to Emerson's dictum that a foolish consistency is the hobgoblin of little minds; only the taxpayer must be consistent—but the Government, never.

Take a cash-basis taxpayer, for example, who has received a promissory note as compensation. Does he have to report the value of the note as income, even though he has not yet received the cash? "Why, certainly," says the Government.

THE GOVERNMENT SAYS "NO"

But suppose the same taxpayer, because of lack of immediate cash, has paid one of his own suppliers with a promissory note. "No," says the Government. "You must pay the note first before you can take the deduction."

What happens to this taxpayer as a result of the Government blowing hot and cold through both sides of its face at once? He pays a much higher income tax precisely at the time when he is short of cash. Only wealthier taxpayers can avoid the burden. They can pay debts in cash.

Smith gives his widowed daughter a monthly allowance. She supports herself and three minor children. Smith can get merely one dependency credit, that is, an exemption of $500.

Yet if he directly supported each child he would get four exemptions aggregating $2,000. To do so he would have to really interfere with the paternal domestic management of the mother of the children.

It would be much better if Smith gave his daughter the money to manage her household as her reason dictated. The Treasury should not concern itself with legislative distinctions.

Hawaii Deserving of Statehood, Says Milwaukee Journal

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an editorial from the Milwaukee Journal of Milwaukee, Wis., as follows:

STATEHOOD FOR HAWAII

The request of the Hawaiians for inclusion in the United States is one matter before Congress that should call for no extended deliberation. Opinion seems almost unanimous that our Pacific stronghold is deserving of statehood.

The residents of the islands have voted for statehood. A congressional committee has voiced its approval after an investigation. President Truman favors statehood. His views were reiterated recently when Secretary of the Interior Krug told the Hawaiian Legislature that the administration is pledged to do everything it can to make Hawaii the forty-ninth State.

Secretary Krug reviewed all the arguments for statehood. He said it was a basic concept of the American system that people should have the right to take an active part in making the laws by which they are governed. He said there is no place in a democratic set-up for "dependent peoples" or "three-quarters citizens." Pointing out that Hawaii pays more taxes to the Federal Government than many States, he added that our war for independence was fought against the idea of taxation without representation.

Hawaii is qualified in every way for statehood, Mr. Krug declared. It has greater population, greater economic strength, and a more stable government than many States had at the time of their admission to the Union, he argued.

As to objections that Hawaii is not contiguous, Krug argued that no such objection was raised to California's admission in 1850, although "we couldn't travel to it overnight or talk to it on the telephone." And to the complaint that Hawaii's population is too heterogeneous, he pointed out that these diverse groups have lived and worked together amicably and democratically for years, and their record of patriotism during the recent war was second to none.

In conclusion, the Secretary made a point that is often overlooked—that the United States has much to gain from Hawaii's statehood, perhaps even more than Hawaii. Such statehood, he said, will add "an informed and experienced element" to our national deliberations on Pacific affairs. Because of our increased interest in the entire Pacific area, we must place a stronger national reliance upon the people of Hawaii. Statehood will encourage Hawaiian loyalties to American interests, and will strengthen our cause in the vast region that is so important to our national welfare.

"I can think of no reason for denying statehood to Hawaii," Krug told the legislators in historic Iolani palace. Truly, there seems no good reason. Here is a matter that all factions in Congress should be able to dispose of in a hurry.

Reds in Our Atom-Bomb Plants

EXTENSION OF REMARKS
OF
HON. JOHN McDOWELL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Reds in Our Atom-Bomb Plants" by the Honorable J. PARNELL THOMAS, of New Jersey, which appeared in the June 21 issue of Liberty magazine:

REDS IN OUR ATOM-BOMB PLANTS

(By Representative J. PARNELL THOMAS, as told to Stacy V. Jones)

The Atomic Energy Commission must come to grips shortly with pro-Soviet infiltration of its own organization. Fellow travelers, if not actual members of the Communist Party, have, for instance, ensconced themselves in the great plants at Oak Ridge, Tenn., where U-235 is separated for use in the atomic bomb.

On a recent visit to Oak Ridge, I was startled to find how many Communist suspects were on duty there—in the electromagnetic plant, the gaseous diffusion plant, or the Clinton Laboratories where general nuclear research is conducted. The laboratories are the most heavily infested.

A Communist policy enforces concealment of party membership on persons holding responsible Government jobs, and there can be no doubt that, in addition to the known adherents, many others are on the pay roll. I examined Army Intelligence reports on a number of men holding strategic positions. Several of these dossiers showed, in my opinion, very serious cases.

A natural question is why the known followers of the party line haven't been fired. The commanding officer assured me that the matter was very delicate, for if certain of the suspected physicists were discharged scores of other scientists had threatened to walk out. This inability to throw out persons of doubtful loyalty is a serious matter.

Communist penetration has apparently been more successful at Oak Ridge than at Hanford, Los Alamos, or the other atomic-energy installations. The morale of the whole organization has, however, suffered from the confusion marking transfer of control from Army to civilian hands. On my unannounced call at Oak Ridge I noticed, for one thing, the absence of elementary security precautions.

The Oak Ridge area of 59,000 acres is surrounded by a fence, which during the war was patrolled by soldiers. This perimeter guard had been withdrawn at the time of my visit, and indeed very few MP's were on duty anywhere at Oak Ridge. Guards, of course, question any stranger at the gates, and they also patrol connecting roads. But there is nothing to stop anyone climbing the fence, even in daylight, and approaching within perhaps 75 yards of one of the three widely separated plants. Each of these is fenced, and patroled by civilian guards. If anyone were bent on sabotage it would be possible to do considerable damage at 75 yards, even with hand weapons.

On my return to Washington the deputy general counsel of the Atomic Energy Commission, who also was its acting director of security, called on me. It later developed that he has a brother who is a member of the Communist Party. I am not so much disturbed by this fact—because he himself has a record of loyal service and the two are estranged—as by the fact that he seemed to be unfamiliar with security conditions at Oak Ridge. He thought, for instance, that there was still a perimeter guard of military police.

Besides the danger from sabotage or the physical penetration by actual Soviet agents, there is another danger which lies in the susceptibility of gullible American scientists employed by the Atomic Energy Commission, or the contractors who operate its plants and laboratories. Our scientists, it seems, are well schooled in their specialties but not in the history of Communist tactics and designs. They have a weakness for attending meetings, signing petitions, sponsoring committees, and joining organizations labeled "liberal" or "progressive" but which are actually often Communist fronts.

Thus the dossiers that I examined at Oak Ridge showed memberships in many organizations which have been classified by various investigating bodies as Communist fronts. One is called the Southern Conference for Human Welfare. This is an innocent enough title. What harm in joining it? Only that it has been initiated and manipulated by the Communist Party behind a facade of loosely organized southern liberals. Earl Browder testified that it was a "transmission belt" of his party.

Among the politically naive, one front leads to another, and finally to action. Communism is not a disease of the poor but an affliction of the academic and professional classes. Dr. X, for instance, has a wife who is an active party member. This, say his friends, makes no difference in his loyalty. But the party's 1938 constitution provides that "no party member shall have personal or political relationship with known enemies of the party and the working class." Under Communist usage, a pro-Communist wife could not properly live with an anti-Communist husband.

There are a number of cases paralleling that of Dr. and Mrs. X. One couple, both on the suspect list and both employed daytimes in one of the plants, give the security officers uneasy moments by staying there evenings.

Relatives of staff members come and go at Oak Ridge. It is a town of some 40,000 and in a year the turn-over may be several times that figure. Only strict security regulation under expert military personnel could control the contracts with American Communist relatives and even espionage agents.

There are minor signs of Soviet sympathies, including distribution of the Communist Daily Worker. The wife of one Oak Ridge employee was found to be employed at the Soviet Embassy in Washington. There is no active Communist cell at Knoxville, 26 miles from Oak Ridge. More alarming is the case of Professor Y, on the staff of one of the Oak Ridge plants, who spent most of one summer vacation in Canada visiting his friend, Dr. Alan Nunn May, since committed to 10 years' penal servitude for betraying British Government secrets.

Among the scientific societies at Oak Ridge there is much advocacy of free interchange of scientific information. This sounds plau-

sible enough until it involves national safety. In his curious confession, Dr. May wrote: "I gave and had given very careful consideration to correctness of making sure that develpoment of atomic energy was not confined to United States of America, I took the very painful decision that it was necessary to convey general information on atomic energy and make sure it was taken seriously." So he gave away secrets to a Russian agent, influenced no doubt by ideology but accepting $700 and two bottles of whisky.

That Americans can be equally generous is shown by the case of Z, a scientist working on the bomb project at Chicago in 1943. The FBI saw him hand a package to a Russian agent. The package proved to contain valuable information. The American was speedily inducted and sent to the Pacific, but his wife used their home in Brooklyn as a mail drop for the Russian agent. The latter's movements were followed by the FBI.

Each of hundreds of scientists has knowledge that could shorten an enemy's time in perfecting the bomb. If five key men could be subverted, years could be saved. It is fortunate that the wartime operations were compartmentalized, so that dupes can give away bits and pieces but not the whole story.

One high Government scientist—let us call him Dr. V—was preparing to fly to a Moscow congress of scientists, and the Army was jittery about what he might say overseas. The Russian plane which was to take him to Moscow was serviced by American Army mechanics at New York. First it had engine trouble and then a military truck accidentally backed into it. But after word came that the scientist's passport had been canceled, the mechanics speedily had it ready for the take-off.

In their efforts to pry loose information, Communists make every effort to use the cluster of associations set up by the atomic scientists themselves. The Federation of American Scientists (formerly the Federation of Atomic Scientists) ostensibly includes most of those who worked on the atom-bomb project in our many plants and laboratories. With it are affiliated the Emergency Committee of Atomic Scientists, Inc., the big-name money-raising group, and the educational or propaganda branch, the National Committee on Atomic Information.

From its office on Nassau Street in Princeton the Emergency Committee sent out solicitation for a $1,000,000 educational fund over the signature of Dr. Albert Einstein as chairman. The letterhead carried the names of half a dozen other top-flight scientists on various college factulties. I do not characterize the committee as a Communist front, nor Dr. Einstein as a Communist, but it is notable that Communist fronts energetically cultivate him. They welcome him as a sponsor, and he has lent his name to a score of organizations classified as fronts by the Committee on Un-American Activities.

The Committee on Atomic Information, which, like the Federation, has offices in Washington, grew out of atomic scientists' efforts to shape atomic legislation. Robert K. Lamb of the CIO United Steelworkers has always been active in the committee. He was chairman of a meeting of the National Student League at Harvard in 1934 after a disturbance had been started at the Charlestown Navy Yard by students and members of the Young Communist League. The National Student League has been cited in four Government reports as a Communist front. Lamb was a contributor to the Communist New Masses in 1938.

From February to July of last year Mrs. Edith Marzani, employed through Lamb, worked in the committee's offices. She is the wife of Carl A. Marzani, a card-carrying Communist Party member who was for years in positions of confidence with the Office of Strategic Services and later with the State Department. He is now under multiple indictments in Federal court.

A former director of the National Committee on Atomic Information was discharged after various complaints, including the allegation that he had been meticulously following the party line. On the NCAI stationery have appeared the names of various persons with long records of Communist-front affiliations, and they have made effective use of their NCAI connection. I do not charge that the committee is a Communist front, but merely point to the danger.

The Communists' usual method of infiltrating a society is to hide their party affiliation, volunteer for the hard detail work that others are likely to shirk, and eventually make themselves indispensable. Finally there are a Communist executive secretary and several Communist executive committee members, controlling funds and directing policies.

The American-Soviet Science Society recently solicited memberships among the staff of the National Bureau of Standards, citing the membership on its executive committee of Dr. Edward U. Condon, director of the Bureau. The letterhead showed affiliation with the National Council of American-Soviet Friendship, Inc., a known Communist front. Dr. Condon's is indeed a name to conjure with, as he was made scientific adviser to the special Senate Committee on Atomic Energy in the last Congress about the time Secretary of Commerce Henry A. Wallace appointed him to his post in the Bureau of Standards. He has also been a sponsor of the Washington committee of the Southern Conference for Human Welfare.

Science groups inside our bomb fences, including Oak Ridge Engineers and Scientists and the Association of Oak Ridge Scientists, were extraordinarily active last summer in opposing military control of the atomic project. The House at that time was considering amendments to the bill creating the Atomic Energy Commission which would have assured membership on the Commission to at least one man from the armed forces. Those of us on the Military Affairs Committee were flooded with letters, telegrams, and telephone calls from all parts of the country urging adoption of the original Senate bill with its all-civilian commission. These were in such volume as obviously to have been planted by professional lobbyists. In addition to the honest protests, many bore the Communist stamp.

One wire from inside the fence was signed by the executive committee of the Association of Los Alamos Scientists. Referring to the proposed amendments, it said, "We particularly deprecate the increased emphasis on secrecy and the inclusion of military personnel on the Commission, since both are contrary to the spirit and interest of any sound solution of the problem of international control of atomic energy." This came, mind you, from the very center of our bomb manufacture.

This is reminiscent of the satirical complaint of the New Leader, an American Socialist (and anti-Communist) paper, that by our indecision and criminal weakness we have forced the Soviet Union to steal the atomic bomb before we could give it to them.

Revelations of the Canadian scandal came while the bill was before Congress, and were dismissed by advocates of civilian control as "hysteria" over a spy scare. The sober report of the Royal Commission, with its 700 pages of evidence, is anything but hysterical, and gains strength from its understatement.

In Canada, the Soviet military spy ring got control of the Canadian Association of Scientific Workers. The corresponding society in this country, the American Assocation of Scientific Workers, has been lauded by the Daily Worker, in which nothing appears without design.

Chapter 25 of the International Federation of Architects, Engineers, Chemists and Technicians, CIO, conducted a special membership campaign in the atomic-research laboratories of the University of California at Berkeley. A State legislative committee, after investigation, concluded that the FAECT and its west-coast chapters were Communist organized. Minutes of 1943 meetings of chapter 25's executive committee disclosed a surreptitious plan to obtain lists of the laboratory personnel, to infiltrate the entire project, and to propagandize and organize the scientists there, meanwhile avoiding detection by the FBI. Scientists engaged in atomic research at Berkeley were at the same time lecturing on scientific matters at the Communist California Labor School in San Francisco.

One of the unions at Oak Ridge recognized by the Atomic Energy Commission is the Atomic Workers Organizing Council of the United Gas, Coke and Chemical Workers, CIO. The union is known to have been deeply penetrated by Communists.

Russia, for obvious reasons, welcomes international meetings and societies of scientific workers. The Bulletin of the Atomic Scientists, copies of which are distributed by the national committee on atomic information, has described the organization in England last summer of a world-wide federation of national associations of scientific workers. Two scientists attended as observers for the Federation of American Scientists, Prof. Frederic Joliot-Curie, a French Communist, was elected president of the provisional executive council. Norman Veall was made regional representative for the British Commonwealth. Veall has been examined by the Royal Commission in Canada, which concluded from the evidence that Veall did not communicate information with respect to atomic work for the reason that the Russians designedly did not ask him.

The international federation was of "trade-union-type organizations of academic and industrial scientists, teachers, and related professional workers," according to the account in the Bulletin. Among those in attendance was listed a representative of the Engineers and Architects Association, Pasadena.

One American also attended as representative of the Federation of American Scientists, an international conference of atomic scientists held a few days later at Oxford. This was called by the (British) Atomic Scientists Asssociation, a limited group of highly qualified scientists.

Naturally Professor Joliot-Curie is all for getting whatever information he can out of the United States. The Sunday magazine published by the New York Daily Worker recently carried an article signed by him as director of the French Government Atomic Energy Commission. "I consider as very dangerous," says the article, "the position taken up by the United States during recent talks regarding the maintenance of secrecy over atomic research, because keeping the secrets of the atomic bomb appears as a means of pressure."

The science lobby which operated on Congress last year had two goals: to get the military out of Oak Ridge and other reservations, and to get David E. Lilienthal in as chairman. It is obvious why fellow travelers wanted the military out. They apparently wanted Lilienthal in, although he is not a Communist, because he lacked experience on security measures and because he was a known liberal. He was, indeed, a sponsor of the Southern Conference for Human Welfare.

Atomic production and research should remain for the present entirely a military province. We cannot afford to lower our guard for a moment. The Soviet Union has large and active espionage organizations here—military, secret police, and party—whose chief purpose is to get atomic information. Our committee itself has unmasked several espionage agents and passport forgers.

Our Atomic Energy Act of 1946, finally passed in the Senate form, recognizes that

the development of atomic energy is subject at all times to the paramount objective of assuring the common defense and security.

It is, however, unrealistic in that it places this vital weapon in the inexperienced hands of civilians. True enough, under the commission is a division of military application, headed by a military man, and there is a military liaison committee representing the Army and Navy which has a right of appeal to the President. But this is far from military control.

A further flaw lies in the security provisions, which authorize the FBI to investigate the personnel but give it no authority to bar undesirables. The FBI is merely to report the facts to the civilian commission.

I fought the bill because I feared that security would be slighted, and so far my fears have been well grounded. I believe that in the present chaotic world situation our only solution is to repeal the act and return Manhattan district to the Army, which can best administer security.

We have an immediate educational problem with the scientists who insist on having academic freedom with military secrets, who want one world but are indifferent as to whether it is to be a Communist world. Compulsory reading of the report of the Canadian Royal Commission would go far toward convincing the politically naive that Communist orders come from Moscow via Paris, and that all of the party members, whether registered or not, are potential traitors, saboteurs, and espionage agents.

In these times, atomic bomb production and research belong under War Department control. When and if the United Nations becomes a going concern, and international security is offered through some agency such as the Atomic Development Authority proposed in the Acheson-Lilienthal report of last year, Congress can review the problem.

Socialization of the Fertilizer Industry

EXTENSION OF REMARKS
OF
HON. MELVIN C. SNYDER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. SNYDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the June 1 issue of the Knoxville (Tenn.) Journal on socialization of the fertilizer industry:

SOCIALIZATION OF FERTILIZER INDUSTRY, AS CONTEMPLATED BY BILL IN CONGRESS, IS THREAT TO ALL PRIVATE ENTERPRISE

Speeches made by TVA Chairman Gordon Clapp in various parts of the country since his confirmation would suggest to his hearers, or to those who read reports of his remarks, that the Federal agency for which he speaks is a strong supporter of the principle of private enterprise.

The regularity with which these pleasant references to private enterprise are worked into Mr. Clapp's addresses lead one to the conclusion that news has been kept from the chairman of the hearings now under way in Washington on a bill purposed to place the TVA in position to completely dominate the fertilizer industry of the Nation.

The bill in question does not appear, under quick reading, to be a very large matter one way or another. It provides for an initial appropriation for expenditure by TVA of $3,000,000 to construct a fertilizer plant at Mobile, Ala., and to acquire phosphate lands in Florida. Its broad objective is set forth in the caption as being a piece of legislation for the encouragement of the use of fertilizer by the farmers of the country. Such encouragement is to be given, under provisions of the bill, through test demonstrations, the same kind of demonstrations the Authority has been conducting over a 10-year period.

It is in this test demonstration feature of the bill that the joker is located. The country's fertilizer industry would have nothing to fear if any Federal agency were simply setting up in business to sell a product. But when the bill lays out a program of test demonstrations, it is talking not about selling but giving away.

Competent authorities in the fertilizer industry are on record to the effect that this exclusive feature of the TVA program—giving fertilizer away instead of selling it—is actually one of two features the private enterpriser has not been able to equal.

The other exclusive feature is that the private enterpriser has not been able to get his manufacturing cost as high as the Authority's. The industry cites as an example a fertilizer known as triple superphosphate, which, according to TVA's 1946 report, cost $85 per ton to manufacture. This fertilizer was given away. At the same time the standard selling price for this same fertilizer in the industry was about $65 and this included everybody's profit.

Secretary of Agriculture Clinton P. Anderson, who is of course an administration man, expressed opposition to the bill this past week on the grounds that the scale of tests—remember this means the scale of giving away fertilizer at public expense—provided for was, to quote his words, "larger than necessary." Analysis of the provisions of the bill by experts would make the Secretary's words one of the notable understatements of all time.

To suggest the proportions of the program, for which this initial appropriation of three millions is only a starter, it provides that 2 percent of the farms in the United States shall be eligible for "demonstrations," which means that each of the farms selected would receive, to meet TVA test requirements, about 30 tons of fertilizer.

In 1945, there were listed 5,859,169 farms in the United States, 2 percent of which would be 117,182. So that after the program got going under full blast the bill under consideration by Congress would provide for giving away 3,515,460 tons of fertilizer annually.

But that is not all. The bill also provides that not over half of the production of the Government fertilizer plants is to be given away. In order to carry out its demonstration program in full the TVA would have to build up a total annual business of more than seven million tons, and the little $3,000,000 initial investment would have to grow to an estimated half billion.

To realize the vast proportions of this camel whose snout is just now being eased under the tent of the fertilizer industry, compare the contemplated production figures above with the actual production figures for the Nation's fertilizer industry in private hands. In 1946 private industry produced and sold 13,000,000 tons of fertilizer. The bill contemplates, then, the ultimate preempting by Government of well over half the production of private industry in one of its biggest years.

Thus one is driven to the conclusion that while Chairman Clapp makes speeches remarkable for pleasantries about private enterprise, the Authority's emissaries in Congress are getting ready to drive to a final conclusion one of the most socialistic of the Authority's undertakings.

Our conviction is that if Congress intends to nationalize the fertilizer business at the expense of the general taxpayer, it will act with a great deal more candor, and sense, too, by purchase of existing fertilizer plants rather than undertaking to put private industry out of business by a long and painful process. Both Joe Stalin and the British Socialists have followed the method we have suggested. They do not beat around the bush with a bill such as the one under discussion, or cloud their purposes with ambiguous verbiage. They simply say they're going to nationalize this industry or that, and that's all there is to it. Our own Congress should be equally frank with our people.

It would seem unnecessary to point out that this is a matter which is not of concern or interest to the fertilizer people alone. The fight to maintain our traditional form of free economy must be waged on every battle front where it is challenged. If the fertilizer industry is nationalized, that simply brings nearer the day when the next field of private industry or business will feel the hot breath of Government upon its neck. Private enterprise must all stand or fall as one fabric, and no citizen should refuse to recognize the fact, even though for the moment he is not endangered.

It might be appropriate to point out that the farmer himself, in whose name the present bill is sponsored, could well take a look at this time at the situation of his fellow farmer in Britain where the same kind of socialization proposed in this bill has actually been made effective. If the British farmer doesn't till his acres to suit the government bureaucrat, he is simply put off his land. Of what value would free fertilizer be under those conditions?

Tensas Cocodrie Sector, Red River Backwater Area

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. PASSMAN, Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement before the Subcommittee on Civil Appropriations for the War Department of the Committee on Appropriations:

Mr. ENGEL. The committee will come to order. Gentlemen, we have with us this morning our colleague, Mr. PASSMAN, from Louisiana.

What project are you interested in, Mr. PASSMAN?

Mr. PASSMAN. It is the Tensas Cocodrie sector of the Red River backwater area that we are interested in, Mr. Chairman, and I have with me Mr. Fred Hudson from the Fifth Congressional District whom I would like to have you hear this morning.

Mr. ENGEL. All right, Mr. Hudson.

Mr. PASSMAN. Mr. Chairman, and gentlemen of the committee, this is Mr. Fred Hudson of Monroe, La., who wishes to be heard on the subject of flood control, especially the Tensas Cocodrie sector of the Red River backwater area project.

Mr. ENGEL. You are appearing on what project, Mr. Hudson?

Mr. HUDSON. On the Tensas Cocodrie sector of the Red River backwater area.

Mr. ENGEL. On the Mississippi River?

Mr. HUDSON. On the lower Mississippi; yes, sir.

Gentlemen, my time is very limited, but I do want to take enough of it to express my gratitude to you for hearing me at all on a particular project.

I should like also to say not only on behalf of myself, but I am sure my people, that the objective of economy and reduction of taxes meets with our most hearty approval.

However, there are some functions of Federal Government that we feel should not be curtailed in the interest of the Federal function itself, and among them are certain measures of flood control within the entire program. Certainly I would not assume or presume to indicate to you what could or should be done from the over-all point of view.

I see you have General Wheeler and his very competent and informed and able staff here, and I should like to say from many years of experience with them in a humble and minor capacity on the general subject of the lower end of the Mississippi River that the Corps of Engineers know the story, and they know what it is all about, and they know what to do about it, and they are most competent and most reliable.

I understand also you will be addressed later by one representative of the whole State, Mr. Dewitt Pyburn, our respected and highly regarded and competent Director of Public Works in Louisiana.

However, there is one particular project to which I would like to direct your attention and would appreciate your listening to me on for just a few moments, and that is what is known as the Tensas Cocodrie sector of the Red River backwater area.

I am sure that you are familiar with where the Red River empties into the Mississippi, and this particular sector is north of the mouth of the Red River.

NOT A LOCAL PROJECT

This is not a project that some local organization has created, propagandized and worked up.

On the contrary it is a project that has existed for many years about which the Corps of Engineers in its prudence and discretion did not feel that anything could be done, which I am sure you realize, and which General Wheeler I am sure will tell you is an integral part of a continuing process of protection. It was not until in 1941 the development of the entire project for the protection of the lower Mississippi Valley reached a point where the Corps of Engineers itself brought up and recommended the protection of several backwater areas.

In its report of March 7, 1941, the Mississippi River Commission has this to say, which the Corps of Engineers and the Chief of Engineers approved:

"The confinement of floods between levee lines on both banks of the Mississippi River, each line having gaps therein permitting the outflow of tributary streams, has caused what are locally known as backwaters. Each backwater, in time of flood, extends around the end of the main-line levee, upstream behind that levee and up into the tributory basin. The area flooded in each case depends upon the height of the flood confined by the main-line levees and the volume of discharge of the tributory. The principal backwaters are the St. Francis, the White-Arkansas, and the Red on the west bank, and the Yazoo on the east bank.

"The backwater areas have had an unhappy history. Originally their status was comparable with that of lands elsewhere in the basins. Floods spread with equal freedom over both banks of the river, inundating the higher lands to comparatively shallow depths for comparatively short periods of time. But as the main river levees were made stronger and extended further and further downstream, the lands upstream from what have become known as the backwater areas were overflowed not at all, while the lands in the backwater areas were submerged to greater depths. The main-line levees have protected the backwater areas from Mississippi River floodwaters coming down overbank from upstream but these same main-line levees, by confining greater floods, have increased the areas of the backwaters and the depths of their flooding. The lands in the backwaters, in many cases, were taxed and continue to be taxed for the construction and upkeep of the very levees which have caused their greater flooding. Under early conditions low, private levees gave sufficient protection to some of the higher backwater lands to permit the profitable operation of large plantations. Now, due to greater flooding, many are no longer profitable and have been allowed to grow up in timber.

"It cannot be claimed that the Government is under obligation to afford equal protection to all alluvial valley lands. That is a physical impossibility. No great engineering project is ever carried through to completion without the destruction of some existing or prospective property values for the greater good of the general community. This project is no exception to the general rule; and it is evident that the backwater areas have suffered some consequential damages and have lost, to a large extent, such future prospects as otherwise they might have had in agriculture while retaining unimpaired their future as timberlands.

"Experience shows that areas of the alluvial valley which have been given a reasonable degree of protection have been largely devoted to cultivation and support a relatively dense population for agricultural lands.

"The Department has consistently opposed the exclusion of great floods from the large backwater areas, since the elimination of the storage capacities in the backwaters would materially increase flood heights. There is no objection, however, to the partial protection of the better portions of such areas provided they are restored to normal function of storing floodwaters when floods attain menacing proportions.

"The principles just stated were recognized as both equitable and sound by the Congress in the act approved June 15, 1936, authorizing the protection of a portion of the White River backwater area from all but the larger floods by an extension of the front-line levee system up the White River, and thence to a connection with the main line Mississippi River levee near Old Town Lake. The extension of the levee system for the protection of this backwater area, as authorized, is being constructed in two operations. The levee extension was built first to an interim grade to obtain substantial protection with dispatch. Work is now in progress to bring the work up to the final approved grade.

"Of course, the backwater areas are not all of equal potential value nor are they in an equal state of development. Their shape, topography drainage, and position with respect to the main-line levees differ widely. Two backwater areas, both contiguous to main-line Mississippi River levees, are so closely related thereto as to merit consideration at this time in any revision of main-line levee grades or modification of the adopted project. These are the Yazoo backwater and the Tensas-Cocodrie area of the Red River backwater."

I shall not go into further detail, as I am sure the Army engineers themselves will tell you more about it.

My point is that this area has been made by the protection which has been afforded to other sections of the country.

In this particular area, gentlemen, it has been overflowed every year for the past 4 or 5 years, and there has been an overflow to such an extent that the people have been run out of their homes and their crops and farms ruined, and they cannot stand it much longer.

As I say, the Army engineers recognized it, and in 1941 Congress passed in the Flood Control Act authority for the protection of this area, authorizing as much as a maximum expenditure of $15,000,000 for that purpose.

In doing that the Secretary of War attested to the House in his letter of August 14, 1941, that it would be in the future of interest to the Federal Government, and that it was engineeringly sound and adequate, that it was economically justified—that is, weighing benefits versus cost—and that it was practical, advisable, and feasible, and that it was fundamental in the development of the over-all project.

Mr. KERR. How much appropriation has been made for this project?

Mr. HUDSON. The entire work was deferred by the war and the inability to get material, manpower, and equipment. It was immediately after the war taken up in the deficiency appropriation bill of 1945 or 1946, I am not quite certain which, and there was $2,500,000 appropriated.

Contracts were let, and the work has actually been begun; but it has just been begun, and my plea is that it would be a calamity to have it interfered with and stopped now.

Mr. KERR. How much is recommended for it now?

Mr. HUDSON. The total authority is $15,000,000, but the actual appropriation that was frozen by the President's order of last August was $2,500,000.

I want to say that these people are perfectly reasonable and we desire to be cooperative. We are in favor of the economy move, and we are in favor of lower taxes and we have nothing but respect for the objective, and if it is necessary to cut our appropriation 20 or 30 percent, whatever is done to others, we would have no objection to that.

We feel that we have no right to any priority, but we do feel that the appropriation that is actually made should be ear-marked for this particular project in such amount as you in your worthy discretion decide to appropriate.

As I understand it, and General Wheeler and his assistants can correct me if I am wrong, the entire budget for the Lower Mississippi project was $24,000,000, was it not, General? Of course, I understand from General Crawford, with whom I have discussed the matter that approximately $7,000,000 and, perhaps, as much as $12,000,000 will be required for essential maintenance, which makes the spreading of the balance rather thin.

Had it not been for the freeze order of the President, which some say was, perhaps without his legal authority but, nevertheless, like the nigger in jail it was done, and that is that, we would have had $68,000,000 for this work including $2,500,000 for the project on which I appear, but the essential dredging and the maintenance and the essential revetment should be done, as to which, I believe, it was General Crawford who said that any curtailment of that, even for economy reasons, would be unthinkable.

We respectfully submit that this Tensas Cocodrie backwater project is a very worthy project. It is an essential project if those people are going to continue to live there and exist because no farmers and small-town residents can continue to exist in a place that is overflowed every year, and that is what has been going on. It is not nature that did it. It is the unavoidable result of what has been done in the general over-all flood-control project.

BENEFITS OF PROJECT

This project would conserve some 233,000 acres of as rich land as there is in the world.

It would set aside and leave available for a sump area for storage, which is essential and we recognize it, some 133,000 acres, but it is the 233,000 acres that we are interested in and that the people want to cultivate and produce on and wish to have protected.

I could talk to you for hours on this, gentlemen, but I have probably already exceeded the time allotted to me.

I know I have not said anything that is not true, that is not provable by the record, and I do not believe I have said anything that General Wheeler, General Crawford, General Tyler, or any of the highly efficient and well informed Army officers who are familiar with it would not back up as true.

I should like only to add my utmost sincerity and my great earnestness in assuring you of the extreme gratitude that those people would feel if you should see fit to allow them their $2,500,000 in the next budget which would continue to be used as the work progressed. It is not necessary to appropriate the entire amount authorized at one time, and if you have to cut it 20 or 25 percent they will have no objection to that because they are in favor of the general system of efficient economy; and even though they are southern Democrats they are in favor of what you are undertaking.

Thank you very much for your consideration.

Mr. PASSMAN. I wish to thank you very sincerely, Mr. Chairman and gentlemen of the committee for hearing Mr. Hudson. I do hope that the committee will see fit to provide adequate funds for the continuation of this worthy project because in my opinion the matter is worthy of your very best consideration.

Terminal-Leave Bonds

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. DORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

LIBERTY POST, NO. 67, INC.,
THE AMERICAN LEGION,
Liberty, S. C., June 5, 1947.

Hon. BRYAN DORN,
United States House of Representatives,
Washington, D. C.

DEAR MR. DORN: An increasing number of queries are coming from merchants and businessmen regarding the posting of terminal-leave bonds as security for the purchase of machinery, tools, livestock, farm implements, and other materials needed in various lines of work. Of course, it is necessary that we explain that the posting of these bonds as security is illegal.

It is difficult for veterans to understand why they must borrow money at a higher rate of interest than is paid on their terminal-leave bond to make purchases when they could purchase many items at a great saving from the War Assets Administration. By the time these bonds mature the War Assets Administration will have sold practically every item needed in various lines of work.

This post has voted 100 percent in favor of arrangements being made whereby veterans may cash their bonds and have the use of the money due them. We appreciate your fine speech on the floor of the House and hope you will continue supporting this proposition so that the bonds might at least be posted as security for loans or other items needed.

Thanking you, and with all good wishes, we remain,

Sincerely yours,

E. W. TAYLOR,
Post Commander.

Veterans' Insurance

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bridgeport Post of June 5, 1947:

VA INSURANCE IS SCORED

Representative EDITH N. ROGERS of Massachusetts is chairman of the House Veterans' Committee. Since World War I she has been most active in veteran affairs, and when out of what seemed to be a clear sky she denounces the operation of the Veterans' Administration in regard to insurance, it really is news. She can generally be relied upon to have the facts.

She told the House this week that the time has come to "stop rendering lip service" to the "mythical 'fine job' allegedly being done for the veteran" and face the cold fact that "the service is inefficient and unsatisfactory." Outside of a few bookkeeping delays, or temporary difficulties due to the large volume of business being handled, it had been generally considered that the VA work in insurance was being admirably conducted.

Mrs. ROGERS, however, points out that there is an appalling drop in service insurance held by veterans every month. This she declares justifies an investigation, to find out why the most liberal and the cheapest insurance in existence should be losing ground.

Her statistics show that after World War I there were 5,000,000 policies in force. Of that number, only 400,000 are left. When World War II ended 13,000,000 men and women held service policies. That figure has dwindled to about 5,000,000.

Why? asks Representative ROGERS. She avers that the average veteran would prefer to pay more for insurance with an independent, commercial company because of the better service he receives.

Referring to this better service, her statistics show that the Veterans' Administration has approximately a million and a quarter unapplied remittances "floating around the country" which they are unable to credit properly because they cannot locate the records of the men. As a matter of fact, it is known that 2 or 3 months are required to get a reply from the VA on insurance matters, even when the records are available.

Thousands of applications for conversion of term insurance are lying dormant; death and benefit claims often require a year or more for settlement. These are some of the service problems of which Representative ROGERS complains.

Further, she claims the VA has "far more people per policy in force than is required by any commercial company," yet the VA alleges that it needs more help to handle the unprecedented rate of discharge of military personnel. VA has a surplus of from thirty to sixty million dollars, but is vague as to the exact amount. Representative ROGERS would have the Comptroller General find out, for the benefit of all the taxpayers, whose money this actually is.

This is, indeed, an unpleasant report, coming at a time when veteran organizations, newspaper and magazine editors, commercial insurance executives, and scores of other interested persons have been fairly begging the World War II veterans to rush to the nearest VA office to reinstate their lapsed policies.

OIC Program

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

As the House prepared to open debate on Representative KARL MUNDT's bill to preserve the State Department's foreign information program, the Federation of American Scientists strongly urged congressional support of the bill. The federation's position was stated in a letter from Dr. Robert E. Marshak, chairman of the federation, to the bill's sponsor, Representative MUNDT (Republican, South Dakota) and to Senator VANDENBERG and Representative EATON (Republican, New Jersey), chairmen of the Senate and House Committees on Foreign Relations. Dr. Marshak's letter stressed the importance of informing foreign peoples of the dangers of atomic war, and of America's proposals for averting this catastrophe. "We believe," he said, "that a most effective means of propagating this information is the continuation and expansion of the OIC program. Informed men are peaceful men."

Dr. Marshak, who last month became head of the Federation of American Scientists, formerly served at the Los Alamos bomb laboratory and is now professor of physics at the University of Rochester. The federation includes a majority of the scientists who developed the atomic bomb, and has as its primary purpose the achievement of effective international control over atomic energy.

The full text of the letter follows:

"As scientists, we have a special awareness of what another great war would mean. As scientists, also, we are members of a professional world community. We know first-hand how much a working knowledge of each other's interests and activities can do to insure mutual understanding and confidence, even among people who are separated by political and cultural barriers. We therefore attach great importance to the program of the State Department's Office of International Information and Cultural Affairs, the purpose of which is to bring directly to other peoples a knowledge of our traditions, our ideals, and our everyday lives.

"The Federation of American Scientists was organized to work especially for control of atomic weapons, as a vital step toward establishing the confidence and community of interest among nations which alone can avert disaster. We have been gratified and encouraged by the widespread support in this country of the principles of world control which the United States has advocated in the United Nations Atomic Energy Commission. It therefore seems especially important now that people in other lands be informed directly and in detail of the terms of our proposals and our purposes in offering them.

"Fear, intensified by international rivalry in atomic weapons, can lead swiftly into an arms race which may well end in the destruction of our civilization. It is essential for world peace that all peoples, everywhere, should recognize this inescapable fact. We believe that a most effective means for propagating this information is the continuation and expansion of the OIC program. Informed men are peaceful men.

"The Federation of American Scientists therefore urges the enactment of legislation

specifially authorizing the OIC program, so as to permit full restoration of the appropriation requested for it by the Department of State. At a time when this Nation is spending billions of dollars on its Military Establishment, we cannot afford to eliminate an inexpensive program which may contribute vitally toward preventing catastrophe.

"ROBERT E. MARSHAK,
"Chairman, Administrative Committee, Federation of American Scientists."

Tax Reduction

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. WILSON of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bedford (Ind.) Daily Times-Mail of June 2, 1947:

A NEW SITUATION—PUBLIC OPPOSITION TO TAX REDUCTION

Legislators are facing a brand new situation, which is baffling. For the first time in our Nation, there is opposition to tax reductions. Ordinarily, one of the best ways to get votes is to promise tax reduction; and an even better method of getting votes is to actually reduce taxes.

Republicans campaigned last fall on the platform that income taxes should be reduced at least 20 percent. Their opponents scoffed at the idea, but the majority of the Republicans elected to Congress were sincere in their statements. The very first bill introduced into the present Congress was to cut taxes 20 percent. (It is known as House bill 1.) Now that bill has emerged from a joint Senate and House committee in such a manner as to entirely justify the confidence of the voters who believed the Republican candidates last autumn.

It is a good tax bill. Certainly, it is an equitable bill. Every person in the land making $500 or more a year will benefit. Roughly this is how the bill will operate: Net incomes of $1,000 or less, 30 percent cut; incomes of $1,000 to $1,398.83, reductions of 20 percent to 30 percent; incomes from $1,398.83 to $136,720, reductions of 20 percent; incomes up to $302,396, reductions of 15 percent; and above that figure, 10½ percent.

Because so few people make very large incomes, there is little thought given to the small amount of money which is really left to the taxpayer after taxes. A man who has a gross income of $100,000 pays out $67,320 plus 89 percent of any money earned beyond $100,000. A man making $200,000 pays $156,820 plus 91 percent of any money earned beyond $200,000. The Treasury Department has not been very fair to the handful of people in the very high income tax brackets. There is publicity about the gross salaries of some corporation officials, movie stars, etc., but no mention of the fact that Uncle Sam bites off $91,000 out of each $100,000 in the very top brackets. For years there has been a cry of "soak the rich." They can't be soaked much more than they have been. Leaving a man only 9 cents out of each $1 earned is certainly not an incentive to building a larger business.

There has been a marked indifference to business expansion, especially by small, closely-owned companies. What is the use? The owners take all the risk, and the Government takes almost all the profits, but fails to share in any losses which might come in years of poor business. Within the past 3 months, three examples of curtailment of business expansion have come to our attention. In each case, the attitude of the owner was the same, "I would rather have a smaller income than to stick my neck out, work like the dickens, and then see the Government come along and gobble up the profits. I would rather be a small outfit; have less money, but fewer troubles and worries. I'll live slower, but I'll live longer." That is a logical attitude, but it does mean the opportunity of jobs is decreased—and that is unfortunate.

It is not a pleasant truth—but it is a truth just the same—that the poor cannot get rich unless the rich get richer. Unless a business expands, it will not create employment. The history of most large fortunes is the same—some capable man had an idea in which he believed, he saved a little money, borrowed some more money, and went into business, prospered or went broke. Some of those who prospered bring to mind such names as Ford, Carnegie, Rockefeller, Wright, Chrysler, to name a few of the outstanding.

It is becoming more and more apparent that the manifold Government agencies, even the Army and Navy, can function very successfully on smaller appropriations than they received during the New Deal days when the philosophy was to "spend and spend, elect and elect." Most of the opposition to tax reduction comes from the unnecessary Government employees who will be chopped off the Federal pay roll, which is paid by our withholding taxes. They represent a very vocal group.

The Nation will function well with a much smaller staff. Provisions have been made to reduce the national debt ($23,000,000,000 will have been paid by June 30), and all of us will have more money to spend on our homes and families. Why anyone objects to tax reduction as long as essential services are unimpaired is a mystery. It is exactly the same as objecting to an increase in wages or salary. Tax reduction means more take-home pay. As for us, we like it.

Increased Widow's Pension

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. FORAND. Mr. Speaker, under leave already granted me, I include as part of these remarks a statement I have just issued in support of the bill I introduced today to raise the limit on the amount of annual income from other sources which may be received by the widow or child of a veteran without disqualifying them for a pension for non-service-connected death of the veteran.

I have today introduced a bill to raise the limit on the amount of annual income from other sources which may be received by a widow or child of a veteran of World War I or World War II without disqualifying such widow or child for a pension for the non-service-connected death of a veteran.

Under existing law if a widow or a child has other income in excess of $1,000, or a widow with a child has income in excess of $2,500, such widow is not entitled to a pension unless the veteran died of a service-connected disability.

Under the provisions of my bill a widow without children would be eligible for such pension provided her income did not exceed $1,500 annually, and a widow with a child or children would be eligible to the pension provided her income did not exceed $3,500 per annum.

This increase is only fair in my estimation when we consider that the cost of living has risen at least 50 percent since existing law was enacted.

United States Information Service

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

ROME, May 7.—Regardless of their varied political beliefs, Italians here are dismayed and bewildered by the possibility that the United States Information Service might be abandoned following this week's vote of the American House Appropriations Committee.

The Roman newspapers carried the reports of the House committee's decision to withhold funds from the State Department's division of information because it considered that USIS was undesirable propaganda. Nothing could be farther from the minds of thousands of Italians who have been using this service here in the last 2 years.

This correspondent, who has lived in Rome for more than a year, has never heard a single complaint from any Italian, whether pro- or anti-American, that USIS was attempting to disseminate political propaganda in Italy. It is recognized here as simply an agency—far more modest and objective than similar British, French, and Russian organizations in this country—which distributes invaluable cultural, technical, professional, and civic information which is unavailable elsewhere.

Russian, French, and British books, for example, are available in the city at reasonable prices in lire. United States books, for which there is an enormous demand, can be bought only with very expensive American dollars. Therefore the USIS library and reading room in Rome alone has a steady attendance of at least a hundred Italians daily. Proportionate attendance has been reported in eight other USIS libraries and reading rooms spread through the country.

In addition, the USIS daily press bulletin, which is carefully nonpolitical, has been irreplaceable to Italian newspaper editors seeking the full text of speeches and press conferences of President Truman and highly placed United States political leaders.

Technical bulletins covering medicine, agriculture, engineering, education, industry and labor are considered so competent that they are used as texts in the Italian technical institutes. It was through these bulletins that the Italians got their first precise information on penicillin, streptomycin, atomic energy, and radar.

The Voice of America radio programs, carried over by the USIS from the Psychological Warfare Bureau, have reached such heights of popularity on a broad cultural and scientific basis that in 1 week the

USIS officials received more than 2,500 letters from all parts of Italy requesting the monthly bulletins of its programs.

The mobile USIS film units covering health, civics, and subjects of interest to women, go out every week end to the most remote provinces of Italy, drawing an average of 200,000 Italians a month. USIS exhibits on similar subjects also attract many customers each month.

Disbanding the USIS, in Italian eyes, would not be considered a weighty political step, in one direction or another. But it would be felt as a serious loss in their struggle to overcome the actute problems of literacy, hygiene, and knowledge of the outside world and their desire to develop cultural ties with the United States that would transcend political aspirations. Those Americans here who are interested in this aspect of Italian life could wish that Congress would think in terms not of less but of more money for the USIS program.

Kansas City Vote Fraud Case a National Disgrace

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, no word from the President can remove the stigma of downright fraud from the Kansas City primary election contest last year. The President, of course, had nothing to do with this situation except that his candidate was the beneficiary of the actual fraud. Yesterday the New York Herald Tribune had a timely editorial on this subject and under leave to extend my remarks I am including it herein:

LOGICAL CONCLUSIONS

President Truman's remark that the Kansas City vote-fraud case should be "carried through to its logical conclusion" was just about the mildest and most innocuous observation he could make on a crime that has shocked the Nation.

When politically inspired thugs broke open a steel vault in the Jackson County Courthouse at Kansas City 10 days ago and carried away incriminating ballots, records, poll books, and tally sheets of the August 1946 Democratic primary, President Truman was staying at the Hotel Muehlebach, only a few blocks away. The implications could scarcely have escaped his notice. The stolen primary records contained evidence that Representative Roger C. Slaughter had been defeated by gross fraud. The primary contest had attracted Nation-wide attention as a Presidential purge.

An exhaustive investigation by the Kansas City Star and other local agencies disclosed that in executing the President's expressed desire the revitalized Pendergast machine had resorted to widespread and outrageous fraud. Subsequently the crime of stealing an election was compounded by the brazen theft of the incriminating records.

Perhaps the "logical conclusion" President Truman had in mind was a further investigation of the case by "duly constituted authorities," the indictment of the underlings who were so negligent as to allow the courthouse vault to be robbed and the minor election officials guilty of the primary frauds.

But there is another "logical conclusion" to this Kansas City case which may outdistance the local law enforcement the President has in mind, a "logical conclusion" in which an aroused citizenry finally smashes the corrupt Pendergast machine and which provides the Republicans with another clear issue in the Presidential election of 1948.

The Labor Bill

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. LeFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial by Mark Sullivan which appeared in this morning's New York Herald Tribune. Mr. Sullivan brings to the attention of his readers the same reasoning I brought to my constituents a few days ago. The Hartley-Taft bill is the result of long and intensive study. It was not put through in haste and anger or with any desire to punish anyone. I believe the legislation is an expression by the Congress to put through the wishes of the people. If the President's statement made after the election last fall, that he would cooperate with the Congress, was anything more than a political gesture, now is the time for him to prove it.

The editorial follows:

ANY VETO OF LABOR BILL REGARDED AS EXTREME USE OF POWER—MARK SULLIVAN SAYS PRESIDENT SHOULD CONSIDER LARGE MAJORITIES WHICH MEASURE RECEIVED IN CONGRESS, LEGISLATORS' SPIRIT OF COOPERATION

(By Mark Sullivan)

WASHINGTON, June 8.—Public interest in whether President Truman vetoes the labor bill includes interest in the considerations that bear upon him as he arrives at decision. Granting that Mr. Truman is conscientious, that he has a mind of his own and arrives ultimately at his own decisions, it remains inevitable that he must to some extent depend upon others.

This is true of any measure coming before any President, and especially true of the labor bill, containing some 20,000 words and including many intricate provisions, expressed with minute care and definition. During the some 2 weeks in which the labor bill was being put in final form by conferees of the House and Senate many other problems of extreme public importance weighed upon the President, and he was obliged by official engagement and his mother's illness to pass many days away from Washington. Under modern conditions no President can be expected to give meticulous word-by-word study to every word of every legislative measure or other document that goes before him. As a substitute there is in the executive department a system which lays before the President accurate and adequate digests of measures and accompanying data.

SEES METICULOUS CARE

Considering the handicap under which any President as an individual necessarily is, there is some weight in the fact that the committees and groups in Congress who draft measures and who propose and argue for amendments have given the subjects a minuteness of care impossible for the Executive to achieve. The pending labor bill was written with meticulous word-by-word care by the labor committees of the House and Senate. Within the Senate committee there was prolonged face-to-face argument, conducted in a spirit of mutual respect, by Senators holding such opposed views on some provisions as JOSEPH H. BALL, of Minnesota, and IRVING M. IVES, of New York. Again, in the conference of committees of the House and Senate, to adjust differences between the versions originally passed by the two, there was prolonged concentration upon provisions to be put in the bill. The care and discussion that went into the writing of the labor bill is itself a consideration that should weigh upon the President's decision on it.

In yet another respect the labor bill deserves a special consideration from the President. To a degree not often equaled this bill represents the will of the legislative branch of Government. As it lies on the President's desk it was passed by the House with a majority of more than 4 to 1, literally 320 to 79. In the Senate a majority of the President's own party supported the bill. In the House 103 Democrats voted for it, only 66 against. In the Senate 17 Democrats supported the bill, 15 opposed.

CITES LABOR'S OPPOSITION

From his official family the President receives information and advice. From other sources he receives pleas and pressures. Among these the most strenuous come from the labor leaders. These are hardly in a position to receive the consideration they demand. Throughout the weeks in which the labor legislation was being written the labor leaders maintained a single position, no legislation at all. To Congress they offered no alternative and they now offer none to the President. The tens of thousands of letters and telegrams which labor leaders have incited to be sent to the White House each and all come down to four words, "veto the labor bill."

Veto of the labor bill by President Truman would be an extreme use of the veto power, an extreme assertion of the constitutional power of the Executive to frustrate the legislative branch. Not only has the legislative branch expressed itself by a more than 4 to 1 vote in the House and a more than 3 to 1 vote in the Senate for the bill as it now lies before the President but, further than that, Congress has already paid deference and consideration to the President. In the final form of the bill arrived at by conference committees of the House and Senate provisions were dropped which Congress wanted and which had been written into the original versions passed by the Senate and House. They were dropped for the deliberate purpose of making the bill more acceptable to the President. That reflected a spirit of cooperation on the part of Congress. Veto now by the President would fairly be regarded by Congress as a refusal of cooperation.

Our Tariff Policy

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the New York Herald Tribune on May 11, 1947, showing that a recent poll reveals that 57 percent of those polled favor low tariffs:

OPINION ON THE TARIFF

The tariff has been a hot political issue since the early days of the Republic. At the present time, the formulation of a sound

tariff policy is as important to the national welfare as it has ever been. It is therefore with considerable interest that we note the findings of Mr. Elmo Roper, who commented in this newspaper recently on the results of his Fortune polls on the subject. Mr. Roper discovered a significant shift in American opinion since 1939, when nearly 60 percent of those questioned said they believed in a high tariff. He now finds 57 percent in favor of low tariffs, and if one excludes those who gave qualified answers or expressed no opinion, the ratio is 3 to 1 against high tariffs.

It must be admitted that these figures give only a very rough measure of the opinions of the voters. Those polled were not tariff experts. A considerable proportion admitted frankly that they did not believe they had enough facts to give a valid opinion. None of them had an opportunity to say how high or how low they thought tariffs should be. It is likely that many Americans favor lower tariffs except in specific instances where their own interests would be directly affected. However, on the basis of these polls, we believe it would be fair to say that a majority of Americans have been impressed by the argument that lower tariffs will mean higher living standards through increased trade. The minority presumably feel that such advantages as lower prices to consumers would be outweighed by disadvantages like the loss of markets for certain American industries and unemployment in those industries.

Significantly, Mr. Roper finds that the shift in opinion on the tariff question coincides with an increase in the number of those favoring international cooperation as opposed to isolationism. He concludes that "not only do majorities say they want international cooperation, but they say they want the kind of tariff arrangement needed to implement that cooperation." It would seem, then, that the majority of those polled believe tariff reduction is necessary, not merely because it would produce such immediate and direct benefits as lower prices but also because they consider that America's prosperity and prosperity of the international community are interdependent. That, at any rate, is a sound conclusion.

Reduction of Agricultural Appropriations

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 9, 1947

REACTION FROM AGRICULTURAL APPROPRIATION BILL

Mr. TRIMBLE. Mr. Speaker, I regretted to see the appropriations recommended by the budget for the agricultural agencies cut. I feel that it was a mistake, and, under unanimous consent, I include in the RECORD as a part of my remarks the following letters that I have received from my district protesting those cuts:

DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING ADMINISTRATION,
Fayetteville, Ark., June 3, 1947.

Hon. J. W. TRIMBLE,
House Office Building,
Washington, D. C.

DEAR SIR: Farmers of Washington County are upset about the reduction in agricultural appropriations, as voted by the House of Representatives.

We appreciate the good fight you are making for the farm program and ask you to continue to do everything in your power to restore this drastic cut in appropriations.

We wish to call your attention particularly to the $300,000,000 AAA conservation payments and section 32 funds. We farmers feel we have been working under a definite promise from the Government and feel it would be impossible to make payments on a fair basis if this reduction in funds goes through.

We also ask your support in insuring a 1948 program to meet conservation needs.

Yours very truly,
WALTER D. RAMEY,
LINCOLN N. MAUPIN,
RAE D. STOKENBURY,
Washington County ACA Committee.

UNITED STATES
DEPARTMENT OF AGRICULTURE,
PRODUCTION AND MARKETING ADMINISTRATION,
Harrison, Ark., May 31, 1947.

Mr. J. W. TRIMBLE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN TRIMBLE: We as a farmer committee elected by the farmers of the Third Congressional District are "smelling the patching" from the results of the House of Representative action in cutting the agricultural appropriation.

The farmers are very much upset and are bringing much pressure to bear on committeemen of your district. Farmers do not feel that they have been fairly treated according to the action and information that were furnished the Department of Agriculture in setting up the 1947 agriculture program by both Houses and major parties in 1946.

All the farmers are looking to you for your continued support in getting triple-A funds and section 32 funds restored in the Senate and the necessary action to insure a 1948 program according to conservation needs.

Very truly yours,
W. D. RAMEY,
Fayetteville, Ark.
JESS W. PARRISH,
Harrison, Ark.
JIM PARKER,
Huntsville, Ark.
H. E. MCMORRIS,
Green Forest, Ark.
RALPH HUDSPETH,
St. Joe, Ark.

UNITED STATES DEPARTMENT OF AGRICULTURE, PRODUCTION AND MARKETING ADMINISTRATION,
Huntsville, Ark., May 20, 1947.

Hon. JIM TRIMBLE,
House of Representatives,
Washington, D. C.

DEAR MR. TRIMBLE: We are enclosing with this letter a summary of conservation (triple A) practices carried out in Madison County in 1946, for which the Government paid a part of the cost (usually about 50 percent). We are also enclosing a clipping from the Madison County Record written by Mr. Dewey Harris, a farmer living near Huntsville, Ark.

We realize that we do not have to sell you on the idea of soil conservation, but we trust that you can use the enclosed information to an advantage in helping to sell the program to someone else.

We, the PMA Committee of Madison County do believe that much and lasting good has been done in our county and State through the agricultural program, and that a lot more can be done if we can be provided with the proper assistance, that is, cash payments to farmers and funds for personnel service. We believe that every dollar spent in carrying out practices will be repaid several times to this and future generations.

You will note from Mr. Harris' letter that he has used $788.35 worth of material and services that netted him $14,505.20 over a 5-year period. Mr. Harris further states that the increase in production on his farm is directly due to benefits received through the triple-A.

If you desire any further information in regard to the work in this county, please call on us at your convenience.

Yours very truly,
D. W. ALDERSON,
JAS. M. PARKER,
OREN PUERRY,
Madison County PMA Committee.

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 9, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over Station WNBF on July 7, 1947:

Dear friends of the Triple Cities and my congressional district, this kind invitation of my good friend, Merlin Castarlin, to speak with Capt. Bob Townsend at Ross Park on Sunday, June 15, has been duly received and accepted. I look forward to greeting my stanch friends on the eleventh annual Townsend Day. This occasion has become as popular in Binghamton as Old Home Day. It gives folks a chance to get together in true American fashion.

Naturally I am anxious to see as many of you at the park as can possibly get there. We have a rendezvous with patriotism, you and I, and I have a most interesting and important message for you. See you, then, at Ross Park, Sunday, June 15, at 2 o'clock.

Just after I spoke on the courthouse square in Binghamton on Memorial Day, a member of city council accosted me and asked what progress is being made in Congress on the question of paying veterans cash for their terminal-leave bonds. Several members of Legion and VFW posts asked me the same question. I had to tell them no action had yet been taken.

These gentlemen pointed out that many veterans need the cash and I quite agree. If I am not mistaken, the enlisted men with low pay were the ones who had to take the bonds, while the officers received terminal leave pay in cash.

I can't see anything fair about stalling off the great majority of ex-servicemen any longer. The issue has to be met sooner or later, why not now? This cash will certainly come in handy, and if my letters are any indication of how veterans feel and I think they are, most of them could use the money.

Many veterans are building or buying homes, or automobiles, or starting to raise families. Perhaps they are in the hole and want to get caught up. Yes, there are thousands of ways they can spend the money to good advantage. As it is now, they can only look at the bonds.

To you veterans interested in this issue of converting terminal leave bonds into cash, drop me a line and express yourselves. Don't let a few, who are lucky to be well-off and comfortable, try to drown out your desires or ridicule your sentiments.

Let me know how you stand. Your letters approving my stand in wanting you to get the cash will be strengthening to me against a tide of opposition which always comes from those who don't need the cash.

I'm for the veteran, first, last and always, whether he fought in World War I or II or any other American engagement.

I recently made the following speech on the floor of the House of Representatives which I would like to read to you at this time.

"Mr. Speaker, one of the most inspiring parts of our Constitution is contained in the preamble which guarantees to all citizens the right to life, liberty, and the pursuit of happiness. Yet, when men and women, 9 out of 10 of them in this country reach the age of 60, they are unable to pursue that happiness because of limited means or the lack of wherewithal.

"Therefore, I am advocating immediate consideration and passage of a universal old-age pension plan such as the one outlined by the gentleman from Oregon [Mr. ANGELL] in his bill, H. R. 16. This is popularly known as the Townsend Plan. Our hope is that not just one group or a few will be included in our social-security system, but all groups regardless of race, religion, or color, and regardless of occupation. All citizens of the land should have the opportunity to enjoy the fruits of a well-earned retirement and the results of all their productive years so that they can live happily in their old age.

"We can successfully fight off communism by making our American system work. The most natural desire of everyone is to have security in his declining years. Reasonable retirement for all is the answer, especially when such retirement is actuarily sound.

"The millions of Americans who have reached 60 or who are approaching this ripe age deserve consideration. They have the right to anticipate their brightest days to come.

"With security guaranteed, they can emulate the experience of Rabbi Ben Ezra who in his wisdom said in Browning's poem:

> "'Grow old along with me!
> The best is yet to be,
> The last of life, for which
> The first was made.'"

Thank you.

The Hartley-Taft Bill

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the May 3, 1947, issue of America, a Catholic review of the week:

CONGRESS AND LABOR

When even columnists critical of organized labor, like Arthur Krock of the New York Times, concede that the Republican majority in Congress is playing politics with labor legislation, it seems useless to devote time and space to a serious discussion of the issues. The bill which the House passed on April 17 by a thunderous vote of 308 to 107 indicates that the Republicans have their eye not on industrial peace, but on the 1948 elections. They want to present Mr. Truman with a bill that he will be constrained to veto. They want to be able to go to the country next year and say: "We know you good people are exasperated with certain abuses of organized labor. You are sick and tired of strikes. When you went to the polls in 1946, you elected a Congress to do something about the situation. Well, we tried our best. We passed a bill which prescribed fair and equitable rules of conduct for labor and management, which aimed to protect individual workers and to recognize the paramount public interest in labor disputes. That's what the preamble to H. R. 3020 said. But what happened? We passed the bill, but a Democratic President refused to permit it to become law. He vetoed it, just like Gromyko. Blame him, folks, and vote for us."

What removes the last vestige of doubt about the intentions of the Republican majority, and their Democratic allies from the South, is their insistence on wrapping labor legislation in one big package. In this way they insidiously combine constructive suggestions with out-and-out antilabor proposals, so that a fair-minded President has no choice: he is obliged to veto the whole bundle.

The Republicans are well aware that Mr. Truman would sign a bill outlawing jurisdictional strikes and certain types of secondary boycotts, or a bill protecting the rights of the rank-and-file union man, or a bill providing a fair and workable formula for dealing with industrial disputes which threaten the general welfare. But that is not what they want. They do not wish the White House to share with them the credit for a piece of constructive legislation, if, which is doubtful, they want constructive legislation at all. They desire political profit from the transaction. As the saying goes, they want to put the President on the spot. They want him to be damned if he does and damned if he don't. And so they wrap up the good with the bad and dream pleasant dreams of 1948.

Not all Republicans, it should be noted, approve this strategy. The bill reported out by the Senate Committee on Labor and Education is a notable improvement on H. R. 3020, and credit for this goes to three Republicans on the committee—Senators IVES, AIKEN, and MORSE—who joined with the Democrats to outvote the committee chairman, Senator TAFT, on several important points. But this bill is also a one-package job; hence subject to the same general criticism as H. R. 3020. The emphasis is too political.

The present prospect is, then, that no new labor law will be written by the Eightieth Congress. While the House has the votes, the Senate cannot muster the two-thirds majority required to override a Presidential veto. And Mr. Truman will almost certainly veto whatever omnibus bill eventually emerges from the joint conference that will have to iron out the differences between the Senate and House bills. Regardless, therefore, of the intentions of the men who planned it this way, labor and management now have a breathing spell to put their respective houses in order; a chance to get together and make collective bargaining work. It may be the last chance they will ever have.

The Fatalistic Psychology of Boom and Bust

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Leon Henderson, from the New Leader of June 7, 1947:

THE FATALISTIC PSYCHOLOGY OF BOOM AND BUST

(By Leon Henderson, former Director of OPA)

A boom-and-bust psychology seems to be dominating America today. It carries with it a spreading fatalism for many persons in responsible positions—a fatalism which paralyzes tested actions which might be taken to forestall, mitigate, or insure against potential disasters.

In early 1946, it was possible to take the position that transition from war to peace could be achieved without alarming dislocations. Economic factors favored this possibility. Peacetime full employment was in sight after years of strain and almost despair. Peacetime production was never higher and it was rising. A balanced budget was in sight. The price level, despite assassination threats, was manageable. Business spending, financed by generous tax treatment, was surprisingly vigorous. The inventory pipe lines were hungrily crying to be filled. A war-devastated world was seeking our goods. There were bright prospects that, by keeping sacred promises to veterans, a steadily climbing housing activity would fill gaps left when consumer goods demands had been met.

Above all, by passing the Full Employment Act, the Government seemed to be guaranteeing that its immense resources would be available if depression ever threatened again.

Reviewing this rosy outlook, how is it possible that the prophets of boom and bust have commanded attention? They smell bankruptcy ahead; for the first time in years the rate of business failure is turning upward. Here and there mills are closing down and retail sales are declining.

In the meantime an irresponsible Congress destroyed sane controls over prices, profits, scarce materials, and consumer credit, and gave us insane inflation.

An irresponsible industry group, pressing on a short-sighted Government, mutilated the veterans' housing program. Today we still have scarcity of housing instead of plenty. This year less than half of last year's housing results may be expected.

In the short space of a year the glorious possibility of matching purchasing power with high production of goods has disappeared. Only by drawing on savings, by increasing consumer debt, by special financing for foreign trade, has the dangerous gap been partly bridged.

A reactionary majority of Republicans and southern Democrats has done a major injury to responsible capitalism, because a responsible capitalism cannot countenance inflation, scarcity, and unconscionable profits.

Given the possibility of approaching business decline and unemployment, what does the majority in Congress propose to do?

It proposes to lay in President Truman's lap a flock of antiliberal, deflationary measures and then go home. It proposes to leave the welfare of this country to a discredited policy of laissez faire.

Faced with a month-to-month decline in construction activity, they sidetrack the mild Taft-Ellender-Wagner bill and offer to let landlords raise their rents.

Faced with a demonstrated disastrous decline in workers' real wages, the reactionary Congress proposes an antiliberal bill to coerce labor from exercising their economic bargaining power.

Every evidence points to the need of additional purchasing power. Mr. KNUTSON and his gang propose to lower taxes for the well-to-do, thus reviving the outworn Hoover trickle-down theory.

Do the Republicans have a formula for inflated prices? Hardly. They have a Dun & Bradstreet questionnaire which they will file in the back room when they go home in July.

Every major measure they propose can be demonstrated to be deflationary. Had a group deliberately set out to choose a program for deflation, it could scarcely have selected a better calculated set of ideas.

We of the liberal faith cannot accept the fatalistic boom-and-bust thesis. Every sinew of our faith tells us that by intelligent choices, by democratic planning, a responsi-

ble government can defend its people against depression.

The Americans for Democratic Action have a program.

ADA suggests that a determined government, utilizing a Price Adjustment Board, help American business to reduce the level of prices by 10 percent, and the cost of construction by 20 percent.

ADA proposes that rent control be continued, that adequate funds for enforcement be supplied.

ADA suggests that the Government keep its wartime commitments for support of farm prices, that the school-lunch program be expanded, and that the Aiken food allotment bill be passed. It recommends a planned procurement of food for foreign relief and wise use of surpluses.

As to taxes—the ADA strongly urges that, when taxes can be cut, they be reduced where the greatest amount of vigorous purchasing power will result. Raising the individual exemption from $500 to $700, and repeal of the burdensome excise taxes, will leave money at home in the right homes.

Industry and labor, by collective bargaining in key industries, have established a new workable "wage package" of 15 cents an hour. ADA suggests that this is a useful standard for rapid adoption. We suggest, too, that the minimum wage floor be raised to 65 cents an hour, and coverage expanded to the limit of Federal power. There are 14,000,000 workers not now covered by unemployment compensation. We suggest that these be brought in, that the scale and duration of payments be increased.

ADA believes that the lending authority of the Export-Import Bank should be increased by $5,000,000,000, so that useful tasks in world reconstruction may be promptly begun.

ADA regards the potential of housing construction as most vital to high employment, as well as the keeping of commitments to veterans. We urge the Federal Government to underwrite 1,500,000 housing units a year, that the program for factory-built houses be revived, and that public housing be authorized to provide 500,000 rental units a year at modest rents.

This is a positive program for progressives; it's a workable, feasible program for America. It involves no new adventures; the administrative machinery for most of it stands ready at hand, eager to do battle against the false philosophy of fatalistic "boom and bust."

The Situation in Greece

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter which I received from Mr. William Dumas, an American citizen, who recently visited Greece, the land of his birth:

DES MOINES, IOWA, *May 10, 1947.*

Hon. PAUL CUNNINGHAM,
House of Representatives,
Washington, D. C.

MY DEAR MR. CUNNINGHAM: Since the American people through their Government have made the decision to step in and help Greece solve her many problems, I want to make a humble suggestion to you regarding the funds which our Congress has voted for that country.

First, I wish to express my appreciation for the contribution you have made concerning the solving of the problems of Greece. Also, that I am a Greek-American myself and have also served in the United States of America Army in the First World War. I had not visited my native land for nearly 39 years. Last summer, however, I went to Greece by plane and stayed there for 3 months. I devoted much of my time there to the study of the general conditions of that country. Many of the statements to follow are the result of what I saw and felt during my stay in Greece:

A. The American Government should not entrust those millions of dollars to the hands of the present Greek Government. If the American Government should do so it would commit a great and irreparable mistake.

1. The present Greek Government is not representative of the Greek people.

2. The present Greek Government is not trustworthy. It is a government, rather a gang, which would spend the American dollars in the interests of the monarchial system in Greece.

3. With a slight exception, the present Greek Government is not made up of capable and honest men. It is made up of German collaborators and traitors who enriched themselves at the expense of the common people during the occupation.

4. The present Greek Government, under the dominant power of the unwanted king, his corrupt court, and his dishonest politicians and generals would, without any doubt, use the American dollars to entrench a Fascist and dictatorial system in Greece as is unknown to the history of mankind. Fascism breeds Communists and revolutions, and communism breeds dictatorship and oppression.

5. The corrupt Greek politician who is the brain trust of the present Greek Government and the king would move heaven and earth to actually steal the money through devilish political maneuvers, unknown to and unsuspected by the American people, and enrich himself at the expense of the American taxpayer and the misery of the common people of Greece.

B. The American Government should employ American experts in Greece to administer the economics of that country and direct and supervise the spending of the American taxpayer's savings.

1. In their work, the American experts should enlist the knowledge and assistance of capable and honest Greek Americans through the Greek War Relief headed by Skouras brothers and William Helis and other capable and honest American Greeks.

C. The American Government should see that the American dollars are spent for public works. This would benefit the common people in Greece and the nation at large. This would employ the mind of the workingman and would therefore stop it harkening to the idolatrous and deceptive trumpet of the communistic Kremlin whose efforts are to communize the world.

Should the American Government work in Greece systematically and with a foresight and should it see that the money is spent in the interests of the country at large, and not in the interests of the undesirable king and the corrupt Greek military men and aristocracy, it could make Greece a veritable paradise. The Greek people love America and admire the American people more than any other people in the world. They love democracy and they hate communism. They will work hard to build and rebuild their country on a sound and honest foundation, provided the American Government restores them their freedom which they now have lost in the hands of the king.

The American Government should avoid the mistakes and blunders of the British who went into Greece and then went out of Greece with bowed faces stained with ignoble acts and shameful policies.

My dear Congressman, they say that a sin concealed is like a hidden fire. It eats into the very life and consumes it with the horrible flame of destruction. The British have committed too many sins in Greece—too many crimes. If the American Government is not careful at this moment and if it has not the will to watch and expose and correct the British sins, America will suffer the humiliation in Greece that Britian did. The whole world will be watching America in Greece now, let alone the Greek people. Let not America lose her prestige which is more precious than money or anything else.

Sincerely yours,

WILLIAM DUMAS.

Soil Conservation

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. PRICE of Illinois. Mr. Speaker, a few days ago, this House passed an appropriation bill for the Department of Agriculture wherein the budget for the Soil Conservation Service was drastically reduced. I opposed a reduction in this the most basic of all our farm programs. I opposed this cut on the premise that its effect will be a drastic and lasting reduction in farm prosperity.

As evidence of the beneficial effect that the Soil Conservation Service's program has had on the American farmer, and further as proof that the curtailment of this Service will adversely affect farm income, I include herewith an article taken from the Lebanon (Ill.) Advertiser dealing with soil conservation in St. Clair County, Ill.

From the conclusive evidence contained in this article, I again reiterate that the recent cuts in funds for the Soil Conservation Service were a serious mistake.

The article follows:

CONSERVATION FARMERS HAVE HIGHER INCOME

By adopting soil-conservation methods 105 farmers of Illinois have each added $1,487 annually to their farm income. This fact was shown in a new comparative study of farm incomes, the result of which has just been announced locally by Otto F. Baumann, of the United States Soil Conservation Service. "This study should be of personal interest to every farmer living in the Shiloh-O'Fallon soil conservation district," Baumann declared.

"Your local district already has 478 cooperators," he explained, "but some of them are just starting to use soil-conservation methods. These men will be interested in finding out what they can expect to realize in the future from their new farming program. The new study will give them the answer."

In making the study, farm economists selected 210 farms which were comparable in size, type of land, and which were located in the same parts of the State. Of this group, 105 are being operated under well-developed, complete farm conservation plans. On the remainder little or no soil conservation is being practiced.

The information was obtained directly from the farmers themselves. It covers crop acreage, yields, and the amount of crop and livestock products sold by the farmers during the 1945 crop year. Actual 1945 market

prices were used in computing income for both groups.

The 105 conservation farmers had an average income that year of $8,930, which was $1,487 higher than the nonconservation farm average. They earned $39.93 per acre, which was $6.91 an acre more than the nonconservation farmers received that year. Farms in both groups averaged approximately 215 acres.

As contrasted with the second group, the conservation farmers had these increases in crop yields: Corn and soybeans, 6.8 bushels per acre; wheat, 2.7 bushels per acre; and oats, 2.2 bushels per acre.

In addition, the conservation farmers averaged 4,302 pounds more pork than the second group; 4,204 pounds more beef; 108 pounds more poultry; 175 dozen more eggs; and 1,300 pounds more milk per farm.

The income figures revealed by the study, Mr. Baumann explained, represent total farm income above the cost of lime, fertilizer, and additional feed purchased.

These studies were carried on by the United States Soil Conservation Service in cooperation with the State agricultural colleges as a means of scientifically checking the benefits which soil-conservation methods are adding to the income from farms located in representative parts of the United States.

Some of the 210 farms studied are located in the Madison County and Shiloh-O'Fallon soil-conservation districts. Other farms in the Madison County and Shiloh-O'Fallon soil-conservation districts can do equally as well.

The GAR Passes

EXTENSION OF REMARKS
OF
HON. GEORGE MacKINNON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. MACKINNON. Mr. Speaker, under leave to extend my remarks, I include a newspaper article from the Minneapolis Tribune for June 4, 1947, describing the surrender of their charter by the surviving members of the Minnesota Department of the Grand Army of the Republic, and my remarks with respect to this historical occasion:

REMARKS OF CONGRESSMAN GEORGE MACKINNON ON THE OCCASION OF THE SURRENDER OF THE CHARTER OF THE MINNESOTA DEPARTMENT OF THE GRAND ARMY OF THE REPUBLIC

Minnesota's Grand Army of the Republic has made its last march, but it did not march in vain. It was they who contributed so valiantly to the preservation of the Union. Their conquests brought about freedom from human bondage.

"Nor shall their story be forgot,
While fame her record keeps,
Or honor points the hallowed spot
Where valor proudly sleeps."
—*Bivouac of the Dead,*
by Theodore O'Hara.

[From the Minneapolis Tribune]

STATE GAR, DOWN TO THREE MEMBERS, GIVES UP CHARTER

(By Janet Russell)

In a final flash of glory Wednesday, the Grand Army of the Republic passed out of existence in Minnesota.

The three aged, surviving members of the once-powerful GAR held their final encampment together in the Minnesota Soldiers' Home and disbanded the State department as they voted to surrender the charter.

The three men who witnessed their organization pass into the realm of memory, history and legend are Albert Woolson, 100, Duluth, the final department commander; Anson B. Baker, 97, Minnesota Soldiers' Home hospital, and Nathan Colburn, 101, Champlin.

THREE OTHER COMRADES

Sharing the honors in the day of recognition to the "boys in blue" were three other surviving Union veterans in Minnesota who did not belong to the Minnesota department of the GAR. They are Elias Fenstermacher, 97, Brainerd; Orris S. Pierce, 99, 3149 Lyndale avenue S.; and Charles L. Hooker, 109, Virginia.

Although the GAR ranks have dwindled to three, veterans of the three wars which have followed the Civil War joined forces to give the occasion something of the splendor the GAR once had.

Organizations made up of Spanish-American War veterans and veterans of World Wars I and II planned a parade through the streets of St. Paul—a parade with younger veterans marching where the thousands of GAR comrades once marched, and with marching songs of the four wars within the memories of the three men who held places of honor last night.

FLAG IS FRAGILE

The American flag belonging to the Minnesota GAR, now a brittle relic which contains an embroidered banner, "Grand Army of the Republic, Department of Minnesota," was too delicate to stand the rigors of a parade and was stationed on the platform in the St. Paul auditorium.

The program at the auditorium, which marked the climax of the state-wide recognition of "Grand Army of the Republic Farewell" day, included an address by Judge Harold N. Rogers of Minneapolis municipal court, introduction of the three GAR men, and a ceremony of turning over the charter to Marion Jewell, secretary of the department.

Mrs. Jewell will take the charter to the national office with a request that it be returned to the Minnesota Historical Society.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to revise and extend my remarks, I desire to include herewith in the RECORD a resolution adopted by the Sixty-fifth General Assembly of the State of Illinois. As will be noted, the Illinois Legislature has gone on record as favoring a year's training period for all young men to occur some time between the eighteenth and twentieth birthdays.

The resolution follows:

House Joint Resolution 34

Whereas this Nation now stands at the crossroads of what will surely be the most fateful period in its history; and

Whereas, despite the magnitude of the victory in World War II, the time has not yet come when peace-loving nations may neglect their defenses or lay aside their arms; and

Whereas a plan of universal military training, embodied in Senate bill 651 and House bill 1988, has been introduced in Congress, at the suggestion of the American Legion, which plan provides for 1 year's training composed of 4 months of basic training and 8 months of advanced study in military schools, colleges, ROTC courses, or in the armed forces, the Organized Reserve, or the National Guard, with a choice of Army, Navy, or Air Force as a field of training; and

Whereas this year of training for every young man coming some time between his eighteenth and twentieth birthdays would be valuable not only to the young men individually, but of immeasurable benefit to the Nation in providing a continuing reserve of trained and capable manpower skilled in the technique of modern scientific warfare: Therefore be it

Resolved by the House of Representatives of the Sixty-fifth General Assembly of the State of Illinois (the senate concurring herein), That we endorse the plan embodied in the bills now before Congress as a vital step in the preservation of our strength and freedom; that a copy of this preamble and resolution be forwarded by the secretary of state to each Illinois Member of Congress at Washington.

Adopted by the house, May 21, 1947.
HUGH GREEN,
Speaker of the House.
FRED W. RUEGG,
Clerk of the House.

Concurred in by the senate, June 4, 1947.
HUGH W. CROSS,
President of the Senate.
EDWARD H. ALEXANDER,
Secretary of the Senate.

Justice for Poland

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me before the Polish-American Congress Sunday, June 8, 1947, Manhattan Center, New York City:

Mr. Chairman, distinguished guests, ladies and gentlemen, it is a privilege to address this great meeting. The atmosphere fairly crackles with enthusiasm for the cause you promote this afternoon, "Justice for Poland." This signifies your determination to battle for the principles of liberty and freedom which the people of Poland have exemplified for centuries. As a liberty-loving people you have the responsibility of fighting for those principles because it has been a precious heritage from your forefathers. In addition you fight to reestablish those rights once more in Poland and in that struggle bring courage and cheer to those who remain in the Mother Country. You realize, I am sure, that it is going to take money, and effort, but above all it will take courage and a spirit within to insure that ultimately there will be "Justice for Poland." This is not a fight for the weak-kneed, the weak-hearted, the selfish or the lazy individual, but it is a battle for the generous, the strong-hearted, and the loyal patriot.

You are not alone in this struggle. Millions of Americans are at your side. They realize that there can be no peace in the world until order through justice is established for every nation.

Ladies and gentlemen, you may well ask, "Yes, that sounds very good, but where have you been, Mr. Smith, while the principles of justice are being ignored?" Yes, you should know what I have done about it.

I am proud of my record in this matter. On the second day of March 1945, which was

only a few weeks after the Yalta agreement was announced, I spoke on the floor of the House of Representatives and used as my subject, Yalta—A Moral Retreat—Poland and Small Nations Crucified. A few days before that, your friend and mine, Congressman ALVIN O'KONSKI, had likewise given a speech in which he described the Yalta Conference as the crime of the ages. He blistered the State Department in its efforts to justify the action taken at Yalta. He also said that the efforts by the Department sounded more like Moscow than Washington. After we had made those speeches we were the targets for all kinds of attacks. It was charged that we were isolationists, that we were disloyal, and the old Communist charge that we were Fascists. But time has been on our side and history will record that we were absolutely right. Time will likewise prove that you are right. You must not fail.

With due humility, I want to call your attention to parts of my Yalta speech as I believe them to be pertinent to the subject of this meeting and so you may know of my position right after the Yalta Conference. I said then:

"The determination to settle the boundary lines of Poland before the question was submitted to the people of Poland constitutes a retreat from the high moral ground that we have steadily maintained throughout the war. To say now that free elections are to be held and that Poland will receive a long shore line carved out of Germany is to rob Peter to pay Paul and is a feeble effort to fool the people."

Further: "I feel it my duty to speak, for I am firmly convinced that a great mistake was made at Yalta; yes, a mistake which, if not rectified, will lead to World War No. 3."

Further, I said: "The results at Yalta must be tested by their effect upon the inalienable rights of millions of people of the small European countries, who apparently had no spokesman at Yalta."

You will recall that Government officials assured the people of this country that the people of Poland were guaranteed the right of free elections, hence, they could choose the kind of government they wanted. And that the elections would be free and unfettered and wholly within the spirit and meaning of the Atlantic Charter. Are we not ashamed of ourselves?

We can hear again the voice of Woodrow Wilson after World War I, when he said, "The day of conquest and aggrandizement is gone forever; so also is the day of secret covenants entered into in the interest of particular governments and likely at some unlooked-for moment to upset the peace of the world." Franklin Roosevelt was a disciple of the great Wilson, but at Yalta he certainly forgot about the lofty idealism of his teacher; in fact Wilson was betrayed at Yalta. There Russia, Britain, and the United States partitioned Poland for the fifth time and all of it was done in secret. Woodrow Wilson must have turned over in his grave.

It was difficult for me, ladies and gentlemen, to reconcile the position of my Government at Yalta to the position it took in 1940, when the rights of Latvia, Lithuania, and Esthonia were under consideration. Then the State Department issued a statement, part of which was:

"The people of the United States are opposed to predatory activities, no matter whether they are carried on by threat of force or use of force. They are likewise opposed to any form of intervention, on the part of the state, however powerful, in the domestic concerns of any other sovereign state, however weak."

Now get this, from the same statement by the State Department:

"The United States will continue to stand by these principles, because of the conviction of the American people that unless the doctrine in which these principles are inherent once again governs the relations between nations, the rule of reason, of justice, and of law—in other words, the basis of modern civilization—cannot be preserved."

I charged in the House that our 1940 position and our position at Yalta were wholly inconsistent and said that unless it was reversed it would lead to another war, more deadly, more devastating, more cruel, and more costly than this one.

And what a tragedy when we think back to the days of 1917–18 and remember what a gallant fight Woodrow Wilson made for Polish independence. In a speech to the United States Senate, in January 1917, he said:

"No peace can last, or ought to last, which does not recognize and accept the principle that governments derive all their just powers from the consent of the governed, and that no right anywhere exists to hand people about as if they were property."

We know that Woodrow Wilson was right because his statement is based upon an eternal truth—that right will ultimately prevail—a truth that is geared to the ages and to which the American people fully subscribe.

Mr. David Lawrence, an outstanding journalist, said after Yalta: "American idealism was defeated at Yalta. American constitutionalism was scorned at Yalta, and the pledges given in the Atlantic Charter that no nation—neither Russia, nor Britain, nor any other country—will seek territorial aggrandizement were flagrantly violated at Yalta."

Many more national authorities could be marshaled in support of our position that Poland has suffered ignominious treatment at the hands of the victorious Allies. As one great Polish patriot has so well said: "Poland has suffered defeat in victory." It is, indeed, a strange situation.

To the liberty-loving people of Poland and the United States, Teheran, Yalta, and Potsdam are nightmares. We do not have the time this afternoon to review events since those conferences; we only know that those who remain in the homeland and bear the burdens of the Soviet dictatorship still refuse to yield to foreign aggression. They are supported in spirit and in prayer by you here who carry the torch of liberty in this free land.

I shall never forget the late President Roosevelt after he returned from the Yalta Conference. He appeared before the Congress in joint session. On that occasion he was wheeled onto the floor of the House and spoke to us while seated. He appeared to be a sick and tired man, but he was cheerful and said: "I have had an interesting trip and I feel fine." That was early in March, and on April 12 he was dead. When he spoke he assured us that the rights of all peoples had been fully protected and he said: "There have been no secret agreements." We know now that that statement was false. The surrender at Yalta to Russia was total and absolute. It was rank appeasement and the historians will so record it.

I have often wondered how the former Secretary of State James F. Byrnes feels about his part in the betrayal of Poland—and that's what it was. You will recall that on July 5, 1945, he addressed a note to the Polish Ambassador in Washington, which said in part:

"It is with great satisfaction that I announce that effective today as of 7 p. m. eastern war time the Government of the United States has established diplomatic relations with the newly formed Polish Provisional Government of National Unity now established in Warsaw. The establishment of this Government is an important and positive step in fulfilling the decisions regarding Poland reached at Yalta and signed on February 11, 1945."

Here was the height of appeasement; here was the sell-out of Poland; this was the final act. And to think that Byrnes started his note by saying, "It is with great satisfaction." What a travesty against justice! As citizens of the United States we should set aside February 11 every year as a day of penitence; we should spend the day on our knees asking forgiveness for the crime we have committed not only against Poland but against the people of other small nations who are the victims of Russian aggression.

I have spent this time reviewing events because it is well for us to refresh our memories and to recognize injustice. But now let us look to the future.

If we are to insure justice for Poland some time in the future, we must eradicate bolshevism and communism as a form of government. It is a mass revolutionary movement and not a political movement. Now this is a task that will require the efforts of courageous men and women inspired by the idea that they are fighting on the side of God against a godless revolution.

The Bolshevik doctrine, as advanced by Lenin, is a struggle against religion and capitalism. This conception, which views spiritual life as secondary in comparison with material and external manifestations, formulates the well-known thesis that conscience is determined by existence and by social relations, as well as, in a particular way, by the economic factor of these relations—this latter being the most important.

From this principle Lenin says that the struggle against religions should tend, in the first instance, to break up the social-economic system upon which the roots of religion rest. The social-economic system, upon which religion grows, is the capitalistic system. Hence the struggle against religion should have for its principal objective the destruction of the capitalistic system. In this way the disappearance of religion will become merely a natural consequence with the defeat of capitalism.

"Fear has created the gods," writes Lenin, and he adds: "Fear inspired by the blind force of capitalism—blind because the voice of the masses cannot penetrate through it. At every moment of the life of the proletarian and of the small proprietor this blind force threatens to bring upon them a sudden, unexpected, and casual destruction, an annihilation, a transformation into nothing; it threatens to make them paupers and prostitutes and to reduce them to death by starvation. Here we have the marrow of contemporary religion, which the materialist should always keep in mind, unless he wishes to remain a materialist of an elementary order. No book of instruction is in a position to root up religion from the masses, who are imprisoned by the capitalists and dominated by the blind and destructive forces of capitalism, until the masses have learned to struggle in common, in an organized, systematic, and conscientious way, against that root of religion—against the domination of capitalism in all its manifestations."

Alert American patriots are the last remaining hope of civilization. There is a great need for vigorous leadership by honest men and women who are devoted to the principles of liberty and justice; political and economic men and women who believe in the sanctity of the individual and the holiness of God. This is the basis for our own free government.

One writer has well said that communism imposes systematic serfdom as a substitute for God-given inalienable individual liberty. He also said that communism is not a philosophy of life for human beings any more than a rat trap is a philosophy of life for rats. Communism uses organized subterfuge, supplemented by outrageous violence.

Yet when we look at the world today we must admit that our own Government has unwittingly advanced the cause of commu-

nism all over the world—yes, even including our own United States. It is idle to think that $400,000,000 in Greece and Turkey is going to stop the march of communism there. Only an aroused public opinion throughout the world can stop it.

But what about justice for Poland now, you ask? I can only suggest a course for the future. We must speak to the people of Poland and to other nations who are in the same boat through the Congress of the United States. We are your representatives and symbolize free institutions. The voice of freedom and of liberty can speak out in the Halls of Congress. It can reflect the will of the people if that will is expressed, if it is alert and forceful. We realize now, I am sure, that a strong Executive took matters in his own hands at Teheran and Yalta. There was collaboration behind closed doors and the public did not know what was going on. That must never happen again. We who had condemned appeasement suddenly found ourselves committed to such a program. The damage has been done.

Justice for Poland may come within a very few years. It may take longer than we expect. But freedom and justice will come just as sure as I stand here today.

I am convinced that we can assure justice for Poland by making absolutely sure that we do not lose our own liberty and freedom. The one citadel of freedom in the whole world is the Congress of the United States. Yet we know that there are certain subversive elements in this country who would sabotage and destroy that Congress. At the present time certain newspapers and radio commentators are engaged in a campaign to destroy our public institutions by ridiculing and offering disparaging remarks about elected public officials. Great emphasis has been laid upon the infallibility of the bureaucrats and the planners. Some people believe that our Government should be run by a few smart men. Do you not recognize that this is the start of communism? A few smart fellows are running Russia, too. There are no real elections in that country. But in this country you do elect people to serve you, and when you want a change you do it with ballots—not bullets. I have had a feeling for a long time that too many people take democracy for granted. The time has come for us to recognize that the world struggle today is between our way of life and the Soviet way. Freedom, liberty, and justice are best protected by making sure that your elected public officials are responsible to you in that they protect your inalienable rights. This can be insured by making the Congress of the United States the real strong arm of Government. That kind of Congress will fight for the liberty-loving people of Poland.

In conclusion, I want to leave with you a thought around which you can all rally in the trying days ahead. I quote two sentences from that remarkable book by that outstanding Polish Ambassador to Washington, Jan Ciechanowski, when he replied to our own Secretary of State on July 5. He said to the Secretary:

"For the second time in history the Polish Nation is deprived of its independence, though this time not as a result of events which took place in Europe alone, but as a result of a war which the United Nations waged in the name of law and justice. Notwithstanding the recognition of this state of things by other states, the Polish Nation will never give up its right to an independent state, and for this right it will struggle unwaveringly."

Ultimately, Poland will be free; ultimately its boundaries will be restored. The task is not an easy one, but strong and courageous men and women, with the help of God, will win. Let us dedicate, let us consecrate, ourselves to that end through our free institutions. The United States must reverse itself and it will when your voices are heard in official Washington.

Greenbelt: The Boondoggle That Made Good

EXTENSION OF REMARKS
OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 9, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Gerald G. Gross from yesterday's Washington Post:

GREENBELT: THE BOONDOGGLE THAT MADE GOOD—FEDERAL TOWN OF 8,000 NEARS HAPPY TENTH BIRTHDAY

(By Gerald G. Gross)

Approaching its tenth anniversary is Greenbelt, one of the most interesting experiments of the early New Deal.

Greenbelt—or Tugwelltown, as it was called for a while—home of 1,900 families, the Federal Government's best example of communal life, started out as a boondoggle but flourished and prospered in a manner to confound its critics.

Situated in Prince Georges County, Md., 14 miles from the heart of Washington, Greenbelt has long since disproved the implication of impermanency which the nickname "Tugwelltown" carried. Today it is a going concern, with a long waiting list of prospective tenants. Its troubles are mainly little ones—youngsters who daub statuary with green paint, fall out of trees, and play in the roadways.

Population of Greenbelt is now about 8,000. The town directory, beginning with Abramowitz and ending with Zuccaro, reveals the diversified descents of the burghers. In between are such family names as Ehrhardt, Murphy, Comploler, MacGregor, Tchikoff, Van Deusen, and (1 each) Cohen and Kelly.

Theirs is a community without a jail, where there has been only one traffic fatality in the decade of its existence; where one-half the population are children; heads of three families out of four are on Uncle Sam's pay roll, and the same percentage displayed blue-star service flags in World War II.

On Memorial Day Greenbelt dedicated a granite memorial to its war dead, and a few hours later opened the swimming pool for the season. The Greenbelt Health Association, a prepayment plan for medical care, is reported to be in a ticklish situation. Interest is mounting steadily in the biennial municipal election which will be held September 16. Folks have their baby-sitter problems, a bigger food market is needed, benefit parties are being given to raise money to equip the rescue-squad ambulance.

TEST-TUBE TOWN

That's Greenbelt, so much like the average small town in Indiana or Vermont and yet so different in many ways. The nature of its conception—to provide work for thousands of jobless in depression days—and the extraordinary character of its operation, due to the fact that it is in Federal ownership, make Greenbelt different in spite of itself.

Add to that the fact that Greenbelt was—and still is—an experimental laboratory in large-scale, moderate-rental public housing and that all of its inhabitants are guinea pigs for the testing of schemes in education, recreation, merchandising, medical care, and whatnot—well, it is evident that here is something which, for all its typicalness, is still a thing apart.

Greenbelt has been the subject of innumerable themes and theses by high school and college students. Laboriously the authors delved into the socio-economic aspects of the project, the political ramifications of a council-manager type of government, and all that heavy stuff. Some of them, recognizing the importance of giving their papers a human touch, engaged James T. Gobbel in conversation on his favorite topic.

Gobbel is Greenbelt's town manager.

"But don't get me too wound up on Greenbelt," says the thirtyish administrator with a broad grin. "If you do, I'll never stop."

A GOBBEL DECADE

His enthusiasm dates back to the time when he was in the Resettlement Administration and his boss, Rexford Guy Tugwell, sold President Roosevelt on the idea of a model housing project near Washington that would give work to a lot of men and, at the same time, provide good dwellings for families of moderate means. Also, it would put a theory or two to the test.

The Government acquired 3,300 acres adjacent to Berwyn Heights, Md., and the first spadeful of earth was turned on October 12, 1935. Actually the ground breaking was done not with a spade but a pick ax, swung by the ubiquitous George E. Allen in his capacity as Works Progress Administrator for the District.

Just 3 days later what had been advance-billed as a "mass protest" against the project was made to the Prince Georges County commissioners. When all were inside and the doors closed, one solitary dissenter faced the officials. He was LANSDALE G. SASSCER, then president of the State senate.

Today SASSCER, a Member of Congress whose district includes Prince Georges, is one of Greenbelt's most stalwart supporters, would like to forget that he once opposed the venture.

Another critic of the unborn Greenbelt was Senator HARRY F. BYRD, of Virginia. His blasts were directed at the project's cost, but they stemmed largely from a personal feud with Henry A. Wallace, then Secretary of Agriculture.

Getting back to Gobbel, he was in on the Greenbelt plan from its blueprint stage. In October 1943 he took over the dual job of Federal manager and town manager. In the one capacity he was landlord, in behalf of the Federal Public Housing Authority; in the other, he was the town's top administrator, appointed by the popularly elected five-man council.

Just a year ago the dual job was split, and Gobbel stayed on as town manager, a $6,500 position, relinquishing his duties as Federal manager to Charles M. Cormack. Last month, in the climax to an intracouncil dispute, Gobbel submitted his resignation. It is effective September 30.

THE PERSONAL TOUCH

The new town council which will be elected September 16 may reappoint Gobbel. Or it may pick someone else. Come what may, he was, is, and will continue to be Greenbelt's No. 1 horn tooter.

As he walks through the town square, there is scarcely a person he meets whom he does not know by name. Proudly he takes you to the firehouse to display the rescue-squad ambulance which four tenants, former GI's, bought with funds they raised and pooled.

Why did Greenbelt have so many poliomyelitis cases last year, Mr. Gobbel?

"Yes, we did have 13 of them," he says. "But who knows why the disease strikes harder in some places than others? Besides, only a very few of our cases got a paralysis."

Juvenile delinquency, how about that?

"No problem there," according to the town manager. "I can think of only one serious case since I've been here. That was a teen-age boy who stole some things. He reformed so thoroughly that a certain youth organization"—Gobbel did not wish to identify the lad too closely—"has honored him by electing him president."

He is proud of the community church—"Do you realize that its members represent 23 denominations?"—and the work being

done by its pastor, who was a Navy chaplain in the South Pacific. He gets a kick out of the Greenbelt band, composed chiefly of teen-age boys and girls, and its "feeder" band of "tikes"—most of them just valve-high to a tuba—who graduate eventually into the big band.

NOT HALF DEVELOPED

For a change of pace, get Gobbel to talking statistics.

The original Greenbelt consisted of 885 houses and apartments. Then there were five farm-type dwellings that were on the reservation when the Government took over. You get an even 900 by adding the 10 privately built and owned houses that were erected on land leased from FPHA. On top of that, you have the 1,000 defense homes that were built here in 1941 and 1942 to relieve the housing shortage.

That is a total of 1,900 units, far below Greenbelt's capacity. They occupy only 200 of the tract's 3,300 acres. Federal Public Housing Authority officials say that 4,000 dwellings could be comfortably accommodated.

The 885 units erected in the thirties, ranging from bachelor apartments and honeymoon bungalows to four-bedroom houses, were supposed to be the first installment toward a goal of 3,000. But lifting of the depression and changes in the political picture arrested further construction.

A few years ago some Greenbelters formed an association whose purpose is to buy their homes from the Government. FPHA officials say that eventual transfer of the property to private ownership is desirable but that it simply is not salable at present.

It would not be feasible, they point out, for the Government to sell the dwellings piecemeal. And no investor has been found who was willing to buy the whole works and, besides paying the price, provide assurance that the tenants' interests and the community's character would be protected.

NINETEEN-MILLION-DOLLAR JOB

Oliver C. Winston, director of the FPHA general field office and titular landlord of Greenbelt's residents, estimates that the original 890 units (exclusive of the 10 non-Federally owned) cost $14,000,000, plus $570,000 for land. Uncle Sam put out $4,500,000 for the 1,000 defense homes—hastily built dwellings of asbestos siding which lack the architectural finesse and charming landscaping of the character houses.

Greenbelt's warmest supporters confess that it is uneconomic; its sewage disposal plant and police and fire establishments should be serving 3,000 to 4,000 families and not 1,900. But construction costs today are prohibitive. It probably will be sometime before you hear of any large-scale building at Greenbelt.

Rents are graded according to the tenant's income, and there have been two increases since the first dwellings were occupied on September 30, 1937. Sixty-five dollars is the top. Only veterans may join the waiting list, and they are told that they cannot possibly be accommodated in less than 1 year.

"Yes, and it might be closer to 2 years," volunteers Mrs. Mary Jane Kinzer, who has charge of family selection.

There isn't much turnover, she explains. Greenbelt still has 313 families who were original inhabitants—202 of them living in the same houses and apartments which they rented in the beginning.

PROPHETS WERE WRONG

Mrs. Kinzer's sense of humor is still intact, though it takes a daily beating from people who think Greenbelt is awful for barring dogs and other pets, who think the community rules are too strict and who think they ought to have a three-bedroom apartment even though they do not have the required number of children.

A decade ago the view-with-alarmers were predicting that this newfangled project would bring in undesirable elements and eventually become a big slum. Some said Greenbelt would become an oasis for long-haired New Dealers. As recently as 1940 it was charged that the community was bolshevistic.

Well, Greenbelt today is a pretty nice place, with a community spirit that gets things done.

The town's cooperative stores are in the black. So are the cooperative busses which, about once a month, give free rides as dividends. At meetings of the citizens' association, American Legion post, sewing circles, etc., there is plenty of outspoken griping—a sure sign of a healthy, democratic community.

As Town Manager Gobbel says, inhaling a chestful of that good old Greenbelt air: "There's nothing like it."

The Confederacy's Warrior Dead

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. GRANT of Alabama. Mr. Speaker, on June 1, Judge Walter B. Jones, of Montgomery, Ala., delivered an excellent and inspiring address at Arlington National Cemetery, his subject being the Confederacy's Warrior Dead.

Judge Jones is an outstanding jurist and author. He is an active leader in the civic, fraternal, and religious life of Montgomery. He is past national archon of the Sigma Alpha Epsilon Fraternity. His father was an outstanding soldier of the Confederacy and was later Governor of the State of Alabama and Federal judge.

The text of Judge Jones' address is as follows:

THE CONFEDERACY'S WARRIOR DEAD

Obedient to the summons of a sad, sweet duty, we gather at Arlington this Sabbath afternoon, on this funeral field of fame, in the glory of this historic place, and we come here, where the dead warriors of the North and South have slept through the long years, to pay tribute to the memory of the sons of Dixie, who in the sixties followed the star-crossed banner, furled long years ago, and now living only in song and story. We come with music and song and tender words, to recall with love and tears those who poured out upon the altars of the South their holy oblations of heroism and sacrifice.

With noble memories welling in our hearts, we come to honor our gallant dead by strewing the first flowers of spring over the graves of those who, not for fame or reward, nor for place or rank, not lured by ambition or goaded by necessity, but in simple obedience to duty * * * suffered all, sacrificed all, dared all—and died in defense of those ideals for which their fathers fought, and dying, delegated to their hands.

DAY CONSECRATED TO CONFEDERATE SOLDIER

This day belongs to the soldiers and sailors of the Southern Confederacy, and this sweet and solemn hour is consecrated to the memory of their sacrifices. Over this great Nation, at this same hour, those who are worthy of the priceless legacy bequeathed to them by their sires, and those who love to honor the brave, are making with grateful and reverent hearts their pilgrimages of love to the mounds where pavilioned 'round with sleep the Southern dead await the voice of Him who brought again from the dead the great Shepherd of the Sheep.

James Ryder Randall, one of the South's greatest war poets, in his touching lines, at Arlington, pays tribute to the soldier dead who sleep here, and we recall today his unforgettable lines:

"In that vast sepulcher repose
The thousands reaped from every fray;
The men in blue who once uprose
In battle-front to smite their foes—
The Spartan bands who wore the gray;
The combat o'er, the death hub done,
In summer blaze or winter snows
They keep the truce at Arlington."

THE SOLDIER DEAD AT ARLINGTON

And so today this great multitude of Americans, mindful of the divine command—"Honor thy father and thy mother, that thy days may be long in the land which the Lord thy God giveth thee"—has turned its footsteps to this hallowed spot where defeated valor lies, by mourning beauty crowned. With music and song and flowers, we have come to pay tribute to the noble dead whose battle flags were forever furled on that historic April Sunday in sixty-five. Here they lie on the gentle slope of the hillside, peacefully awaiting the last great day when the earth and the sea shall give up their dead and they shall be raised incorruptible.

MEMORIES OF THOSE WHO SLEEP HERE

Over there sleeps a lad who stood by the side of the "Gallant" Pelham at Kelly's Ford, and saw the great cannoneer write his name in letters of gold on history's scroll.

Yonder, just on the brow of the hill, in his humble grave, rests one who charged with Kelly o'er Franklin's crimson-sheeted field; and close by his side, in his faded jacket of gray, sleeps one who drank the wine of victory at Fredericksburg and helped Lee roll back the mighty armies of Burnside.

In the shadow of yonder mournful cedar lies one who marched out steadily, as if on dress parade, across a mile of open plain, in the face of thundering guns and thousands of rifles at Cemetery Ridge, and made the phrase "as valiant as Pickett's charge" the "supreme martial metaphor."

In the shade of yonder solemn elm rests a sailor lad who steamed out into Hampton Roads on the iron monster, the *Virginia*, saw her ram and sink the mighty *Cumberland*, force the gallant *Congress* to strike her colors, and show the world that the day of wooden war vessels was past, and that in the future all navies must be ships of steel.

In the shadow of yon tearful willow is the last bivouac of a boy soldier who was with Longstreet at Second Manassas and joined in the pursuit of the fleeing Pope.

Guarded by yonder modest stone sleeps one who helped Lee repulse Grant at Spottsylvania Court House; and close by his side sleeps a lad who was with Albert Sidney Johnston at Shiloh, saw the great Confederate chieftain, mounted on Fire-eater, lead the charge against the enemy, shouting: "Men, they are stubborn; we must use the bayonet."

Not far from here lie the ashes of one who was with Stonewall Jackson at Cross Keys and Port Republic, in the First Valley Campaign, and saw the skilled leader drive Fremont and Shields from the valley.

Over there, beneath the emerald grasses, forever rests a young Confederate cavalryman who cheered as Turner Ashby rode his milk white steed at the head of Jackson's cavalry; and nearby rests one who was with Ewell at Culp's Hill, and saw the great Confederate general drive Meade's right back in confusion.

Yonder, beneath the grass-covered sod, resting in the serenity of death, is one who

saw Lee's flag of truce go forth through the morning mists at Appomattox, and shortly after surrendered his last cartridge and his bullet-torn flag, and, with the consciousness of duty faithfully performed, turned his weary footsteps homeward to fight in the battles of peace as he had fought in the battles of war, like a man.

THE CONFEDERATE MONUMENT AT ARLINGTON

Within a stone's throw of this beautiful and hallowed spot stands the handsome memorial to the Confederate dead designed by Sir Moses J. Ezekiel, who as a youth fought with the Confederate cadets in the battle of New Market, 1864. And at the foot of this monument, among his fellow soldiers of the Confederacy, rests the body of the talented sculptor.

This monument, a gift of the United Daughters of the Confederacy, was dedicated by President Woodrow Wilson in 1914.

The south side of the monument bears the following inscription:

"To our dead heroes, by the United Daughters of the Confederacy. Victrix causa diis placuit sed victa Catoni."

How appropriate is the selection of this Latin phrase from Lucullus, and translating the inscription we learn, "victorious cause pleases the gods, but a vanquished cause pleases Cato."

This great Roman statesman, Cato the Elder, was regarded by all in his day and time as the ideal model of high morals, and to say "a vanquished cause pleases Cato" is a noble tribute to those who bore its banners in battle.

And so here at Arlington:

"The victims of a grand despair
In long, long ranks of death await
The last loud trump, the judgment sun
Which comes for all, and, soon or late,
Will come for those at Arlington."

THE SOUTH DID NOT REBEL

What a flood of deep, indefinable emotions, what throngs of stern and tender memories stir our hearts and fill our souls and minds as we reverently stand before the graves of our heroic dead, and recall again those days and deeds of long ago, when Lee and Jackson, Gordon and Johnston, Stuart and Ashby, Longstreet and Pickett, walked among the children of men.

We see the southerner of the sixties anxiously guarding the rights of his State, standing steadfast for those ancient principles of local self-government and State sovereignty, the very rocks upon which the Union had been builded, and in the establishment of which his fathers—Patrick Henry, Thomas Jefferson, George Washington, James Madison, and John Marshall—had taken such signal and honored parts.

The southerner and his military leaders had been taught, yea taught in the very textbooks used at the United States Military Academy, that the secession of a State from the Union depended upon the will of the people of such State, and, until 1860, no one had ever doubted the right of a State to withdraw from the Union. It was not South Carolina that led in the thought and intention of disunion, for in 1796, in 1803, again in 1807 and 1811, even as late as 1844, New England took the lead and, first upon one ground and then upon another, advocated and threatened secession. These are the undeniable facts of history; and they were the indisputable facts more than half a century before South Carolina passed her ordinance of secession.

SOUTHERNER GUIDED BY INSTINCTS OF SELF-PRESERVATION

The sons of the southland did not rebel, nor did they create any new doctrine; they only asserted the time-honored rights of their States. The motives and sacrifices of the southerner were not the mad folly of misguided fathers who waved hostile battle flags against the genius of liberty in the New World. He did not give his land to ruin and his sons to slaughter because of his devotion to the institution of African slavery. Nay. Realizing that he could no longer live in peace under the Union of the fathers, the southerner, in obedience to the instincts of self-preservation and the teachings of a lofty courage, declared that he would depart in peace, and, that denied him, would stake all upon his sword. That was denied him, and then came the guns at Sumter, and then the Confederate soldier.

THE CONFEDERATE SOLDIER

And what a noble soldier he was. What imperishable renown did he win for his country. And what a glorious page did he write for himself and his children in history's grandest volume.

As we stand here today, in the presence of our honored dead, memory carries us back to that day when the long arguments of statemen ceased, the troops assembled, and the flower of southern manhood, "the knightliest of the knightly race," went forth to battle.

"No warrior of the golden past, of glorious antique days,
Crowned with the victor wreath of Greece, of Rome's immortal bays,
No knight who laid his lance in rest with mighty Charlemagne,
Or bore the brave Crusader's cross in great St. Louis' train,
No soldier of the Lion-Heart, who thundered at the gate
Of Acre, when proud Saladin held there his royal state,
No Cavalier of England, who rode in daring pride
With Rupert of the Bloody Sword, or with him fought and died.
But the heir of all these heroes of the great days of old,
Last of the long and gallant line of knightly hearts of gold.
One who has written with his sword his name upon the page
Of glory's deathless muster-roll, gathered from every age."

These are the warriors, the heroes of the rights of sovereign States we honor today.

GRANT'S SOLDIERS

As we dwell upon the life and character of the Confederate soldier, let us not forget his antagonist who bravely fought in the armies of Grant, Hooker, Meade, and McClellan. And, on this occasion, may I not picture this soldier of the armies of the United States to you in the words of one who fought him at Chancellorsville, Gettysburg, Monocacy, and Cedar Creek—words uttered nearly three-quarters of a century ago in the Cradle of the Confederacy, by one who carried Lee's flag of truce at Appomattox, and who today sleeps in the soil of Alabama among his comrades of the sixties. In speaking of the northern dead, he said:

"And while we ponder thus, the mind carries us northward, where tombs, not of our dead, are whiter than the sands of the sea and more numerous than the stars in the heavens. In them lie men of the same race as ourselves, who spoke the same language and worshipped the same God. Fond mothers sent them to battle, and tender tears and agonizing prayers watched their pathway. Not Pickett's charge at Gettysburg, nor Cleburne's at Franklin, outshone in vain but glorious valor the luster of his assault at Marye's Heights, and his mad charges at Spottsylvania and Cold Harbor. He had grander courage yet—he did not mock us at Appomattox. He followed a flag that was as dear to him as was to us the star-crossed banner that has long since taken its flight to greet the warrior's soul, and he that worthily speaks for the dead, or the living, must say that no feeling of hate to the northern dead pervades this Memorial Day. One touch of pity makes the whole world kin. From scenes like this, where the warring sections mourn their dead, let the statesman draw inspiration to guide the living."

NO VACANT CHAIRS IN THE FIRESIDE OF THE HEART

And now, my friends, the glow is fading from the western sky; the shadows are lengthening and the hour has come when we must quit this sacred ground and leave our noble dead in the keeping of the God of Peace. And as we go to our homes, let us remember that the Confederate soldier did not fight and die in vain, for out of his struggles have come freer and nobler States, and, because of this, a more enduring Union. Let us here dedicate ourselves anew to the great principles for which he battled, and resolves to emulate his glorious life and character.

Let us remember, too, that there are no vacant chairs in the fireside of the heart, and that on this sacred Memorial Day, as on all days, the spirit of the Confederate soldier hovers near, bidding us, in the service of a reunited Nation and people, "to think the highest that is in us to think; to do the best that is in us to do; and to be the noblest that is in us to be."

Price of Iowa Farm Land

EXTENSION OF REMARKS
OF

HON. JAMES I. DOLLIVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 9, 1947

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

DEAR MR. DOLLIVER: Regarding conference called by President Truman for June 9, 1947, concerning placing of ceilings on price of farm lands.

The members of the Iowa chapter of the National Institute of Farm Brokers have given considerable thought to this conference, and we feel very strongly that the price of farm land in Iowa, at the present time, is not excessive, and that it would be very detrimental to both buyers and sellers of farm land, to attempt to control the price, in any way at this time.

According to the figures of the United States Department of Agriculture, farm land in Iowa today, based on an index of 100 for the 1909 to 1914 average, is selling at 134, which is exactly the same as in 1917. The average production of farms in Iowa in the 5 years prior to 1947 is 46½ percent greater than it was in the 5 years prior to 1917, due to the use of hybrid seeds, fertilizers, better farm practice, and better farm equipment. A farm in 1917, had no graveled roads, electricity, or other modern conveniences, nor were any paved roads available in the State. In other words, today's farm selling at the same price as it did in 1917 is a better equipped unit, and one that will produce 46½ percent more than the same unit selling at the same price in 1917.

The mortgage indebtedness on farms in Iowa, is at an all-time low and what financing is being done, is on a long-term basis, and at the lowest interest rate in the history of the Midwest. We fear that any tampering with the prices of farms will only result in two things: (1) Farm sales will be made privately between buyers and owners with a good share of the price hidden as a side consideration; (2) That the whole control program, when abandoned, will result in an immediate upswing in price that will inaugurate the very thing it was trying to prevent. Farms are now being sold in a very

orderly fashion, and three-quarters of them for cash.

We would greatly appreciate any assistance that you might be able to give in bringing these facts before the committee and seeing that no tampering is done with the prices of farms in this State.

Yours very truly,

OTTO KNUDSON,
President, National Institute of Farm Brokers, Chapter No. 2, of Iowa.

Jewish National Homeland in Palestine

EXTENSION OF REMARKS
OF
HON. JOHN McDOWELL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas we believe that the peace and security of the world and freedom from fear of all peoples can be accomplished only by the nations of the world, powerful, and weak, honoring their pledges and commitments; and

Whereas we believe that a just and honorable solution of the Palestine issue currently before the United Nations and its Investigation Commission is vital to the interests of all freedom-loving, democratic people; and

Whereas for the past 30 years, beginning with the Balfour Declaration, each President of the United States of America, both Houses of Congress, and both the Democratic and Republican Parties have repeatedly declared it the policy of the American people and of their Government to support the establishment in Palestine of a free and democratic Jewish Commonwealth; and

Whereas, pursuant to this traditional American policy, the United States Government is formally, legally, publicly, and morally committed to a policy helping to establish a Jewish national homeland in Palestine: Therefore, be it

Resolved, That we, the City Council of Clairton, Pa., respectfully call upon the Government of the United States to take the initiative during the meetings before the Investigation Commission and before the United Nations in vigorously championing the program for Palestine it has repeatedly reaffirmed; and be it further

Resolved, That pending final settlement of this issue by the United Nations, the great weight of the United States Government be brought to bear on Great Britain, the mandatory government, to set into motion at once an interim policy providing for immediate large-scale Jewish immigration into Palestine and the removal forthwith of the discriminatory land restrictions in the Jewish national homeland; and be it further

Resolved, That the United States forthwith publicly declare its traditional policy on Palestine and assume the leadership to which its prestige, power, and humanitarian traditions entitle it, in saving displaced homeless persons now languishing in European, Cyprean, and other concentration camps so that they may, at long last, begin life anew in a home of their own choice; and be it further

Resolved, That copies of this resolution go forward to the President of the United States, the Secretary of State, the American delegate to the General Assembly of the United Nations, to the Pennsylvania United States Senators, and to the Congressmen of Allegheny County.

Trained To Raise Hell in America

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. KNUTSON. Mr. Speaker, under permission granted me, I desire to insert in the RECORD a reprint from Nation's Business for April 1947 entitled "Trained To Raise Hell in America," which I hope every Member of the House will read. The article follows:

TRAINED TO RAISE HELL IN AMERICA
(By Junius B. Wood)

Attention, ambitious young men and women! A well-established and liberally endowed university offers you free courses in factory sabotage, bomb making, kidnaping, train wrecking, bank robbery, fomenting armed mutiny, and other techniques of violence and treason.

Scholarships cover all expenses, including recreation and annual vacations at summer resorts.

This university is the West Point of world revolution.

That it exists is surprising. That it is sanctioned and supported, according to its graduates, by a recognized government, is more amazing.

Other state-supported schools educate their youth to become better citizens. This university teaches youth of other lands to go back home and wreck their countries.

Over the years it has trained and returned to the United States an estimated 800 disloyal Americans. They are the leaven of some 50,000 Communists and 10,000 pinkos in our land; they are the high officers of a secret army now being drilled to overthrow our Government and social order.

Most startling of all, from an American point of view, is the diplomatic amiability which bolsters and bows to a government that is diligently working to wreck our institutions.

This university is the International Lenin School in Moscow. Conspiracy and secrecy are the essence of all it teaches. Outside of top levels in the Communist Party and in the Soviet Government, few even in Moscow know of its existence.

It is behind a stucco-covered brick wall, high enough to baffle prying eyes. It is on the left side of Vorovskaya Ulitza (street), a few blocks beyond Arbat Ploschad (square of the telegas). Oldtimers, before adopting names of Communist heroes became the vogue, knew the thoroughfare as Povarskaya Ulitza (Cook Street). Even earlier, in 1613, Arbat Ploschad was where a Russian volunteer army under Prince Pozharsky and a Nishni Novogorod (now Gorki) tradesman broke through the defenses of the White city and drove the Polish invaders from the Kremlin.

In olden days this was the genteel neighborhood of court attendants. Later, the aristocracy found it convenient for extramarital ventures. Now it is dotted with diplomatic offices and homes. Students can look across the street from dormitory windows at the former British mission building, now a consulate, at the onetime German Embassy and the official abodes of other capitalist countries.

The present site of higher education in bank robbery—rechristened "revolutionary self-help"—and kindred arts was once the quiet love nest of a Russian prince. His lady friend's little palace in the spacious grounds has been remodeled into the students' auditorium, classrooms and dormitories. It faces a plain, unnumbered gate in the wall, guarded 24 hours a day by a Red sentry so none may enter without a Communist identification card.

More buildings were needed for the growing school. Overlooking the wall is a structure in modern Soviet architecture with classrooms on the lower floors and sleeping quarters on the others. Back of the modest palace is a building for political police and secret paraphernalia, to which even students do not have free entrance. In the rear of the school building is a larger one with halls for demonstrations in street fighting and other activities. A smaller administration building is near the center of the campus, still leaving ample space for outdoor exercises away from inquisitive eyes.

SIBERIA AWAITS THE CURIOUS

Native Russians have learned that the reward for curiosity may be an extended visit to Siberia or an appearance before a firing squad. Patrons of the school admit that the Japanese did photograph the establishment and from within the compound. This was considered an act of treachery (the two countries being friends at the time) which was not discovered until a Soviet spy fraternally stole a copy from Japan's secret files.

When a stranger ask any Muscovite in the know about the Lenin school, the prearranged reply always is:

"It's up Tverskaya Ulitza, off the square with the Moscow Soviet Building," meaning the city hall. This college with so similar a name is the Lenin Institute. Its field is scholarly and theoretical, shouldering the big task of compiling biographies of Marx and Lenin which will account for their acts during every day and hour of their lives.

The International Lenin School started with Nikolai Bucharin, party doctrinarian, as its first director. Lenin passed into posthumous fame and Bucharin did not survive the Stalin purges, but the school grew. War temporarily interrupted plans for expansion as well as the flow of students from other countries.

The school has a permanent faculty, mostly from the Academy of Red Professors, and a director, at one time a woman. High lights of the Soviet hierarchy, past and present—Stalin, Trotzky, Kuusinen, Molotov, Manuilsky, Yaroslavsky, Lazovsky, Budenny, and others—serve as guest lecturers.

Students are immediately inducted into the air of conspiracy in which these veterans have lived. With matriculation, each student takes a revolutionary or party name by which he will be known in the Communist circles and outside activities. Mark Aldanov in The Fifth Seal tells of a party worker who had so many aliases that he forgot his baptismal name.

Even party workers not in the top Holy of Holies speculate over the identity of Josef Broz Tito, belligerent dictator of Yugoslavia. They explain that Tito is a party label from "Third International Terrorist Organization," the initials being the same in Slavic and English. They surmise from his photographs that Tito may be Rudolph Baker, a promising American student of Slav ancestry who was detailed to district organizing after his return to the United States and then mysteriously disappeared.

Dual names as party labels are not limited to students. The oldtimers needed them as revolutionists, and aliases are now a stylish party custom. Among the emissaries sent by Moscow to run party affairs in the United States, the Hungarian Pogany was "John Pepper" and "Schwartz" the late Lussey was "P. Green"; Alpi was "Fred Brown," and the Finn Sirola was plain "Miller."

With his rebirth under a new name, the student gets more instructions in life behavior. He must blindly obey every order. He may associate outside with the unfaithful but not disclose that he is a Communist, must not dress or act conspicuously, be photographed, answer questions, or become talkative from drinking. If positively identi-

fied as a Communist, he shall frankly admit it, but under no circumstances, even if it means imprisonment or death, disclose anything about the party.

WARNED AGAINST UNITED STATES CONTACTS

The first business of any meeting, even casually on the street, is to agree on a fictitious story of what is being discussed to avoid disclosing the truth if interrupted later. Students should not recognize each other off the campus or cultivate fellow countrymen, Americans being warned particularly against American engineers, newspapermen, tourist, and Government employees in Moscow.

The freshman student is already familiar with some tricks of deception. In the United States, he got a passport on the pretext of sightseeing in Europe. If he used a false name, the American party which paid his expenses to Moscow, corroborated his "legent," or fake biography. In the school, the political police can supply a forged identification for any country.

Unless usually naive, the student senses that permission to be off the campus until 11 p. m., is to enable the police to check on his actions and acquaintances. He learns that they watch his political progress or deterioration and control him as they do every Russian. He is now dependent on the Russian party and Soviet Government for existence.

He is instructed to be peaceful and disingenuous with authorities pending the day of revolution. Instead of avoiding military, police or other law-enforcement service in his own country, the graduate must welcome it. These are not only choice fields for spreading Communist doctrine among associates, but the military will supplement the school's instruction in tactics and weapons. A surprising story is told of the recent war:

"Today, I'll start your lessons on dismantling and assembling a machine gun," an American captain told a likely appearing enlisted man. The officer started to take the gun apart.

"Let me try," the soldier suggested. In a few minutes, he had the gun apart and before long the complicated mechanism was back in place and working.

"Where did you ever learn that?" the captain asked, amazed at such dexterity by a raw recruit.

"In the Lenin School in Moscow," the man explained. Instruction in weapons of other countries is one of its courses.

This man was one who had belatedly realized that his first loyalty was to his own country and not to Moscow and the world revolution. Nurserymen figure that 20 percent of seeds will not germinate and the Lenin School figures the same percentage of its alumni may lapse from communism.

PARTY IDEOLOGY FIRST

To keep the percentage down, the first studies in the school's 3-year course are intensive indoctrination in the theories of Marx, Engels, and Lenin. Once well grounded in party ideology, a party member will realize that winning a wage increase or election or disrupting his own country's economy for the benefit of the Soviet Union are only steps toward the final goal.

"Strikes are skirmishes that force the class solidarity of the proletariat, that oppose class against class and train the masses for the final struggle—the destruction of the state apparatus in a capitalist state," is quoted from a lecture by Abraham Branovich, better known as A. D. Lozovosky, lately Secretary of War in the U. S. S. R. and tops in Profintern and Comintern.

"The most glaring weakness of our members is inability to connect particular tasks with party outlook," Beatrice Siskin, alias "Shields," a Lenin school alumna, warns in Party Organizer, the monthly magazine circulated only to trusted American party members. It also fell to name changing and is now Contact.

The Lenin school student who survives volume I of Marx's involved and obtuse capitalism can go on to volumes II and III, to the clearer philosophy of Lenin, the mistakes of Malthus, Ricardo, Smith, and other bourgeois economists and to increasing instruction in practical communism. As volumes II and III were written by Engels from notes left by Marx, faculty members doubt whether Marx himself would understand them.

In addition to its 3-year course, the school has short courses in labor activities, party organization, propaganda, and such, according to the graduates of the school.

The labor movement is next traced from ancient times to the Red Revolution in 1917. In Marxist dogma, the struggle between employers and workers is irreconciliable. Christianity, according to Marx, came from a slave rebellion against the masters. In modern society the struggle is between capital and labor, farmers and distributors. It will be solved only when civilization returns to the collectivism of tribal days and the masses take over the factories and farms. This is the version to be expounded to the masses, but it is made clear to the students that actually a government, as in the Soviet Union, will take over with the Communist Party in control and today's students as the actual rulers.

"Saying there can be unity of interests between employers and employees is treason to the working class," says a textbook by Olgin, followed by instruction that a collective agreement should be broken at the first opportunity.

Stalin, always direct, clarifies this with: "The mightiest ally of Russia is strife, conflicts, and wars in every capitalist nation."

Comrades who recant communism are to be ostracized, slandered, and accused of stealing and swindling, according to the school's instructions. The easiest way to answer charges by outsiders is to denounce them long and loudly as lies until they are doubted.

When the student reaches the courses on Communist Party organization, the haze of theory clears and action starts. He is taught what methods to use, based on party structure and ideology, in any foreseeable circumstance.

In a country where the party is outlawed, it must work entirely underground. In the United States where it is legal but suspect, it should work under cover of other organizations, but the strategy of conspiracy to create internal disorder and to undermine the Government is the same.

TAUGHT BORING FROM WITHIN

The Lenin school student must join tradeunions or liberal societies when he returns to his own country—attend all meetings, pay dues promptly, be eager for work, unite others by party discipline until the organization is blindly following the party line in which he is so well grounded.

"Never in our wildest dreams did we imagine a simple-minded government would permit trade unions and strikes by its employees," a professor in the school commented on the United States. "We have unions but here all workers are government employees and strike is the same as mutiny in the armed forces, punishable by death. Nor did we foresee that a government would facilitate Communist infiltration into independent unions."

Students who can stand it, get the powerful dose from A to Z. They have now reached Z which is insurrection or revolution—how to put propaganda and organization among the masses to a practical test. Red Army officers and technicians, shadowy shapes from the MVD (Ministry of Political Police) and veterans in revolution take over. The course is based on actual experiences, a few successful and many bitter, each teaching something. When the time comes to apply these lessons there will be no turning back, and the penalties for failure are death.

"Too great humanity is a danger as it is interpreted as a sign of weakness," says the textbook of Han Kippenberger, who, under the name of Alfred Langer, writes as a former revolutionary leader in Germany. "That is the great lesson from all revolutionary conflicts. Humanity should be extended only to those who may be won over to the cause. The revolutionary procedure—that is, the terror—should be applied most strictly to all adversaries."

PREPARATION FOR REVOLUTION

Though Moscow does not consider revolution imminent in the United States, American pupils get the course so they will be ready if the occasion arrives. Russia is a shining example of a small well-organized group taking over a country, and the lessons have succeeded in China and the Balkans.

Four "conceptions," using the school's phraseology, for an insurrection are: Preparation, timing, knowledge of tactics, and complete surprise. Though loyal to the Communist world capital and well instructed, the local leaders still will be amateurs—and Moscow prefers to send experienced revolutionaries to take charge and avoid disastrous bungling and overleniency.

Like the party policies and the life of a party member, nothing is left to chance or to personal vagaries, but is planned in advance on party principles and experience.

High points of the plan for the capture of Chicago—when the time comes—sound like an army operation with everything provided for from psychological warfare to dropping paratroopers.

The peaceful preparations are to go on for years through capable party members burrowed into trade-unions, public offices, police force, liberal clubs, and other sources of information. Vital spots, such as power plants, radio stations, and airports must be mapped.

All the working masses and unorganized proletariat may not be aroused to join in the fracas, but the needed knowledge of where to attack to paralyze the city will be at hand. Even recording such a small detail as whether a watchman has a dog is called for in the instructions.

A headquarters, known only to a selected few, will be set up; a courier system organized; telephone talks will be in code, party papers or names memorized and destroyed. Until the zero hour, nonparty friends should be used as blinds and communications written on borrowed typewriters.

Police forces are notoriously unreliable for insurrections. Consequently, the city's riot squad—sure to put up a fight—is studied. If it is on three shifts, the weakest one is picked for attack. Once it is subdued, other police can be mopped up. If there is a suspicion that police officers are alert to what is brewing, the advice is to telephone them on a phony pretext to learn whether they are home or on duty.

The habits and daily routine of the chief of police, also the mayor and leading citizens, must be learned. A blacklist is to be prepared of politically undesirable citizens for summary liquidation or temporary use while their families are held as hostages.

Squads are assigned to capture each objective. Getting arms for them is easy in the United States. The hours and minute when the groups will strike simultaneously will be the final instructions.

To prevent calls for outside help, communications will be interrupted immediately. Railroads are to be wrecked several miles outside the city, either by sending out maverick locomotives or by blowing up incoming trains. Armed men will hold the airports.

Captured radio stations will order a general strike which will be easy if the power plants are seized. The mayor, chief of police, and other officers and leaders are to be captured early. If the mayor refuses to read the

proclamation which must be prepared for him, he can be disposed of on the spot and somebody with a similar voice, already selected, can read it.

According to the time schedule, a city like Chicago should be captured in less than 48 hours. By that time the insurrectionists will have all the weapons and can arm more supporters. They are to proceed to setting up the government from officials picked in advance.

POSTGRADUATE TRAINING

After completing this practical phase of his studies, the graduate of the Lenin school leaves Moscow to begin his career. He may be sent to a colony for a year or more of postgraduate training or to his own country where communism may be outlawed. He has mastered the technique of working under cover. Even in the United States and other countries where the party is permitted, it is actually two parties—one in the open and the other in the shadows.

A party worker or returned student is ostensibly assigned to duty by the proclaimed head of the Communist Party of the United States. Actually his job is picked by the party's American politburo which acts under Moscow's direction. He may be detailed as a state secretary or to other organizational work, for propaganda or writing articles, for special work among Negroes or foreign-language groups or to get a job and build up party influence in a particular union.

The International Lenin School, of special interest because of American students, is only one of several which the Soviet Union operates for this purpose. The Eastern University, formerly the Sun Yat-sen Institute which Chiang Kai-shek's son attended has graduated nearly 10,000. Its efficient work shows in China and Korea, making trouble for young Chiang's father and for us.

Graduates of Western University are active in Balkan and Baltic countries and scattered foreign-language groups from the United States. Tiflis, scene of Stalin's youthful exploits, has a school for Communists from the Near East. Another in Vladivostock is chiefly for Koreans.

The Academy of Red Professors with a 7-year course is scholarly and philosophical. It is for heavy thinkers and high-browed evangels of communism with little appeal for less sedentary Americans.

SCHOOL FOR SECRET POLICE

On an equally high pedestal above the other schools for world revolution is the supersecret Kirov Academy in Leningrad. It is under the MVD, or secret political police. Only candidates who have proved their do-or-die stamina enter its classes. It teaches higher-level underground work and how to organize a police force which can control a nation, even its army, and keep the Communist Party in power. Its alumni are active in both Hungary and Greece.

By fostering so-called liberal schools in American cities, some formerly under party names, selected students can be instructed in revolutionary tactics. Summer camps with intensive courses are even safer from intruders. A goodly portion of some 20,000 graduates of these schools become converts to communism or sympathizers.

With the American schools the International Lenin school in Moscow has become less essential for the program in the United States. It does, however, continue as a goal or finishing school for the hopeful young party member or graduate of the American classes.

The Soviet schools for foreigners are not too alarming when they are stripped of mystery. It would be well to know their eight-hundred-odd American alumni, also their instructors, and what secret plotting is behind the formal handshakes over a conference table or the clink of cocktail glasses at a banquet board. It also will help when they know that we know—an interesting long-range job for our State Department and FBI.

The Missouri Valley Authority

EXTENSION OF REMARKS
OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 10 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD an article, Plain Talk About a Missouri Valley Authority, by Morris Llewellyn Cooke, appearing in the January 1947 issue of the Iowa Law Review.

This important article is given even greater stature and significance because of its authorship. Morris Cooke is quite generally recognized as one of the Nation's foremost engineers in the field of scientific management. His long record of achievement in the public interest places him, along with Theodore Roosevelt and Gifford Pinchot, among those early conservationists to whom this Nation owes a debt of gratitude for saving our natural resources from exploitation and ruin.

Morris Cooke is a practical engineer. He was director of public works of the city of Philadelphia for many years; chairman, Mississippi Valley Committee; first Administrator of the Rural Electrification Administration; chairman of the Technical Mission to Brazil; and United States arbitrator in settlement of the oil dispute with Mexico.

The Mississippi Valley report made under Morris Cooke's chairmanship drew sharply into focus the need for an integrated program of resources development. He has long recognized the dangers of soil erosion, the need for a national forestry program, tied in with flood-control activities on the main stems of our great river systems.

As an early advocate of the TVA, Morris Cooke stood shoulder to shoulder with the great Senator Norris in leading this Nation toward the establishment of that world-recognized achievement. In this article on Plain Talk About a Missouri Valley Authority, Morris Cooke brings to bear on this subject the accumulation of his vast knowledge and wide experience in harnessing natural resources for the common good.

I have an estimate from the Public Printer, which indicates that the article by Mr. Cooke will exceed the two printed pages allowed under the rule without an estimate, and that the cost of printing will be $355.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLAIN TALK ABOUT A MISSOURI VALLEY AUTHORITY

(By Morris Llewellyn Cooke)

The date 1900 may be said to mark the turning of a most significant page in the progress of the race, essentially because commercial electricity arrived toward the end of a century during which there had been a progressive change in the mental attitude entertained toward man and his environment.

Since the beginning of recorded time countless millions inhabiting the valleys of the world—of the Euphrates, the Ganges, the Nile—have lived lives of utter squalor; squalor emphasized by the splendor surrounding the way of living of the ruling few. Low vitality, ill health, primitive sanitation, inadequate food, unceasing toil have been the grinding lot of mankind. The nineteenth century had witnessed a widening of the democratic process and a growing regard for the individual. There also had occurred a stepping up in the tempo of scientific discovery, which gave new insights into our basic resources—man, land, and water.

In 1882 came current electricity with the growth in its use accelerating in each succeeding decade. By 1900 scientists and engineers had learned to generate it in any desired volume from fuels and falling water. By this date too it could be transmitted great distances to operate large-scale industry, and to serve in many ways in the homes of the people.

In 1933 the Tennessee Valley Authority with its novel concept of local autonomy was launched. During the years of its development it has afforded the world the first demonstration of the political, economic, and social effects which may be expected to flow in increasing measure from the competent application of the wide variety of influences pictured as having culminated about 1900. TVA is admittedly only a beginning—a foretaste of what is to be. But through foresight, highly competent administration, and some lucky breaks such foundations have been laid as will insure further and continuing progress. Enough has been demonstrated in the Tennessee Valley to afford valid promise of establishing throughout the world conditions under which man can reach new heights of living and being.

What is the application of all this to our theme? The Missouri Valley[1] is one of the undeveloped areas of the world. Its rivers are largely uncontrolled and its soils are washing away. Income-producing industrialization is all but absent, obvious natural resources remain undeveloped, average income is low and moving lower, both family and community life are below the American standard, and population is declining. One is tempted to ask, "Watchman, what of the night?" and the answer can confidently be made that most of the influences that now weigh down the Missouri Valley can be removed, others minimized by establishment of an autonomous valley authority comparable to TVA. And it may be asserted just as confidently that practically all the opposition to such an authority is occasioned by the desire to set ahead relatively petty interests—both public and private—which have no legitimate bearing on the proposal to establish within the Valley a general level of well-being in which all citizens, and all legitimate interests, may participate and profit.

In view of so much that is wrong it is not strange that there are to be found people who take the very pessimistic view as to what can be accomplished under the most favorable procedures in improving the current way of life in the Missouri Valley. It is generally and perhaps rightly assumed that the upper valley—the land of low rainfall—would be the more difficult part of the problem. And yet a distinguished group of experts visiting this region during the height of the

[1] The Missouri Valley consists of large parts of Missouri, Kansas, Colorado, Minnesota, Wyoming, all of Nebraska, and a considerable South Dakota, North Dakota, Montana, and section of western Iowa. This represents in area nearly 17 percent of the total area of the United States. The population included in the Valley is about 11 percent of the total population of the country.

disastrous drought of 1936 and while the effects of the depression were still widely felt, had this to say:

"The land may bloom again if man once more makes his peace with Nature. Careful planting will give him back the foothill trees; terracing will restore grass for controlled grazing; fewer and larger farms on scientifically selected sites may yield under the plow a comfortable living; dams will hold back the waters from rains and melting snow, giving power and controlling the flow of the life-giving streams; springs may be developed, water pumped by windmills to water cattle, moisture held in the soil by scientific methods of tillage; by such means the life of man on the land may be made happier, more prosperous, more secure. The sun, the wind, the rain, the snow can be friends of man, not enemies. This is no Utopian dream. It is a promise, to be realized if we will." [2]

It is a great mistake to view the situation in the Missouri Valley as a matter with which only the residents of that region need be concerned. The Missouri Valley is an integral part of the United States. The buying power of the valley is an important factor in the trade of the country. The banks of the valley are part of a Nation-wide system. With every decline in the indices of the prosperity of the valley the great trunk-line railways which run through the region are penalized. The health of the valley's people is a matter of general concern, among other reasons, because of its obvious bearing on recruiting for national defense. The decline of the Missouri Valley is all but problem No. 1 on the national doorstep.

NEW ATTITUDES TOWARD BASIC RESOURCES

Now what can be said as to our changing attitude toward basic resources? I first take man—our principal resource. The dignity of the individual and the necessity for recognizing differences between individuals are concepts of relatively recent growth. Given a reasonably responsible government and a favorable environment, we now know that what happens is largely decided by the individual. Indeed under present-day attitudes each of us has become a personality. In my early years the idea was widely and importantly held that labor was a commodity. By contrast, in TVA as a part of the cost of building dams and for the first time in history, villages providing decent living conditions for the workers were laid out and, when practicable, with the thought that they would be more or less permanent. And in the subsequent development of TVA vast research has been devoted to devices for making life more worth while in the home, on the farm, and in the fields. One might continue these new affirmations indefinitely.

When it comes to land and especially to soils, science has opened up vistas for conservation and progress not dreamed of even a few years ago. At the conservation meeting of the governors of States in the White House in 1907 the representative of the Department of Agriculture referred to our soils as "imperishable" and "eternal." But in a short span of 40 years since, we have come to know that over wide areas the land is all but worthless because of soil erosion. That is the negative side. On the other hand, the sciences of land use and of soil conservation have, through a wide variety of new farming practices,[3] given us a new and more constructive attitude toward what just a few years ago seemed almost a hopeless prospect.

[2] The Future of the Great Plains (1936), a report of the Great Plains Committee.

[3] Two practical pamphlets outlining these practices have been published for free distribution: 1. There Goes a Thousand Million Dollars a Year, issued by Ford Peterson Co., and 2. Let's Practice Soil Conservation for a Permanent Agriculture, issued by International Harvester Co., Chicago.

Shaler, Harvard's great geology teacher of a half century ago, raised the portentous question as to whether "human culture can devise and enforce ways of dealing with the earth so that it may support men of the ages to come." We in the United States have a special responsibility in this matter because our soils as a whole are in better shape than those found in the other continents, and we have the needed resources both to carry on the necessary researches and see that the findings are applied. It cannot be too often repeated that in this matter of nailing down our soils we are still slipping, notwithstanding all the progress made in recent years in our understanding of the problem.

World-wide research into the science of soils, in which Union of Soviet Socialist Republics scientists have taken an important if not a leading part, has yielded new understanding. For instance, within recent years a Rutgers College group has isolated hundreds of varieties of micro-organisms to be found in good soils and not heretofore known to exist and speculated profitably as to their roles in soil processes.

In an entirely different field, W. D. Ellison, of the Soil Conservation Service, reports on the mechanical effect of the lowly raindrop on soils. When rains fall slowly, farmers give thanks for "a good soaking rain." When the rains beat hard and fast and fall on exposed seed beds and bare ground, farmers know instinctively their land is being hurt. Row crops—corn, cotton, and tobacco—are especially vulnerable. Flowing water cuts gullies and rills. But sheet erosion—something else—takes place across entire fields, and is usually blamed on the cutting power of water flowing down slope. Ellison has discovered that this is only partially true.

Some rainstorms have large drops; some have small. In some, the drops fall fast; in others they fall slowly. We have drizzles and cloudbursts. But each drop that hits bare soil splashes many small particles of soil into the air and this is what causes sheet erosion. A single raindrop may splash very little soil, but during a heavy rainstorm on a bare field of highly erodible soil, the billion or more raindrops striking each acre may splash more than 100 tons of soil into the air. This splash will reach heights of from 5 inches to more than 2 feet. Since most of the land in the United States slopes, most of the splashed material is moving downhill.

When soil is splashed into the air the very slightest particles are usually carried off downslope, while the heaviest particles may settle out of the surface water almost immediately. This process results in the washing out of light organic matter, humus, clay materials, chemical fertilizers, and seed. Several tons of very fine particles from each acre of bare land may be released in a single shower.

When raindrops beat on the soil, breaking down the clods and crumbs, the resulting small particles tend to reduce the size of the cracks and pores through which water may penetrate the surface. Before long the surface of the land is sealed, and so there results an increase in flash runoff, which tends to aggravate flood situations.

The conservation of readily detachable soils depends on protecting the soil against the beating raindrop by holding it together, while the conservation of readily transportable soils, on the other hand, must depend primarily on stopping surface flow of water. Heavy cover crops and mulches are most effective in preventing the erosion of highly detachable soils, while terracing is an effective measure in dealing with highly transportable soils. After all, the only way to safeguard the land is to use it according to its individual capability and characteristics.

Five years ago the Soil Conservation Service in estimating the total cost of protecting the Nation's 1,300,000,000 acres of erodible lands against further depletion [4] concluded that approximately $3,000,000,000 would be required to be expended over a period of 25 years—say $120,000,000 a year with the allotments increasing toward the end of the period. As this gross was not more than one-tenth of what had been spent in the preceding 25 years on roads and highways—exclusive of what had been spent in cities which amounted to another ten billion—it seemed to be a sum easily within range of accomplishment. Not to spread gloom but only to emphasize the necessity for action, it has been estimated that our annual losses due to soil erosion now total nearly $4,000,000,000. Anyone who has watched the deterioration in Pennsylvania farm lands during the last 50 years can easily believe this.

Recently the Soil Conservation Service has restudied the situation and divided the total work into the portions of this work which should be done in 10-, 20-, and 30-year periods, based on the current rate of depletion. That means first attending to the areas where total loss may be impending. The soil-conservation worl to be done in the Missouri Valley is being divided up similarly and from this it is believed that one will be able to form a guided opinion as to how soil losses are going forward in the valley as compared with the rest of the country.

An important step in ending erosion is water control. During the last 15 years we in the United States have made great progress in our understanding of the origin and behavior of water (see fig. 2 [not printed]) [5] when it strikes and courses through the land. We know now that floods and damage to tillable areas through run-off are largely due to improper water-control practices. Roadside ditches, gullies, and up-and-down furrows on steep hillsides—the product of recent years—largely account for our increasing floods. That this water is allowed to run off rather than seep in accounts for the lessening of our subsurface reserves and the tragic lowering of the water table, which is a threat to agriculture everywhere, and in some States is shaping up as a block to further industrial growth. In Ohio, for instance, Procter & Gamble and Youngstown Sheet & Tube are reported to have found the diminishing water supply the principal obstacle to their growth. The remedy lies largely in "holding the raindrop where it falls," giving it by various devices and practices a chance to sink in and reach the water courses ultimately by underground routes (see fig. 3 [not printed]) [6] thus not only building up the subsurface water reserves but also sparing damage to agricultural lands.

Our everyday experience is proving that most of the problems posed by the necessity for conserving our main natural resources—men, land, and water—are soluble. But unless the people competent to tackle and solve these problems are given a chance to do so, such areas as the Missouri Valley will continue to decline. Every delay adds to the difficulty and expense of solutions.

THE TENNESSEE VALLEY AUTHORITY EXPERIENCE

Certainly no one was in a better position to know the effectiveness of the TVA administrative mechanism and, as a farmer, to know the difficulties connected with bringing back abused acres than the late President Roosevelt. He never lost an opportunity either to visit the Tennessee Valley or to give favorable testimony as to what was there being

[4] See Conservation of Renewable Resources (1941), a symposium on fundamental aspects of the problem, held in connection with the bicentennial of the University of Pennsylvania.

[5] From Person, Little Waters—Their Use and Relation to the Land (1936).

[6] From Cooke, Multiple Purpose Rivers (April 1944), 237, Journal of the Franklin Institute 256.

accomplished. He was a constant advocate of valley authorities in general throughout the country. In September 1944, at the height of the war, President Roosevelt urged on Congress "careful and early" consideration of an MVA "for the greatest benefit of its citizens, both present and future, and for the greatest benefit of the United States." In signing legislation authorizing certain work to be done on rivers within the Missouri Valley, not long before his death, he stipulated that these projects must not be allowed to stand in the way of the establishment of an MVA.

An eloquent testimony as to his faith in autonomous watershed development is afforded by the following statement as related by Secretary of Labor Perkins:

"President ROOSEVELT. When I get through being President of the United States and this damn war is over, I think Eleanor and I will go to the Near East and see if we can manage to put over an operation like the Tennessee Valley System that will really make something of that country. I would love to do it.

"Secretary PERKINS. There is plenty for you to do here.

"F. D. R. Well, I can't be President forever, and I don't know any people who need someone to help them more than the people in the Near East." [7]

Fortunately 12 years of novel and fruitful experience with the Tennessee Valley Authority would give any new valley authority an advantage which TVA did not enjoy. The list of pick-ups which any new authority could have for the asking would be worth many millions. In spite of all the difficulties which attend the launching of any new enterprise, TVA justifies and has won worldwide recognition. A constant stream of visitors, representing to date over 50 nations, is visiting the Valley in increasing numbers. Scores of books, hundreds of pamphlets, and thousands of newspaper articles, many of them in foreign languages, have been written analyzing its operations. Perhaps the broadest gage and most fundamental item in this long list is TVA—Democracy on the March [8] by David E. Lilienthal, former Chairman of the TVA Board, a book which has been translated into a score of languages including Hebrew and Chinese. Democracy has developed no techniques for adequately rewarding such signal public service as has been rendered by Lilienthal and his colleagues against exasperating odds in making a success of this enterprise.

During the days of its fiery ordeal in getting started, of having its legislation validated by the Supreme Court,[9] and of having its brand-new organization shaken down, TVA was subjected, as might have been expected, to widespread critical comment, much of it originating with the private utility companies. Finally friends and foes united in a thoroughgoing and amply financed congressional investigation with a clean bill of health as the verdict.[10] But the criticisms keep on just as Mencken's imaginary story of the introduction of the bathtub is still published 40 years after the distinguished author widely advertised it as a fake.

Just as "the test of a pudding is in the eating" so what TVA has actually accomplished along many different lines during its relatively short life must be its most dependable justification. One cannot visit the Valley without encountering these benefits at every turn. Fortunately the United States Census [11] has recently issued various comparisons county by county between conditions in the Missouri and Tennessee Valleys—1930 as contrasted with 1945. For instance, in these 15 years: 1. In 1930 the acre value of Missouri Valley was $39.17 or 15 cents more than in the Tennessee Valley. By 1945 the acre value of Tennessee Valley farms had risen to $46.30 and in the Missouri Valley had fallen to $25.28. 2. In the value of farm machinery employed per acre the Missouri Valley figure rose from $7.13 to $9.34 while in Tennessee Valley it rose from $7.05 to $12.72. 3. In the matter of farm homes equipped with electricity the increase in Missouri Valley was twofold while in Tennessee Valley it was sevenfold. 4. In population the Missouri Valley lost slightly as contrasted with a national average increase of about 7 percent and with a 12-percent increase in Tennessee Valley. 5. And farm tenancy in Missouri Valley fell from 40 percent to 35 percent while in Tennessee Valley it dropped from 43 percent to 27 percent. These revealing comparisons might be continued more or less indefinitely.

FATAL FLAW IN PICK-SLOAN PLAN

Congressional announcements, the mimeographed hand-outs of certain Government bureaus, and the propaganda of the private interests, including that of local and national chambers of commerce might easily lead one to believe that the steps already taken or authorized would solve all the problems of the Missouri Valley. These steps consist largely of building dams and other structures in or adjacent to the main stems of rivers—the Missouri and its principal tributaries.

There is an obvious and fatal flaw in these plans, a flaw which neither the Congress nor the people directly interested appear to want to recognize even though hundreds of millions—perhaps over $1,000,000,000—are under these plans to be spent in the Valley. Such expenditures surely ought to do something pretty fine, say the pork-barrel politicians, the contractors who will do the work, and the special and private interests to be favorably affected, each perhaps in a different way.

This vast and all but futile scheme is to be carried out by two agencies of Government—the Army engineers and the Reclamation Service, the latter the Bureau which handles irrigation within the Department of Interior. Formerly these two agencies fought each other tooth and nail, hammer and tongs, for appropriations. But with the appearance of the MVA proposal discretion suggested that these agencies work together both for appropriations and against MVA. So what has been humorously referred to as a shotgun marriage was effected and the Pick-Sloan plan was adopted. The consolidation of the lobbies representing these agencies has been highly successful in making it appear that dam building on a large scale would save the Missouri Valley.

Here is the hitch. Water which at one and the same time is the lifeblood of irrigation and the cause of floods originates almost wholly upon the land. It is what is done on the land that conserves water and makes increasing volumes available for irrigation up river. It is what is done on the land that retards run-off and thereby reduces the volumes of water which have to be handled as floods downstream. Yet neither the Army engineers nor the Reclamation Service has any legal right to carry on operations on the land nor does either attempt to operate on the land. If steps are to be taken on the land to increase flow to provide for irrigation and navigation, and to decrease flow in order to prevent or decrease floods, then it must be done by some agency commissioned to operate on the land and authorized to coordinate the efforts of the score or more of public agencies influencing the conduct of water wherever it is to be found, among them the Army engineers and the Reclamation Service. This is a function for an autonomous watershed or valley authority.

The path to land-wise conservation of water has been cleared by the Soil Conservation Service of the Department of Agriculture in its sponsorship of uniform State legislation authorizing autonomous soil-conservation districts. Three hundred and fifteen such districts have been established in the Missouri Valley covering about 45 percent of the Valley's area. Each of these districts has accomplished much within its own geographical confines; and each through educating groups of farmers to better agricultural practices has made a real contribution to the total national problem of land use and water conservation. But to be truly effective even in their restricted area of operations, these districts need valley-wide leadership such as would be provided by an MVA. This could be done without any appreciable encroachment on their local autonomy. Perhaps a contract between MVA and Soil Conservation Service, similar to those in force between TVA and many governmental agencies—Federal, State, and local—would provide one means to this end. But whatever the final organizational set-up every effort should be made to give as free rein as possible to the farmer's individual initiative. Local interest and resourcefulness as contrasted with bureaucratic control should be promoted. The Department of Agriculture, as well as MVA, should constantly seek to be the farmer's great and good friend, available on demand with advice but without imposing cramping instructions or dictating procedures. Self-reliance of the individual has been and will continue to be our most priceless asset. The mechanical working of the land under modern soil-conservation practices requires a constantly increasing variety of heavy machinery too expensive to be owned by a single farmer or even a single district. Valley-wide organization would permit such equipment to be moved about on loan. In recent years the Congress has made some appropriations to the Forestry Service in the Department of Agriculture to aid land and water salvage work, pond building, and such like, not ordinarily associated with forestry. Such recognition of pressing needs in certain areas and for certain projects simply affords another unanswerable argument for an over-all autonomous regional agency, bringing into effective harmony the vast number of conservation activities which will have to be either energized or initiated if the vitality of the Missouri Valley is to be restored.

Involved in this total task of putting the Missouri Valley on the way to its maximum rehabilitation and development are a myriad of minor matters and adjustments, some confined to narrow areas, others common to the entire region.[12] There are, too, some major problems which in the light of our knowledge of only a few years ago seemed all but insoluble. In the latter class is the treatment of certain tributaries of the Yellowstone—"the Tongue, the Rosebud, especially the Powder River and most especially the Big Horn," [13] which come into the Yellowstone carrying a tremendous load of silt and cause the Yellowstone to load and color the Missouri-Mississippi all the way to the Gulf. This condition was once believed natural and unavoidable; we know now, however, that it results largely from overgrazing,

and that as recently as the time of the Civil War these particular streams ran almost crystal clear.[14]

With the situation in the Missouri Valley as grave as most indices suggest and with the promise of relief through an MVA "just around the corner" one wonders why nothing is done about it. The answer seems at least threefold. First, it has been widely assumed that such radical changes in political administration as called for by an MVA cannot be brought about quickly; no matter how serious the emergency may be, long periods of gestation are assumed to be necessary. Second, there has seldom been concentrated on a single piece of legislation such a volume of fallacious argument and special pleading as has been thrown up against Senator MURRAY'S successive bills for an MVA.[15] And third—and by far the most important—we have not taken on the appropriate postwar type of thinking about desirable changes in our political, social, and economic set-up. The legislative process remains, except on rare occasions when the national safety is involved, pretty much the humdrum, slow tempo process it has always been. It is a process adapted to the relatively small affairs of "horse-and-buggy days." It is based too frequently on what cannot be done. World War II has taught us that it is high time that we quit talking about what cannot be done and visualize what can be done. Especially in a matter such as setting up an MVA, where the need for action is overwhelming and the remedy right at hand, we must lift ourselves out of the world of "small potatoes." We must adopt the type of thinking that called for the "impossible" in airplane production and then more than doubled it, that moved 12,000,000 men equipped for war overseas when it clearly "could not be done," and that gave us long-sought atomic energy and the bomb and the war's end. This type of thinking backed by a few unquavering voices can give us a Missouri Valley Authority.

TIME-WORN ARGUMENTS AGAINST MVA

As is apt to be the case with any sizable project, there are questions in connection with the proposal for an MVA upon which reasonable men may hold differing views. On such matters either viewpoint may be adopted—at least temporarily—without materially lessening the value of the scheme as a whole. It is important that discussions be held and legitimate differences of opinion be expressed. But captious criticisms on minor points, even though made unconsciously, may weaken or defeat the over-all objectives.

There is no arithmetical answer as to whether one administrator or a board of three, or even five, men should head the proposed Authority. Any one of them would probably work. Whether one is better than three would depend in large measure on the character of the appointees under the two set-ups. Because of the marked difference in economics up and down river I personally prefer a board of three, which would give an opportunity to appoint one man closely acquainted with the situation down river, another having familiarity with the low-rainfall upper section, and a third, perhaps the chairman, who would possibly come from outside the valley, and therefore not share what are undoubtedly fairly acute local prejudices. Again, if it be held that irrigation should be reserved for "family-sized farms" as contrasted with corporation farms, there may well be a difference of views as to the formula. One hundred and sixty acres, once a standard, has long since ceased to be wholly dependable. Ten acres of irrigated land, used for highly priced crops, may be a full-size job for one family, while with another type of land use, 1,000 acres may be insufficient for adequate family living. Here again a difference of opinion on a minor matter should not be made the excuse for holding up vitally needed legislation.

Perhaps the most fundamental of such questions is as to whether the Missouri Valley—17 percent of the area of the United States—is too large to be put under a single authority and administration. One reason why the size of the Missouri Valley is used as an argument against a single authority is that people mistakenly assume that the scope of the Authority is wider than it really is. It has nothing to do with the great bulk of the political and quasi political administrative activities of the region, such as the State, county, township, and municipal governments, the school system, and widely ramifying Federal responsibilities, such as those of the Treasury, Commerce, and War Departments.

Some of the most effective opposition to an MVA comes from Federal officeholders—perhaps because they fear that its creation will in some way curtail their own authority. Hugh H. Bennett, the distinguished head of the Soil Conservation Service, who has probably done more for soil conservation than any other single individual, in his appearances before congressional committees and in periodicals with wide circulation, has given diaphanous support to the MVA proposal. Largely through an unfortunate interplay of strong and technically equipped personalities Soil Conservation Service has until recently been practically excluded from the Tennessee Valley area—the Authority having decided, somewhat mistakenly, I believe, to do its own soil-conservation work. There is no reason to believe that the same thing would happen in another area under wholly different conditions and under different administrative direction.

Similarly Harold Ickes, when Secretary of the Interior, took violent exception to the second draft of the MVA bill and dubbed it one "to gut and dismember the Department of the Interior," [16] insisting that if such an agency were created it should be placed under his direction and control. Later Secretary Krug took a more statesmanlike view when he said in connection with the proposal for a Columbia River Authority:

"It is clear to me that a strong regional autonomous organization should be created to execute certain specified Federal functions in this area. The most important thing to keep in mind is the need for such a delegation of these certain specified Federal responsibilities to a single regional organization. It could do the job better and cheaper than many Federal agencies dealing with river development." [17]

COLD- VERSUS WARM-WATER FISHING

There are 57 varieties of private interests in opposition to unified watershed developments. The Izaak Walton League, for instance, opposes virtually all dam building because (1) such structures are apt to intersition effective, the league on occasion teams fere with upstream "cold-water fishing," i. e. for trout and bass, and (2) that the constant shift in water levels above the dams makes the shore lines difficult nesting and feeding grounds for game ducks. To make this oppoup with the private power interests, who always oppose public dam building as leading toward public ownership of the power industry. Every effort should be made, of course, to keep in a state of nature the largest possible number of those priceless beauty spots where game fish are to be caught by the relatively limited number of those possessing the proper paraphernalia, including hip boots. But we must not lose sight of the vast number—children and adults—who enjoy hauling out "sunnies," catfish, and other varieties from reservoirs created by multiple-purpose dams, filled as they are with water disdainfully called "warm" by those who prefer to go to the wilds for their sport and recreation.

We should, of course, deeply resent the spoliation of the physical aspects of our water courses. When I was a boy one did not have to leave the haunts of men to find streams where verdure—ferns and mosses—bordered streams of clear water in which fish lived and thrived. Through the dumping of waste and more frequently through the scouring of floods of the stream bottoms and banks, all this is gone. The present generation does not realize the change and the loss. So if on the upper reaches of our rivers such beauty spots still persist, I am all for saving them, while at the same time we harness other waters to produce energy and incidentally make pools where young and old can pull out warm-water fish.

There has been, it must be admitted, an almost patronizing attitude on the part of most agencies, public and private, toward realizing on the recreational opportunities associated with dam construction. But this can and must be corrected. For instance, it would be relatively easy to create below the dams, where water levels are fairly steady, new areas for game birds quite the equivalent of those destroyed above the dams. All that would be needed would be legislation including in the total cost of the dam the minor expense of some bulldozer work below the dam proper to clear away underbrush and open new fresh-water channels.

Perhaps I feel strongly in this matter because I have lived through comparable aberrations in engineering thinking. I recall the time when educated water engineers divided about 50–50 as between those who believed that rivers were designed by God as conveniently located sewers and those who fought to protect them against defilement of any sort whatever. This attitude has resulted in the present practice of 6,300 communities with a population of over 50,000,000 dumping their disease-laden sewage into our rivers.[18] The first highway engineers I knew drew a straight line between two points and "let her go." Now it has become quite the practice to choose scenic routes, to watch the grades and curves, to avoid the clutter of pole lines and hot-dog stands, and even to seek out vistas. It has become professional to have in mind and safeguard aesthetic considerations.

The most substantial grievance to those of us who believe in a broad recognition of the claims of recreation lies in the fact that whatever is done to further recreation is almost always undertaken after the claims of flood control, navigation, and power have been satisfied, rather than as an integral part of the making of plans and their execution. This usually means "too little and too late."

WASHINGTON LOBBIES IN ACTION

A military commander invariably seeks to find out as much as possible about the opposing forces, the strength of the several services, and how deployed. So those of us who are seeking to promote MVA legislation must recognize the organized groups in opposition, study their methods, and keep a watchful eye on their operations. The cattlemen, lumber and oil interests, railroads, electric power industry, and the contractors, each motivated somewhat differently, are opposing MVA just as they opposed and continue to oppose TVA. What makes this opposition powerful is that they hang together on

[14] Ibid.

[15] The first bill was introduced in the Seventy-eighth Congress, the second in the Seventy-ninth, and the last is before the present Eightieth Congress. With appropriate variations all three bills are modeled on the TVA.

[16] So stated in a letter to the author, dated December 24, 1946.

issues even where their own particular interests may not be affected.[19] The cattle, lumber, and oil men want to graze, cut, and drain without let or hindrance, without regard to the evil effect on the districts in which they operate and even if the long-term interests of their own industries are sure to be injured thereby. The cattle and lumber interests are now engaged in a campaign to have the Federal holdings in range and forest turned back to the States and then if possible to private ownership. Contrariwise, history shows that when State administration gets too effective the cry goes up for Federal control. The railroads oppose the development of river transportation for fear of its effects on rail rates. The power people oppose public power as likely to press down private electricity rates, for it is recognized that cheap electricity is perhaps the most important factor in regionalism. The contractors oppose MVA because TVA adopted the policy of doing its own construction of dams and transmission lines in order to safeguard the comfort and safety of the workers and to distribute the educational advantages that can be made to accompany that kind of work. The foremen were necessarily moved from one dam site to another but as largely as possible labor was recruited locally. In addition to the training afforded, each worker acquired an understanding of TVA and its objectives.

To further consolidate this opposition and make it more effective some 30 organizations,[20] largely but not exclusively confined to the West, have been created for the purpose of holding meetings at strategic times and places and otherwise lining up directed support through the press, chambers of commerce, Izaak Walton league bodies, college teachers, and other amenable agencies of our free enterprise society. A small percentage of these organizations include with their propaganda activities some socially desirable objectives. It must be admitted that this makes their opposition all the more formidable.

These widely distributed, closely articulated, and highly vocal back-country propaganda organizations head up in various Washington lobbies. A lobby may be a single individual or a highly functionalized group of individuals. However set up, the Washington representatives of the private interests referred to above invariably work as a team so that when legislation is to be opposed all hands join in the attack, seemingly quite regardless of whose ox is to be gored or who pays the bills. It has happened more than once that quasi-public lobbies such as those who work on the Congress on behalf of bureaus and departments of the Government have actually teamed up with these private lobbies. That the National Association of Electric Companies takes its lobbying seriously is indicated by the fact that its representative in Washington, who is registered under the La Follette-Monroney Act as a lobbyist, receives a salary of $65,000 per annum on a long-term contract. He seemingly earns his salary for at a recent hearing on REA legislation it is reported that the presidents of 25 private utility companies were in attendance. Such a showing is apt to impress all but the most stout-hearted legislators. A mass of detail as to how these lobbies operate appeared recently in the CONGRESSIONAL RECORD and was later published in a pamphlet for free distribution.[21]

It is increasingly being recognized that the industrialization of an essentially agricultural region such as the Missouri Valley is basic to its real growth.[22] For each such area and for each stage in its development there appears to be an appropriate balance between the number of industrial and agricultural workers with the percentage of the latter declining as income per capita increases. Perhaps the most obvious first step in industrialization is to develop within the region the processing of the maximum volum of the foods, fibers, and timber produced. From there on to the satisfying of local consumer wants by local manufacture and to the development of natural resources lying fallow [23] one covers the whole range of possible future industrialization. These steps have yet to be initiated in the Missouri Valley with its colonial economy producing raw materials for processing and fabrication elsewhere than in the Valley—largely in the industrial East. Out-of-balance rail rates only aggravate this unfortunate situation. As has been demonstrated in TVA experience, an enlightened, aggressive headquarters organization such as would be provided by a Missouri Valley Authority is needed to give to industrialization the required tempo and a wide distribution. Our war-born technical efficiency has the tendency to lessen the country-wide demand for labor. But an industrialized regionism not only multiplies the kinds of jobs but facilitates rapid adjustments in employment for the individual.

The type of agricultural-industrial regional set-up fostered in the Tennessee Valley, and potentially in the Missouri Valley, is the only one which affords the background and means for a culturally enriched and satisfying village and rural community life. In the Missouri Valley and elsewhere throughout the land it is increasingly true that in place of a stabilized and well-content population, we find a large percentage of the people on the move, wanting to get away from a colorless and stultifying subsistence. On to the big city is the cry—with a drab life the result for the great majority.

The local community we seek, according to Baker Brownell [24] has five essential characteristics. It is:

1. A group of neighbors who know each other.

2. A diversified group as to age, sex, skill, function, and mutual service to each other.

3. A cooperative group, in which many of the main activities of life are carried on cooperatively.

4. A group having a sense of "belonging," or group identity.

5. And lastly, a rather small group, such as the family or small town, in which people can know each other as whole persons, not as functional fragments.

When the group under consideration is so large that the people in it do not know each other, in Brownell's view the community in the sense in which he uses the term disappears.

Seemingly such grass roots community groups do not conflict with that broader concept of community living as advocated by Patrick Geddes[25] and by Robert M. McIver in his Community.[26] On the contrary they afford its only sure support. The use of the same term for functions, characteristics, and qualities at the several levels of evolutionary development—differing as they may in intensity—is quite common in science, notably in biology. An amoeba is an organism but so is Albert Einstein.

It has long since become obvious, and with the development of atomic energy it only becomes more so, that we must develop a science of society that will help us keep pace with our great strides in physical science. Society, according to Howard W. Odum,[27] can only be built on man's relation to, and his dependence upon, the great physical backgrounds and natural resources. These together with the people constitute the physical basis of society and therefore become the first and inescapable principles of the science of society. And this is fundamental the world over. Further the proposition of the regional equality of peoples, with better opportunity to have access to the resources in the places where they live, is an essential problem of modern social science. This includes the widening range of occupational opportunity that comes from developed resources and a balanced culture.

VALLEY DEVELOPMENT A WORLD-WIDE MOVEMENT

It is impossible to examine the proposal for a Missouri Valley Authority in its true perspective except it be viewed as part and parcel of a many-sided world-wide movement. While the international publicity which has attended the success of TVA has given valley development a decided impetus and clarification, regionalization has been actively promoted in many parts of the world for many years. Russia, India, China, Spain, and French West Africa [28] are among the countries having going valley projects, while in Palestine, Ontario, Australia, Wales, France, Mexico, Brazil, and elsewhere the matter is very much to the fore. People generally throughout the world are beginning to realize that it will be only through the type of organization which goes with unified watershed development that we can conquer the dreadful poverty which increasingly menaces civilization.

There are businessmen all over the world who are coming to recognize that economic development, especially of backward areas, is the most obvious means of expanding world trade and defeating isolationism. And so in the preliminary draft of the Charter for an International Trade Organization [29] under the United Nations the signatories "recognize that progressive economic development is dependent upon the availability of adequate supplies of capital funds, materials, equipment, advanced technology, trained workers and managerial skill" and pledge themselves "to impose no unreasonable impediments that would prevent other members from obtaining access to facilities required for their economic development." The World Bank was set up to facilitate such developments.

"Investment of 2 percent of the American national income or $4,000,000,000 annually for the next 20 years in the economic development of the less fortunate countries of the world" said Chester Bowles, former Director

[19] For a discussion of the way in which these different groups hang together and fight each other's battles see a series of seven articles by Ralph W. Page published in the Philadelphia Evening Bulletin in early October 1946.

[20] A list including most of these organizations can be compiled from a study of the congressional hearings on the MVA bills in the Seventy-eighth and Seventy-ninth Congresses, for one of their important functions is to put in voluminous testimony against valley developments.

of Economic Stabilization, recently "might well change the entire tide of world history."

This sum, in addition to private investments abroad, would go a long way toward the building of a modern transportation system throughout the East, in South America, and in Europe, and would help to harness the power of most of the great rivers of the earth, eliminate floods, build great power plants, provide irrigation for the benefit of tens of millions of people. And by raising living standards in Europe, Asia, India, South America, and Africa would enable countless people to become customers for the goods produced in our own factories.[30]

Supplementing these proposals, Charles F. Kettering, vice-president of General Motors, admitted recently that:

"We have the scientific knowledge to provide an adequate diet for every one of the 2,000,000,000 inhabitants of the globe if the information were properly applied. The false barriers erected by man himself prevent a large percentage of the peoples of the world from enjoying the benefits of science." [31]

THE EPIC OF A SWISS VALLEY

In the summer of 1946 I visited the Valley of the Aar in northwest Switzerland, an area which has been wonderfully reconditioned through the introduction of electricity beginning in 1895. In recent years the electricity supply resulting from dams in the river has been increased by the creation of pondage in the nearby mountains. Although the region is highly industrialized it gives the impression today of a well-kept park. Factories, homes, and farms give every appearance of prosperity. And yet, less than 100 years ago the country was quite wild; little land was cultivated, people lived in thatched houses, and wolves and wild boar roamed the hills.

The pressure of poverty was so great at that time that the town of Rothrist cut down trees from the mountainside and sold the lumber in order to buy ship passage to this country for its surplus and very poor population. It was shortly after this that the industrial development of Rothrist and the Valley of the Aar began. And while the 300 voyagers who left the Aar to seek new opportunities in the New World were settling in the industrial slums of America,[32] in many cases to remain there, the Aar Valley was gradually being converted through considered industrial development to an area of social and economic abundance.

With so many solid arguments in favor of an MVA we must concentrate on the techniques by which it can promptly be brought about. Because MVA is the first valley authority proposal since TVA, proponents of MVA must be prepared "to stand the heat," to meet the vehement opposition of those who want to stop this country-wide movement in its tracks. Further, if the idea is to eventuate promptly in legislation, one or more centers comparable to Senator Norris' office between 1918 and 1933 will have to be created. Coincident with the building of the Wilson Dam in World War I, the question arose in the Senator's mind as to what would be done with the electricity when it was no longer necessary to the conduct of the war. From this time on there was a warm welcome awaiting those with pertinent ideas or a willingness to work on the ideas of others. Gradually and collectively there was built up an understanding as to the fundamentals of a widely ramifying public-power project. Much of the assembled statistics found its way into the CONGRESSIONAL RECORD, committee hearings, and gradually and increasingly into the public prints. If a grateful Republic should ever erect a memorial to this piece of wholly disinterested public service it would carry the name of George W. Norris—in letters of gold—together with Paul Y. Anderson, William T. Chantland, Mabel Cory Costigan, Ruth Finney, Hugo L. Black, Frank W. James, Judson King, O. C. Merrill, John Morin, Marguerite Owen, Gifford Pinchot, John P. Robertson, J. D. Ross, Charles G. Ross, Charles A. Russell, Belle Sherwin, Harry Slattery, E. C. Scattergood, and Thomas L. Stokes.[33]

Until just before the TVA bill was introduced in the Congress it had been almost exclusively a public power and fertilizer bill. Senator Norris made a 30-minute call on President Roosevelt early in 1933. Returning to his office he began revamping the bill so as to broaden its scope and make power take its rightful place as one of many forces in a great social experiment reaching every nook and cranny and all the people in the whole Tennessee Valley.

A broad regionalism has been advocated at Chapel Hill, N. C., for years, through the Institute for Research, under Howard W. Odum's leadership. Their constant effort has been to widen the concept of regionalism and to break away from the idea, formerly quite generally held, that planning was applicable only to the city and metropolitan areas.

A regionalism conference was held early in July 1931 at Charlottesville, Va., with Mr. Odum, Ernest P. Goodrich, Lewis Mumford, and Stringfellow Barr among the speakers. Franklin D. Roosevelt, then Governor of New York, took an active part in this conference, making the opening address at the first session. He had become thoroughly familiar and sympathetic with the wider and more recent outlook as to regionalism. In New York he had put the theories of general resource planning to practical test. He had mobilized and integrated the work of State agencies in a unified program. Senator Norris had aroused the public conscience with respect to one resource in the Tennessee Valley. Now all these interests were combined "Hail and farewell" to George W. Norris and Franklin D. Roosevelt. God grant that comparable sponsors may be found for CVA, DVA, AVA, MVA, and all the other major valleys, for the continued well-being of our land and of our people is at stake.

[30] From a speech given at Freedom House, January 17, 1947.

[31] From retiring address as president of the American Association for the Advancement of Science, Boston, December 27, 1946.

[32] Strangely enough, at least one family settled in the Missouri Valley, where it remains in relative poverty to this day.

[33] It is interesting to note that not one of this group was a resident of the Tennessee Valley—not a realtor among them.

Hungry Horse Dam and Montana Reclamation Projects

EXTENSION OF REMARKS
OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 10 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "Appropriations for Hungry Horse Dam and Bureau of Reclamation Projects," prepared by me for delivery in Montana.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow citizens, the western program of reclamation and power development, including the Hungry Horse Dam and irrigation project in northwestern Montana, is the key to our future growth and prosperity. Appropriations for the construction of these projects are now being considered in Washington. The action of Congress on this matter is vitally important to our people. If successfully carried out, this program of power production and reclamation will constitute the most important move our State has ever taken toward the establishment of a sound and balanced economy, and will in the years to come make Montana the "Treasure State" in fact as well as in name.

Unfortunately, a reactionary Republican group in the House of Representatives at Washington have slashed these appropriations which were recommended by the President and the Interior Department to begin the construction. This action will, if not corrected, undermine the whole program. Indeed, if the arbitrary action of the House of Representatives is not reversed in the Senate the national policy of developing western resources and building up a sound economy for the Western States may not merely be stymied but it may be entirely destroyed.

The people of the West have been aroused by this effort of reactionary eastern Republicans to block this vitally important program. Extensive hearings have been held at which representatives from the interested Western States have appeared and presented convincing proof of the necessity of proceeding with the construction of this program without delay. The future growth and prosperity of our State is involved and every citizen is deeply concerned. While Montana is the third largest State in the Union, possessing almost unlimited natural resources, it is nevertheless recognized as one of the backward States in the Union in point of population and economic development. Its growth and industrial progress have been retarded in the past. It has been denied by those who control its destiny an opportunity to develop its vast water, agricultural, and power resources.

This important program now before the Congress for the development and conservation of western resources is nonpartisan in character. It has the united support of the people of the West and is recognized as an engineeringly sound and financially feasible program. Furthermore, it is wholly repayable and does not in any respect constitute a subsidy or charge against the taxpayers of our State or of the Nation. Self-liquidating projects of this character have been demonstrated to be of tremendous value to the States in which they are located and to the Nation as a whole. They constitute a wise contribution to our national defense and general welfare.

The Hungry Horse Dam is located on the South Fork of the Flathead River near Kalispell. Contiguous to the dam there is a large area of rich, undeveloped agricultural land. This project will bring a hundred thousand acres of this valuable land into a high state of cultivation, greatly adding to the taxable income of the State and the local communities. The preliminary construction program originally recommended by the President and the Interior Department amount to $4,500,000. In the House this appropriation was cut to $1,550,000, which effectively hamstrings the engineering plans and will add to the ultimate costs of construction, if it is ever carried through.

The need for the early construction of the Hungry Horse Dam and the reclamation project I have described is urgent. They constitute an essential and indispensable part of the whole western program and benefit Montana and the entire Columbia basin. The low-cost electric power which will be produced through the construction of this project will make possible substantial development of both large- and small-scale industry in Montana and give our State a more balanced economy. The carrying out of this program means that we are breaking

away from a long-followed do-nothing course which has confined Montana within the narrow limits of a raw-material economy—an economy which utterly failed to provide opportunities for homes and jobs for our young people. The continued expansion and development of all parts of our country, including Montana, is essential if we are to provide for our growing population and continue to enjoy a high measure of employment and national income, and guard against the dangers of another blighting depression.

In Montana the problem of the need for industrial development is particularly urgent. It is becoming more urgent year by year, because we lack the necessary economic balance to provide jobs and opportunities in life for our young people. Montana, though undeveloped, is one of our country's richest States in natural resources. It sustains a wide variety of agriculture. It possesses extensive cattle, wool, beet sugar, and wheat-growing industries. It has an abundance of forest and mineral resources which, properly developed, can bring about a substantial increase of industry and business, and place the region on a basis of continuous prosperity. It has vast undeveloped deposits of phosphates so essential to the maintenance of agricultural fertility. It has rich, productive soils and favorable climatic conditions. It has water resources with magnificent potentialities for irrigation, reclamation, and electric-power development.

Notwithstanding all these recognized advantages, the private power interests in our State oppose this development. They gloss over and minimize facts in an effort to discredit the program. They undertake to make it appear that Montana is just a poor, backward State, and nothing much can be expected of it. They would have us understand that, while it is too bad that Montana is a poor, struggling State, it simply cannot be helped and the people should accept its lowly status without complaint.

Representatives of the power interests appeared at the hearings in Washington, and in the course of their testimony sought to imply that Montana is not a State entitled to industrial development or growth. Let me quote the exact statement of Mr. J. E. Corette and Mr. H. H. Cochrane, representing the Montana Power Co. In their joint statement they said: "Our basic economy in Montana is about what you would expect for that kind of a State." They said, and I quote again: "The prosperity of Montana really comes from agricultural and livestock industries." Later they referred to the mining industry, but indicated that it was of much less importance than the agricultural and livestock industries. Now, my friends, I am sure you will be disappointed to hear Montana condemned to a state of perpetual pauperism. It is just exactly such backward and undeveloped conditions of our State that the people of Montana are trying to get away from.

Montana is a backward, poor, undeveloped State only because it has been held back and confined during its entire existence to a raw-material economy. We are, as everyone knows, sadly lacking in industrial and business development. Our activities are devoted solely to raw-material production and exploitation. As we exhaust our minerals and forests, and deplete our soils and other resources, we become poorer and poorer as the years roll by. Our population dwindles or remains static and our young folks desert us for other fields of activity.

This attitude of holding Montana in the position of a raw-material economy as a colony for the industrial East is creating widespread disappointment in our State. Our citizens are compelled to stand idly by and see our State become gradually impoverished, except in certain favored spots because of special conditions. This situation will continue to exist unless we take steps now to balance our economy by providing low-cost electric power and attract investments for the developing of processing plants and other industrial activities related to our extensive raw-material resources.

It has been pointed out on many occasions in our State that our young people who are educated and grow up in Montana are compelled to leave the State in search of opportunities in life in other parts of the country. Boys and girls of Montana families are scattered all over the Nation. Very few of our returning veterans are able to find opportunities here and are being compelled to hunt elsewhere to establish homes and take on family responsibilities as independent citizens. Dr. Melby, former president of the State university, referred to this situation in our State several years ago. Many prominent businessmen, too, have called attention to these unsatisfactory economic conditions.

Frank J. Gavin, president of the Great Northern Railway Co., in an interview printed in the Great Falls Tribune in May 1944, discussed the need for the development of our resources. Among other things, he said, "Power has a lot to do with development. Montana certainly has the raw materials, and I don't know why Montana can't have manufacturing if it has power, labor, and population."

An editorial in the Cut Bank Pioneer Press of June 2, 1944, commenting on the Gavin statement, pointed out that the Gavin proposal was far more important than many postwar plans getting the headlines. The editorial concluded in the following words: "The views of an important leader who is no visionary ought to revive interest in a matter that should take precedence over all others in planning for the years after the war." The people wish to follow that advice.

This matter of restoring the appropriations so as to proceed with these projects for the development of the Western States, including Montana, is now before the Senate Committee on Appropriations. I am hopeful that we will overcome the opposition presented by the biased Representatives in Congress from the industrial East and succeed in having these appropriations restored. We can then go forward with this important program to line Montana up with the other progressive and prosperous States of the West—a program which will definitely increase our national strength and wealth without costing the taxpayers a dollar, because the program is entirely repayable out of the proceeds of the projects.

The New York Times of May 11, 1947, in an editorial commending these western projects and commenting on their self-liquidating character, said:

"It is gratifying to learn that the Bonneville-Grand Coulee system has been a profitable investment. As of June 30, 1946, the Bonneville Power Administration had returned to the United States Treasury some $80,000,000—about one-fourth of the investment so far made, including interest. This financial showing is all the more remarkable because the 36,000,000,000 kilowatt-hours sold since 1938 have averaged 2.55 mills per kilowatt-hour. Those who proclaim the dawn of a new industrial day, now that a uranium pile may be substituted for coal or oil, may well ponder these figures. Atomic power cannot compete with falling water, which costs nothing. Whatever may happen in other parts of the world the Northwest will rely on its rivers and their tributaries. A potential of some 25,000,000 kilowatts remains to be developed. There is more gold in these waters than there is in any of the hills of the far west. Horace Greeley's advice to young men is still good."

This is a sound, intelligent, nonpartisan program which will bring progress and prosperity to Montana. It should have the cooperation and support of all industrial and business interests in our State inasmuch as they will benefit in a very high degree from the expansion and prosperity which will follow.

Unions and Politics

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Tuesday, June 10 (legislative day of Monday, April 21), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Unions and Politics," which appeared in the Washington Post on Sunday last.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNIONS AND POLITICS

Not only is the existing prohibition against political contributions by labor unions inadequate, but all restrictions on use of union funds for political purposes will be lifted when the Smith-Connally Act expires June 30 unless the labor bill which will go to the White House tomorrow becomes law. Under this bill labor organizations would be prohibited from making any contribution or expenditures in connection with national elections or primaries. All the proposed legislation aims at doing is to put labor organizations under restrictions already applicable to corporations and to close loopholes in the existing law that have permitted certain types of political expenditures to escape the ban, such as outlays for political advertisements and pamphlets designed to influence the outcome of elections.

Opponents of the proposal protest that it would muzzle the labor unions and deprive the labor press of the right to express its opinions freely. The same argument, of course, can be applied against the banning of political publications financed by business and industrial corporations. But in neither case can it rightly be claimed that the freedom of the press would be invaded or the rights of an individual to express his opinions curtailed. The members of a labor union would still be perfectly free to make voluntary contributions for the support of a newspaper or other publication designed to further the political fortunes of particular candidates or parties. According to Senator TAFT, a labor union could, indeed, under the proposed law publish a political newspaper provided it was paid for by subscriptions. But no union funds could be used for the purpose.

In our opinion, such restrictions are necessary not only to protect the body politic against the sort of spending abuses that the Corrupt Practices Act was intended to prevent, but also to protect members of labor unions from being forced to make indirect contributions for political purposes. Far from being an invasion of the right of an individual to give free expression to his political views, prohibitions on the political use of union funds are essential to protect those rights. For members of labor unions belong to different parties and their political views often represent the extremes of radicalism and conservatism. They are banded together to further their mutual economic interests—not to advance the fortunes of any political party or candidate for office. Hence, if any part of the contributed dues are used for political purposes, some of the contributors are in effect victims of political coercion, being denied their right as citizens to throw their support wholeheartedly to causes and candidates of their own choice.

Under existing law labor unions become the accredited bargaining representatives of employees. Sometimes those employees

are forced to become members of a union in order to hold their jobs. In any case, they may wish to join the organization that represents them and determines the conditions of their employment. If that organization uses any part of the dues they contribute to support political programs or candidates for political office not acceptable to them, they are placed in a most embarrassing position. Many union members would, therefore, welcome a complete legal divorce between labor organizations and any form of political activity as a means of emancipating them from forced contributions to political causes of which they disapprove.

Imports of Whisky Under Trade Agreements

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 5, 1947

Mr. REED of New York. Mr. Speaker, the foreign whisky ring has won a great battle. Through the operation of the Trade Agreement Act, clothed in the pious habiliments of peace, the foreign whisky ring has achieved a major victory by opening the liquor floodgates, thus deluging our country not only with whisky but with gin, brandy, champagne, sparkling wines, still wines, vermouth, ale, porter, and beer. It requires propaganda of a higher order to convert millions of good Christian Temperance women, especially mothers, and also the women members of the larger congregations of our churches to the wet cause as carried out by the State Department under the Trade Agreement Act. Yet if those persons who have appeared before the Ways and Means Committee, each professing to represent large groups of women throughout the Nation as favoring the wet program of the State Department under the Trade Agreement Act are correct in their claim that they do represent the women of the churches on this issue, then there has been an amazing change in the habits and convictions of the good Christian women of our land.

No person or group of persons can support the Trade Agreement Act without accepting full responsibility for what is done by those who administer it.

Prominent women who appeared before the Ways and Means Committee representing their respective women's organizations as being in favor of the liquor program under the Trade Agreements Act are listed below:

Mrs. Harvey Wiley, General Federation of Women's Clubs, Washington, D. C. Statement was submitted for record in lieu of appearance.

Prof. Mildred Northrop, Women's Action Committee for Lasting Peace, New York. Professor Northrop is professor of economics at Bryn Mawr, Pennsylvania.

Mrs. Laura Puffer Morgan appeared for the above-named organization.

Mrs. Zelia Ruebhausen, National League of Women Voters, New York City, N. Y.

Mrs. Margaret F. Stone, the National Women's Trade Union League of America, Washington, D. C.

Miss Katharine Lee Marshall, Women's International League, Washington, D. C. Statement filed in lieu of appearance.

Dr. Helen Dwight Reid, American Association of University Women, Washington, D. C.

I am sure that the examination of the Honorable Charles Taft will be of interest to the members of those churches which comprise the Federal Council of Churches. Mr. Taft is an able and persuasive advocate. He presented and represented his group of churches before the Ways and Means Committee hearing held on April 29, 1947. I quote from the public hearings to which I have referred:

Mr. REED. I was rather interested in the statement made with regard to your coming here representing the Federal Council of Churches. Am I correct in that?

Mr. TAFT. Yes, sir. That is in connection with that first statement. I do not include with that statement these detailed answers; they have not responsibility for that.

Mr. REED. Would you mind naming, for my benefit, the denominations represented in that council?

Mr. TAFT. I will try. I am not sure I can give all of them.

Presbyterian, U. S. A.; the Episcopal; the Northern Baptist Convention; the Presbyterian, U. S.; the Congregational; the Congregational Christian—that is separate, I am never quite clear about that; the Disciples; the Evangelical and Reformed; the Evangelical United Brethren, which is just combined in Pennsylvania; African Methodist Episcopal, African Methodist Episcopal Zion, the National Baptist Convention—which are three of the colored denominations; the Methodists; the United Presbyterians; the Dutch Reformed; at least two meetings of the Friends—I think the Philadelphia and the Five Year Meetings; the United Lutherans are members—not the American or the Augustana or the Missouri Synod.

There are some small ones. I cannot remember all of them, I am sorry.

Mr. REED. I understood you to say that the organization represented the aggregate of about 27,000,000?

Mr. TAFT. It is 27,000,000 members of those churches. As I said, though, very firmly, I do not claim to speak for them, obviously.

Mr. REED. What proportion of that membership of 27,000,000 would you say are women, have you any idea?

Mr. TAFT. This would have to be a guess. I think it is slightly larger than the proportion of women in the population, which I think is around 51 percent, but not very much more.

That does not mean that the men attend churches well, Mr. Reed.

Mr. REED. I understand. I know from experience. However, does the Methodist Church have a temperance organization?

Mr. TAFT. I am sorry, I cannot answer for that. I am attorney for the Methodist Publishing House, among other activities, but I cannot speak for their organizations or other organizations, I am sorry.

Mr. REED. Would you say, generally speaking, they are fairly familiar with the provisions of the different agreements?

Mr. TAFT. I would think not; no, sir.

Mr. REED. Therefore, really, in endorsing the trade agreements, they are not altogether too familiar with it?

Mr. TAFT. I would agree with that entirely. They are endorsing a general principle upon which they have been sold and they endorse it with great sincerity and with a very widespread selection of the membership, I have no question.

Mr. REED. I was wondering, because quite a number of the churches that you have named are quite active in temperance activities.

Mr. TAFT. I can say this to you, sir, that they passed a resolution at the Federal Council meeting in Seattle. I do not have it with me, but it was passed after long consideration and discussion, and it is not definitely a prohibition resolution. It is a conference resolution and they have urged various measures such as better relations or regulations of advertising, but the churches today in the Federal Council at least do not stand officially for prohibition.

Mr. REED. However, did they take an interest in the trade agreements with Canada in 1936 and 1939 by which they lowered the duty on liquor—that is, whiskey—from $5 per gallon to $2.50?

Mr. TAFT. I do not think they took any steps—they certainly took none in the Federal Council until 1942, and back of that, as to the denominations, I do not know. I think there was some before that, but the Federal Council did not until 1942, I believe.

Mr. REED. You would not know, then, whether they were interested or took a vote or referendum or anything on the trade agreements particularly in which they lowered the tax from $4 per proof gallon on rum to $2.50 a gallon?

Mr. TAFT. I doubt if they knew anything about it at that time, sir.

Mr. REED. You would not, of course, know about the further one with Cuba, in 1939?

Mr. TAFT. No, sir. I hope you will not tell them, Mr. Reed, that I was the rum czar in the Caribbean in 1934.

Mr. REED. As long as you were not a rum runner, that is all right.

Mr. TAFT. I had to fix the quotas for rum to be admitted to the United States during the whisky drought.

Mr. REED. I wondered if all these good women who were interested in their children favored not only losing the revenue to the taxpayer and reducing the tax of $5 per gallon on gin to $2.50?

Mr. TAFT. I can only say to you, sir, that until the whisky drought in the United States, the prohibition of the use of alcohol for making liquor, that the imports from Cuba and the Caribbean of rum were almost invisible. They were very, very low.

Mr. REED. I can give you some figures on those in a little while.

The CHAIRMAN. They are larger now.

Mr. TAFT. They went up because you could not buy it here. They went up in 1 year, as far as Cuba is concerned, from 2,000,000 gallons to 14,000,000, and the following year they were building capacity for 75,000,000 gallons.

Mr. REED. Are you giving credit to the reciprocal trade agreements?

Mr. TAFT. No, sir; not at all. I am giving it to the fact that the United States was giving every bit of alcohol it could get its hands on to making rubber.

Mr. REED. I was wondering to what extent the women were interested in brandy. They were reducing that from $5 a gallon to $2.50.

Mr. TAFT. Which agreement is that?

Mr. REED. That is the one with France, and with Argentina.

Mr. TAFT. Well, French brandy certainly has not been an important factor in the liquor market at any time, although I hasten to say I do not drink—brandy at least.

Mr. REED. I do not charge you with drinking.

Mr. TAFT. You understand I must protect my record here.

Mr. REED. Well, you are representing the churches here, I know you must be speaking for them here. Of course it is a loss of revenue of nearly, almost $1,000,000,000 as a result of the lowering of these taxes.

A very interesting thing to me is, I know the churches must have had some interest in the fact that they have on the list, over there at Geneva, to lower still further the

tax on whisky, brandy, gin, rum, and other distilled spirits, champagne, vermouth, and other wines, with certain exceptions, beer and ale and other malt products.

Of course, I cannot tell to what extent. Of course, they had no particular referendum, with fine church organizations and the like, on this item.

Mr. TAFT. I believe their experience with prohibition has led them, to a very considerable degree, to the position that the promotion of temperance must be an educational process and it cannot be done by law. That is my own conviction, sir.

Mr. REED. Then they are using this method of letting in more liquor to educate the people not to use it, is that the idea?

Mr. TAFT. No, sir; I would say that the imports of liquor that are involved in that particular case are a relatively small element to us, or to world trade, although they are important as a source of dollars to the British.

Mr. REED. Now, I am quite sure that as long as they are in this campaign of education, to handle the temperance question, while really the trade agreements and the production involved and the dollar value of the flood of liquor that came in here under the trade agreements is of great interest to the church people, I ask permission at this point to include official figures in that regard.

This appearance of the Honorable Charles Taft before our committee representing millions of church members, urging in their name a continuation of the wet program under the Trade Agreements Act, seemed to be in conflict with the temperance principles espoused by some of the churches for which he claimed to speak.

I recall reading in a publication of the Central Methodist Church, of Detroit, Mich., in which was quoted with approval of the church the findings of the General Director of Public Health in Sweden, Dr. Axel Hojer, as follows:

1. Beverage alcohol is the great destroyer of character and personality.

2. Beverage alcohol is the most powerful agent in the disorganization of family life.

3. Beverage alcohol destroys precision in work and lowers both quantity and quality.

4. Beverage alcohol disorganizes traffic and is a major factor in serious accidents.

5. Beverage alcohol is not a remedy for internal use but a poison.

6. If beverage alcohol procures some revenue for the state, it creates a still higher expenditure. It invariably lowers the standard of the economic and cultural life of the people.

The Central Methodist Church publication commenting on the findings of Dr. Axel Hojer said:

These statements are both conservative and incontestable. Only the incorrigibly ignorant or the selfishly interested would attempt to deny them—openly.

I do not believe the majority of the church members and the members of the temperance organizations of my district believe in flooding our country with foreign liquor. I am sure that even the wets would not favor the foreign whisky ring to the extent of letting them profit by the 50-percent tariff reduction on each gallon of whisky and other liquor, such reduction to come out of the pockets of the taxpayers of our own country.

I here insert the table showing the reduction in tariff on foreign liquors entering this country under the trade agreements. The table shows the vast increase in volume of whisky and other intoxicating liquors inundating our country:

Alcoholic beverages: United States imports for consumption, by specified kinds, 1934–46

I wish to report that liquors are on the list for a further reduction by our trade-agreement negotiators at Geneva, Switzerland.

Did the propaganda of the State Department which was sent out to the church organizations and women's clubs urging them to support the trade-agreement program explain that the only real barrier to trade to be promptly removed would be the barrier to foreign whisky importation? No. This proposed reduction from $5 a gallon to $2.50 a gallon on imported whisky was not mentioned in the propaganda of the State Department. If this move to deluge this Nation with foreign imported whisky and other liquor had been urged as the main argument for the adoption of the Trade Agreement Act, I doubt if the millions of church members would have been so zealous in supporting this wet program. The figures relating to the volume of imported liquor from the day the tax of $5 a gallon on whisky was reduced to $2.50 a gallon reveal the danger of relying on organized Government propaganda when it is directed to an unworthy end. It places those good citizens who rely on misleading propaganda in a most awkward position and definitely puts them in opposition to their honest intentions and convictions.

Not once in the public hearings on the trade-agreement bill did the State Department officials indicate that the purpose of the proposed legislation was to lower the trade barriers to admit imported whisky.

There will be an ample supply of whisky for our soldiers when and if universal military training is adopted. Is this what the public desires?

The propaganda technique of deception worked, and now it is sought at Geneva, Switzerland, to lower still further the barriers to the imports of foreign liquors.

Steel Requirements for Full Employment

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 10 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a study on Steel Requirements for Full Employment by Dr. Louis H. Bean, economist in the Bureau of the Budget.

I have been greatly disturbed by published reports rejecting decisions of steel companies not to expand production to meet the enormously increased demand for steel in our economy. This is so manifestly the steel age that any such decision has far-reaching effects.

During my chairmanship of the Senate Small Business Committee, we held hearings in which a good cross section of independent manufacturers testified that steel shortages were greatly handicapping their operations. These conditions have continued and, in fact, recent investigations shows that they have become greatly aggravated. Independent business firms are shut down and others are working on part-time because of the lack of steel.

In this situation, I asked Dr. Louis Bean, who had made a very thorough study of steel capacity and needs, to prepare for me a statement on this important subject. It is of such crucial significance to the Congress and to the American people that I seek to make it available through the pages of the CONGRESSIONAL RECORD.

There being no objection, the study was ordered to be printed in the RECORD, as follows:

STEEL REQUIREMENTS FOR FULL EMPLOYMENT

Conclusions with regard to steel requirements and capacity both for 1947 and for the immediate future need obviously to be based on surveys of actual demand by the various users of steel and of actual plans of producers with regard to capacity. For 1947, the results of such a survey are available, but for future steel requirements for full employment we can resort in this statement only to projections of recent and current trends in consumption. Both for full employment conditions in 1947 and for the longer future, we appear to need more steel production than present capacity can provide.

At the beginning of this year, the Civilian Production Administration made a survey of the supply of and demand for steel products. Translating the results of that survey into terms of steel ingots and castings, it showed that the steel industry was expecting to supply about 83,000,000 to 85,000,000 tons, but the total demand for products added up to 92,000,000 tons of ingots, indicating a shortage of 11 percent. Actual supply or production of steel during the first 4 months of 1947 has been at an annual rate of 85,000,000 tons.

According to the American Iron and Steel Institute, the 1947 capacity of the industry is 91,000,000 tons, compared with 95,000,000 in 1945. It is generally understood that for the immediate future the iron and steel industry has no plans for expanding its ingot capacity. In other words, even if the industry operated at 100-percent capacity throughout 1947, it would not be supplying all of the steel that American industry and foreign demand could consume.

The estimated demand for 1947 of 92,000,000 tons may, in fact, be an underestimate. For example, in the case of steel for the automobile industry, requirements are based on 5,000,000 passenger cars and 1,250,000 trucks. The potential demand for automobiles, in view of wartime curtailment in production and in registrations, has been estimated far in excess of 5,000,000 cars per year for several years. Even under normal prosperity conditions similar to those of the 1920's and allowing for the increase in population, production could be expected to exceed 6,000,000 cars.

The present shortage of steel and other raw materials has a limiting effect on the total national production. Total industrial production is high, but not high enough. This is indicated by excerpts, attached hereto, selected from the United States Department of Labor report on Labor Market Information, March 1947, by Areas. It is also indicated by the fact that during the last half of 1946 and the first part of 1947 the total national output of goods and services per man-hour appears to have been at least 15 percent below normal, taking into account the long-time trend in the Nation's productivity. If this shortage in total output of industrial goods and services is to be made up, it would require more steel and other raw materials, and the required steel production would be in excess of present capacity. This is in line with the findings of the Civilian Production Administration.

On the other hand, if the shortages of steel and other raw materials are not soon made up, some unemployment might develop. As indicated by the attached excerpts, there has already been some curtailment in employment as a result of these shortages. And there could be more unemployment as employers sought to increase production per man-hour without a larger supply of raw materials for expanded production.

It may be asked why is there need for more steel production and therefore more capacity, in view of the fact that we have practically full employment? One reason has already been suggested, namely that we are operating the national economy below normal efficiency. Full employment and normal efficiency would bring about a greater consumption of steel if it were available. Another reason may be given in terms of consumer expenditures. A substantially larger proportion of consumer income is being spent for nondurable goods. If this excess were shifted to durable goods, undoubtedly a larger volume of steel would be required than is now being produced. A third factor that needs to be mentioned is the 1,600,000 persons in the armed services and the effect that that may have in reducing the consumption of steel below what it would be if they were engaged in civilian employment. The additional consumption probably would not amount to more than, say, 2,000,000 tons, a relatively small part of the indicated difference between full employment steel requirements and present production.

Estimating the total amount of steel production and capacity that may be required for full employment situations beyond 1947 is not as simple as making surveys of current production and consumption. The obvious approach would be (a) to study the facts as to past and current tendencies; (b) to secure what information may be obtained from the producers and consumers of steel and steel products as to the most likely developments with regard to productivity of existing plants, plans for new investment,

new technological developments, the rate of growth in competition from other products such as light metals and plastics; and (c) to reconcile, if necessary, the indications obtained from the statistical analyses with those obtained from the latest information as to most probable supply and demand developments.

The rest of this memo touches only on indications as to full employment requirements for steel derived from analyses of the over-all record of production and consumption to date. There are, of course, many studies of this subject, but I refer here to only two. One is a byproduct of a recently published study of the United States Department of Labor on "Full Employment Patterns, 1950." The other is a set of statistical analyses of the trends in domestic and foreign production of steel in relation to full employment and to different levels of unemployment.

The Department of Labor study defines full employment in 1950 as requiring 59,000,000 jobs in civilian employment and 1,500,000 in the armed services. In addition, it assumes that there may be about 2,000,000 persons unemployed for brief periods due to shiftings from job to job and from one locality to another, and to normal delays of various sorts in bringing job applicants and job opportunities together. Starting with this labor force and the detailed production and consumption facts of 1939 for the entire economy, the analysis deals with the supply and demand for labor, goods, and services that might prevail in 1950. It concludes that the amount of steel that might be required by 1950 could range from 98 to 122 million tons depending on whether full employment were attained by relatively large consumer expenditures for nondurable goods or by relatively large expenditures on capital goods, the latter requiring the greater amount of steel.

In the past, our full employment or prosperity situations were attained as a result of expansion in both categories of expenditures, consumption, and investment. Consequently, in comparing this range in the Department of Labor's estimates with the record of production in normal prosperity years, an average of this range, namely, 112,000,000, should probably be used This figure of probable steel requirement if full employment prevails in 1950 is approximately 20,000,000 tons in excess of present capacity.

Approximately the same conclusion is indicated by an examination of the long-time record of steel production as contained in the attached four charts. [Charts not printed.] One shows the record of United States steel production from 1900 to date and the trend of production in prosperity years; the second shows the same record of production, but in terms of the amount of steel per person in civilian employment; the third shows total production from 1920 to 1947 related to the different levels of unemployment experienced during the 1920's and 1930's; and the fourth is the record of production of steel in the United States compared with a similar record for the rest of the world, showing the magnitude of the present and prospective shortage aboad in contrast with full employment requirements abroad.

In the record of steel production in the United States from 1900 to date, as shown in chart I, note particularly the years marked as prosperity years and how the trend of production has risen from one prosperity year to the next throughout the period 1900–29. In 1903, a prosperous year, we produced 16,000,000 tons; in 1907, 26,000,000; in 1913, 35,000,000; in 1929, 63,000,000. In 1941 we produced 83,000,000 tons, but in that year we still had 8 percent of the labor force unemployed. Had production in that year equaled the volume suggested by the trend of output in the pre-1930 prosperity years it would have exceeded 90,000,000 tons. That trend of production for full-employment years, if projected to the years 1947–50, indicates a requirement of well over 100,000,000 tons.

This projection does not take into account the changing rate of population growth and the accompanying change in the number of persons to be employed. Therefore, chart II presents the annual totals of steel production on a per capita basis. It shows the production of steel, not per person in the total population, but per person employed in the United States in civilian jobs. Thus, in 1900, for every person with a job, we produced close to one-half ton of steel. By 1913 we produced close to 1.0 ton per job; by 1929, 1.35 tons; and in 1941, 1.6 tons. This rising volume of steel per job opportunity for full employment situations, if projected beyond 1941, indicates a maximum requirement of 1.8 tons per job in 1947–48, and with 58,000,000 jobs constituting full employment, total steel production would need to be about 104,000,000 tons compared with first quarter of 1947 production equivalent to 85,000,000 and a capacity of 91,000,000.

The over-all trends for full-employment conditions, shown in charts I and II, both show that on the basis of past experience we need over 100,000,000 tons of steel to attain full employment. How much unemployment would there be if total production were only 80,000,000 or 60,000,000? Chart III helps to answer this question; it shows the volume of steel production for the years 1920 to date, including for each year from 1920 to 1941 the percentage of the total labor force that was unemployed. Thus, in 1920 and 1929 we had only 3 percent unemployment. In 1923, 1925, 1926, and 1928, 4 percent; in 1924 and 1927, 5 percent; in 1922 and 1941, 8 percent; in 1922 and 1930, 9 and 10 percent, respectively; in 1931 and 1939, 16 percent; and in 1932 and 1933, 25 percent.

Two facts stand out; the level of steel production goes down with increasing unemployment; and for each level of unemployment the underlying trend of production is a rising one. Contrary to the general view, the underlying trend of steel production was a rising one, even in the 1930's.

If these trends of 1920–40 are projected to 1947–50, it becomes clear that for full employment such as we had in 1929, when we produced 63,000,000 tons of steel we would need close to 110,000,000 tons. Similarly, in the years of deepest depression, 1932–33, with 25 percent unemployment, we produced only 16,000,000 to 26,000,000 tons of steel, and if such a deep depression were allowed to develop again in the near future, it would most likely be accompanied by a production of only 60,000,000 to 65,000,000 tons of steel.

In considering whether something like 110,000,000 tons of steel, as indicated by the foregoing analysis, would actually be utilized in full employment situations in 1950 and after, the question of a possible rise in substitution is often raised. Similarly, for such a large volume of consumption, capacity would have to be increased very substantially from the present 91,000,000 tons to something over 110,000,000 tons to allow for a normal operating margin. And in this connection the question is raised as to whether technological developments may not make it possible to produce much more steel with no increase over present capacity.

Such information as is now available for 1947 and 1948 indicates that at most the substitutes for steel; namely, light metals, plastics, and rubber represent a possible displacement of steel of not more than 2,000,000 to 3,000,000 tons. This is a small part of the present as well as the longer time difference between current production and the projected requirements based on past full employment experience. With regard to increased productivity of present plant capacity as a result of new processes, all that needs to be said here is that such new processes as are being discussed in the industry are apparently still in the experimental stages. From the standpoint of consumers of steel products, it is of course immaterial (setting aside the question of price) whether the amount of steel for full employment needs is produced by expansion of present capacity or by increased productivity due to new processes. Both of the questions as to the probable rise in the importance of substitutes and as to the advent of new processes need to be dealt with by competent technicians and industrial engineers familiar with the use properties of steel and competing materials and with production processes.

Leaders in the steel industry apparently consider the present level of demand as temporary. They expect demand to fall off by the end of 1947 sufficiently to bring about a balance between supply and demand for steel at a level that would make present capacity more than ample. As to the longer time outlook, they take the major depression experience of the 1920's and 1930's as a guide to the average volume of their future markets. It is possible that in these expectations the deep depression of the 1930's is given too much importance, for there is no real reason for taking that kind of depression as part of the normal ups and downs in the demand for steel. The record in chart I shows the deep depression of the 1930's is not at all characteristic of the fluctuations in the demand for steel at least since 1900. In fact, if the record is taken back another 25 years to the early days of the steel industry, there is no situation similar to that of the 1930's.

The point is often made that the production of capital goods such as steel cannot be maintained year in and year out at a maximum level. In this connection it should be observed that we did have a 7-year period, 1923–29, with unemployment ranging only between 3 and 5 percent. If we take the entire 10-year period 1920–29, including a major depression in 1921, a moderate depression in 1924 and a minor one in 1927, the average of unemployment amounted to 5 percent; and for this kind of experience the average volume of steel required in 1947–50 approximates 100,000,000 tons, for which a capacity of about 110 would be required.

Another reason for considering past business cycle experience as inapplicable for the future is that certain economic programs, both domestic and foreign, if they materialize, could produce a relatively long period free of major business depressions. For example, the 10-year housing program providing for 1,500,000 units per year now being considered by Congress would contribute greatly toward keeping the demand for steel at a continued high level.

In case of a sag in domestic consumption of steel, foreign demand for American iron and steel products could lend considerable support. Steel production outside the United States is bound to remain below normal for several years, as is suggested by the record in chart IV. The wartime curtailment in foreign steel production amounted to a decline from 97,000,000 tons in 1939 to 52,000,000 tons in 1945, as Russian, German, French, and other European steel plants were destroyed. Normally, foreign production in 1947 would now be up to about 120,000,000 tons. It will probably fall short of that amount this year by at least 50,000,000 tons and the shortage will take years to make up, even if the rate of recovery is as speedy as that after the First World War or as that after 1932. The opportunity for a much larger volume of United States exports of iron and steel products during the next 5 years is potentially greater than ever before; and this ought to be looked upon as support for prosperity levels of United States steel production in case domestic demand begins to sag.

It is extremely important that industrialists do not take a pessimistic view of American industrial prospects. It is likely to bring about a slower rate of capacity expansion in certain key industries like steel, and in other industries directly or indirectly dependent on steel, and thus tend to restrain industrial growth and job opportunities.

A good example of this type of pessimism due to an overemphasis on the record of the 1930's is the following statement contained in the 1946 annual United States Steel Corp. report to its stockholders.

"If the record of the past is any measure of the future, United States Steel has entered a period of peace in which the long-term outlook is for the average use of about two-thirds of its capacity with relatively inadequate provision for future needs having been made during recent periods of maximum production."

The United States Steel Corp. has a capacity of nearly 30,000,000 tons, or about 32 percent of the capacity of the entire steel industry. If its prospects are taken as two-thirds of present capacity, on the average, it would mean only 18,000,000 tons for the United States Steel Corp. and about 60,000,000 tons for the industry as a whole. Judging from the record in chart II, 60,000,000 tons of steel in 1950 would be equivalent to an unemployment situation of about 20 percent. This would mean that in a total labor force of 60,000,000, about 12 million would be unemployed.

We are entering the peace years with a greater appreciation than heretofore on the part of business and Government of the need for maintaining full employment. There is wider recognition of the feasibility of cooperation between producing and consuming interests and public agencies in behalf of maintaining full employment. There is much wider experience in labor-management relations to promote stability. There are extensive plans by international economic and security agencies aimed at raising the world demand for raw materials and for maintaining peaceful conditions to sustain that higher level of demand. Under these circumstances the highly abnormal experience with low production in the 1930's should not color unduly our judgment with regard to the next decade. The experience from 1900 to 1929 would appear to be a more reasonable basis for judging the future than the experience of the 1920's and 1930's. In that 30-year period there were only 2 years, 1908 and 1921, when the operations of the United States Steel Corp. actually fell below 60 percent of capacity. Based on that period, the steel industry's prospect would be for production averaging more nearly 80 to 85 percent of capacity rather than two-thirds.

If an industry like steel, basic to so much of our industrial production, fails to set its goals in line with full employment requirements and instead orients its policies in line with operating its present capacity at only two-thirds on the average, the maintenance of full employment becomes impossible, unless, of course, job opportunities develop in service industries or in production of goods less dependent, directly or indirectly, on steel.

Outworn Censorship Now Plagues Japan

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 14, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I wish to include herewith an article by Mr. Ralph Donaldson, of the Cleveland Plain Dealer:

OUTWORN CENSORSHIP NOW PLAGUES JAPAN

(Article 11)

Besides labor domination, the Japanese press is plagued by a military censorship which undoubtedly was necessary at the beginning of the occupation, but for which there is no longer any need.

As a matter of fact, censorship today is hampering one of the objectives of the occupation, which is to establish a firm belief in and knowledge of the democratic way of life among the Japanese people.

The press code for Japan, which was promulgated September 19, 1945, was designed primarily to bar publication of troop movements, to forbid destructive criticism of the occupation forces, to outlaw propaganda, and to prevent publication of any news items which might stir up resentment against the occupation.

The press code also contains the stipulation that "there shall be no false or destructive criticism of the Allied Powers." This, of course, includes Russia, which is one of the Allied Powers.

However, there is considerable Communist propaganda in Japan today. Some of it consists of outright attacks on the United States as an imperialist power and denunciations of our occupation policies.

The presumption is that these newspapers, printed in Japanese characters, are prepared outside of Japan and brought in for hand to hand distribution by Japanese Communists.

Conservative Japanese editors say they are not permitted to reply to this propaganda, because any comment would be construed as destructive criticism of one of the Allied Powers. So far the Communist propaganda has been ineffective, but the censorship policy requires the Japanese people to be exposed to it without any remedial comment from their own newspapers.

The Japanese editors also complain that they are not permitted to print any interviews with repatriates from Siberia. When the war ended, Japan's Kwantung army in Manchuria, estimated at 750,000, was swallowed up by the Russians and taken to Siberia.

Recently, the Russians agreed to repatriate these troops at the rate of 50,000 a month. They are coming back to Japan now, and presumably many of them have interesting stories to tell of what happened to them from the time of surrender until their release. But any comments which are in any way critical of the Russians are excluded under the censorship code.

In a conference with the American editors, the Japanese editors and writers said that censorship makes it impossible for them to publish the true story of what is happening in Japan.

They cited a conference between Japanese labor leaders and Brig. Gen. William F. Marquat, chief of the economic and scientific section of SCAP, during which it was made clear that the occupation authorities wanted the general strike, set for February 1, called off.

CENSORS CALLED INEFFICIENT

They contended that if this story had been printed, the strike threat would have diminished. But they were not allowed to print it, and General MacArthur finally had to step in and prohibit the strike.

One editor cited an editorial on coeducation, which has just been made permissible in Japan. The editorial was held up for no apparent reason. Publication of a report on Henry Wallace's Madison Square Garden speech last summer was delayed for a week.

Moreover, they said, due to inefficiency in the censorship offices, many stories and editorials are delayed until they have lost their news value.

It is axiomatic that a free people must be an informed people. But we, who are trying to instill the principles of freedom in the Japanese people, have put arbitrary restrictions on the information they may receive.

Truman-Wallace Defeat in Washington

EXTENSION OF REMARKS

OF

HON. LEONARD W. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 10, 1947

Mr. LEONARD W. HALL. Mr. Speaker, under leave to extend, I include a revealing article by that able political writer, Mr. Gould Lincoln, on the results and the meaning of the Republican victory in the Third Congressional District of the State of Washington.

Because of the Nation-wide interest in the contest, Mr. Lincoln's analysis is especially valuable:

[From the Washington Star of June 10, 1947]

THE POLITICAL MILL—WASHINGTON STATE ELECTION CALLED MAJOR PARTY DEFEAT—SAVAGE BEATEN DESPITE ENDORSEMENT OF BOTH WALLACE AND ADMINISTRATION

(By Gould Lincoln)

Neither President Truman or Henry Wallace can get any joy out of what happened to their candidate, former Representative Savage, in the Third Congressional District of Washington in last Saturday's election—Mr. Savage was defeated by his Republican opponent, a newspaper editor, RUSSELL V. MACK. Mr. Savage was Mr. Wallace's candidate primarily, but after Mr. Savage had defeated Attorney General Smith Troy in the Democratic primary for the nomination for Representative, President Truman, Governor Wallgren, of Washington, and Gael Sullivan, executive director and vice chairman of the Democratic National Committee, all stuck their necks out. Mr. Truman at a recent press conference publicly announced his support of Mr. Savage, and Governor Wallgren and Mr. Sullivan had preceded him.

The Democrats, as a matter of fact, were counting heavily on winning this by-election in Washington to fill a vacancy created by the death of the late Representative Norman, Republican. A victory there would have been construed by them, jubilantly, as a sure sign that the tide had turned and that the country was again swinging Democratic. This desire for victory is probably what impelled Mr. Truman, Governor Wallgren, and Mr. Sullivan to get back of Mr. Savage. The President did not have to mix himself up in this congressional district fight. Neither he, nor Governor Wallgren nor Mr. Sullivan wanted Mr. Savage nominated.

It is being argued in some quarters that Henry Wallace's support of Mr. Savage was what did him in at the polls, and that had Mr. Troy been nominated, the Democrat might have defeated the Republican. But that is by no means necessarily so. Mr. Savage won the nomination over Mr. Troy because of heavy CIO and radical support. They went to town for Mr. Savage in the primary and in the general election—and they might have done neither for Mr. Troy, known as a conservative Democrat. The election as well as the primary was held on Saturday—an odd day of the week for an election. As it happened, that is a day when the CIO workers and other organized labor is free—while the farmers, who work 6 days a week, are not.

RADICALS SUPPORTED SAVAGE

The defeat of Mr. Savage was a Democratic defeat—not just a defeat for Henry Wallace. One of the reasons the Democrats lost heavily in Washington in the 1946 elections was because the charge was laid against them that, as a party, they had played along with the radicals, fellow travelers and Communists—for the sake of getting their votes. Mr. Savage, who was then in Congress, was charged with being one of the most radical of its members. He was defeated by nearly 7,000 votes by the late Fred Norman. He was defeated Saturday by a narrower margin, some 1,500 to 2,000 votes. Last November was a general election, with many candidates for other offices. Saturday was a special election with only the Savage-Mack contest. In consequence, the vote Saturday was much lighter—about 64,000 as compared to 88,000 cast in 1946.

There was no slightest doubt that Mr. Savage had in this recent campaign the support of the radicals, including Communists. The willingness, therefore, of the Truman administration to line up for Savage, as well as Henry Wallace, again raised the same old issue—that the Democrats, for political expediency, are willing to go along with the Reds, despite the fact that President Truman in his foreign policy has displayed great firmness in dealing with Soviet Russia.

The Democrats, in this campaign for Mr. Savage, raised the issue that the Republican Party was out to beat down the West—because the Republican House had cut vigorously the appropriations for the Interior Department, reducing the Government money to be expended for reclamation, irrigation, and power projects in that area. They figured it would be effective—and the Republicans were uncertain about it. Still the Republican candidate won.

Mr. Savage, while in Congress, had been an arch foe of legislation opposed by the labor unions. So Republican congressional action on the labor bill now awaiting approval or disapproval by President Truman played its part in the campaign. Organized labor was desperately fighting to put Mr. Savage back in the House. There is a large organized labor group in the district. Still the Republican candidate won.

Only twice in the last 16 years has the Third Washington District elected a Republican to the House—each time it was the late Fred Norman. First in 1942 and again in 1946, Mr. Norman won. Saturday's result, therefore, can give little satisfaction to the Democrats as they look forward to the national election in 1948. If they cannot win in such a district with Mr. Wallace's blessing—they cannot win without him either.

Mayor Frank Hague

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mrs. NORTON. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include a recent editorial in the Jersey Journal expressing the high regard in which Mayor Hague is held by the people he has been privileged to serve during the past 34 years. His unique position of having been elected eight times for a term of 4 years with tremendous majorities proves that he has, during all these years, held the respect and affection of the people he served so well. While we who appreciate what he has done for Jersey City—my own district—regret that he has resigned as mayor, we feel that he has earned the right to do so, and we are hoping that his great experience and leadership will be continued in the State and in the Nation at this period when good leadership is of the greatest importance.

HAGUE RECORD IS LONG LIST OF BETTERMENTS

Mayor Frank Hague's retirement as mayor, while he is abdicating in no degree his powers as Democratic local and State leader, will be made the occasion for a public demonstration in the Dickinson High School, Tuesday evening, June 17.

It is at that time that the city commissioners in open session on the stage of the high school, with the public filling the auditorium and packing the galleries, will accept Hague's resignation as mayor and commissioner, elect City Clerk Philip McGovern as the new city commissioner, promote Commissioner Frank H. Eggers to the mayoralty, and appoint war veteran Francis Burke as new city clerk.

The city commissioners and the public will have abundant reasons for bestowing praise on Hague and registering a tribute of respect and appreciation for good work done. The public will also have good reason for encouraging the new and younger mayor as he embarks on a course of municipal leadership in a time of unprecedented widespread unrest and complications.

With the history of Hague inextricably interwoven with the modern history of Jersey City, in which he was born and reared, Mayor Hague in his earlier days reorganized the demoralized police department, stamped out commercialized vice, and checked gangsters in Jersey City, even though his administration covered the brawling days of prohibition when gang slayings were commonplace throughout the Nation. There was never a case of protection money paid by any businessman or industrialist even during the days when racketeers in other cities flouted the authorities by exacting tribute under threat of destroying life and property.

Later in his 34 years reign Hague developed the city hospital into the medical center with Federal funds and won for it national praise and renown. He gave Hudson a maternity hospital and it was the first public institution of that kind in the United States devoted entirely to maternity cases. In the development of a united welfare program that won the commendation of the State and Nation, Hague, supported actively by Governor Moore, established a school for crippled children and developed and enlarged it. In the movement to help solve the juvenile delinquency problem Hague has been active and conspicuous. Jersey City's Junior College was the first school of that kind in the State under municipal auspices.

Probably the most outstanding achievement came in the latter days of his mayoralty career. Crowning a record with many notable chapters, Hague rendered the people one of his greatest services when he successfully fought the plot to turn over to the railroads a gift of $80,000,000 in canceled taxes without warrant and excuse. The decision of the courts upholding Hague no doubt will always be the reward giving him the greatest satisfaction.

Mayor Hague after 34 years of municipal battling has a right at the age of 71 to ask for the lightening of official burdens as, with unstinted energy, he plans to devote his time from now on to the work in State and Nation attaching to a powerful political leadership in a chaotic era of the world's history.

Taxes

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Journal of Commerce of today:

TAXES

MAGILL APPOINTMENT UNDERSCORES TREND TOWARD SALES TAXES

WASHINGTON.—Any lingering doubts that Republican legislators plan to shift the center of gravity of the Federal tax system from income taxes are pretty much dispelled by appointment of Roswell Magill as key outsider to help formulate the 1948 tax law revision.

Named by the Ways and Means Committee as chairman of a new advisory group, Mr. Magill favors minimizing income taxes as a source of Federal revenue. Excises and other sales-tax types of levies would be given a greatly expanded role as revenue raiser.

As chairman of the special advisory group, Mr. Magill will play a key role in formulation of new tax law. His general views have followed closely Republican tax and budget programs since the beginning of the year; some in fact suggest that the Republicans got the programs from him. Treasury has disagreed with just about everything Mr. Magill says. The appointment, therefore, does not bode smooth sailing between Capitol Hill and the Treasury.

Others in the group include John W. Hanes, who also backed H. R. 1, effective to January 1, 1946; J. Cheever Cowden, former NAM spokesman who advocated sales taxes before Congress earlier.

Another Bubble Bursts

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, much has been said of the importance and value of cheap electric power as an inducement to industry to locate in certain communities. The construction of large multiple-purpose dams has been advocated, and in order to obtain authorizations and appropriations from Congress with which to construct these dams, the New Deal promoters have tried to sell Congress and the public on the idea that cheap power would be an inducement to industry to locate in the vicinity of these multiple-purpose dams or hydroelectric power generators.

It is always refreshing to see whether or not such claims and arguments are supported by the facts. A few figures and a little historical information on the subject is most illuminating. I am, therefore, pleased to quote the following editorial from the Tulsa Daily World of Tulsa, Okla., of May 22, 1947:

ANOTHER BUBBLE BURSTS

Cheap power does not seem to be the chief ingredient of industrial growth, at least in the Tennessee Valley Authority area. The TVA has been pumped by its proponents as a great social experiment designed to raise the standard of living of the people in the section which it serves.

The major emphasis of the TVA experiment has been on the provision of electric energy—that very necessary ingredient to industrial development. Hence, the success of the TVA may best be measured, at least in its prime aspect, by the industrial progress of the territory it serves. The Southern States Industrial Council has made a survey of the gain in the value of manufactured products in 16 States of the South between 1933 and 1945. Mississippi led with a 411-percent increase while Oklahoma was eighth with a 234-percent increase. Tennessee, where the TVA operates, ranked seventh with a 288-percent increase. The Council says, by all reasoning of the New Dealers and by all claims of TVA boosters, the percentage of increase for the State of Tennessee should have been far and away the greatest in the South, if not in the Nation.

Yet, we find the greatest percentage of increase in Mississippi and Alabama, only remotely affected by the TVA. The next four highest, Texas, Florida, Louisiana, and Arkansas, are entirely removed from TVA influence. Clearly, the comparative record of industrial development in the South during these years must be disillusioning to the advocates of the TVA.

Housing for Veterans

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. FORAND. Mr. Speaker, under leave already granted to me, I include as part of my remarks the following resolution adopted by the General Assembly of the State of Rhode Island that prompt and favorable action be taken on the Taft-Wagner-Ellender housing bill.

That there is a shortage of housing is not disputed by anyone. The question seems to be whether private enterprise can meet the challenge and provide housing of the type required for all our people, including the low-income groups as well as those who are fortunate enough to be financially able to pay the exorbitant prices asked for houses at this time.

It is my opinion that private enterprise either does not want to or cannot provide low-rental housing which is so sorely needed by the veterans as well as other low-income groups, and I sincerely hope that this Congress, before it adjourns, will take favorable action on the Taft-Wagner-Ellender bill.

House resolution requesting the Senators and Representatives from Rhode Island in the Congress of the United States to use their good offices to secure prompt passage of the Taft-Wagner-Ellender long-rang housin bill

Whereas it is evident that one of the most pressing problems confronting the Nation is the lack of adequate housing to shelter our people; and

Whereas veterans of World War II and millions of other American citizens are finding it virtually impossible to find decent housing for themselves and their families; and

Whereas there exists in this State and Nation many blighted areas which constitute social and economic liabilities and require redevelopment in the interest of the health, safety and welfare of our citizens; and

Whereas there is now pending in the Congress of the United States, the Taft-Wagner-Ellender long-range housing bill to encourage construction of 15,000,000 city and rural dwellings in the next 10 years; and

Whereas the announced goal of the measure is "decent houses and a suitable living environment for every American family;" and

Whereas the target for the first year would be 5,000,000 units, which would provide at least some relief; and

Whereas under the terms of the bill private enterprise in the construction industry would be encouraged to serve as large a part of the total housing need as possible; and

Whereas the bill provides Federal funds to clear slums and provide public low-rent housing to areas whose needs cannot be fully met through reliance on private enterprise, or local and State revenues: Now, therefore, be it

Resolved, That the members of the Rhode Island House of Representatives, realizing that there is a great need to provide decent and adequate housing for citizens of our State and of the Nation and believing that the proposed Taft-Wagner-Ellender housing bill can do much to alleviate the housing shortage, do hereby respectfully request the Senators and Representatives from Rhode Island in the Congress of the United States to use their good offices to secure prompt passage of said Taft-Wagner-Ellender bill, so-called; and the recording clerk of this honorable body is hereby authorized and directed to transmit duly certified copies of this resolution to the Senators and Representatives from Rhode Island in the Congress of the United States.

Necessary To Watch the Peas and Shells

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am just in receipt of a letter from a prominent businessman of Oklahoma City, who has always had the best interests of the farmers of our State at heart. He has sent me an editorial which appeared in the Oklahoma City Times, published at Oklahoma City, Okla., under date of May 27, 1947, and bearing the above title.

I think it would be well for each Member of Congress to study well what the author of this editorial has to say with reference to the appropriations which Congress has been making for the Soil Conservation Service and for the AAA. These agencies are frequently confused, one with the other. My friend suggests that we are tremendously interested in saving the soil and we do not believe it would be in the interest of good judgment nor economy to combine the Soil Conservation Service with the AAA or any other organization.

This editorial has added significance and should be of more than usual interest to the Members of Congress at this time in connection with the agricultural appropriation bill recently passed by the House of Representatives, and I commend the following editorial to your most serious consideration. The editorial follows:

NECESSARY TO WATCH THE PEAS AND SHELLS

Not all of the maneuvering for large appropriations for the United States Department of Agriculture is the work of designing politicians and bureaucrats desperately trying to hold on to their jobs, but unquestionably much of it is.

The Government soil-conservation work provides one wide-open method whereby the genuine soil-conservation program and the political type may be so scrambled up together that only the careful observer can tell the difference.

It is evident that some of the Washington press reporters have fallen for the game in which the peas are skillfully shifted, being covered by first one shell and then another. They write in general terms about the soil-conservation program without knowing exactly what they are writing about.

It should be made emphatically clear that the United States soil-conservation service with its annual appropriation of less than $40,000,000, is the service that really matters. It is composed of highly trained technicians, and it is headed by the veteran expert, Dr. H. H. Bennett. Its work during the past decade has been marvelously effective. It shies away from politics and tends to its knitting, as a competent Government department should.

Then there is a wholly different division, which requires no technical knowledge or ability, but nevertheless has received the lion's share of appropriations, running to about 10 times that of the United States Soil Conservation Service.

This division is an outgrowth of the old AAA, and was formed as a desperation move by Secretary Henry Wallace when the processing tax was knocked out by the Supreme Court, and it became the political department of the general conservation movement, its function being to spread the gentle rain of checks to individual farmers.

These checks were ostensibly intended to reimburse farmers for soil-building practices, but the practice quickly took on the aspects of a racket, for payments were made for as many as 40 different practices, including digging a well, making a garden, and other frivolous pretexts. If the payments had been made wholly for terrace building and the use of two or three principal fertilizers, there might have been some sense to it, but the case of a farmer not far from Oklahoma City illustrates what really happened.

"I received a check for $400 from the Government the other day," he said. "What for?" he was asked. "Blessed if I know," he replied.

The record shows that a large part of the money, probably the bulk of it, has been going to well-to-do and wealthy landowners. One of this type recently said:

"This Government hand-out is a farce and a disgrace. I know the value of soil conservation and soil building, and it pays me big dividends to do the work on my own, so why should I be paid for it?"

His statement is amply reinforced by research of the Oklahoma State Bankers Association, which finds by exhaustive reports that the average immediate benefit from soil conservation amounts to 40 percent increase in crops.

As a matter of fact, obviously there would be little realistic and practical use in soil conservation unless it were profitable to those who practice it, so the Government

hand-out is a prima facie case of political "gimme." The chief benefit of Government financing of terracing, pond-building, and fertilization payments up to now is that it has induced the establishment of projects which are examples to the neighbors. However, since this phase of the work has been accomplished, it's about time to inventory and clean up the situation.

If there are any technical experts in the political hand-out division, it is purely coincidental.

Those who are interested in soil conservation should differentiate carefully between the genuine service and the political type and not shed too many tears over the reduction in appropriation for the latter. The conservation movement is so big and important that it ought to be gone over carefully. The political angles ought to be eliminated and all the work should be concentrated on the program of saving the soil, hewing to the line and letting the votes fall where they may.

Address of Mayor William O'Dwyer

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of Mayor William O'Dwyer on radio program sponsored by the American Federation of Labor over Station WJZ on Tuesday, June 3, 1947:

It's been a long time now, but most of us have not forgotten the Republican depression that began in 1929. When we hit bottom in 1932 and President Roosevelt took hold, we needed help from Government. And so began the New Deal—a philosophy of Government based on the simple, democratic principle that we should do the most good for the most people.

As conditions improved, the same old crowd that led us right into the worst depression we have yet had, became vocal once more. In Congress, on the radio, in the newspapers, from the speaking platforms. The New Deal was under attack.

Government, they said, was trying to run business. The New Deal was "planned economy," "Statism," "socialism," and even "communism."

If Washington would only let us alone, they said, we could solve all our problems ourselves. Get rid of the bureaucrats, the rules, the regulations they cried. The New Deal is unconstitutional, un-American, blood brother to the foreign isms.

That's what they said in the days of President Roosevelt.

But this is not all ancient history.

About 1 year ago we were assured by ROBERT TAFT, Republican Senator from Ohio, and his cohorts in Congress, that prices were bound to come down if the Government's OPA ceilings were removed. They scoffed at the estimates of the Administration that living costs would skyrocket.

So the OPA was demolished in deference to those who clamored against Government regulation of business. And what has been the result. You get the answer all too well when you go out to buy food and clothing and other necessities.

But we have to say this for the Republicans. At least they were consistent. They opposed the socially and economically beneficial legislation of the New Deal and they fought against regulatory war emergency legislation.

But now what do we find with the passage of the Taft-Hartley bill by the Republican Congress. The great advocates of free private enterprise have now embarked on the most comprehensive program of regulation by government we have yet to see in this country.

Of course they don't want to regulate everybody. Just the majority of the people—those who work for a living at wages of $30, $40, and $50 a week.

It took the New York Times more than 14 full-length newspaper columns to report the complete text of this bill. Practically no phase of the relations of management and labor are free from its restrictive provisions. Before a union is organized, there are laws governing what the workers can do. After a union is formed, there are rules for their dealings with management. There are restrictions on the kind of agreements that can be made. There are rules of procedure where no agreements are made. There are rules, regulations, restraints, restrictions, and controls.

Those of us who sincerely believe in free private enterprise, also believe in free collective bargaining. Freedom cannot be apportioned on a class basis. If the Republicans want the freedom for capital to own and operates businesses, as I do, they must also recognize the right of the working men and women to own and operate their unions.

Now let me make this perfectly clear. I'm prepared to have it out both ways. I am against any kind of State control—for business or labor. I have an intense loathing and hatred for the Fascist and Communist glorification of the state at the expense of the individual.

Let me also make this clear. Government has a job to do in correcting abuses by industry or labor, and I'm in favor of having corrected the abuses by the extremists on both sides.

But that's a far cry from the Taft-Hartley form of State control of labor unions.

Although the Republicans would deny it, the fact is that this law gives positive aid and comfort to the totalitarians. First of all, it is consistent with their views of Government regulation of everything. Secondly, it's a stab in the back of our free-labor movement—the most powerful force we have to fight communism and fascism.

As I read through the provisions of the Taft-Hartley bill, I kept thinking that its authors must have been trying at least to solve one problem; namely, unemployment among the lawyers. And this bill would really solve that one. Under it, litigation is substituted for collective bargaining—court proceedings for the peaceful adjustment of grievances and disputes.

I kept comparing the operations of this legal monstrosity with the work of the division of labor relations which I set up last October. This division has no power to command. It cannot subpena. It issues no orders, no decisions. It doesn't have any involved rules of procedure. It has merely one simple purpose and objective: to bring about the friendly settlement of labor disputes that seriously affect the people of this city.

What have been the results of the work of this division? Just this: Since it was created, New York City has had only one serious strike, and that lasted for only 1 day.

I said when I established the division that I was confident that management and labor could settle their controversies across the bargaining table. I still think so, and I've had my faith in collective bargaining reaffirmed by the work of our division of labor relations. I am also convinced that we will never achieve labor peace under the system of State regulation of industrial relations set up by the Taft-Hartley bill.

You might be curious, as I am, as to why the Republicans devised the Taft-Hartley bill. After 14 years of solid opposition to any and all forms of regulation, they now come forth with a thoroughgoing system of regulation for labor. Part of the explanation, of course, is that they are being pushed by the NAM and the chamber of commerce, whose representatives admittedly wrote most of the legislation.

But fundamentally, in my opinion, it is that deep down they do not trust, and, in fact, fear, the workingman. They believe that people who work for a living haven't got the emotional and intellectual capacity to be free from Government restraints. They must be guarded; they must be watched.

I have an abiding and deep-rooted faith in the common sense, the intelligence, the emotional stability of the working men and women, as well, for that matter, as the business men and women of America. I do not believe that either group must be placed in shackles. I therefore oppose, with all the vigor I can command, the Taft-Hartley labor-control law.

Arming Latin America

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Oregon Statesman by ex-Governor Sprague, of Oregon. The membership of the House would do well to consider carefully the contents of this editorial in view of the important decision on this subject which we must make.

ARMING LATIN AMERICA

Congress should scrutinize very carefully the recommendation of President Truman that the United States supply arms to the nations of Latin American and Canada and train their army, navy, and air personnel in tactics used by this country. His plan also calls for us to maintain and repair their planes, tanks, guns, and ships. The basis for renewing this appeal, first made last year, is that world developments during the year give still greater importance to this legislation.

Suppose we take this apart. What developments are there which make a fresh threat to the Western Hemisphere? The only plausible answer is that our relations with Russia have become strained. Very well, Russia is possible enemy No. 1. If so, how does South America or Central America become involved? Is Uncle Joe going to come up through Antarctica, subdue the Pategonians at Tierra del Fuego and then inch his way up through the Southern Continent to the Panama Canal or by a short hop cross to Miami? Surely, no one has any fear of that.

Russia has no navy so it could not transport armies for any beachhead on South or Central America. It has no fleets of long-range planes. If it builds them they will come over the north top of the world directly toward our centers of industry.

The coordination of defense between this country and Canada which was begun in 1940 seems practicable, especially since Canada is the air crossroads of the world. But the nations of Latin America are in no danger of attack from outside this hemisphere. Surely, we are not shivering over the Communist Parties of Latin America.

If we did arm the southern nations of what value would they be in future warfare? In the last war all but Argentina declared war on the Axis but only Brazil par-

ticipated with troops and that country only with a token force. Its navy did patrol duty but where is the navy to venture into American waters with hostile intent?

Not only is there no evident reason why we should furnish these countries with arms and then keep them in operating condition, but there are good reasons why we shouldn't. The cost will be by no means inconsiderable, even if we ship them surplus material. If we furnish them arms we merely help build up the military caste in those countries and make their governments more than ever the creature of the military command. The only use that probably would be made of all this United States furnished equipment would be either to foment or suppress revolution or to carry on war with a neighboring nation. As far as cementing their friendship is concerned the effect might be the reverse except among the generals and colonels who would get new guns to play with.

This form of bounty is a mistake. It is of no great benefit to the nations receiving it and adds nothing to the practical defense of the United States. We still would have the job to do for both continents, except for the probable help of brave Canada.

There are other ways to assist our neighboring nations and much better ways of providing for the national defense. One of the first is to concentrate rather than scatter our weapons of war. Another is to strengthen the instrumentalities for peace, like the United Nations.

Congress failed to adopt the President's recommendation for hemisphere defense last year. It will be wise if it puts his revived appeal on the shelf. With the War Department "taking over" the Department of State. Congress is under greater need for exercising independent judgment in the area of foreign policy than before.

Soviets Salute D-Day and Breach Widens

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted me by the House, I include the following newspaper article by Robert M. Grannis, published in the Brooklyn Eagle of Sunday, June 8, 1947:

SOVIETS SALUTE D-DAY AND BREACH WIDENS
(By Robert M. Grannis)

I am addressing this to Communists and Russian apologists in this country whose divided allegiance is an affront to all decent Americans. They need to know the true complexion of the Russian way of life they prefer to our own. And we who find their presence and utterances most unwelcome need to know what we can expect if the day ever comes when we have to go to war with the Soviets.

Friday was the third anniversary of D-day, the day when American and British troops achieved the impossible—a landing on the coast of France where the Germans were firmly and confidently entrenched.

Our Russian friends who say they want peace, our Russian friends who cry out against social injustice used Friday to defame the memory of Allied dead. They used it to spread lies among the conquered people of Germany as a means of undermining trust in the United States, as a means of peddling communism.

The Kremlin marked the day with a front-page editorial in the Taeglische Rundschau, which is the official daily paper of the Soviet military administration in Berlin. It was printed in German for the edification of the German public.

SAYS REDS ALONE WON THE WAR

First it repeated the old lie that Russia alone won the war. Then it added two new points:

That our air forces had sought our German cities for bombing and neglected military targets.

That the western allies delayed the second front until they were afraid the Russians would win alone.

As to the actual Allied invasion on June 6, the editorial said: "The invasion troops experienced relatively weak resistance. The Germans' eagerness to fight had disappeared and how the war would end was obvious to everybody."

You Communists who parrot the Russian doctrines in this country—you Communists who swallow the red line and call yourself Americans need to remember the thousands of loyal Americans who rest in cemeteries in Normandy; the American hospitals that are filled with the mentally ill and the maimed.

This Russian hate editorial is a challenge—you can't be on both sides at the same time. The protection of the American flag is not rightly yours—it is yours by sufferance alone. In Russia your actions and utterances would send you to a concentration camp.

OUR DESIRE FOR PEACE HAS LIMITS

We who are not Communists want peace just as earnestly as the next man. But we don't want it at the expense of selling out the whole world to a nation that deals in lies under the guise of social justice.

I believe that the danger of war with Russia is remote. I believe that Russia will bully her way across Europe as long as we permit it and no longer.

I believe we have nothing to fear if we keep ourselves strong and encourage and help others to do likewise. And I predict that one day the Russian balloon will explode when the people discover they are being deluded by men who practice gangsterism in the name of democracy—the same caliber of men who tried to sell the German people the idea that theirs was a super race and born to conquer and rule.

Meanwhile it is well to remember that Russia's strength today is a debt she owes to the United States. I think it is not an exaggeration to say that without our help she might have perished. And again it will be the strong right arm of the United States that will be felt if she threatens the peace of the world.

Consumers Cooperative Association

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Tulsa (Okla.) World of May 4, 1947:

CO-OP EMPIRE FACES KANSAS COURT BATTLE—ATTORNEY GENERAL SEEKS RECEIVER AFTER WORLD EXPOSES SCHEME

TOPEKA, May 3.—The economic future of the $17,000,000 Consumers Cooperative Association—the second largest in the United States—will be determined here June 6 when the State supreme court hears an application for its dissolution and the appointment of a receiver for its vast properties.

The action was brought and is being prosecuted for the people of Kansas by their attorney general, Edward F. Arn. He charges the CCA with:

1. Violation of its charter provisions.
2. Violation of the State marketing act.
3. Selling $7,120,64[illegible] of unregistered securities in violation of law.
4. Operating as a farm cooperative when in fact it was an industrial empire.

The varied, interlocking and far-flung activities of the 18-year-old cooperative were recently exposed in an exhaustive study made by the Tulsa (Okla.) World which said the Kansas City organization showed net earnings of $1,665,298.82 in 1944–45 and was tax-free. The newspaper pointed out the fact that a taxpaying corporation earning $1,665,298.82 would have surrendered $632,000 in Federal taxes at the present rate of 38 percent.

The CCA was originally chartered in Kansas to deal in, handle, and distribute petroleum and various products and byproducts; also such commodities as are essential to the operation of the business of this association; to purchase, lease, build, construct, maintain, and operate warehouses, filling stations, pumping plants, compounding plants, refineries, and all other appliances and conveniences for use in connection with the manufacture, purchase, and sale of gasoline, petroleum, lubricating oils, and all other petroleum and oil products.

CHARTER AMENDED

In November 1937 the CCA amended its charter to include the buying, selling, processing, manufacturing, warehousing, and transporting of tires, auto accessories, groceries, paint, farm machinery, farm supplies, and other consumers goods.

It thus hoped to participate in the benefits of the State's Cooperative Marketing Act. The purposes of the act, however, are clearly defined and limit it to the promotion and encouragement of intelligent and orderly marketing of agricultural products.

Instead of being an agricultural cooperative, the CCA, according to the attorney general's petition in the Supreme Court, had activities which included:

1. International trade, including shipping of petroleum products overseas to the extent that during 1946 approximately 3,000,000 gallons of motor oil were shipped to 10 different foreign countries.
2. Entering into exchange agreements with all major and independent oil companies in connection wtih the transportation of oil and gasoline.
3. Ownership of huge oil refineries at Coffeyville, Kans., Phillipsburg, Kans., Scottsbluff, Nebr., where it has a total annual production of more than 130,000,000 gallons of refined fuels and can handle approximately 6,000,000 barrels of crude oil per year; this in addition to one-third interest in a large refinery at McPherson, Kans., which itself has a capacity of 6,000,000 barrels of crude oil per year.

VAST EMPIRE

4. Ownership of canning plants, lumber mills, printing plants, paint factories, and other industries.
5. Purchases, owns, and holds extensive oil and gas leases and royalties and oil producing properties.
6. Drilling, operating, and producing approximately 450 oil wells with an annual oil run of nearly 1,750,000 barrels.
7. Ownership and operation of a vast pipeline system.
8. Operation of auditing, management, services, and insurance agencies, as well as many other business and industrial pursuits.

All these activities and pursuits, the petition states, extend far beyond the authority of the State Marketing Act and the CCA has usurped and assumed corporate powers not delegated to it by the State and to which it is not entitled according to Kansas law.

These pursuits were engaged in by the CCA and its subsidiaries, the Cooperative Pipeline Association, the Cooperative Refinery Association, and the Cooperative Oil Production Association

STOCK SALE BARED

By February 28, 1947, the CCA sold $2,707,170 of its capital stock without first registering it with the Kansas corporation commission, as required by law. In addition, the petition states, it sold $4,398,674 in deferred patronage refund certificates and $14,800 in certificates of indebtedness—all unregistered. The total was $7,120,644 in unregistered securities sold in violation of law, Attorney General Arn charged.

When the CCA dealt with nonmembers, as it still does, it is a violation of the Kansas cooperative marketing act.

Instead of being a farmers' cooperative—as it claimed to be—the CCA carried on an expansive industrial pursuit under the guise of marketing agricultural products, the Supreme Court was told.

Settlement and Colonization of Utah

EXTENSION OF REMARKS
OF

HON. EDWARD V. ROBERTSON

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, June 10 (legislative day of Monday, April 21), 1947

Mr. ROBERTSON of Wyoming. Mr. President, this year the State of Utah is celebrating the one hundredth anniversary of the entry of the pioneers into the Salt Lake Valley. The historic pilgrimage of these people in their trek to the Rocky Mountains is one of the outstanding events of American history, and their colonization of the great American desert has resulted in the great inter-mountain empire of which Utah is the center.

In Washington the Congressional Library has arranged an interesting exhibit, showing an early pictorial history of Utah and its colonization by the Mormon people. On the occasion of the opening of this exhibition last Saturday, exercises were held under the direction of Dr. Luther Evans, Director of the Library. As a part of the program the junior Senator from Utah [Mr. WATKINS], who is a descendant of Utah pioneers, delivered an interesting address and paid a tribute to the pioneers of Utah. I ask unanimous consent that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

DESERET, LAND OF THE HONEYBEE, A UNIQUE EXPERIMENT

At the outset, Dr. Evans, in behalf of the people of Utah, and in my own behalf as a second generation descendant of pioneers who settled that State, I want to thank you for the very gracious gesture in placing before the people of the Nation this historic exhibit. You and your staff have always been courteous and very generous in giving aid and assistance. I desire to particularly acknowledge the fine work of Mr. Sandborn and Dr. Burr, and extend appreciation to all the members of your staff. This is indeed an auspicious occasion and one long to be remembered.

Now to my theme—Deseret, land of the honeybee—a unique experiment.

In the early summer of 1847 a band of pioneers left the Missouri River, bound for the mysterious region then known to most of their countrymen as the great American desert. On and on they went, out the long reaches of the Platte River, past lonely Chimney Rock, sentinel and landmark of thousands destined to follow them, past Fort Bridger, named for the aging trapper familiarly known as "Old Jim." Then, through the last mountain passes and out of Emigration Canyon. At their head moved the son of a veteran of the American Revolution. Brigham Young himself was leading a sort of revolution, when he announced to his followers that the desolate looking valley before them was the place where they should start all over again.

Few in the company, or among the thousands who came after, could have known the fascinating story of how that land had been revealed to the world.

More than 300 years had passed since Antonio de Mendoza, Viceroy of New Spain, had heard rumors of lands and Indian tribes far to the north of any previous Spanish exploration. There was a tradition that the founders of the once mighty empire of the Aztecs had come from the shores of a great salty lake in that northern wilderness. There were rumors of the land of "Quivira" and the "Seven Cities of Cibola." Those stories piqued the curiosity of a Spanish monk, Fray Marcos de Niza, who decided to find out about Cibola. His report, which someone unkindly said was embroidered by fancy, decided the Viceroy to undertake exploration of the north country on an unprecedented scale. The result was the famous expedition led by the Governor of New Galicia, Francisco Fosquez de Coronado.

To him we owe the first knowledge of contact by white men with the land of Utah. The Indians told stories of a red river that ran at the botom of a vast gash in the earth. So Coronado sent a detachment to find it, led by Garcia Lopez de Cardenas. Pressing northwestward, after many days' journey, they came suddenly upon the brilliant and awesome gorge, somewhere near the present southern boundary of Utah. Their emotions were probably those of countless thousands of modern tourists who now get there easily by motor. Crashing pieces of music and reams of diaries do not convey the impression, as well as 20 words by a frail American poet who wanted to see the Canyon before her early death:

"By Zeus! Shout word of this to the eldest dead!
Titians, Gods, Heroes, come who have once more a home!"

—*Adelaide Crapsey.*

The Spaniards found that rock pinnacles, which form the rim looked no bigger than a man, were taller than the tower of Seville Cathedral. The river, a ribbon when seen from above, was a broad, swift torrent, angry and red. Rio de Tizon they called it—"Firebrand River."

The conquest and settlement of New Mexico, and missions to the Pueblo Indians, brought the Spanish to the very verge of the Utah mystery. But the full revelation waited for more than two centuries.

While the English colonies were preparing to declare independence, in June 1776, a Spanish monk was making ready to start on the first great exploration of Utah. Other monks were busy founding missions on the coast of Upper California, and the powers of church and state were anxious to find an overland route from Santa Fe to Monterey, and link the far-flung missions and presidios into one strong cordon from Texas to the Pacific Ocean. History has almost forgotten the name of the expedition's formal leader, Fray Atancio Dominquez. Because the real leader, the man who sold the idea to the authorities, was Fray Silvestre Vilez de Escalante, of the Zuni Indian Mission.

In the summer of 1776 the expedition vanished into the wilds, and the autumn was well advanced when Escalante recorded his return "dead tired" in his now famous journal. He had failed in the main purpose of his journey—to break the overland path to California. But in his heroic trek of over 2,000 miles he had crossed the plateau and canyon country of southeastern Utah, crossed the Green River, seen the snow on the Timpanagos Mountains, observed the Indians of the lake valleys, and forded the Colorado on the return journey. His mapmaker, Bernardo Miera y Pacheco, drew the first map showing the details of Utah's geography with something like an approach to accuracy. After that trip, the Spaniards knew far more about Utah than Anglo-Americans learned until many years later.

What little our countrymen did know, even as late as the 1840's came from inaccurate and sometimes partly imaginary maps, and from the reports of hunters, trappers, and scouts who after 1820 threaded the mountain passes, briefly explored the Great Salt Lake and valley, met the Indians, and suffered in the deserts. The names of some of those trailblazers are now legendary. There was Jed Smith, who made the first trip to California through southern Utah, and the first overland journey eastward across the desert that stretches from Great Salt Lake into Nevada. His journal of the latter feat is one of the heroic narratives of American history. There were the fur traders, Peter Skene Ogden and Etienne Provost, for whom two of Utah's cities were named. And the mulatto scout, James P. Beckwourth, who dictated his autobiography, and Jim Bridger and Joseph Reddeford Walker, and Kit Carson, who guided John C. Fremont, the Pathfinder. Most of those trailblazers were too busy to write much, and some couldn't write at all. The priceless information they gathered in their minds slowly dispelled the cloud of mystery that hung over Utah and guided the official explorers, who with the support of the fur companies and the United States Government, broke new trails, surveyed wagon routes, and felt out the easiest routes for future railroads.

Utah suddenly emerges into broad daylight in the reports, journals, and letters of John C. Fremont, Howard Stansbury, and James Hervey Simpson, and the romance of Washington Irving, founded upon the journal of Capt. Benjamin Bonneville. Those explorers really enjoyed themselves, in spite of hardship and danger. They hunted and camped out, and were companions to the artists whose sketches inspired engravings and water colors in which the scenery of Utah still lives as it came to their eyes with the freshness of a romantic discovery.

Even after all their efforts, much of Utah was still a deep and forbidding mystery, especially the vast plateau and canyon region of the far south, where the Green, the San Juan, and the Colorado Rivers wound down through awesome walls of rock. In 1869 the mystery began to yield a little to the determination of a Civil War veteran who came out of the Battle of Shiloh with his right arm shattered to the elbow. That was Maj. John Wesley Powell. His supreme confidence inspired the band of men who started for high adventure at Green River, Wyo., in May, and

in August completed one of the greatest explorations of all time—900 miles through the canyons of Utah and Arizona. Powell's work, and the later expeditions of Hayden, Dutton, and Dellenbaugh, revealed to Americans the marvelous scenery and resources of Utah. They aroused the public interest and pride that eventually created the national parks and monuments now visited yearly by hordes of awestruck tourists.

But we are running ahead of our main theme. The hunter and the fur trader, the explorers and surveyors, the geologists and map-makers came and went, but the Mormon pioneer, actuated by a deep religious faith, came, planted, built, prospered, and stayed. Even the lure of newly discovered California gold—gold, by the way, discovered by Mormons—did not change or alter his purpose. He came with what he believed was a sacred vision and a divinely revealed history of peoples who had once inhabited the lands of the Americas. That book has been considered, even by those who refused to accept its religious message, as one of the hundred books that have had the greatest influence on American civilization and religious thinking. It inspired the coming into existence of a native American religion, which took its name Mormon from the Sacred Book. It inspired a religious community that planted a new garden in the barren waste, and to that garden gave a name Deseret, the land of the honey bee, whose hive has been the symbol of Utah these 100 years with final recognition as a part of the great seal of the State.

Now, the establishment of States by religious communities was not new in America, and their founders were fond of likening themselves to the Children of Israel. Like them, they found a "promised land," where there were corn, and wild grapes; and in a last resort they could, like the Pilgrim Fathers, "suck the treasures hid in the sand." But the pioneers of Utah found none of those things. There was water in the snowy mountains, and under the sand, and the rocks were veined with minerals. They had to unlock the storehouse by hard labor. While others found a promised land, they had to make it. They were like the bishop who was sent into the wilderness, with orders to create his own diocese.

Inspired by the churches missionaries they streamed to Utah from the older States, and from England, Sweden, Denmark, and other lands. The leaders had little to promise them, except hardship and work—the beehive was not merely a symbol, it was a stark reality. So was the suffering on the way—the swollen feet, the thirst, the rought jolting of wagons, the pull and creak of the hand carts, the dust, the heat, and many times death and lonesome graves to mark the way for later comers. There were all the hardships and dangers we read about so comfortably now, in the narratives copied in recent years by the Historical Records Survey. But there were compensations—companionship, and the hymns by campfires in the wilderness, when someone started to sing and all joined to swell the chorus; and there were the hours of worship and of prayer when heaven drew nearer. For the adventurous, there was buffalo hunting; for the sensitive, the thrill of wild and colorful scenery, and the stars coming out at campfire time. And to those who came later at the journey's end, there was the supreme moment of emerging from Emigration Canyon to see the growing city, and the shining level of the lake, and friends and kinsmen who had gone ahead coming out to greet them, and the greatest thrill of all, there was their Zion, the Zion their prophets had told them in the last days would be established in the tops of the mountains.

Within a few years Deseret was a fact, felt around the world. Its farmers, the first Anglo Saxons to practice irrigation on a large scale, were making the desert bloom. Others introduced the manufacture of iron, and stayed up through the night to feed fuel to the beehive furnaces. Before long, still others began to experiment with the sugar beet. Some tended sheep, sheared them, spun the yarn, dyed it with homemade colors, and wove it into cloth. Men turned the legs and rounds of chairs, and the leader, Brigham Young, set the example by working in his own carpenter shop. Theirs was an economy of necessity which for many years made them self-contained.

The impact of this unique community, founded upon religious devotion, sacrifice, and economic cooperation, was new and strange. Whether friendly or not, most observers admitted the practical genius of these people, as colonists and as founders of what was practically a new civilization in a barren wilderness. The astonishing thing about it was the fact that they were mostly of humble origin, the little and supposedly obscure people of the world, who left all that they might find a place where they could be free to worship God according to the dictates of their own conscience. They were the people who, at the end of a long grueling day of physical pain and hardship encountered on the great journey—they were the people who, in the face of deep sorrow and anguish of soul at the loss of dear ones whose bodies had been placed in wayside graves—they were the humble people who could, under such tribulations, sing with all the deep feeling and fervor of their souls their great pioneer song:

"Come, come, ye saints, no toil nor labor fear,
But with joy wend your way;
Tho' hard to you this journey may appear,
Grace shall be as your day.
'Tis better far for us to strive
Our useless cares from us to drive;
Do this, and joy your hearts will swell—
All is well! All is well!

"Why should we mourn, or think our lot is hard?
'Tis not so; all is right!
Why should we think to earn a great reward,
If we now shun the fight?
Gird up your loins, fresh courage take,
Our God will nevèr us forsake;
And soon we'll have this truth to tell—
All is well! All is well!

"We'll find the place which God for us prepared,
Far away in the West;
Where none shall come to hurt or make afraid;
There the saints will be blessed.
We'll make the air with music ring—
Shout praises to our God and King;
Above the rest these words we'll tell—
All is well! All is well!

"And should we die before our journey's through,
Happy day! All is well!
We then are free from toil and sorrow too;
With the just we shall dwell.
But if our lives are spared again
To see the saints their rest obtain,
O how we'll make this chorus swell—
All is well! All is well!

—*William Clayton.*

But to go on, the Army officers, surveyors, and map makers, who came in the late 1850's, were astounded to find the oasis of culture those people had made in a land ringed by snow-capped mountains and isolated from the rest of the Nation by vast stretches of Indian and buffalo ranges and infinite levels of appalling desert. Travelers from the States and Europe in the very earliest times saw irrigation ditches, sunny spots of greenery, the foundations of churches, temples, stone and brick houses, iron furnaces, cooperative stores, a theater, a newspaper, elementary schools, and the beginnings of a university, later to become the University of Utah, where Orson Pratt was working out a new alphabet, the Deseret characters. It was all quite astonishing, and many couldn't understand the blend of religious faith and practical good works. It seemed to defy common sense—it was unique and under the circumstances unparalleled, but there it was.

Equally unique was the political sense of what was presumed to be a company of dreamers and fanatics. They had hardly settled and driven the first furrow, when they organized a provisional government—for Deseret. Within 2 years they had drafted a constitution and were knocking on the door of Congress, for admission as a State. Their petitions were received with civility at the freezing point—but that didn't discourage them. And their patience survived many similar snubs during the 46 years (1850–96) when Deseret was a Territory. No other well-settled State has passed through such a long period as a Territory; that, too, is unique.

Meanwhile, the people and their leaders accepted, in a realistic spirit, the fact that the expansive force of American civilization made isolation impossible, and that they were part of the American family. They determined to support the Union of States, and to lead the development of the Rocky Mountain West. Knowing the hardships of the overland trails as few other Americans could, they favored linking the oceans by rail. The ceremony that marked the completion of that project took place in their Deseret May 10, 1869, at Promontory Point. The solders were drawn up, the locomotives of the Central and Union Pacific railroads puffed close to each other, and the golden spike was driven. Then the crowd melted away, the cameras were taken down, and Utah was bound to play its role in American civilization.

It has played the part, evolving from a patriarchal religious society into a modern American State. In 1894 Congress permitted Utah to hold a constitutional convention, and on January 4, 1896, President Grover Cleveland signed the proclamation announcing the admission of Utah to the Union on an equal footing with the other States. It was not the Deseret of 1849, or the territory of 1850, for in the meantime three other States had been carved from it, Nevada, Colorado, and Wyoming.

The treasures hid in the earth, land, water, and minerals, the hard work and industry of her people, the fine spirit of cooperation of the pioneers and later comers of all religious faiths, have brought Utah a long way in these 100 years. In retrospect it is amusing now to read the pronouncement of a geologist that artesian wells would be impractical in the desert. The pure fountains that now gush from thousands of wells in many Utah valleys have helped make farms and gardens. The diversions of mountain streams through networks of irrigation ditches and canals, and the fields and orchards contrasted with the bleakness of the adjoining desert, are typical features of the landscape. Other great irrigation and power projects in contemplation of construction are expected to attract the young people of the State to do more pioneering to spread the cultivated areas, and to encourage the growth of numerous small and large scale industries and the building of many thousands of new homes.

The great new steel mill at Geneva, resultant of the war, suggests what the industrial future of Utah may be and contrasts strangely with the heroic pioneer smelting of iron in Iron County by the pioneers. The early diggings for copper are dwarfed by the vast terraces of the open copper mine at Bingham.

Development of roads has opened the friendly State as a paradise for tourists, and brought the scenic wonders that awed the Spanish explorers within reach of anyone who can drive his own car, or buy a bus

ticket. The route to the national park country lies through an almost continuous belt of settlement and cultivation, which was already begun when the explorers, seeking a route to New Mexico, passed that way years ago.

There is more in Utah than wells, dams, ditches, acres of sugar beets, and vastnesses of pinnacled rock and chromatic canyons. The earliest pioneers were not illiterate and uncultured boors. Their Deseret News, still flourishing, was the first newspaper in the Great Basin region, beginning June 15, 1850. Their University of Deseret and their primary schools have grown into a State free-school system and two public institutions of higher learning. Their arts and crafts are the treasures of the museums maintained by the Church of Latter-Day Saints and the Daughters of the Utah Pioneers. The singing of hymns, around campfires on the trail, was the fountainhead of a brilliant musical history, and of the tabernacle choir that inspires millions today through the radio.

Utah began with a company of devoutly religious people, who withdrew themselves from the world of their time to seek in the wilderness the peace they craved. They thought they had come to make their homes in the great American desert, a land undesirable to all other Americans, and the place where they might remain in seclusion. But that seclusion which they sought was bound, in the very nature of things, to be invaded before long by the westward march of Americans following the war with Mexico and preceding the great Civil War. The gold discovery in California emphasized that rush. The new colonies in Utah were way-stations on one of the main highways to the new El Dorado in the West. Some of these adventurers tarried in the villages and cities, liked the country and decided to make their homes there. Thousands more, impelled by the urge to go West, were attracted to the new and growing territory. They came, they saw, and they remained, thousands of them, to take an important part in the building of Utah, and many of them deservedly share honors as pioneers.

Utah soon became a place of many religions, and it was inevitable that during an adjustment period which followed there should be some friction and recriminations. Happily those times are of the past, and today religious intolerance in Utah is practically unknown. It is a land of homes, schools, churches, farms, mines, and industries, and a land of opportunities where men and women of all faiths live together and work together, with tolerance and understanding. And in the new period just ahead, which will be a period of pioneering only in a different way, the people should build worthily on the foundations laid by the pioneers of 1847.

Today we honor the memories of the men and women of 100 years ago. Utah had its beginning as the result of the migration of a religious group seeking opportunity for the development of its religious ideals. One of the perennially significant facts about such religious groups is that their spiritual energy rarely flows solely in the original channel. It has a way of descending, like water from the mountains, and spreading out in rills to bring life to the plains. It has been so with the history begun by the pioneers of Utah. The mountain of inspiration, where the religious impulse began, is still there. The hard realism and common sense of their progeny has caused its snow-fed streams to water the fields marked out by their practical energy. In a very peculiar way, as Deseret, has become the State of Utah, the history of the experiment in cooperation has shown the intertwining of American democratic political ideals and the devotion of a religious society to make the pattern of modern Utah, an unique contribution to the American way of life.

In Memoriam, Hon. Fred Van Ness Bradley

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 10, 1947

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following sermon by Rev. William J. Lichan, of Rogers City, Mich., in memory of our late colleague, Fred Bradley:

Looking through the church records of Westminster Presbyterian Church, I found the first four names as follows: Carl D. Bradley, Emma Bradley, Fred V. N. Bradley, and Marie Bradley.

It was Carl D. Bradley who built Westminster Church and to the end the family have been supporters of it.

On occasions like this, one is called upon to render active service when one's feelings seem to impose silence rather than the call for words. Only 2 days ago, attending the general assembly at Grand Rapids, I heard the newsboys crying: "Bradley died—Read all about it." Yes, laymen and ministers alike came to me and said, "Sorry to hear of the sudden death of Congressman Bradley."

It is in this spirit as Fred's pastor that I approach the duties of this hour. Most of you know Congressman Bradley as your personal friend, others like these distinguished guests from Washington, D. C., knew him as their colleague and coworker; yes, and true friend, but the letters which I have received from Fred in the past few months I shall always treasure. Here is but one paragraph from his last letter to me:

"It will be a pleasure if I can be of assistance in the two cases you mentioned in your letter, and you will hear from me again as soon as I have contacted the proper authorities here in Washington. Please be assured of my cooperation. With kindest regards to you, in which Mrs. Bradley joins me, I remain

"Sincerely yours,

"FRED BRADLEY."

Today we have come here from all walks of life at the call of death. Indeed his passing was a shock to all of us, yet it is one of the common and ever recurring events in human affairs that people die. Those whom we love are taken from us and those whom we have known are with us no more. It is well for us in the midst of these circumstances to pause and think seriously about our affairs and realize that this is not our abiding place. Death strikes in all places and among all classes.

Not so long ago it was Fred who said: "Washington with its rounds of entertainment in addition to the many legislative chores is more than many common Congressmen can take. It's physically and mentally a strain hardly imaginable to the folks back home." I am weary. "Let us get ready and go home," might have well been said by this one man. It was ROY WOODRUFF who said: "In my many years in the House, no Member's service has impressed me more favorably than Mr. Bradley's." Are there words of comfort and hope for you Mrs. Bradley? You who from now on must walk alone in the paths you two have walked so oft together.

"Time brings us change and leaves fretting;
We weep when every comrade goes
Perhaps too much, perhaps forgetting
That over yonder there are those
To whom he comes and whom he knows.

"I would not hold our loss too lightly;
God knows and he, how deep the pain,
But friends, I see still shining brightly
The brightest link in all our chain
That links us to a new domain.

"For this I swear, because believing
Time breaks no circle such as this.
However hurt, however grieving,
However much a friend we miss,
Between the worlds is no abyss.

"For friendship binds the worlds together
World over there, world over here.
From earth to heaven is the tether
That brings the earth and heaven near
And makes them both a bit more dear.

"Not weaker now our chain, but stronger;
In all our loss and all our ill
We now shall look a little longer
At every star above the hill
And think of him, and have him still.

"Whatever vales we yet may wander,
What sorrow, what tempest blow,
We have a friend, a friend out yonder
To greet us when we have to go—
Out yonder someone that we know.

"To all eternity he binds us;
He links his planet with the star;
He rides ahead, the trail he finds us,
And where he is and where we are
Will never seem again so far."

—*Douglas Malloch.*

Let us pray.

Almighty and Eternal God, Father of comfort, who hast brought life and immortality to light through the gospel of Christ, we thank Thee for words of hope and comfort that break upon us and our vision with a light from above. We praise Thee for the assurance that to depart from this earth and to be with Christ is far better, and to be absent from the body is to be at home with Thee. Turn our thoughts not downward to the grave, but heavenward to eternity.

We thank Thee for the boundless blessings that attend our earthly pathway; in a world full of anguish our sheltered lives are brightened with Thy sunlight and beauty. We praise Thee for the inspiration of friendship, especially do we thank Thee for the one whose memory we honor today. For the gentleness of his character, for the breadth of sympathies, for the power of his conviction, for his patience and courage, for his genius for friendship, for his loyalty to his State, his Nation, and his devotion as Congressman to his task and his willingness to aid those who were in need of aid, we give Thee thanks.

Now that for a time he has parted from us, we beseech Thee to bless this family circle that is severed, his companion who is bereaved. Grant that we all may be worthy of our loved ones and true to those who have put their trust in us. Send us back to our tasks with new cheerfulness and hope, gladly to accept whatever Thou dost give us. As we wait for the cloudless day to dawn and the shadows to flee away, give us an unquestionable faith in Thy Holy Will and to Thee shall be the honor and glory forever. Amen.

Presentation of Honorary Degree to Speaker Joseph W. Martin, Jr.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. CROW

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 10, 1947

Mr. CROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following address of the Honorable D. Lane Powers in presenting the Honorable JOSEPH WILLIAM MARTIN, JR., Speaker of the House of Representatives, to the president of the board of trustees of Pennsylvania Military College, Chester, Pa., on June 3, 1947, to receive the honorary degree, doctor of laws, together with the address of the Honorable JOSEPH W. MARTIN, JR., Speaker of the House of Representatives, after receiving the honorary degree, doctor of laws.

ADDRESS OF HON. D. LANE POWERS

JOSEPH WILLIAM MARTIN, JR., Speaker of the House of Representatives, was born at North Attleboro, Mass., on November 3, 1884.

The early part of his career was spent in journalism, which field he is still pursuing. At the age of 18 he was a reporter on the staff of the Attleboro Sun. He also served on the Providence Journal. In 1908 he became publisher of the Evening Chronicle, North Attleboro, and he has continued in this capacity to the present time. He is also publisher of the Sentinel, Franklin, Mass.

Four years after he became publisher of the Chronicle he began his career of political service to his State as member of the Massachusetts House of Representatives. He went next to the Massachusetts Senate in 1914, and began active participation in national political life as delegate to the Republican National Convention in 1916. To detail his many specific services, both State and national, would not be particularly enlightening as to the true nature of his contribution to his Nation and his party. Let it suffice to say that he was elected Representative in the Sixty-ninth Congress (1925), and has been an active Member and a growing power through more than two troubled decades. He now stands before us as Speaker of the House of Representatives, a strong force and a steadying influence for everything truly American.

Mr. President, this gentleman has been my close and respected friend and colleague for years. His long and outstanding career of public service is deserving of outstanding recognition. I therefore take as a special honor the privilege of presenting to you for the degree of doctor of laws the Honorable JOSEPH WILLIAM MARTIN, JR.

ADDRESS OF HON. JOSEPH W. MARTIN, JR., SPEAKER OF THE HOUSE OF REPRESENTATIVES, ON RECEIVING THE HONORARY DEGREE

Mr. President, gentlemen of the board of trustees, members of the faculty, alumni, students, and friends of Pennsylvania Military College, it is with a mixture of humility and pride—and a very deep appreciation, I come to you to receive the distinguished honor of this degree you have been pleased to confer upon me.

I have a profound respect for education. It is one of the glories of America that such institutions as Pennsylvania Military College can exist and continue through the years.

In accepting this honor so graciously offered me, I am proud to become a member of the society into which it brings me. This college has conferred its degrees upon a distinguished list of statesmen, Presidents, generals, and judges. No man can be in the company of such illustrious men as Charles E. Hughes, Douglas MacArthur, George C. Marshall, John J. Pershing, Owen J. Roberts, Patrick J. Hurley, Edward Martin, without feeling humble, yet proud to be one of such a distinguished company.

You may well be proud of the more than a century and a quarter of military and civic service behind Pennsylvania Military College. This college has trained youths who have served with distinction in our Nation's wars, during the long span of this institution's existence. I have learned that in the recent great struggle, 918 of your men served with the colors, of whom 37 gave their lives.

There are two ways of getting an education. One is by hard study; the other is by hard knocks. All men must learn—in the classrooms and corridors of the colleges—or in the school of experience.

The college teaches men how to think. I am tempted to say the school of experience teaches men how not to think—or should.

The man who goes to college and learns how to think—then does not follow his teachings—fails of real education. The man who has experience—but fails to heed the lessons—does not profit by experience—and gets nowhere.

The end product of education, to be worth while, is human service. Nothing else is worth while.

One fact of history is outstanding. All great destroyers were arrogant. All great builders have been wise—and very humble. Destroyers seek to rise by putting other men down. Builders rise by trying to help other men to rise.

Twice within the lives of many of us here—three times in the lives of some of us—America has had to go to war to put down the arrogance of destroyers. On those occasions our military men have done a wonderful job of leading our defense on the battlefields. Those who stayed at home have worked just as earnestly providing the machines and materials of war to supply our armed forces for battle.

The American people have always wanted to live at peace with all the world. We have, therefore, never been prepared for war when war came. Twice within 30 years we have performed miracles of preparation under our free American system.

With world conditions as they are we shall have to maintain, for a long time, an invincible national defense. It would be highly dangerous not to do so. That defense must be economical, but it must be kept fully effective to guarantee peaceful progress.

Human progress proceeds along three parallel lines—wise government; productive economy; free society.

America has risen to her greatness because she has followed those three lines. Her constitutional government of laws has always been the abiding place of justice and tolerance. America has become the greatest abode of liberty and progress on this earth. Today she offers the last remaining habitat for liberty. Only good government—wise government—will keep her so.

Since all spiritual development and human progress for any people must follow on the three lines of wise government, a good, productive economy, and a just, tolerant society, government is an exceedingly important part of the life of every individual.

The subversionists—those who would supplant government of laws by government of men—constantly strive to discredit our American Government. But our Government is not something merely to be sneered at, ridiculed, and reviled—as Communists and Fascists declare. Government is to be justly and constructively criticized, constantly improved through better laws—and fewer of them—and by more enlightened administration. But government is always to be supported and cherished, when it is wise. If orderly government under just law is ever destroyed in America, liberty will go off the track, progress will cease, and chaos will come.

The Congress is the people's special instrument of control over their Government. Without the Congress, we could have no representative government by consent of the governed. Therefore, those who would destroy our constitutional government of, by, and for the people, bend their utmost efforts toward destroying your confidence in your Congress.

Right here I want to deliver a message to the young people of America.

Into the hands of your generation, we of the older generation must deliver the destiny of our Government and our Nation. To you is committed a task, upon you rests a responsibility, you are granted a great adventure and a priceless privilege—that of remolding a weary and war-shattered world into a structure of liberty, prosperity, progress, and happiness. No such great adventure ever was possible to the youth of any other age.

Be not dismayed at the enormity of the job. Always remember, if you use right rules, and stick to the right principles, it is no more difficult to add or multiply great sums than little ones—it merely takes longer.

Let me counsel the youth of America—do not be fooled and defrauded by the ridicule and abuse heaped upon your Congress and your Constitution by those who would destroy the structure of your laws. They would enslave you and loot your country under the guise—the gross false pretense—of widening your opportunities.

One theme of derision and bitter criticism constantly harped upon by those who would destroy your Constitutional right to govern yourself is that the Eightieth Congress has been a do-nothing Congress. The reason for those assaults is because the Eightieth Congress has been moving, directly and promptly, to abolish unnecessary controls, reduce useless spending of public funds, and to replace recklessness in our Government, our economy and our society by economy and fair responsibility.

I do not intend to try to tell you in 10 minutes what the Eightieth Congress has done since last January; but from the contentions of the subversionists, you would think they expected the aftermath of war conditions, the cutting of expenditures, the freeing of the Nation from unnecessary controls, should have been cleaned up in about 12 days.

These jeering critics of the Congress would have you believe that if both parties in each House of the Congress do not always agree at every point, popular government will come to a standstill. These would-be wreckers of Americanism would have you believe that if the two Houses of the Congress do not see eye to eye on every phase of every issue, the Congress has failed.

Self-seeking opportunists courting radical support for their political aspirations, would try to convince you government has failed if the Congress does not act as a rubber stamp for the White House.

The truth is disagreements between parties in a bipartisan Congress, and between the two Houses of the Congress, and between the legislative and the executive branches of the Government, are wholesome. They are healthy and necessary under our form of government.

But—and mark these words—when both parties in the two Houses ever agree on all questions, beware. If ever both Houses of the Congress agree on all phases of all issues without dissent and discussion, look to your liberties. If ever both parties in both Houses, and both Houses and the White House, all agree entirely on all phases of all questions, it will be useless for you to look to your liberties; they will be gone.

Young folks, and older folks, we have the finest Government, the finest economic system, the best social system the world has ever seen. Let us continue to protect it. Let us continue to work out the flaws and faults. Let us continue to adapt it to changing conditions so we may help lead the world back to peace and sanity. But let us never give it up; permit it to be destroyed; or allow false pretenders to defraud us out of it, or persuade us to abandon it.

Americanism is today the light of the world. It is the hope of the world. It is the salvation of the world, if we keep it on the high spiritual plane on which it was conceived.

God give us—especially America's youth—the wisdom, the faith, and the courage to guard America; to carry on under our incomparable American system of freedom to help rebuild a shattered world.

Yearning To Quit Europe

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 10, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article by Lester Allen which appeared in the Boston Post, Sunday, June 8, 1947:

YEARNING TO QUIT EUROPE—MILLIONS OF THOROUGHLY DISILLUSIONED AND HOPELESS PEOPLE SEE NO HOPE IN OWN LANDS

(By Lester Allen)

Throughout western Europe an immense number of people dream and talk of getting away from their own countries and going to nations across the seas where they will be safe from war. They are found in the Netherlands, Great Britain, Belgium, France, Portugal, and Italy, and no doubt, if Russian control was not so strict, they would be found in nations east of the Russian occupation line.

They are aware of their failure to fashion a life for themselves, satisfying to their inner selves, and they do not like to contemplate being caught in-between in another war. The London Sunday Times noted recently that tens of thousands of Britons were waiting vainly for an opportunity to get out of England and go to the colonies or to the United States.

Netherlands correspondents noted that students in Dutch agricultural colleges, whose skill is needed by the Netherlands in the colonial possessions, have stated a preference for California, Florida, South America, or Canada.

FRENCH, ALSO

Young Frenchmen, who came of a race which traditionally wouldn't be found dead outside of metropolitan France, are seeking ways of escaping to the Western Hemisphere to settle there for good.

Perhaps the Dutch are more keenly aware of a deficiency in their way of life, and they seek to do something about it. J. H. Boas, an articulate Dutch writer, has summed it up, "Now they are haunted by the fear that they will fall again," he says, "and that they will fail even more because failure in peace is more demnable than failure in war.

"They are bored stiff by the endless repetition of national slogans which are acceptable as quaint and rather useless drawing room ornaments in the uneventful safety of their prewar homes. They are fed up with the glorification of folklore, which may interest the readers of foreign geographic magazines, but to which the natives will never give any credit and which will positively disgust them when in times of stress and distress it is exploited by way of escapism from the serious almost tragic moral problems which confront practically every European nation."

SEE IT AS SPIRIT

"They are sick of the timeworn tenets of patriotic ideals inspired by obsolete and mostly rather ridiculous songs, rather than the strong reality of free and sovereign citizenship. They have acquired a holy respect, bordering on veneration, for the citizen-armies of that unmilitary new world which crossed oceans in order to deliver them, and they are deeply aware that it is not merely the strength of new weapons, but the greater strength of a new spirit which wrought their deliverance."

It is not fear of another war with Germany, or fear of a war between the western democracies and the Soviet Union, which has brought about the profound disillusionment of these people who want to break away from their native lands. They learned 2 years ago that German invincibility was a myth, a foolish legend, which they exposed for themselves during the long and bitter occupation when they lived in close contact with the conquering Germans. They learned that Germans are obsessed by a frantic inferiority, that they bluster and connive and browbeat en masse, but are abject and pitiable as individuals.

These people who seek to escape from Europe have found a profound moral chaos open before them. The petty dishonesty of daily life sickens them. Everyone is made a petty criminal by being compelled to trade in the black market to get the crusts of bread that will keep them alive. Those who do get away from Europe will tell you with childlike wonder what a marvelous feeling of goodness comes over them when they walk into an American grocery store and buy what they want honestly, without breaking a law and without a twinge of conscience.

Things are not going to change, they say, over and over again. Things will not improve. It is this incessant fear and dismay that gets them down. Two years ago they had stout hearts, and were convinced that if they worked and saved and suffered and sacrificed that the old way of life would be rebuilt. Now they are not so sure. They then expected much from what the future would bring. Now they feel that the future will bring only more of the same dreary round of toil and suffering.

ARE PLAIN PEOPLE

These people are not intellectuals, splitting the hairs of an ethical problem. They are plain, common people, small business people, skilled tradesmen, landholders, salaried men. The intellectuals tell them that it is merely a question of making a choice between the Soviet Union as a great, protecting power, or the United States as a great protecting power. The intellectuals reason that there is a breathing spell. War between the two great nations will not come right away; it requires time for a build-up, time for amassing money and manpower.

Most western Europeans have made their choice. They have chosen the New World, and not because of any conviction that democracy and free enterprise are better than collectivism. They choose the New World because they have seen Canadians and Americans and Australians, men bred far from the bickering and strife of Europe, and liked the way they do things, their outlook and their dynamism.

If the instincts of the common people of Europe, as distinct from intellectuals, politicians, and financiers, can be trusted, there is hope of saving Europe. They are aware that the United States is thinking about a plan for an economic union of western European countries and a master plan for financial aid to this economic union.

Europeans know from bitter experience that a Europe united by force is a perilous reef upon which Europe has been broken several times since the Roman legions ventured out of Italy. But, every day it becomes more apparent to them that without some form of economic union Europe is doomed, and they are doomed with it.

MATTER OF SENSE

Any plan to alter the prostrated economy of Europe, to change it over from a ruinous flophouse into a prosperous area, must include a realignment of Europe's productive machinery, a shotgun wedding of the Ruhr with the rest of Europe's economy. Mass migrations are virtually impossible. Europe's people have staggered their last wandering mile. A pooling of resources is barely possible, for such a pool would have to triumph over the rabid nationalism rampant in the areas that would benefit most.

Looking upon Europe from this safe vantage point it appears that a United States of Europe is merely a matter of good common sense. But, actually, Europeans do not think in our dynamic fashion. They have no faith in free suffrage and the power of the individual vote. They are dogmatic and hidebound by tradition.

When the French permitted some Italians and Germans from over-populated areas to enter France to work, it was looked upon as a sign that French nationalism was being tempered by common sense. Actually, it was merely a desperate need for manpower to accomplish the minimum of reconstruction, and there was bitter resentment that even if these men earned their bread they were just so many more mouths to feed.

The people of Europe who want to get away find no clarion call to unified effort in their own countries in such flag-waving appeals as that of Gen. Charles de Gaulle, and his moving references to the glorious past of the great French Nation. They have only a sinking feeling that the past holds nothing for them if it is to become the mold of their future.

The United States cannot avoid contributing to the vast disillusionment of Europeans. Events have alined the Soviet Union against the United States. It is certainly not an incentive to struggle on, squeezed between the threat of a militant communism and obliteration by the atomic bomb.

UNION SET UP

Belgium, the Netherlands, and Luxemburg have set up an economic union of sorts, the so-called Benelux union, founded in 1944. It has given promise of fruitfulness over a long period, but time is what Europe can least afford. Whatever plan is adopted to relieve the distress must be one that relieves immediately, not some day in the future.

Watching the citizen armies of Canada and the United States stream across Europe brought home to the people of the western European nations that these armies were made up of their distant relatives who, having left Europe for good, had become a different kind of people, with different viewpoints.

If they had the power, which they haven't the bitter, unfair and deliberate villification of the United States, which comes from intellectuals and politicians of Europe, would be tempered by an outpouring of real gratitude for what we have already done.

The people who want to get out of Europe know that it is impossible for all save a very few who manage to raise the money and get on the quota for admission to another land. Perhaps that is why the utterances of Secretary of State Marshall and the discussions of loans to Europe are followed by Europeans with even more rapt attention than some of the deliberations in their own law-making bodies.

PEACE ELUDES THEM

They have spent 2 years struggling for peace and peace has eluded them. They are as disillusioned, in fact, as we are disillusioned. As one Frenchman paraphrased it, "God helps those who helps themselves" has come to mean, "God help those who try to help themselves."

There is a feeling abroad, however, gaining in strength, that Europe could not be more miserable than it is today, and that, since nothing could be worse, what is coming is bound to be much better. But they still want to get out of Europe, these tens of

thousands of discontented and disillusioned people, who have come to believe that America's worst slum is better than what they now have.

Test Program in Fertilizers by Federal Government Aids, Not Hurts, Private Industry

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 3, 1947

Mr. KEFAUVER. Mr. Speaker, during recent weeks Members of Congress have been greatly interested in fertilizer legislation. Also, this week, the TVA's fertilizer program will be considered. A very interesting diagnosis of the problem is contained in a feature article in the News-Sentinel of Knoxville, Tenn., dated June 8. It was written by Edward B. Smith, a thorough newspaperman who is well-acquainted with the problem. The article is as follows:

A terrific battle is taking place in Washington these days between two powerful forces over a proposed expansion of fertilizer test demonstrations on America's farms.

Opposing the bill are the American Plant Food Council and the National Fertilizer Association, two propaganda agencies maintained by the fertilizer business.

Supporting the bill are the American Farm Bureau Federation, Association of Land Grant Colleges and Universities, leading agronomists, farm demonstration agents, and county agents everywhere.

It is interesting to note that the bill itself is sponsored by a bipartisan group of Senators—HICKENLOOPER, WHERRY, CAPPER, THYE, AIKEN, BUSHFIELD, YOUNG and WILSON, all Republicans in both liberal and reactionary camps; and two Democrats, HILL of Alabama and STEWART of Tennessee.

A lot of misleading propaganda has been printed about provisions of the bill, which is called the National Soil Fertility Act. Fertilizer people say it puts the Government into the fertilizer business in a big way, that it will drive private business into bankruptcy, that it is State socialism, that it is communism, and so forth.

Briefly, here are provisions of the act:

A test demonstration program is established, involving 2 percent of the Nation's farmers (not 2 percent of the land, as has been said). These farmers would agree to grow specific crops and use specific amounts of test fertilizer. Some of the triple superphosphate would be supplied from a new TVA plant at Mobile, Ala., the only cost to the farmer being the freight charge. He would also buy considerable quantities of commercially produced fertilizer through regular private channels at prevailing prices. Farm management practices as well as fertilizers would be tested.

Key unit in the administrative part of the program would be the extension department in each State. In each State there would be also an advisory committee composed of the State experiment station chief, two farmers, a representative of the private fertilizer business, and a representative of farmers' cooperative organizations.

National policy on administration of the act would be formulated by a committee composed of 12 farmers and three representatives of the land-grant colleges.

TVA would be directed to erect a $3,000,000 superphosphate plant at Mobile, so that phosphate rock from Florida deposits could be economically shipped to it by barge. This plant must be sold within 5 years either to private fertilizer industry or to a farmers' cooperative.

Supplementing the needed plant at Mobile would be phosphate and potash plants near raw material sources in the West. These plants would be built by farmers' cooperatives, using Farm Credit Administration long-term loans. The cooperative plants would not be income tax exempt.

The test-demonstration idea is not new. TVA, in the original act creating it, was directed to conduct such experiments and research, using the idle nitrate plant at Muscle Shoals. For more than 10 years TVA has carried on experiments in new and better ways to produce phosphates in highly concentrated form, using enormous electric furnaces and power from Wilson Dam. Working through university extension departments and county agents, it has established test demonstrations on many farms throughout this area. Land that had been worn out and eroded for years has been put back into high productivity.

The TVA-produced fertilizer has been furnished free. All the farmer pays is the transportation cost. But TVA has not driven the private fertilizer out of business. The result has been exactly the reverse. The private fertilizer industry, thanks to this educational program by TVA, is selling more fertilizer today than it ever has before.

Look at the sales record for Tennessee, as an example. In 1941, TVA distributed 7,702 tons of test fertilizer to Tennessee farmers; in 1942 the tonnage was 8,683, in 1943 it was 10,008, in 1944 it was 11,799, in 1945 it was 7,608, and last year 14,240. Now watch how commercial sales zoomed in Tennessee during the same period: In 1941, total tonnage was 141,461; in 1942 it was 174,298, in 1943 it was 230,218, in 1944 it was 271,545, in 1945 it was 277,090, and last year it was 331,265. These are the industry's own figures, incidentally. In the 6-year period commercial sales in Tennessee have more than doubled.

The story of fertilizer is as dramatic as is the story of electric power. Before TVA, electric power was a luxury, particularly here in the Southeast. Today, all across America, electric rates are lower and consumption is zooming skyward. The private power business, no longer a monopoly, is nevertheless making plenty of money and paying excellent dividends to stockholders.

The fertilizer people ought to get smart, too.

Veterans' Housing

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of the House to the address of Mr. Frank B. Creedon, Housing Expediter, before the Washington, D. C., Building Congress, delivered on June 9.

The address is as follows:

Addressing a building congress has become a habit with me. I have had the pleasure in New York, more recently in Boston, and here today in Washington. I am grateful for the opportunity and wish to thank you, Mr. Lee, as president of the Washington Building Congress, and you, Mr. Clas, as program chairman, for your kind invitation.

I would like you to know that I was favorably impressed by the statement which the Washington Building Congress sent to the President last month pledging its support of measures to reduce building costs and to stabilize the building industry. I am sure that we all subscribe to the desirability of achieving the first seven objectives. The eighth objective of immediate elimination of controls on construction by the Federal Government, I should like to discuss with you today.

As Housing Expediter, my chief concern is with the problems of housing—but the problem of housing is as broad as the entire construction field. It is, therefore, very appropriate for me as Housing Expediter to discuss this problem with the Building Trades Congress.

In my association with William Jeffers, former Rubber Director, during the war I was struck with the remark once made by him to the effect that he was amazed at the number of synthetic rubber experts engaged on the problem. Gentlemen, in my brief experience as Housing Expediter I have found that there are many more synthetic housing experts.

Having had some experience as an engineer and construction manager I have always found that in order to build a job, the thing to do is measure the size of it, get the necessary tools, equipment, and men, and get on with the job. Then if time and other factors permit, refinements may be sought for and incorporated in the project. We have approached the housing problem in the same manner. We know the tremendous need for housing so we have the measure of the job but unfortunately we are unable to assemble sufficient men and materials to get on with it in a manner comparable to the demands of our measurements. But we are going on with the job using all the men and materials that are available.

There are obviously many refinements which are needed and which are very desirable in reaching a solution of the housing problem, and each refinement contributes to a more satisfactory solution of the housing need. Consistently we have refrained from letting a multiplicity of smaller problems distract us from the main objective, and in line with this premise I have consistently resisted efforts to take on the solutions of problems which I believe to exceed the scope of the Federal Government's powers in that field. Where certain obstacles were encountered which raised problems which I felt to be; and know to be, not in the field of Federal Government, we have attempted to assist those in whose field the problems lie. Revision of building and safety codes, development of new materials and increasing use of modulor design are examples of the kind of thing I mean. These problems are not within the province of the Federal Government. Some are problems in the field of labor and management; others are problems of local government, and still others are a challenge to industry.

The biggest problem affecting housing today is the supply of building materials. Try as you will to find other problems to solve, until this nut is cracked and the materials supply pipe lines are filled so that firm delivery promises and prices can be made and relied upon, the other problems will not be solved.

Now, of course, a Government official is fair game and never out of season. I ought to know; I am always looking down the gun barrel, but it seems to me that the subject of Government controls as a scapegoat for all the ills that beset us should be pretty well exhausted by this time. In the housing field not only have I repeatedly stated my views on the subject, but these statements have been backed up with positive action. Every control that could be removed has been removed and this same policy will be applied to the few remaining controls when they can

be lifted without harm to the housing program or the economy of the country as a whole.

Removal of the few remaining controls at this time will not result in the production of any additional housing but in fact will have the opposite effect. The problem can be simply illustrated by citing the case of pig iron. You all know that it takes pig iron to make cast-iron pipe and cast-iron soil pipe is one of the scarcest building materials today. There just isn't enough cast-iron soil pipe to satisfy the demands for housing and the nonresidential construction which is now permitted to go ahead. By the allocation powers we direct the amount of pig iron which must go to cast-iron pipe manufacturers. Now let's be frank about this. The pig-iron manufacturers don't like to be directed and neither would I in their place, but by the use of premium payments, which are optional with the industry, they have been induced to increase the production of merchant pig-iron and by direction have delivered a part to the cast-iron soil pipe manufacturers.

Without this power of allocation and without the power to pay premiums, what would happen?

Not only would the soil-pipe manufacturers use the pig iron for purposes other than building production but pig-iron suppliers would sell their pig wherever they choose. And this is no criticism of their action. But how in the world can anyone interested in the housing or construction field believe that by permitting this to happen, the housing program would be helped. Well, I just can't follow such reasoning. This would not only make cast-iron soil pipe unavailable to builders of housing, it would make it not available, period!

Last Monday for the first time since becoming Housing Expediter, I made a public statement estimating the number of houses which can be built this year. There are so many factors to be considered that not until then did I have sufficient facts upon which to base an estimate, and I reiterate—this is an estimate and not a prediction.

My statement was that with the few present controls continuing, we could expect to complete slightly over 1,000,000 dwelling units of all types this year, of which more than 750,000 will be new permanent units. This number of completed dwelling units would give us the best year of housing completions since the middle twenties. These results were achieved without undue impact on nonresidential construction because in 1946 when controls were tighter, more private commercial, industrial, and other nonresidential construction was put in place than in any other peacetime year in the Nation's history. Now with this record of more homes being completed than in any year since the middle twenties, and a larger volume of other private construction under way than in any other year of the Nation's history, we should note that this record housing year was accomplished without adversely affecting other parts of the Nation's economy.

But if the few remaining controls are lifted at this time, my estimate of 1,000,000 homes will not be reached. We may lose over 200,000 completions. But let us not be misled into believing that the building materials which will not go into these lost houses will go into needed commercial and industrial types of construction. Based on the number of applications of all types of construction which have been denied there is an estimated pent-up demand of $3,000,000,000 which may hit the market. This includes a large amount of easily deferrable and much less desirable types of projects. But by a curious paradox these less necessary projects can, in the open market, outbid the sponsors of commercial and industrial construction as well as housing for the scarce materials which will then become scarcer. If this happens it certainly will not result in lowered prices but the very opposite will happen and you know and I know where prices are today.

Everyone in the country is more or less familiar with rent control on existing housing. Rent control will eventually be lifted but I do not believe that many people will recommend the lifting of rent control entirely at this time. The time to lift rent control, is, of course, when the supply of housing has come somewhere nearer meeting the demand. This day will certainly not be reached sooner by doing anything to delay or hamper the construction of new housing.

The building materials situation has improved greatly. Many materials short a year ago are now in plentiful supply. Others in short supply at present are becoming more and more plentiful. There are only a very few which are not satisfactory from the production standpoint. So, I say to you builders who have struggled with shortages and restrictions for almost 2 years since VJ-day, be patient just a little longer and I believe I can say that all restrictions on construction can be safely removed this fall. I have tried in this brief talk to give you the picture as I see it, without boring you with many of the details.

You all know what happened when L-41, the order which limited building construction, was lifted shortly after VJ-day. Many builders requested that it be restored and controls on building were reinstituted.

Now, we are all anxious to remove these few remaining controls. It is my judgment that the time for lifting all controls is approaching—but most assuredly, it is not yet here.

GOP Congress Slow To Take Care of Vets

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. ROONEY. Mr. Speaker, although this Republican Congress has been in session over 5 months now, not a single piece of legislation for the benefit of our war veterans has yet been enacted. Not one of the promises made to the veteran last fall by the Republican Party has been redeemed. What have you done about increasing subsistence allowances for students and job trainees? What have you done about redeeming the terminal-leave-pay bonds? I am glad to say that I have signed discharge petition No. 4 with regard to the Kearney bill as well as the petition to discharge the Rules Committee concerning the cash payment of terminal-leave-pay bonds. The following article, published in the June 7, 1947, issue of Trainman News, official paper of the Brotherhood of Railroad Trainmen, accurately describes the legislative situation:

GOP CONGRESS SLOW TO TAKE CARE OF VETS—ELECTION-TIME TALK FORGOTTEN AS SESSION WINDS UP FIFTH MONTH

WASHINGTON.—The GOP Congress, it seems, is ignoring the veteran like a pay car passes a bum.

The lawmakers have been in session 5 months now and action on measures to benefit World War II warriors adds up to just about zero.

All the election-time gab spouted off last fall when the veterans were practically promised the earth with a fence around it has amounted to what most people thought it would—a lot of hot air. Yet, some favorable legislation was expected since 69 ex-servicemen were elected to Congress and 47 of them belong to the majority party.

Well, here's the record and it's a pitiful one:

The hopper contains several bills for a bonus, but no hearings have been held. And prospects for hearings at this session by the House Ways and Means Committee are remote.

Subsistence allowances for students and job trainees—after 5 months House committee has reported a bill raising monthly allowances for married veterans from $90 to $105, with increased amounts for children, no raise for single veterans. Senate committee still considering the matter. Meanwhile, nearly a million veterans, one-fourth of the total in school or training, have dropped out without finishing their course.

CEILING REPEAL SCUTTLED

Ceilings on job trainee monthly income—outright repeal of the ceilings scuttled. Kearney bill (H. R. 246) which would raise ceilings to $250 for single veteran trainees and $325 for married was passed by House Committee on Veterans' Affairs, buried by Rules Committee. Discharge petition No. 4, which would send the bill to the floor, had 95 signatures at last report, requires 218.

Increased benefits for unemployed veterans—no action. Meanwhile, a quarter million veterans have exhausted their year's unemployment compensation under the GI bill of rights. War veterans make up 28 percent of the Nation's labor force, but 36 percent of the unemployed.

Cash payment for terminal leave pay bonds—none of the bills introduced have been acted upon.

Seamen's bill of rights (H. R. 476), giving limited benefits to wartime merchant seamen—still in House committee.

Congress has passed one bill for the vets but, you might know, that has a hitch to it. The measure allows the ex-doughboys to reinstate national service life insurance without physical examination, but critics assert it permits the Veterans' Administration to declare policies lapsed only 3 months after the previous payment.

New Works Conducted by Hans Kindler With the National Symphony Orchestra Since 1941

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following list of works played for the first time in Washington, D. C., between 1941 and April 1947 by the National Symphony Orchestra:

NATIONAL SYMPHONY ORCHESTRA ASSOCIATION, 1947

An interesting record was made by the National Symphony Orchestra, under Hans Kindler, during the war years from 1941 until the close of the season just past, in the number of works played for the first time in Washington, D. C.

These were 149 in number, and included 15 symphonies. Out of these 15 symphonies 5 were given their concert premieres. In all,

37 works were played for the first time anywhere; 79 of the 149 works, or 53 percent, were written by 48 American composers, of whom 8 are American by naturalization.

This list of 149 does not include any of the orchestra's standard repertoire played before 1941, although, of course, a large number of the works comprising this repertoire were also played during the above-mentioned period. It included symphonies by Johann Christian and Karl Philipp Emanuel Bach; Haydn; Mozart; Beethoven, 7 symphonies (including 3 performances of the Ninth with chorus); Schubert, 5 symphonies; Schumann, 2; Mendelssohn, 2; Tschaikovsky, 4; Sibelius, 2; Brahms, 4; Liszt (Faust Symphony with chorus); Scriabin, Third Symphony (Le Poeme Divin); César Franck; Glazounov; Saint-Saëns; Chausson; Dvorak; and others, as well as works by Richard Strauss (Heidenleben, etc.), Wagner, Moussorgsky, Ravel, Debussy—in short, the standard repertoire from Bach to Stravinsky.

The combined works, old and new, as played under the brilliant leadership of Hans Kindler and our guest conductors resulted in a series of programs and performances of which the association is justly proud.

The list of 149 premieres as analyzed above is, we think, unusual enough to be of interest to the music public in general.

LIST OF WORKS PLAYED FOR THE FIRST TIME IN WASHINGTON, D. C., BETWEEN 1941 AND APRIL 1947 BY THE NATIONAL SYMPHONY ORCHESTRA, HANS KINDLER, CONDUCTOR

Antheil, George: Symphony No. 4.[1]
Antheil, George: Decatur in Algiers.
Antheil, George: Scherzo, The Golden Spike.[1]
Bales, Richard: Music for Strings.[1]
Barber, Samuel: Symphony No. 1 (new version).
Barber, Samuel: Concerto for violin and orchestra.
Barber, Samuel: Commando March.
Bartok, Bela: Concerto for violin and orchestra.
Bartok, Bela: Portrait, for violin and orchestra.[1]
Benjamin, Arthur: Cotillon Suite.
Benjamin, Arthur: Overture, Italian Comedy.
Bennett, Robert Russell: Overture to an Imaginary Drama.
Bernstein, Leonard: Fancy Free (ballet).
Bergsma, William: Music on a Quiet Theme.[1]
Bornschein, Franz: Ode to the Brave.[1]
Bornschein, Franz: Moon Over Taos.
Bortkiewicz, Sergei: Concerto for piano and orchestra.
Britten, Benjamin: Four Sea Interludes.
Bruckner, Anton: Symphony No. 4.
Busoni, Ferruccio: Concerto for violin and orchestra.
Busoni, Ferruccio: Concerto for piano and orchestra.
Calker, Darrell: Penguin Island.[1]
Canteloube, Joseph: Suite of Songs From the Auvergne.
Carpenter, John A.: Dance Suite.[1]
Castro, Juan (Argentine): Arabal (Sinfonia Argentina).
Chavez, Carlos (Mexico): Sinfonia de Baile.
Clements, Otis: Prelude and March.[1]
Cole, Ulric: Divertimento.
Copland, Aaron: A Lincoln Portrait.
Copland, Aaron: Billy the Kid.
Copland, Aaron: Fanfare for the Common Man.
Copland, Aaron: Outdoor Overture.
Copland, Aaron, Rodeo.
Cornelissen, Arnold: Symphony No. 1.[1]
Cornelissen, Arnold: Lilac Bush in Bloom.[1]
Cowell, Henry: Ancient Desert Drone.
Creston, Paul: Chant, 1942.[1]
Creston, Paul: Frontiers.
Crist, Bainbridge: American Epic: 1620.[1]
Crist, Bainbridge: Souvenir de Ballet.

[1] First concert performance anywhere.

Delamarter, Eric: They, Too, Went t'Town (overture).
Delius, Frederic: Concerto for piano and orchestra.
Delius, Frederic: La Calinda (from Koanga).
DeSabata, Victor: Juventus.
Eppert, Carl: Traffic.
Fernandez, Oscar (Brazil): Batuque.
Fuleihan, Anis: Comedy Overture.[1]
Fuleihan, Anis: Etude for winds.
Gilbert, Henry: Overture on Negro Themes.
Gilbert, Henry: Riders to the Sea.
Gnattali, Radame: Concerto for piano and orchestra.[1]
Gould, Morton: American Salute.
Gould, Morton: Concerto for piano and orchestra.
Gould, Morton: Cowboy Rhapsody.
Gould, Morton: Sinfonietta.
Grainger, Percy: Suite in a Nutshell.
Grainger, Percy: Danish Folk Song Suite.
Grainger, Percy: Youthful Suite.
Guarnieri, Camargo (Brazil): Abertura Concertante.
Harris, Roy: Acceleration.[1]
Hart, Weldon: Darling Cory.
Hindemith, Paul, Cupid and Psyche.
Hindemith, Paul: Mathis der Maler.
Holst, Gustav: Suite in E flat Major.
Holst, Gustav: The Planets.
Howe, Mary: Paean.[1]
Howe, Mary: American Piece.
Ibert, Jacques: Divertissement.
d'Indy, Vincent: Symphony on a French Mountain Air.
Jacobi, Frederic: Four Dances.
Jones, Charles: Overture for orchestra.[1]
Kabalevsky, Dmitri: Symphony No. 2.
Kabalevsky, Dmitri: Overture, Colas Breugnon.
Khachaturyan, Aram: Dances from Gayaneh.
Khachaturyan, Aram: Concerto for piano and orchestra.
Khrennikov, Tikhon: Symphony No. 1.
Kindler, Hans: The Seven Provinces.[1]
Kindler, Hans: Scherzo, Hop-Frog.[1]
Kilpatrick, Jack: Three Ozark Dances.
Lee, Dai-Keong: Hawaiian Festival Overture.[1]
Lee, Dai-Keong: Prelude and Hula.
Leng, Alfonso (Chile): Canto de Invierno.
Mahler, Gustav: Das Lied von der Erde.
Mahler, Gustav: Symphony No. 4.
Mahler, Gustav: Lieder Eines Fahrenden Gesellen.
Martinu, Bohuslav: Thunderbolt.[1]
McDonald, Harl: Bataan.[1]
McKay, G. F.: Symphonie Miniature.
Mennin, Peter: Folk Overture.[1]
Menotti, Gian Carlo: The Old Maid and the Thief (opera).
Menotti, Gian Carlo: Concerto for piano and orchestra.
Milhaud, Darius: Concerto for two pianos and orchestra.
Milhaud, Darius: Quatre Chansons de Ronsard.
Milhaud, Darius: Suite Provencale.
Olmstead: Suite for voice and orchestra.
Pescara, Aurelio: Tibet.
Piston, Walter: Symphony No. 2.[1]
Piston, Walter, The Incredible Flutist.
Ponce, Manuel (Mexico): Chapultepec; Concierto del Sur, for guitar and orchestra.
Prokofieff, Serge: Lieutenant Kije.
Prokofieff, Serge: Concerto No. 2 for violin and orchestra.
Prokofieff, Serge: Concerto No. 3 for piano and orchestra.
Prokofieff, Serge: Gala Performance (ballet).
Prokofieff, Serge: Peter and the Wolf.
Read, Gardner: Prelude and Toccata.
Read, Gardner: Night Flight.
Riegger, Wallingford: Canon and Fugue.
Riegger, Wallingford: Passacaglia and Fugue.[1]
Riegger, Wallingford: Funeral March.[1]
Rieti, Vittorio: Night Shadow (ballet).

[1] First concert performance anywhere.

Rieti, Vittorio: Waltz Academy (ballet).
Schuman, William: News Reel.
Schuman, William: Prayer, 1943.
Schuman, William: Side Show.
Shapleigh, Bertram: Mirage.[1]
Shostakovich, Dmitri: Symphony No. 7.
Shostakovich, Dmitri: Symphony No. 9.
Shostakovich, Dmitri: Concerto for piano and orchestra.
Shostakovich, Dmitri: Song of the United Nations.[1]
Shure, R. Deane: The Flax Spinner.[1]
Stravinsky, Igor: Four Norwegian Moods.
Stravinsky, Igor: Comedia Balletica (ballet).
Stravinsky, Igor: Danses Concertantes (ballet).
Stravinsky, Igor: Jeu de Cartes.
Tansman, Alexandre: Polish Rhapsodie.
Tansman, Alexandre: Symphony No. 5.[1]
Tavarez, Hekel (Brazil): Concerto in Brazilian Forms for piano and orchestra.
Tavarez, Hekel (Brazil): Danza de Caboclo.
Taylor, Deems: Marco Takes a Walk.
Tschaikovsky, Peter: Overture, The Voyvode.
Van Vactor, David: Overture to a Comedy No. 2.
Villa Lobos, Heitor (Brazil): Bachiana Brasiliera Nos. 2 and 5.
Villa Lobos, Heitor (Brazil): Impressoes Seresteiras.
Vasquez, José (Mexico): Acuarelas de Viaje
Wagenaar, Bernard: Feuilleton.[1]
Wagenaar, Bernard: Song of Mourning.[1]
Wagner, Joseph: Festival Processions.
Walton, William: Concerto for violin and orchestra.
Ward, Robert: Symphony No. 1.
Warren, Elinor: King Arthur's Farewell.
Weinberger, Jaromir: Czech Rhapsody.[1]
Wilkes, Robert W.: Tolentine Overture.
Wilkes, Robert W.: Twilight Dreams.[1]
Williams, Vaughan: Three English Folk Songs.
Wiren, Dag: Serenade for string orchestra.[1]
Wiren, Dag: Overture Joyeuse.
Wiren, Dag: Scherzo.
Zimbalist, Efrem: American Rhapsody.

Soil Conservation

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 10, 1947

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Florida Times-Union of May 27, 1947:

ECONOMY, YES, BUT NOT FOOLISH PENNY PINCHING

Taxpaying citizens of the United States are insistent in their demands that costs of government be reduced, that services be improved, and that the tendency toward an aristocracy in the Government service—government at all levels—be checked. They want to see cuts made in the proposed Federal budget, now before Congress and calling for more than $37,000,000,000.

These citizens are not so foolish, however, as to think that economy-minded Members of Congress can pick up the budget of a department of their Government in Washington and arbitrarily chop off any fixed percentage with safety. If there be any who think that can be done without danger to the Nation's future, they should study the Department of Agriculture's budget, which the

Appropriations Committee is now threatening to cut by one-third.

For included in the cut is the fund set up for soil conservation. This fund would be reduced by almost one-half—from $300,000,000 to $165,000,000. Yet the inroads being made upon the Nation's soils have reached alarming proportions—alarming because of their scope, and because there can be no American Nation when there are no soils upon which to raise food crops for humans and feed crops for the animals, and fowl upon which the people depend for life.

Soil conservation is fundamentally important to America. The health, happiness, and future welfare of the people depend on the curtailment of the ravages of erosion much more than any other agricultural problem that is known today. Furthermore, soil-conservation farming is responsible for high yields and quality of products more than any other single benefit. It is, therefore, economically profitable to hasten the application of conservation practices on the farms of the country. Contrariwise, it is economically unsound, even foolhardy, to take any step that retards conservation practices, or, better, that tends to hold such practices on an unprogressive basis.

Infinitely better would it be for Congress to eliminate some of its subsidies, or make its cuts somewhere else in the Federal budget in order to save money, than to reduce the funds for soil conservation. If anything is to be done about that program, it should be given increased funds, and steps taken to get the maximum in results for the expenditures.

No Time To Spare

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Item of June 7, 1947:

NO TIME TO SPARE

Russia's bold political coup in Hungary has been followed by reports that steps will now be taken to form a Balkan federation of Soviet-dominated countries in eastern Europe. Membership might include Hungary, Bulgaria, Rumania, and Yugoslavia, and perhaps Poland. That would be a formidable line-up, and the possibility of its extension was grimly underscored by the arrest of a Bulgarian anti-Communist, Nikola Petkov, on charges similar to those used in the Hungarian coup.

What could be a more immediate and impelling argument for a United States of Europe? In its absence, a Balkan Union might well be expanded to include nations where the Communists, while not yet preponderant, have an excellent chance of becoming so. Economic necessity dictates a European federation. Whether it is to be a democratic union or a totalitarian chain is the question.

Yet Secretary of State Marshall, while pledging American encouragement, disavows direct participation. "It would be neither fitting nor efficacious for this Government to undertake to draw up unilaterally a program designed to place Europe on its feet economically," he now says. "This is the business of Europeans. The initiative, I think, must come from Europe."

From where, we would ask, did the initiative for the Hungarian coup come? Or the Bulgarian purge that is now in progress? From whom would the initiative for a Balkan Federation come? The Europeans? Already Metyas Rakosy, Hungary's Communist dictator under the Soviet aegis, has boasted that he outwitted the United States by the swiftness of his seizure of power.

Secretary Marshall and all other Americans know the answer to that. Is it to be a Union of Sovietized European Republics or a United States of Europe? It is in large measure ours to decide, not by "encouragement," but by outright initiative.

The Good Road

EXTENSION OF REMARKS
OF
HON. JAMES W. WADSWORTH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. WADSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following world broadcast by Dr. Frank N. D. Buchman from Caux, Switzerland, June 4, 1947, introduced by Rear Adm. Richard E. Byrd:

REAR ADM. RICHARD E. BYRD. I consider it a great privilege to be given the opportunity to precede Dr. Frank Buchman on this broadcast. As I see it, Frank Buchman and his many associates are inspired. If you could know exactly what this group is doing, you would see that their lives are completely dedicated to the greatest of all causes—the achievement of peace, harmony and good will in the world. These men and women, their whole families, give themselves unselfishly. They have gone out into the world and have given up their homes and security. They work without pay. Their attitude is akin to that of the disciples of old.

We know that many minorities have organized themselves into strong units for purely selfish purposes, but this group is consecrated to the cause of good. They are implementing in a practical way what Christ taught 2,000 years ago; and make no mistake about it, many nations of the world are beginning to feel its influence.

We know that there is evil in the universe and due to that evil there is much bad will in the world. But it is my conviction that there is far more good will than there is bad will. But the world has suffered immeasurably and is still suffering from selfishness, and that is because the selfish groups have developed a genius for organizing and mobilizing whereas those of good will have seldom demonstrated a talent for organizing. Consequently only too often the bad will dominates the affairs of men with devastating results in the form of cruelty, suffering, despair, starvation, chaos and war, all of which lend more strength and power to the forces of evil.

On the other hand, the MRA not only is mobilizing good will the world over, but is changing men of bad will to the end that the good will eventually predominates, so that the human race will no longer resort to war but will choose rather to settle questions across the godly table of arbitration. We know that this is a materialistic age where man's genius has been largely expended on the development of material science to the neglect of the human spirit and the science of human relationships. The MRA has the answer. How else can man fit himself into this Atomic Age than by the creation of a universal good will that will dominate the world so that it will dissolve man's dangerously selfish desires and ambitions?

People the world over are bewildered and confused. They do not know just what to do about it. Frank Buchman points to the answer. His group is fighting throughout the world to accomplish what you people of good will who are listening to me today are hoping can somehow be accomplished. I want to say with all the emphasis at my command that this movement gives you the chance you have been looking for to go into action to save civilization.

And now I give you Dr. Frank Buchman, who started this great movement more than a quarter of a century ago.

THE GOOD ROAD

(By Dr. Frank N. D. Buchman)

People everywhere are trying to find the good road that will lead them to security. Awesome fear surrounds everyone. It stalks the world. Conference follows conference but peace comes no nearer. Menacing economic problems face both the Old World and the New. The young United Nations sags under the weight of its problems and the lack of the right spirit in which to meet them. People lose faith in their leaders, and statesmen—earnest, able men—toil but see no harvest.

Some people are thinking in terms of another war. I don't believe they are sane if they are thinking of such an answer. But there are men who are willing to submit to all its horrors if that were a way out.

Meanwhile the forces of subversion prey like vultures over man's disillusionment. Even the elements seem to be working with them, giving a red answer to the balance sheet.

On every hand we see disunity. Divisions are the mark of our time. Men oppose other men because they are of another nation, another race, another class, another party, or simply because they hold another point of view.

Everyone longs for peace and order, yet battling for divisive points of view only increases the chaos. What is our greatest need?

Someone in Europe said recently, "We are hungry, hungry not only for food but for ideas—ideas on which to reshape our individual and national life."

The truth is that our problem goes deeper than economics or politics. It is ideological. Divisive ideologies strive for the mastery of men's minds. Thousands follow their banners only because they see no convincing alternative. Not all governments have grasped the paramount importance of ideological preparedness. A nation which is materially strong may be ideologically divided against itself, and therefore in danger. Leaders who ignore this fact will sell us short.

There is a road, a good road among many false ways, a good road mankind must find and follow. It is a God-constructed road. It is the great high road of God-inspired democracy. It is valid for every nation. It is essential for world peace.

Men today are being stretched consciously or unconsciously into new molds of thinking. People everywhere ask, "Have you the answer to communism?"

It is interesting how fanciful and heroic or even pathetic some people are in trying to find the answer. Others begin to see vaguely that there must be a note of change. Everybody knows somebody, some nation which ought to be different. But most people have not come to the point where they see that they themselves need a radical change. Yet these are days of radical action. And human nature can be changed.

"I thought," said a military man recently after meeting Moral Rearmament, "I thought

that I was Major Brown. I found that I was Mr. Anyman facing Major Change."

He had found the good road, the road of a change of heart. As we travel this road miracles happen and renaissance and true security will follow in their train.

A steel worker came to our training center here at Caux. He had been a Communist for 28 years. He had trained his daughter until she became even more radical than he. Yet that daughter was changed and persuaded her father to come to Caux. Before he left us he read a poem that he had written. These are his words:

"I contemplate, and bow in awe
Before God's master plan;
I watch the miracle superb—
The change in selfish man.

"The snows on Dent-du-Midi
Are but the robes of grace;
God has a plan for every man,
And each one has a place."

This steel worker now writes, "I was a new creature in Christ and the experience at Caux sealed forever my allegiance to the Highest. This is the first time in years that I have written anything of a spiritual nature, for, for the last 28 years, my pen and any talents I possessed were given to proclaiming and proclaiming very forcibly my belief in the materialism of the Marxist theory."

People summon new hope whenever you give the voice of faith as a sure and certain answer for even the darkest days. I thank God for the mounting evidence—sometimes in the headlines, more often behind the headlines—that this is true.

I hold in my hand today a report by the noted Associated Press columnist DeWitt Mackenzie, which he calls one of the most remarkable in his experience. He tells of the striking new plans which one of China's foremost soldier-statesmen has been developing for his nation. Concerned over the tragic divisions of his country, General Ho, who as China's Chief of Staff received the surrender of 2,000,000 Japanese in China, and who now represents his country on the United Nations Military Staff Committee, went to a Moral Rearmamant conference in America.

This is the new truth he saw there. He says, "During the past 20 years of my fight against materialism in China, the method I used was force against force, and organization against organization. I have now come to the very firm conclusion that I must fight an idea with an idea."

General Ho now puts first the moral rehabilitation of China. He believes that along with economic reform must come the moral force that will give new standards to the country. In short, says the General, there is no use merely trying to reform the Communists by naked force alone. It would be best to solve the Communist problem by moral force. He stresses the importance of raising the moral standards of society in China as a whole, including Communists and Kuomintang.

To this end he has submitted to his government detailed plans for sending at once selected groups of his countrymen to Switzerland and America for training in Moral Rearmament. He specifies that these men must be unselfish by nature, and ablebodied, that they must be men of faith and that they must return to give at least 1 year's service to the development of this ideology in their country. He concludes with these memorable words, "To put the world in order, we must first put the nation in order; to put the nation in order, we must put the family in order; to put the family in order, we must cultivate our personal life: and to cultivate our personal life, we must first set our hearts right."

Here surely is statesmanlike planning, a new approach to the problems of fratricidal strife which menace so many nations today.

Here at Caux, in the heart of troubled Europe, and at Mackinac Island in America there are centers for ideological training to which the ordinary man and the statesman are coming in growing numbers, and they are finding there new hope and the way out of confusion. One of the statesmen from the Paris Peace Conference last summer said, "At Caux I found the answer to Paris."

India, a center of considerable confusion today, sent a distinguished delegation of leaders. One was the Director of Agriculture for the United Provinces. He said, "Two main ideologies are likely to capture the imagination of the people of India. One is the ideology of Karl Marx. The other is the ideology advocated by Moral Rearmament." Indian newspapers got the point. They said it in headlines—"Caux, the answer to communism."

The son of an Indian peer came to Caux with his parents. He was drifting aimlessly. He was gripped by the new life he saw for himself and his country. He found a love for the millions of India and is a spokesman in the making for that nation.

Coal is one of the chief problems of the economic world. Every major coal field in Britain was represented at Caux. In the most critical year for the British mines these leaders went back to settle disputes and raise production. There was more coal because there was a new spirit. These miners have not only increased production, they have happy homes.

A British Member of Parliament said, "A fresh wind of liberty and good will blows from Caux over the ruined nations." Today he is heading a committee of Parliamentarians who are inviting government leaders from other countries to join them here to plan the moral and spiritual rebirth of nations which will make peace secure. Labor leads in many lands. Labor led by God can unite the world.

Army leaders, too, see a new role for themselves and their forces, to give quickly to their nations the added strength of an inspired ideology.

And thank God there is now at work a world force of people, ideologically equipped, who know how a new moral climate can be produced because of what has happened in their own lives. Workers and soldiers, housewives, and statesmen, farmers and industrialists, young and old, they have no new paper plans to offer. They have experience which cannot be denied. They know that a change of heart is possible. They know that definite, decisive guidance from God is available, today as always.

Two weeks ago I was present in Rome at the ceremonies which proclaimed as saint a statesman of his day, Nikolaus von der Flue, who lived in Switzerland in the fifteenth century. Nikolaus had this gift of Divine direction. As he exercised it, he became the saviour of his country. He was a farmer who tilled his land well, a soldier, a magistrate. At 50, oppressed by the problems of a warring world, he gave up much to follow radically the guidance of God. Soon his inspired good sense, knowledge of men and singleness of heart commanded the respect of his contemporaries, not only in Switzerland but in all Europe. He became the most sought-after arbiter in affairs of state. When the bitter quarrels of the Cantons brought his country to the verge of civil war, it was his God-given answer which set Switzerland on the good road that gave her unity. It is most timely that this statesman of 500 years ago, who listened for God's word and fearlessly passed it on to his generation, should today receive this supreme recognition. Today he is a saint for our times, a model for the United Nations.

A diplomat led by God—a nation united. Is that the answer?

An Arab Foreign Minister said, "The world is at the crossroads. One road leads to revolution and chaos. The other to reaction and despair. Moral Rearmament is the third way—the way of an inspired democracy that will unite the world."

Democracy's inspired ideology is a life to be lived, a road to be followed. A whole new order of statemanship is required. Cabinet ministers to rule well must change people. Ordinarily cabinets do not have that art.

As men change, nations find a new level of living that makes problems melt.

As men listen to God and obey His orders, nations find a pattern that makes plain God's will for government.

Here is the good road. Anyone can travel it. Everyone must travel it—ordinary men and the statesman alike.

As we step out upon it, God becomes real. Fear vanishes and life opens out. There is no need for detours: the good road lies straight ahead.

"When ye turn to the right hand and when ye turn to the left, thine ears shall hear a word behind thee saying, 'This is the way, walk ye in it.'"

"Nations shall run unto thee because of the Lord thy God. And great shall be the peace of thy children."

Soil-Conservation Program

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 10, 1947

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the Lions Club, of Albia, Iowa, urging that appropriations be continued to the Department of Agriculture and other Government units so that the soil-conservation program may be continued:

Whereas the United States Congress is now in session and is considering appropriations for the benefit of the Department of Agriculture which affect the soil-conservation program as now being conducted in Monroe County, Iowa; and

Whereas the conservation program now in existence and planned is of great value to our community and its land and farming population, and it being the desire of the Albia Lions Club that such practices be continued, and for the purpose of expressing such belief: Now therefore be it

Resolved by the Albia Lions Club of Albia, Iowa, That it is the belief of said club that the soil-conservation practices now being conducted in Monroe County, Iowa, and the State of Iowa, should be continued, and we therefore urge our representatives in Congress to continue the appropriations to the Department of Agriculture and other Government units so that such programs may continue; be it further

Resolved, That a copy of these resolutions be sent to the Representatives in Congress from our district and to the Senators from the State of Iowa.

Passed and adopted this 4th day of June 1947,

C. J. MURRAY,
President.

Attest:

L. L. SMITH,
Secretary.

Must We Have Another Depression?

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 9, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Leon H. Keyserling from the New York Times magazine of June 8, 1947:

MUST WE HAVE ANOTHER DEPRESSION?

(By Leon H. Keyserling)

WASHINGTON.—If a group of economists and other observers of current affairs gathered to appraise America's economic future, opinions would be about as follows: Some of the group would regard a recession as inevitable in less than a year; others would believe that it still might be averted by prompt action. (The average definition of a recession would be a drop in production ranging from 5 to 10 percent and unemployment running up toward five to six million.)

A majority would agree that, if a recession should come, it would be shorter and milder than the one which started in the second year after World War I and that there would then be a few years of high prosperity. Most significantly, a large majority would think this: Unless substantial changes in popular attitudes and economic practices occur, the new prosperity era will be followed within 3 to 10 years by a depression which might be as much larger than the one commencing in 1929 as the second World War was larger than the first.

This concern about a major depression in the fifties does not spring from unwarranted pessimism or from a superstitious belief that history must repeat itself. It has a more solid basis. While all economists do not agree as to all the causes of the last depression, a listing of the causal factors generally agreed upon indicates that many of these factors are again present now or will be present within a few years.

Some of these are the tendency of our productive capacity to outrun our mass buying power, the chronic weakness of such bellwether industries as residential construction, the seeming reluctance of capital investment to expand as dynamically as it once did, the uncertain elements in foreign trade, the enormous disparities in the price-and-wage structure, and huge differentials in the enjoyment of national income whether measured by regions or by individuals. Above all, the country as a whole has not yet adopted and put into action a fully rounded antidepression program.

The majority opinion that this depression threat is several years off rather than imminent rests largely upon the backlog of demand resulting from the war. This pent-up demand is regarded as sufficiently powerful to forestall a depression for some years. But it may not be powerful enough to avert a recession in the shorter run, for the war boom and the postwar restocking boom have resulted in many maladjustments, the most serious being price inflation. Yet even the recession which may be just around the corner can be avoided or reduced to minimum proportions if remedial action is taken in time.

A short-range program to avert this recession was contained in the Economic Report of the President on January 8. This program focused upon maintaining high buying power to match high production. It proposed voluntary price reductions, moderate wage adjustments, maintenance of rent control, expansion of social security and minimum-wage legislation, a Government-aided housing program, a surplus in Government revenues over expenditures, and improved management-labor relations. Suggestions made recently by six distinguished economists in the New York Times magazine and by other competent authorities have been in substantial measure similar.

Whether or not these immediate antirecession efforts receive the cooperation necessary for their complete success, the current situation provides us with a laboratory in which we may learn a lot about preventing the depression which looms a few years off.

America has the power and the time to prevent another 1929 or worse. This preventive effort, however, cannot commence with prescriptions. It must commence with wider popular agreements on general principles, for only on the firm foundation of common consents can we proceed harmoniously and swiftly to the development of specific measures. What broad principles, then, can we now evolve from experience? In what direction should this experience propel us to act?

LESSONS OF 1929

Future historians alone will be able to measure the full costs of the depression which started in 1929. Even they may fail to allow adequately for the happier course world events might have taken if America had remained prosperous throughout the third decade of this century.

But we can make some evaluation even now. Over the 10-year period beginning with 1930 our national income fell far short of what it would have been if prosperity had been maintained; the amount exceeded $300,000,000,000 (adjusted)—about the dollar cost to us of the recent war. This takes no account of the lingering effects of human deprivation and social discontent.

Another major depression could mean a drop of nearly $100,000,000,000 in our annual national income, and unemployment which could easily exceed twenty million. And just as the last depression here impeded world revival and thus paved the way for warmakers, another American economic collapse would undermine world reconstruction and thus blast away the foundations of enduring peace.

But while the record of the last depression alerts us to the danger, it does not provide us with a complete remedy. The most significant lesson we can learn from the past is that we have not yet learned enough. Without underestimating the far-reaching improvements that were initiated during the thirties, we must recognize that the recovery, strictly speaking, was not much greater than that which had followed previous depressions, and by the middle of 1937 we were again on the economic downgrade for a spell.

True, there are some who maintain that the imperfections in the recovery program were mainly quantitative. They say, for example, that the public-works program did not succeed fully because it was too small and too slow and because it was tapered off too sharply after 1936. But it seems far more likely that the insufficiencies in our former approaches have been qualitative as well as quantitative.

The first of these insufficiencies arose from circumstances beyond the control of those making the effort. They were empowered to act only after the depression was upon us in full force. They checked the economic fire, but they did not put it out entirely. Nor did they develop an apparatus which can be used without modification in the future. It is hard to build an adequate fire-prevention system in the middle of a big fire

Another insufficiency in our previous efforts cannot be extenuated so easily. Too much trust was put in the idea that direct Government programs can be used to enlarge employment regardless of their effect upon the whole business system. To illustrate: The employment of 3,000,000 people on public works does not necessarily add three million to the net number of employed. It may add four million if its indirect consequence is to stimulate private employment by one million; or it may add only two million if its indirect consequence is to retard private employment by one million. When such hypodermics are given, the most important thing to watch is their effect upon the whole economy—in the long as well as short run.

The most serious insufficiency in our previous antidepression efforts, however, was that they did not place enough emphasis upon restoring balance within the enterprise system itself. It is easy to illustrate this in terms of the current situation. Of present national income running at an annual rate of about $180,000,000,000, about $117,000,000,000 is in wages and salaries, about $18,000,000,000 in farm income, and about $15,000,000,000 in corporate profits. (The remainder is in entrepreneurial income—interest, rents, etc.) And it is decisions within the enterprise system which mainly determine wages, salaries, prices, and profits.

As the Nation's economic budget shows, in peacetime three-quarters or more of national receipts and expenditures are attributable to consumer business and international transactions, while only about one-quarter or less are attributable to Federal, State, and local governments.

Manifestly, the policies pursued within the enterprise system have more effect upon the Nation's economic health than any programs the Government may undertake, unless the Government should undertake to run the whole economy.

Responsible, vigorous enterprise and responsible, vigorous government are both essential to the maintenance of prosperity within the framework of our democratic freedoms, and neither can do its full share unless there is a precise delineation of the role of each and of the working relationship between the two.

THE ROLE OF ENTERPRISE

We may begin this delineation by stating briefly, at the risk of some oversimplification, the core requirement for maintaining maximum employment, production, and prosperity. As our already fabulous capacity to produce increases, the flow of income to producers must be kept in equilibrium with the flow of income to consumers, and while certain Government devices may help, the major stabilizing or unstabilizing factors are the wage-price-profit relationships of the enterprise system.

Concerning these relationships, there will never be complete agreement between management and labor. Some disagreements will continue to be settled by the relative strength of the parties. But mere tests of strength will no more add up to economic equilibrium than the impersonal competitive forces conjured up by Adam Smith. Both industrial leadership and labor leadership will be tested by their capacity for foresight, forbearance, and appreciation of the national interest, which is also their own.

Their common aim should be to answer this question: What kind of profits, prices, and wages will keep supply and demand in balance at the highest levels which our resources and individual freedoms permit? When management and labor, in conjunction, get a better answer to this question than they have at present they will both be better off than ever before. And so shall we all.

In this context, the recent advice of President Truman that labor remain moderate in its wage demands, and that businessmen undertake voluntarily to reduce prices where profit margins permit, becomes fully understandable. Yet, while many people have agreed with the President's advice on prices,

some have said that moral suasion was sure to fail. But would they regard compulsory regulation of prices and wages in peacetime as consistent with the blend of private and public action best suited to the American tradition and needs?

President Truman's advice on prices has been in accord with the evolution of American experience. But while this experience shows the need for a wise admixture of private and public action, it has not yet forged all of the instrumentalities required for the blend. Only strong action, comprehending the needs of the whole economy and sensitively adjusted to these needs, can stabilize a system as complex and interdependent as ours. The economic system, like nature, abhors a vacuum; and since the price-wage-profit relationship is not to be fixed by Government fiat, this question thrusts itself inescapably forward: What other devices within the enterprise system itself will accomplish workable results? This requires a fresh look at the whole problem of business size and practices.

While we should work steadfastly to keep the doors of opportunity open to small, individualistic enterprise and to prosecute monopolistic misdoing, we cannot re-create the pre-Civil War pattern or achieve economic stability by applying standards of size alone. Today some industries which are organized on a large, integrated basis are administering their prices at lower levels than the traffic will bear.

In contrast, the home-building function, which can hardly be called an industry at all—it is mostly in the hands of very small operators—has been notoriously inefficient, highly resistant to technological change, and is presently pricing its product out of the market. And one reason for the difficulty of the farm price situation is the lack of organization in farming which makes a wise price policy hard to adopt even were it defined.

This suggests that the older and simpler concept of trust busting needs to be modernized by attention to problems such as these: where certain industries have already acquired a degree of concentration which makes monopolistic abuse possible, how can this concentrated power be used to stabilize rather than to exploit the economy? In those industries where competition still exists or is attainable, how can this competition serve as a stimulus to efficiency without preventing the coordination of effort which healthful price policies may require?

Where prices of a particular item should be lowered, and no one businessman can afford to take the first step alone, how can many businessmen similarly situated take the step together? Where the retailer and the wholesaler must synchronize their price policies, how can this be accomplished? Where industrial prices, farm prices and wages are interrelated, how can the businessman, the farmer and the laborer work things out instead of calling each other names?

While both the NRA and the OPA had their defects, and while there is scant desire to resuscitate either, the fact that the country turned to the first to fight deflation and to the second to fight inflation indicates that some coordination becomes essential when economic stability is seriously endangered. The Government should not discourage such stabilizing efforts by enterprise as show fair promise of an adequate and preferable alternative to intensive Government control and regulation. And avoiding the evils of the corporative state does not mean industrial self-regulation free from Government vigilance in the public interest.

Similar considerations are applicable to labor organizations. The true purpose of large-scale labor organization is not to enable ever more powerful labor leaders to fight on equal terms with ever more powerful employers. Large-scale labor organization, at its best, can help to reduce the glaring disparities in the wage structure and standards of living, can aid in the development of a self-disciplined labor movement, can put a powerful shoulder to the wheel of social progress, and can join with industry and Government in the formulation and application of stabilization policies on a scale large enough to be significant.

Sound competition, directed toward increased efficiency, should be encouraged. But there is also need to evolve instrumentalities of expression and action through which industry and labor can work alone and with Government to master rather than succumb to the gigantic problems of twentieth century industrialism. Otherwise economic collapse could lead to supergovernment and not to the preservation of enterprise. The recognized primacy of government should be used not solely to police and prohibit bad practices but also to encourage good practices. Both price making and wage negotiation will require flexible and realistic experimentation with new modes adjusted to new needs.

THE ROLE OF GOVERNMENT

While determination of wage-price-profit relationships rests mainly with enterprise, the Government can help in developing some useful economic guides. It can provide Nation-wide facts and analyses beyond the capacity of individual employers, trade associations, workers, or labor unions to ferret out by themselves. The Government may set up some forums for study and exchange of information. It may cooperatively promote understanding and agreement about courses of safety and danger.

All parties concerned are only in the initial stages of this economic fact-finding and analysis. Frequently conclusions are drawn that profits are too high because the return on net worth is greater than in 1929, or that wages are too low because they have increased percentage-wise less than profits since early 1946, or that farm prices are in greatest need of reduction because they have gone up more than industrial prices. These conclusions may be true or false in whole or in part. But at best such facile comparisons with the past are inadequate.

The patterns of the past may have been undesirable; presumably they could not have been entirely desirable in view of the instabilities which ensued.

Moreover, a healthy level of profits or wages cannot be measured solely by national totals. It depends also and even more upon their distribution.

The moral is this: While currently available economic guides have considerable utility when not misused, there is imperative need to refine and classify these guides into more precise categories for practical application.

This entails a better portrayal of production goals and national requirements. In any given industry, it is difficult to appraise appropriate profits until we know more about existing plant capacity, measured against the capacity required for our present and future needs. While the statement is made that farm prices are too high, this needs to be tested by a more discerning look at farm standards of living and a more comprehensive analysis of the farm production necessary for world trade, our own industrial demands at maximum employment, and decent diets for every American family. And shortages of some basic raw materials require immediate attention.

Since the end of the war, there has been an understandable slackening of interest in this whole matter of productive capacity, national requirements and goals. There is need to speed up this vital line of inquiry, not to restore the forced drive of a war economy, but to marshal every acceptable incentive toward an economy of maximum production for peacetime plenty.

These improved economic guides will not only help enterprise; they will also enrich the perspective of the Government in the performance of its own inescapable functions. These functions include a tax program which, until defense expenditures can be reduced greatly, will draw in more than $30,000,000,000 a year in revenue; management of a national debt approximating a quarter of a trillion dollars; manifold money and banking functions; social security, minimum wage, and other protective programs; the established regulatory activities; and necessary public spending for defense and welfare at levels far above the prewar rate.

The range and flexibility of these public undertakings make them enormously powerful weapons for combating deflationary forces. They can furnish production incentives, affect the size of the labor force and redress imbalances in the economy by withdrawing or adding purchasing power at strategic spots. But the specific adjustment of all these governmental programs to a consistent national economic policy and objective should not be ignored until depression appears, and then hastily attempted. As we learned from the last depression, such a course leads to inconsistency and lost motion. It will be far more profitable and less costly if these programs are constantly and temperately coordinated with all other efforts—especially those of enterprise—to maintain continuous prosperity. It is easier to hold fast to prosperity than to recapture it. An ounce of prevention is worth a pound of cure.

This coordination of all governmental programs does not imply a planned economy or more Government intervention. The people who have complained most frequently about lack of consistency in Government policy have been conservative businessmen and taxpayers. Harmonizing various undertakings pares down rather than increases the total size of the Government structure. It weeds out duplications. It puts the spotlight on what is vital and what is superficial.

THE ROLE OF US ALL

Transcending all these specifics, the campaign for continuous prosperity must be affirmative and aggressive. Defense will not win the war against unemployment. Economic Maginot Line strategy would have ruinous consequences. The people of America need to be electrified by our limitless possibilities, not frightened into action by prophets of disaster.

Our national income (1944 dollars) now is about 64 percent greater than it was in the last year before the war; almost 3 times what it was in the depression year 1932; 72 percent higher than it was in the peak prosperity year 1929. During the war we made enormous strides in producing faster and more cheaply. If we apply these techniques, our national income can mount steadily in the years ahead. Nothing but folly can prevent us from attaining extraordinary and universally enjoyed standards of living and opportunities for self-development. There can be so much for all that the removal of unmerited poverty will remove the threat to merited wealth. This is what Eric Johnston calls "America Unlimited."

Prosperity is ours for the doing. In summary of the foregoing discussion, these five lines of activity, relevant to the current anti-recession effort but aimed mainly against the terrible threat of a major depression some time in the fifties, should be carried forward with relentless vigor and determination:

1. We need to set goals reflecting America's maximum productive capacity, based upon our resources and skills. We need to subdivide these goals into at least a few major classifications, so that production may be

related to the optimum satisfaction of human needs, and so that incentives may be applied where shortcomings become apparent. These goals will provide an affirmative impulse to national effort and a frame of reference for testing the validity of specific economic policies. This is a task primarily for engineers, economists, and students of human needs.

2. We need to gain and apply more knowledge bearing upon the kind of income flow to producers and consumers that will stimulate and sustain this maximum production and the maximum employment that goes with it. This involves the wage-price-profit policies of enterprise. It also involves the fiscal and regulatory policies of government, for every important Government program (e. g., taxation, social security, rate making, tariffs, aid for education, agriculture, health, or housing) affects the flow of income to and from producers and consumers and therefore balances or unbalances the economy depending upon the wisdom of the application. This fitting of separate actions—both private and public—into the whole picture of economic equilibrium might be called the problem of maintaining maximum purchasing power. It requires still further advances in the science or art of economics, and greater acceptance of this tool by businessmen, farmers, workers, and public officials.

3. We need to define more clearly the respective roles of enterprise and government in maintaining maximum production, employment, and purchasing power. In order that enterprise may exert a major stabilizing role, we need to harmonize our thinking about the size and practices of business and labor organizations with the size and complexity of the modern economy. In order that government may reinforce the stabilizing efforts of enterprise, we need ever-increasing cooperation between the two and we need to weld all national economic policies into a consistent program. This calls for public statesmanship and industrial statesmanship.

4. We need to cultivate an ever-growing understanding and cooperation between management and labor because their actions so largely affect the whole economy. This depends upon the leaders of both. It depends upon specific machinery for cooperation, which the Government can encourage, as well as upon public good will.

5. We need, above all, to achieve the popular agreements and consents without which there can be no effective action in a democracy. This is a challenge to all who help to mold public opinion or disseminate information through the written or spoken word. It calls for practical application of the highest gifts of political science.

These five main lines of concentration are virtually a summary of the purposes of the Employment Act of 1946. This act, approved by a majority of both parties, calls for an annual inventory of the nation's economic condition and an annual program to achieve the declared policy of continuous maximum employment, production and purchasing power. Under the act, the Joint Congressional Committee on the Economic Report and the Council of Economic Advisers to the President have been established, and those charged with responsibility are enjoined to consult with industry, agriculture, labor and consumers. This affords an unprecedented opportunity for the President, the Congress, and the people to participate in shaping the kind of future that we want.

The great philosopher of history, Toynbee, has concluded that no great nation ever succumbed to the pressure of competing ideologies or forces unless it first weakened itself by self-inflicted wounds. If we make the most of our own resources and talents, we have nothing to fear in the course of world events. We hold within our hands the capacity to retain leadership in a peaceful world environment through the strength of our matchless native endowments.

Speech of Pope Pius XII

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 10, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the text of a speech of world-wide importance made on June 2, 1947, by Pope Pius XII.

In his analysis of the conditions that exist in the world of today, of the problems, as well as the menace and danger that confronts decent people throughout the world, and his call for unity, and as a result thereof, unified action on the part of all religions and all decent-minded persons, the message of Pope Pius XII is worthy of deep consideration, to be followed by definite, constructive, unified action in preserving and advancing the truths and fundamentals, spiritual and governmental, that we of all creeds in the United States as well as countless millions of persons in other countries believe in, and which are being challenged by atheistic communism.

TEXT OF POPE'S WARNING OF TYRANNY AND WAR IN SPEECH TO CARDINALS

THE YEAR 1947

Once again the recurrence of the feast of our holy predecessor and heavenly patron provides us with the occasion, venerable brethren, of dwelling for a while with you on the great questions of the tremendous happenings of the day, and on the dangers that threaten the whole world.

May the outpouring of our mind and heart, which find an echo in the thoughts and sentiments so happily expressed to us by your venerable dean, be for each of you, our intimate counselors and faithful helpers, and for ourselves, a stimulus to continue with renewed confidence, greater energy, and calm dedication that apostolic work which today more than ever weighs on all the toilers in the Lord's vineyard, all the ministers of the sanctuary.

The year 1947—what judgment shall the future ages pass on it? It has almost reached half of its course and up to now, to the time of speaking, has it brought anything else to the world except the apparently irreconcilable opposition between the mighty onrush of problems in which it is sinking and entangled, and the humiliating lack of solution for them?

The verdict of history will be in accordance with the results coming from the events and discussions of the months which still remain.

Future generations will either bless or curse it; they will bless if it is means for the great human family a starting point toward the reawakening of the sentiment of brotherhood establishing an order of law and peace worthy of men, useful and beneficial for all; they will curse it, on the other hand, if it means a gradual decline into those stagnant marshes of discord and violence from whose murky depths there can arise only sinister and harmful forebodings of new and incalculable calamities.

SECURITY

The wounds caused by the war have not yet been healed; indeed, some of them have rather been deepened and inflamed.

Was there ever before so much talk of universal security which should have been the fruit of victory? But where is it to be found? Have feelings of uncertainty and the fear of war vanished or, at any rate, have they diminished? If things are considered as they really are, it must be admitted that it is not possible, even with the best of good will, to establish immediately that security for which the human race so ardently longs.

Then, in that case, let not those postwar and peace methods be employed which have nothing to do with punishing the criminals of the war but which create bitter disillusionment, especially among those who had no responsibility for the past regimes and during which they themselves were persecuted and oppressed.

How, indeed, does one help in establishing universal security by heaping up in its very foundations mighty ruins—not only material ones but the ruins of living human beings? How can a Europe feel safe whose members are a prey to despair and to discouragement, the dark and dismal forces of disintegration which the revolutionaries of tomorrow will easily exploit, just as those of yesterday did?

We well know, indeed, the extent and gravity of the unspeakable horrors with which the defeated system covered the face of Europe; nor do we wish to lessen the enormity of its guilt. But how is it possible for the victorious nations, in their turn, to adopt or tolerate the methods of hate and violence on which that system lived and thrived, or how can they use the weapons which aroused their righteous indignation when employed in the hands of others? What sensible man would ever seek a guarantee for his own safety and security in the ruin and misery of his neighbor?

Therefore, once again we desire to exhort and warn the nations: security, as far as it may be realized here below, cannot have any other solid foundation than the physical and moral well-being of a nation, based internally on right public order and externally on normal relations with neighboring states. At present, it is still possible to renew such normal relations, even after the second World War. May the rulers of the states not let slip this opportunity; it may be—God forbid—the last opportunity.

PROSPERITY

Much has been said also about a universal prosperity, which should likewise have resulted from the victory. But where is it? There are, indeed, countries where the wheels of industry turn rapidly and work without interruption and at a maximum capacity. Production — overproduction — that is the golden key, the sesame, the secret formula that would wipe out the last traces of the evils of the war and fill up the craters it made.

But the prosperity of nations cannot be safe and secure if all do not share in it. Hence it is not unlikely that idleness and the impossibility of commerce in which some nations find themselves placed will automatically cause in the near future economic crises and unemployment even in other nations as well.

LIBERTY

Likewise, much was said of the state of liberty which was to have been another perfect fruit of victory—liberty triumphing over despotism and over violence. But this cannot flourish except where justice and law command and efficaciously secure the respect for individual and collective dignity.

Meanwhile the world is still waiting and pleading that justice and law create stable conditions for man and society. In the meantime millions of human beings continue to live under oppression and despotic rule. For them nothing is safe—neither home, nor goods, nor liberty, nor honor; thus, the last ray of happiness—the last spark of courage—dies in their hearts.

In our Christmas message of 1944, addressing a world full of enthusiasm for democracy and eager to be its champion and proponent,

we expounded the main moral requirements for a right and healthy democracy. Today not a few fear that the hope placed in that order has diminished, owing to the striking contrast between democracy in words and the concrete reality.

If at this moment we raise our voice, it is not to discourage the many men of good will who have already set to work nor to belittle what has already been attained, but it is only through a desire to contribute, as far as in us lies, to an improvement of present conditions.

It is not yet too late for the peoples of the earth to bring about in a united and loyal effort, these conditions so indispensable for security, for universal prosperity or at least for a tolerable modus vivendi, and for a helpful organization of liberty.

YOUTH

A consideration of the first importance renders necessary this common effort—the good of youth and of the family.

The church, a tender mother, is not alone in fearing for the welfare of youth. In some countries the new generations from their adolescence and even from infancy suffer from weakness, physical and spiritual anemia caused by material poverty with all its attendant miseries, from an insufficient family life or even from its complete absence, from lack of education and instruction or finally, perhaps, from long years of imprisonment or exile.

Among peoples living under better conditions, dangers of another kind often arising from an excess of wealth and pleasure menace the physical and moral health of youth. This state is still sadder. But there is something even more serious, and it makes the cure of the evil still more difficult—the widespread crisis, indefinitely prolonged, with the disorders it provokes and the uncertainty for the future which it necessarily brings, sows in the hearts of coming generations seeds of distrust in their elders, whom they hold responsible for all the evils they suffer and makes them skeptical of all the principles and values that their elders held in high esteem and passed down to them.

There is a serious danger that very many youths poisoned by these corrupting principles will end by falling into pure nihilism. Woe to the nations the day when there is extinguished in the heart of youth the sacred flame of faith, of ideals, of readiness for sacrifice, of the spirit of dedication. Even though such a state of things were to last but for a short while, who can foresee the consequences?

THE FAMILY

In a similar precarious state of incertitude which tends to continue, what can the future hold in store for the family—that natural nursery and school where the man of tomorrow grows up and is formed?

From districts that suffered most come distressing news of the miserable condition of family, youth, woman. Above all, tragic is the state of the families—if those wandering groups may still be called such—whose fidelity to God's law brought the blessing of a rich crown of children, very often after paying more than others their tribute of blood during the war. Today, they are obliged to suffer more acutely the consequences of the general lack of dwellings and provisions.

It is not God, certainly, who is failing to keep His promise, as the sneers of egoists and the pleasure-loving seem to insinuate; but the incomprehension, the harshness and ill-will of others makes the burden of life well-nigh insupportable for the heroes of conjugal duty.

It is only true heroism, sustained by the grace of God, that is capable of keeping in the hearts of young married people the desire and joy of having a large family. What a humiliation for the world to have fallen so low—into a social condition so opposed to nature.

Before God and faced with this sad truth, we call with all our strength for a speedy remedy and trust that our cry of anguish may resound in the ends of the earth and find an echo in the minds of those who are in charge of public affairs and who cannot ignore that, without a healthy and vigorous family life, a people and a nation are lost. Nothing calls more urgently for the peace of the world than the unspeakably wretched state of the family and of woman.

FEAR NOT

What is the true state of affairs? Who would dare affirm that the 2 years since the cessation of hostilities have marked notable advances in the path of restoration and social progress?

In seeing fruitless conferences succeeding one another and the series of interrupted or postponed discussions being prolonged, the peoples, bitterly deluded in their desire for order, peace, and reconstruction, are coming to lose hope and patience.

It is not our intention to make accusations. We have before our eyes a higher purpose than to pass judgment on what has been done. We wish to forestall new and greater evils in the near and distant future.

During periods of deep agitation of minds and of disordered events we place all our trust in God, the Father of our Lord Jesus Christ and Lord of Lords (II Corinthians 1: 3; I Timothy iv: 15), and after God we place our trust in the faithful of the whole world. To them, then, we address the words that the Divine Master repeated to his disciples: "Fear not."

If there is something today that gives cause for fear, it is fear itself. There is no worse counselor, especially in the present conditions. It only bring dizziness and blindness and leads away from the right and secure path of trust and justice.

False prophets unscrupulously propagate with cunning and violence anti-Christian and atheistic concepts of the world and of the state, which are contrary to the natural law, and as such they have been condemned by the church, particularly in the encyclical, Quadragesimo Anno of our great predecessor, Pius XI. Neither the difficulties of the present nor the cross-fire of propaganda should frighten or mislead you.

Fear, which is a shameful thing in itself, excels in its many disguises. At times it puts on the misleading garb of a declared Christian love for the oppressed; as if suffering people could derive advantage from falsehood and injustice, from mob tactics and from promises that can never be fulfilled.

At other times it hides under the appearance of Christian prudence and under this pretext remains silent when duty should require it to utter a fearless non licet to the rich and powerful, and to caution them thus: It is not lawful for you, in following a greed for gain and dominion, to stray from the inflexible lines of Christian principles which are the bases of political and social life which the Church has repeatedly and with great clarity expounded to the men of our times. To you especially the invitation is addressed to collaborate without reserve in forming a public order which will realize in the highest possible degree, a healthy economic life and social justice.

Thus the exploiters of class warfare will be deprived of the possibility of ensnaring the disappointed and the despoiled people of the world, by telling them that the Christian faith and the Catholic Church are not their ally, but their enemy.

By disposition of the divine providence, the Catholic Church has formulated and promulgated its social doctrine. She points the path to be followed; and no fear of losing possessions or of temporal gains, of appearing less in harmony with modern civilization or less national or social, could authorize true Christians to deviate even a hair's breadth from this path.

PEACE

Considering the sad reality of the numerous and disastrous conflicts which so painfully afflict the world of today and bar the path of peace, it would be equally wrong to shut one's eyes so as not to see or to hold one's arms so as not to act, alleging as an excuse that nothing more can be done. Nothing more can be done? At the very moment when Christians can oppose to vacillating and uncertain principles that fearless courage which is not the mere joyous exuberance of a sanguine nature, but a manifest proof of a supernatural force nourished by the theological virtues of faith, hope, and charity?

By means of this force a mighty breath of pure air will sweep over the world, dissipating the atmosphere of panic and pessimism which threatens to poison it; eyes sealed till then, will open to the clear vision of truth and justice. Those in good faith and of good will, who had gone astray, will discover a way out of a situation that has become almost intolerable and advance toward a solution of apparently insurmountable problems.

For those who see things in the light of the supernatural, there is no doubt that even in the most serious conflicts of human and national interest there is always room for a peaceful settlement.

Is this not, perhaps, the mission of the Christian, of the Catholic, in the whirlpool of social and political agitation of today? This is preicsely the explanation of the hatred toward the church that all those cherish whose life depends on dissensions and conflicts and whose interest it is to fan them continuously into flame. They feel almost instinctively that the church, established by God as a rock of brotherhood and of peace, cannot come to terms with the idolatrous worshippers of brute force and of the struggles, inside and outside their frontiers for world domination.

This consideration should be enough to fill you, Catholics, with noble pride because the hatred launched against the church heightens in the eyes of men her spiritual and moral grandeur and her work done for the good of mankind. Be alive to such greatness! It means a task, a duty, a responsibility. It is not without a purpose that Divine Providence has disposed that never more deeply, perhaps, than at present, have all the faithful of the church on earth felt conscious of sharing intimate membership in the mystical body of Christ. Even if the powers of darkness, of disunity, discord, and destruction are spreading today over the whole world, so much more effective must be the superior activity of Christians and their force, derived from union, order, and peace.

What true Catholic could think of shirking such a pressing duty? Apply yourselves, all of you, with earnestness to those tasks; among the timorous be fearless, among the doubters be firm in faith, among the discouraged be strong in hope and be full of love among the skeptics who are devoid of love.

LOVE

Your love is ardent and is as vast as the world. We know it from experience and can in some measure gage it from the admirable generosity by which the Catholics in countries still prosperous helped to relieve the needs of people in greater want. They gave incomparably more than figures published in certain quarters would lead one to believe. To a renewed expression of our gratitude toward all the benefactors, we join once again our earnest exhortation: Let not your love grow cold, but let it spread more widely. There are still so many districts from which rise to heaven a cry of distress and a plea for help.

Heaven hears this cry of anguish, but wishes to heed it through means of your charity. The words of Christ, "As long as you did it to one of these my least brethren you did it to me" (Matt. xxv:40), may also be changed by saying: The good that each of you has done to relieve your neighbor in need has been done by Christ; Christ himself, in you and through you, is helping the poor and the derelict.

Therefore, in the happy certitude that Christ lives and works in each of us, we say to all our sons and daughters throughout the universe:

Strong in faith, put up a good fight! The future belongs to believers and not to the skeptics and doubters.

The future belongs to those who love, not to those who hate.

The church's mission in the world, far from being ended or outmoded, goes out to meet new trial and fresh enterprises.

The task confided to you by providence in this crucial hour is not to conclude a weak and timid peace with the world, but to establish for the world a peace really worthy in the sight of God and man.

Humanity, by its own unaided efforts, cannot win this peace. To implore it from the divine mercy for the poor, torn and tortured world is a duty that all, pastors and flocks, should undertake with fervent zeal, especially during this month consecrated to the heart of the Divine Redeemer.

Animated by an unshakable faith in the power of this suppliant prayer, and as a presage of its being heard, we impart with an ever-flowing heart, on you, venerable brethren, and on all our beloved sons and daughters scattered over the face of the earth, our apostolic benediction.

Flag Day

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following proclamation of the Governor of the State of Connecticut:

STATE OF CONNECTICUT.

By His Excellency James L. McConaughy, Governor, a proclamation:

June 14 is the one hundred and seventieth anniversary of the decision by our Continental Congress to approve the Stars and Stripes as our Nation's flag. In honor thereof, and pursuant to custom and statute, I hereby proclaim Saturday, June 14, 1947, as Flag Day.

Let us display Old Glory on all buildings, schools, and our homes. It has thrilled us at home; it has inspired the valiant warriors who followed it against our Nation's enemies. It has returned battle-scarred and tattered, but always victorious, from brutal and bloody wars to fly from the flagstaffs of peace, symbolic of the pride, the courage, and the spirit of America.

Today the eyes of the world turn toward Old Glory with prayer and with hope. Let us unfurl it proudly as a constant reminder that democracy and freedom live in our Republic. Out of the exciting tumult and strife of our country's infancy came the glorious red, white, and blue design which has grown into a living thing. Let it emblematize our precious heritage as we cherish our continuing freedom, equality, and fraternity, in days of peace, in days of war, in days of plenty, and in days of need.

Given under my hand and seal of the State at the capitol, in Hartford, this 21st day of May, in the year of our Lord 1947 and of the independence of the United States the one hundred and seventy-first.

[SEAL] JAMES L. MCCONAUGHY.

By His Excellency's command:

FRANCES BURKE REDICK,
Secretary.

Permanent Peace Must Rest on Mutual Understanding—There Is No Better Path to Mutual Understanding Than the Exchange of Students, Teachers, Information, and Skills—H. R. 3342 Is a Measure To Wage Peace and Avert War—It Deserves Your Support

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. MUNDT. Mr. Speaker, there is no better place in all this world to teach democracy and to demonstrate the virtues of freedom than in the United States. H. R. 3342 proposes in part to enable our State Department to encourage the interchange of students and teachers with friendly nations on a reciprocal basis so that others may learn about America and its cherished concepts by observing our way of life and so that American teachers and students can serve as ambassadors of good will abroad through attendance at foreign schools and colleges.

It should be pointed out, Mr. Speaker, that the students of rich foreign families have always been able to attend schools and colleges in the United States. Over 17,000 foreign students are now in this country but they have not been selected by our State Department and they are not participants in the type of program which H. R. 3342 envisages.

H. R. 3342 would establish safeguards and protections in the field of student and teacher interchanges and in connection with such students as are now in this country. These safeguards do not now exist but the passage of H. R. 3342 will equip the State Department with authority to make certain that visiting students and teachers are serious minded, able and loyal foreign subjects who are here for the purpose of learning about America and its great economic, social, and political institutions.

For example, upon the passage of H. R. 3342, the State Department would be required to utilize the formula of reciprocity in the interchange of students and teachers. This means that only visitors for this purpose would be admitted from abroad from those countries granting like concessions and privileges to our nationals in their lands. Thus the United States would cease to be the recipient of students and teachers from areas which deny access to visitors from America. As a further new safeguard which would come into operation with the passage of H. R. 3342, this legislation provides specifically for the prompt deportation of any visiting students or teachers who engage in political activities or who prove unwelcome because of security reasons. Thus instead of increasing the dangers which might conceivably come from the admission of foreigners or visitor's visas, H. R. 3342 actually and definitely takes positive and effective steps to reduce such dangers.

Mr. Speaker, America can afford to show itself to foreign students and teachers. We have a system and a way of life of which we can all be proud and which sells itself quickly to visitors who are given the opportunity to study and understand it. I can think of nothing which would contribute more greatly to the stability of China, for example, than for the United States to admit 1,000 able young Chinese students to learn about America in our schools and colleges with the specific understanding that they return to China to help develop and stabilize their own country. What is true of China is equally true of other nations of the earth where the crying need today is for trained and able leadership. Surely we can ill afford to perpetuate chaos and turmoil abroad by failing to provide an opportunity for carefully selected young foreigners to learn about America by studying in our country.

Mr. Speaker, as a very pertinent example of what I have in mind, I am inserting in the RECORD at this point a letter received today by Congressman LANDIS, of Indiana. The author of the letter is Prof. William Hugh Jansen, director of the English program for foreign students in Indiana University, located in Bloomington, Ind. The letter tells its own eloquent story:

INDIANA UNIVERSITY,
DEPARTMENT OF ENGLISH,
Bloomington, Ind., June 7, 1947.

The Honorable GERALD LANDIS,
House of Representatives,
Washington, D. C.

DEAR MR. LANDIS: I am sending you a part of an examination written for me today by my foreign students. Though the English and the script are not always of the best, I wish you would take time to read them so that you may see what some of our foreign students are thinking.

I do this because I understand the Mundt bill, section 201, concerning the exchange of students and teachers between the United States and other lands, is under fire—that there is a fear that such an exchange will expose our institutions to communism and will mean the break-down of immigration bars.

I assure you that nothing is further from the truth. The strongest bulwark protecting democracy against communism in foreign lands will be those students who were once "exchanged" to the United States. And indeed one of the strongest props for our native democracy should be the evident admiration for our institutions in the eyes of these exchange visitors. I can see no greater hope for our future position in the world than can be provided by our extending our educational facilities to future foreign leaders. The leaders of the future of democracy will be those educated here. If we deprive them of that opportunity, where will they go? To nondemocratic countries, of course, and then I fear for the direction that their leadership will take.

The nine papers that I enclose are written by one who is already a teacher, by three who will become teachers, by a prince who will become a political leader, by three who hope to aid their countries in medicine and den-

tistry, and by one who is the scion of a democratic family in a rather autocratic country. I have indicated their nationalities on their papers. One of them spoke no English 4 months ago; only one has had more than a year's experience with the language. They live with American students; they love, and are loved by, American students. Can anybody believe honestly that they are forces for communism in this country? Or can anyone suppose that they will be anything but supporters of what we proudly call the American (i. e., the democratic) way when they return to their countries?

Very sincerely yours,

WM. HUGH JANSEN,
Director of English Programs for Foreign Students.

Mr. Speaker, at this point I desire to quote briefly from a few of the examination papers enclosed with Professor Jensen's letter. I think any fair minded American can convince himself from these statements that America gets big dividends through a program of exchanging students and teachers with other countries.

The first examination paper is from a young student from Chile who is now attending Indiana University. Here is what he says:

My training here called my attention to the good friendship that exists among all the Americans; they don't consider too much the differences of religions, or money, social, and political differences. In Latin American countries all these factors are troubles. In spite of that we are growing up as democratic republics. I think that when the individuals grow and build their personalities thinking not only as individuals but as members of a community, they are able to give welfare to the rest of the people.

Mr. Speaker, this young student will return to Chile with new confidence and enthusiasm for our American concepts.

Here is an examination paper from a student from Costa Rica now at Indiana University. He says:

American people open their homes very easily. Their homes are widely open to the strangers. In Costa Rica it is a little different. We would not invite to our homes the first person we meet. Of the two methods, I like and love the American way.

This next examination paper is a young visitor from Greece now at Indiana University. He says:

I could tell an American that his country has developed and preserved the human freedoms better than any other country in the world. It has developed the ways of living well and comfortably and it has grown up more gloriously than any other country in the present century.

Mr. Speaker, I submit that if we could bring 5,000 young Greek students to the United States, train them in our colleges and universities for 1 year, and then return them to Greece we would do more to strengthen freedom and democracy and to help resist communism in Greece than we can with the multi-hundred-million-dollar aid bill which was recently passed by Congress.

Next I call your attention to an examination paper written by a student from Iran who is now attending Indiana University. He says:

The American people should teach millions of people who live like animals in other countries. You have millions of enlightened people in the United States and they teach lessons of democracy to the reactionary people of the Middle East.

Here is the proof of the pudding, Mr. Speaker. Here is testimony from first-hand sources that what H. R. 3342 proposes to encourage and systematize and expand has vast potential possibilities for spreading freedom throughout the world, for stiffening the resistance to communism and other totalitarian techniques, and for cementing friendships with the United States which are literally priceless. No wonder Gen. Ike Eisenhower came before our committee to plead for the passage of H. R. 3342 and the comprehensive program it proposes to establish at the cost mind you—at the very insignificant cost, I repeat—of less than one-fourth the cost of a single battleship.

Let me read you a sentence from the examination paper of a student from Turkey now attending Indiana University. He says:

Before the First World War there wasn't any relation between Turkey and the United States. But the second war changed everything. Now it is easy to see frequent relations in all the fields especially in culture and economics. These relations are going to attract many Americans to Turkey. I hope they will like it.

Let me complete these exhibits by quoting from a paper written by a Brazilian student now attending Indiana University. He writes:

This country is a marvelous one. What makes it marvelous are the little things we see in the streets, the little machines that come to our lands, the gaiety of the people and their friendship and belief in democracy that leads this country to be the first in the world. God bless America.

Mr. Speaker, can we afford to discontinue or cripple a program paying dividends in lasting friendship and respect such as are indicated by the quotations which I have just read? These comments were written in the course of an ordinary examination in English during which each student was invited to write his own thoughts on the subject, What I Could Tell an American About His Country. I have read you passages from the original papers handed in by the students. Their English and handwriting were not always of the best but their enthusiasm and friendship for America leaves nothing further to be desired.

In conclusion, Mr. Speaker, since so many have asked questions about the safeguards in H. R. 3342 and the congressional controls written into the legislation by our committee, I am inserting at this point a summary of those 20 safeguards which I described in detail on the floor of the House last Friday:

Let me give you the facts from the printed record and I hope you will supplement this information by reading the comprehensive volume of hearings which we held on H. R. 3342 and the committee report which accompanies it. Here, however, by specific, definite reference to page, section, and line are the new safeguards by which Congress will direct the activities of this new program and by which Congress will keep it constantly under its control and supervision.

No. 1. On page 3, section 201, line 15, you will find set forth in unmistakably clear language the doctrine of reciprocity governing our international relations and activities. I have discussed this previously in this address so I shall not elaborate upon it further now.

No. 2. On the same page, page 3, starting on line 21, you will observe that we require the Secretary of State to turn over for deportation any foreign visitor who abuses the privileges he enjoys under his visitor's visa by engaging in activities of a political nature or in activities not consistent with the security of the United States. May I add, Mr. Chairman, that since visitors are now in the United States and will always be here whether we enact H. R. 3342 or not, this is a highly significant new safeguard since it gives the Secretary of State authority and instructions which will not only stop any existing un-American activities on the part of foreign visitors but which will make certain under the exchange program we propose to establish there shall be no abuses of this type. This safeguard is specific, stern, and clear.

No. 3. On page 4, section 203, line 19, we provide that no assistance under this act shall be furnished of any character not in keeping with the free democratic principles and the established foreign policy of the United States. Mr. Chairman, here once again we write into law the clear conviction of Congress that this shall be an American program, projecting American concepts, and conforming with American ideals.

No. 4. Page 9, line 4: Here we make clear that nothing in this act shall authorize the extension of services and advice to foreign countries relating to the organization, training, operation, development, or combat equipment of the armed forces of a foreign government. You see, Mr. Chairman, throughout this legislation we retain the fundamental purpose of this program. This is a peace bill, sir, and not in any sense a war measure or a military proposition.

No. 5. On page 8, section 403, line 12, we specify that the Secretary of State shall encourage the performance of the services proposed under this legislation by private American individuals and agencies. Only where private enterprise is unable or unwilling to function is it contemplated the information and educational exchange program established under H. R. 3342 shall be handled by the Government itself.

No. 6. Again on page 8, section 403, line 16, we provide that the services abroad rendered by a Government agency shall be advisory, investigative, or instructional in character for purposes of demonstration and not in competition with private enterprise.

No. 7. Still on page 8, section 403, line 20, we make even clearer that such services abroad shall not include the construction of public works or the supervision of such construction. It is our purpose to aid private engineers and private American enterprises to secure business connections and contracts abroad and not in any way to interfere with private enterprise. That we have been successful in doing this is clearly apparent from the fact that the Committee on International Relations of the Engineers Joint Council has enthusiastically recommended passage of this bill. The testimony of their spokesmen is found on page 178 of the printed hearings available to each of you.

No. 8. Page 9, line 8: We specify that services by our Government to foreign countries shall not be undertaken if such services will impair the fulfillment of domestic responsibilities of any Government agency. In other words, we clearly recognize and stipulate that the primary function of an American Government agency is to handle the needs and requirements of Americans first.

No. 9. Page 9, line 12: Here we stipulate clearly that this is to be no great haven of bureaucracy and no starry-eyed adventure by impractical idealists or theorists. Here it is provided that the Department of State shall invite in outstanding leaders—please note the language is mandatory—in the various fields of activity covered by this act to review and extend advice on the policies in each of the various categories concerned.

No. 10. Page 11, section 502, line 7: We have made it crystal clear in the language of this so-called Mundt bill that this program

will not establish competitive Government radio and press agencies to compete with private American enterprise. Note the language of this specific congressional directive:

"The Secretary shall encourage and facilitate by appropriate means the dissemination abroad of information about the United States by private individuals and agencies, shall supplement such private information dissemination where necessary, and shall reduce such Government information activities whenever corresponding private information dissemination is found to be adequate."

Mr. Chairman, the Office of Information and Educational Exchange as proposed by H. R. 3342 will become the only Government agency in the United States operating under a congressional mandate to work itself out of a job as soon as possible.

No. 11. Page 11, line 15: Here we stipulate directly that this act shall not be construed in any way to give the Government a monopoly in the production or sponsorship on the air of short-wave broadcasting programs or a monopoly in any other medium of information. Mr. Chairman, it is interesting to observe here that all seven of the short-wave licensees in the United States are in favor of this program and that well over 80 percent of the editorial opinion of this country has also been expressed in support of it.

No. 12. Page 11, line 17: We provide specifically here that the State Department shall—again please note this is a directive and not a suggestion—invite in outstanding private leaders in cultural and informational fields to review and extend advice on the Government's international information activities. We have proposed, sir, to mobilize in this great crusade to win and preserve the peace the best brains and capacities of America both in and out of Government in every field of endeavor and pursuit incorporated in this legislation.

No. 13. Page 11, still in section 502, near the bottom of this page, please, on line 23: To make double certain and completely positive that there shall be no competition by the Government against private enterprise we stipulate that all films, broadcasts, and other materials in the fields of mass media shall be identified as to Government source when they are so projected.

No. 14. Page 14, line 4: Again to make positive that this becomes truly the voice of America we stipulate that the employment of aliens shall be sharply limited to services related to the translation or narration of colloquial speech in foreign languages when suitably qualified United States citizens are not available. These will be very few in number but where they are required their services become invaluable.

No. 15. Page 16, section 703, starting on line 21: To prevent this operation from becoming a sprawling bureaucratic office and to safeguard the American taxpayer we specify that the maximum use must be made of existing Government property and facilities where Government property or services are required to be used under this act. Thus where Embassy property abroad can be used, it will be; where existing offices can be used at home, that is required. Small as are the outside expenditures to be made by this operation, we have set up safeguards that they all be used, economically and efficiently.

No. 16. Page 18, section 901, starting on line 14: This is the now famous loyalty check on all personnel to be used in this program. It requires that all people employed or assigned to duties under this act must first be screened and certified as to loyalty and security by the Federal Bureau of Investigation. I have discussed this earlier in this speech so I shall not amplify upon this safeguard further now. It is the complete answer, however, to those who worry, as all of us rightfully should, lest un-American influences creep into this or any other division of the State Department. You can be sure before the FBI certifies as to their loyalty the people in this division will be completely and adequately investigated and examined.

No. 17. Page 19, section 904, line 20: This safeguard provides that nothing in this act shall authorize the disclosure of any information or knowledge in any case in which such disclosure is prohibited by other law of the United States, such as in the case of atomic developments, for example, or where it is inconsistent with the security of the United States. Since the War Department is to be represented on the Interdepartmental Coordinating Committee advising the Secretary of State on the conduct of this program, this provides a full and effective safeguard concerning our military secrets as well as upon other developments which might better not be disclosed.

No. 18. Page 20, section 906, line 18: Once again to make definite and clear the mandate of Congress we here provide that it shall be the duty of the Secretary of State—need I add, sir, that any Cabinet officer can be impeached for a violation of duty—that insofar as is practicable the services and facilities of private agencies, through contractual arrangements or otherwise, must be utilized in carrying out the provisions of this act. By bringing in here the element of contractual arrangements we specifically provide the avenue and agency for utilizing a wide field of private agencies in implementing the program set up in H. R. 3342.

No. 19. Page 21, section 908, beginning on line 6: To retain the full control of this program in the hands of Congress—and whom, may I ask, are we to trust if we cannot trust ourselves?—we provide that the authority of this act or any provision of it shall terminate whenever such termination is directed by concurrent resolution of the two Houses of Congress. Since such a termination procedure does not require the signature of the President, it means that a simple majority of the Congress can terminate this program in whole or in part at any time it so desires or at any time it finds or feels that the program is neither effective nor efficient. Seldom has legislation been written which carries a more direct and decisive safeguard.

No. 20. Page 21, section 909, which is the final section of the act and which begins on line 11: Here we provide that the Secretary of State must submit to Congress semiannual reports of expenditures made and activities carried on under the authority of H. R. 3342. In addition we must appropriate the money specifically for every activity under the act at the beginning of each fiscal year.

From These Beginnings

EXTENSION OF REMARKS
OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 10, 1947

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune on its one hundredth anniversary, June 10, 1947:

FROM THESE BEGINNINGS

The Tribune was born into the most dynamic era in history. More changes in the conditions of human life were to take place within a few generations than in all the previous centuries together. It is the moment of all moments to start a newspaper, for change is news and great changes are great news.

So many revolutionary discoveries and inventions in the physical and biological sciences were to be made in the century that men came to expect them. There was to be a great surge of activity in the old arts and the creation of new ones. Civilization was to march across half a continent of virgin wilderness. Plagues were to be conquered and illiteracy largely overcome in the western world. Nations were to rise and fall. Great wars were to be followed by a period of relative peace and then by still greater wars. There were to be profound political and moral crises within a Nation composed then of only 29 States.

If there was a better spot than Chicago from which to view the pageant we can only wonder where it was. At the beginning, in 1847, the frontier had moved beyond Chicago, but not far beyond it. It was a city by statute, but in population hardly more than a village on the edge of largely unbroken prairies and in the shadow of the northern forests. Within three generations it was to become the center of the most productive of all agricultural and industrial areas and to find itself close to the center of population of the leading Nation on earth.

By 1847 there was need of a new journalism, with new methods of collecting and organizing the news. Few editors yet realized that their readers wanted something more than casual items copied from whatever sources came to hand. The failure to meet the needs of the new day goes far to explain why so few of the newspapers then in existence have survived. It was the Tribune's good fortune that its editors were in step with the new times, especially after 1855 when Joseph Medill and his colleagues acquired the paper. By 1881, Medill could look upon his achievement and say:

"As a news-gatherer, the Tribune is already the leading American newspaper. It uses the telegraph more freely and more wisely than any other journal; it has a larger and better staff of correspondents than any other; its news is better edited and more judiciously displayed than that of any of its contemporaries. It does not throw the burden of selection, arrangement, and distribution upon its readers, but gives them all the news in convenient form."

Those who seek an explanation of the Tribune's continuing success can find no small part of the answer in those few lines. Call it a knack, call it an art, a tradition or anything else, the recognition of what is news and the presentation of it in sharp focus are Tribune specialities that put us on top and have kept us there.

Many of the newspapers of a century ago, especially in the older sections of the East and South, addressed themselves to an aristocracy. Here, in the heart of the old Northwest Territory, dedicated as it was to the political equality of men and to universal free education, there was no temptation to cater to rank. The Tribune was to be every one's newspaper in a community where all were assumed to be concerned equally in public matters. The aristocratic press, with few exceptions, did not survive the subsequent competition of the vulgar press. The Tribune did without sinking into vulgarity. It learned early how to win and hold the lead in circulation without crawling into the gutter, and without demogogic appeals to class prejudice.

There was something else in The Tribune's tradition that was even more important. The Tribune in Chicago was strategically situated in its formative years to play a leading part in the political and moral conflict that was impending. Here in Illinois, more sharply perhaps than in any other State, the issue of slavery and its extension was focused. In part, that was because in Illinois, as in Indiana and Ohio, the southern counties were settled in the main by men from the slave States and the northern counties by men from free soil. As late as 1853, 6 years

after the founding of the Tribune, the proslavery forces in Illinois were the stronger. They proved it by enacting a series of laws which forbade any Negro, slave or free, to enter the State and punished violators by ordering them sold at auction for a term of service sufficient to pay their fines. The best that the antislavery forces in the legislature could do was to win approval of a provision requiring a jury trial in such cases.

In a State so divided, it was inevitable that the political leaders of both parties should temper their doctrines in the hope of attracting the support of the middle-of-the-road men. Thus, Lincoln, who hated slavery, insisted over and over again that slavery must be protected in the States in which it existed, but not in the Territories; Douglas was equally insistent that the mere permission to extend slavery into the Territories, which he advocated, need not and probably would not result in its extension.

Here was a distinction with a real difference, but it was a subtle one which could easily have been glossed over. In the circumstances, the Tribune might have chosen to remain neutral in the hope that by avoiding offense to the Douglas following it would win new friends, lose no old ones, and recover its solvency, for at the time the paper was in serious financial difficulties. Something like neutrality was, in fact, the line which Greeley took and because his weekly New York Tribune circulated widely in Illinois, he did heavy injury to Lincoln's cause.

Medill didn't have the kind of mind that could miss the point that a victory for Douglas would be a victory for slavery, and a victory for Lincoln a victory for freedom. That was enough and more than enough to decide his course. The Tribune, taking no account of the risks, was in the fight with everything it had.

"We need not say," Medill could write a few years later, "that the Tribune, whatever its other faults, has not that of timidity." And he could add, with justified pride: "We go our own way, at our own time, in our own manner, in company of our own choosing, knowing as we do that vindication will be sure to follow. We can afford to be honest and fearless, and to wait."

That became the Tribune's tradition. Readers of today do not have to be reminded that it is still operative. The bigger Mr. Roosevelt's popular majorities grew, the harder the Tribune fought the New Deal, just as, against heavy odds, the Tribune had slugged it out with Lorimer, Small, and Thompson. The Tribune in a century has never compromised its convictions to sell more papers or to avoid injury to itself.

The readers seem to like it that way. So do the men and women who together make this newspaper. No doubt that is one reason why we have today, as we have always had, the cream of the crop not only in the editorial departments but in the mechanical and business branches as well.

It's been a great century and in the course of it we have learned a lot and probably forgotten a lot, too. But we haven't forgotten how to get all the news and present it; and we haven't learned how to play safe in great moral and political crises. It will have to be that way in the second century, too.

Your Chances of Getting Ahead

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 4, 1947

Mr. SHAFER. Mr. Speaker, every once in a while I come across some figures which appear to me to clarify the basis of our Republican actions here in the Congress and to give added reasons why the American people must vote for solvency if they are to save themselves.

For more than 15 years the so-called common man has been voting for security, but all the time he has been losing his chances of attaining security. Every time he has voted for more security in the form of bigger Government handouts, he has lowered the value of the dollar and made more difficult the task of all working Americans who want to save enough to care for themselves when they are too old to work.

James H. McGraw, president of McGraw-Hill Publishing Co., has given the figures and the explanations which show these facts far more clearly than I could give them myself.

He points out in the editorial and accompanying statistics that a man now must earn four times as much money to save as much toward retirement as he did in 1914. A typical American, not looking for hand-outs but anxious to prepare his future against starvation and degradation, must make more than twice as many dollars each year as he made in 1929 to save a comparable amount of money for his old age. The return on the money in the form of interest has decreased steadily, as have the value of the dollars, so he must save twice as much as he once did to have only as much security.

In other words, the Government itself has been working to make it virtually impossible for millions of our citizens to do anything but seek a public dole. That is why we are in the shape we are in—with plenty of dollars for exhibition, but not quite enough to buy what we must have. I saw a cartoon of a farmer carrying a bag full of money the other day and the caption on it was, "We used to go to the store with a pocketful of money and get a bagful of groceries. Now we go with a bag of money and get a pocketful of groceries."

That is about what the New Deal has brought us to. Under permission to extend my remarks I include the following editorial and accompanying statistics from the June 2, 1947, issue of Aviation News:

Your Chances of Getting Ahead

For 20 years we have been whittling away the foundations of our economic structure. We have been cutting away the incentives to "get ahead in the world," to increase production, and to improve efficiency. Unless this process is reversed soon, we risk the sort of industrial stagnation that currently afflicts Great Britain so disastrously.

How far the whittling has gone is shown by the statement at the end of this article. It shows that everyone's stake in working harder and getting ahead has been reduced sharply since 1929. In that year anyone who was even moderately successful could look forward to reaping the rewards of his success. If he earned $5,300 annually over a period of 25 years he could retire on a comfortable income of $3,000 per year. Or he could pile up enough capital to go into business for himself. He could fulfill the American dream as phrased by Abraham Lincoln in his first annual message to Congress in 1861:

"The prudent, penniless beginner in the world labors for wages awhile, saves a surplus with which to buy tools or land for himself, then labors on his own account another while, and at length hires another new beginner to help him. This is the just and generous and prosperous system, which opens the way to all, gives hope to all, and consequent energy and progress, and improvement of condition to all."

Look at the situation today. To retire on an annual income from investment that will buy as much as $3,000 did in 1929, a young man needs to earn over $13,000 a year for 25 years. That's more than 2½ times the income he would have needed in 1929. The same thing is true of acquiring a stake in a business.

Although the dollar income needed for retirement rose 75 percent between 1914 and 1929, the average person's chances of getting ahead improved. This is because the average man's income was rising; it was double the 1914 level by 1929. So more people were within striking distance of success and security.

WHY TRY TO SUCCEED?

It was a different story after 1929. The income needed for retirement today is 2½ times the 1929 amount. Meanwhile average incomes are up only 80 percent. So the average person's chances of achieving success are actually slimmer now than in a generation.

What is more, fewer people actually do achieve success today. Only 1 percent of all families now have incomes large enough to build up a retirement fund or acquire a stake in a business. In 1929, almost 6 percent of all families attained a comparable degree of success.

Higher taxes are the most important reason why it takes so much more now to build up a competence. They account for one-half the increase in the amount needed. The other half is explained by higher living costs and lower interest rates.

It is, of course, true that few people ever get into the higher income brackets. So the process of cutting away the incentives which play such a key role in our economic system affects comparatively few people immediately. It does, however, have a powerful indirect affect on all of us.

EVERYBODY LOSES

When half to four-fifths of any additional income of successful people goes to Uncle Sam a heavy drag is obviously put on doing the work to get it. Thus, we stand to lose the benefit of full use of the Nation's best brains. By so doing we stifle industrial progress. And the loss in productive efficiency far outweighs the amount of tax revenue the Treasury gains. Carried far enough, the process of stifling economic progress by slashing rewards leads straight to industrial stagnation.

The same process also multiplies the risks of embarking on new capital investment. High taxes rule out all but the most profitable new projects and restrict most expansions to boom times when profits are high. So capital investment follows a boom-and-bust pattern and, by so doing, contributes much to ups and downs in production and employment.

THE SORRY PLIGHT OF BRITAIN

The case of Britain today provides an object lesson of how blighted incentives produce industrial stagnation. Britain's number one economic problem is to get more production. But the tax load there is so heavy it stifles the incentive to produce more.

A coal miner who works an extra shift pays about a third of his added earnings to the tax collector. And, as the London Economist comments, tax rates on business executives are so high that they kill every incentive except that to tax evasion. In short, not only is the incentive to succeed blighted, but so is the incentive to work. A root cause of Britain's trouble is this: The cost of an expensive program of social benefits has been piled on top of the heavy costs

of paying for past wars and trying to prevent future wars. Tax rates are boosted accordingly. What her experience proves is that the attempt to provide excessive social benefits may defeat itself. It raises the tax burden on rich and poor alike and smothers the incentive to work. So the underlying basis of all economic benefits—production—is eaten away.

We in the United States haven't traveled as far down the stagnation road as Britain has. Taxes amount to about 26 percent of national income here as against about 45 percent there. But unless we start soon to build up incentives to do better work, instead of whittling them away as we have been doing, we will catch up with Britain fast.

IT'S LATE BUT NOT TOO LATE

Can anything be done? Decidedly yes, particularly by tax reform and reduction in the cost of living. As far as interest rates are concerned, any large increase would raise excessively the cost of carrying our war-swollen national debt, and hence raise taxes. But some increase in what are now excessively low interest rates may well be both feasible and desirable.

Action on the tax front is the first order of business. Our jerry-built tax structure is the thing that is chiefly responsible for cutting the incentives to work harder. Two things are important: (1) Government spending must be pared on the bone; (2) the tax system must be completely overhauled to remove the shackles on all-out production.

The fifty-sixth editorial in this series, published in March, outlined major steps that need to be taken in remodeling Federal taxes in order to increase incentives to individual and business enterprise. The revenue bill now before Congress is no more than a short step in the right direction. Much more must be done to clear the way for high production and rising living standards.

Lifting the blight which taxes now place on incentives would help cut the high cost of living. It would stimulate greater production and greater efficiency. But a further step is necessary. Part of the benefits of improved efficiency must be passed on to consumers in the form of lower prices.

In the past few years we have been following precisely the opposite course. In many cases wages have been increased all out of proportion to increased productivity. Result—soaring prices and a severe squeeze of the consumer, to which some greedy exploitation of war-created shortages has also contributed.

TO GIVE ABILITY A CHANCE

Our basic and most crucial problem is to get back on the track which leads to higher production and improved living standards all along the line. We got off that track in the thirties. Then, we started scrambling for larger slices of the same pie instead of trying to produce a larger pie. Now the process of getting back on the track is greatly complicated by the tremendous tax burden growing out of the war.

Yet it's not too late to turn back from the road that leads to industrial stagnation. As the statement in the center of the page shows, we could restore the odds of getting ahead to what they were in 1929. Cutting the Federal budget to $25,000,000,000 a year and putting the tax structure in good order are the crucial first steps.

By taking these steps soon, Congress can go far to restore the incentives to hard work and efficiency which have been so largely washed away in the past 20 years. If they are not taken the American dream of getting ahead by hard and effective work will exist only in the history books, and our children will inherit from us an economic order without opportunity, without hope, without individual liberty.

JAMES H. MCGRAW, JR.,
President, McGraw-Hill Publishing Co., Inc.

To see how your chances of getting on in the world have changed during the past few decades, the McGraw-Hill department of economics has calculated how much it now takes to save enough to acquire a retirement income or a comparable stake in a business, as compared to what it took in 1914 and 1929.

The objective set is an income from investment equal to $3,000 a year in 1929 dollars. It is assumed that the savings required to yield this income are made over a period of 25 years. During that period it is also assumed that $4,000 per year (in 1929 dollars) is spent on living expenses. Several other factors were omitted from the calculations because they would not have a decisive effect on the results. Thus, existence of social-security pensions now reduces the income needed; but if State income taxes were added, the income needed would increase.

Here is how the figures work out:

	Yearly income needed
1914	$3,075
1929	5,267
1947	13,221

It now takes more than four times as large an annual income as it did in 1914 to gain a comparable stake. It takes well over twice as much as it did in 1929.

Changes in three factors—Federal income taxes, living costs, and interest rates—explain why the income needed has multiplied so. Here's how these factors line up for the 3 years.

Year	Federal income taxes—married man, 2 dependents		Cost of living (index numbers, 1935–39)	Interest rate high-grade corporate bonds
	$5,000 income	$10,000 income		
				Percent
1914	$10	$60	71.8	5
1929	3	40	122.5	5
1947	589	1,862	155.0	2½

Similar calculations show that if we could reduce Federal expenditures from $35,000,000,000 to $25,000,000,000 annually, raise interest rates by one-tenth, and lower living costs by 15 percent—all realistic possibilities if we make the effort—then the income needed to build up such a retirement fund would come down to $9,500. The chances of realizing that goal would then be restored to what they were in 1929.

Conditions in the Balkan Area of Europe

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include a very informative letter received by me from Reuben H. Markham, of Boston, Mass., who writes with an experience of 35 years in actual contact with conditions in the Balkan area of Europe:

BOSTON, MASS.

Hon. JOHN W. MCCORMACK,
Washington, D. C.

DEAR MR. CONGRESSMAN: I am writing this letter to tell you why I believe you should support President Truman's proposal to stop the advance of Soviet-backed imperial communism at Greece's northern border.

My claim to your consideration is the fact that I have spent most of the last 35 years in the Balkans, first as a missionary teacher in Bulgaria, and for 20 years as the correspondent of one of America's most influential newspapers. During the war I was deputy director of OWI for the Balkans and served overseas in the Middle East area. I returned to the Balkans as a correspondent in 1945 and came back in July 1946, after having been expelled by the Red army.

Imperial communism is engaged in a political and conspiratorial offensive throughout the world and is devoting its chief efforts to the Balkan front. It holds the whole of eastern Europe, except Greece, and is trying to break through Greece into the eastern Mediterranean, the Near East, and Africa.

RUSSIA IMPOSES COMMUNIST GOVERNMENT

The Communist-led governments of the Balkan countries north of Greece were imposed by Russia. Mr. Andrei Y. Vishinsky personally forced the present government upon Rumania March 6, 1945. He had flown from Moscow to Bucharest for the purpose. Backed by the Red army then occupying Rumania, he ousted a pro-Allied government, which had been loyal to America and Britain as well as to Russia, and placed the country in the hands of four Communists, three of whom had recently come from Russia.

The Bulgarian Government was set up in the Soviet Legation in Sofia and was imposed upon the country on September 9, 1944, as the Red Army approached the Bulgarian capital. It replaced a pro-Allied government. It is run by fanatical Bulgarian Communists who came from Russia and have long been in the service of world revolution.

Tito and his six Communist comrades who govern Yugoslavia, all of whom have been trained in Russia, were enabled to seize power in that country through Red Army aid and—with some misdirected Allied help.

The Albanian government is a Soviet creation, mistakenly helped to power by the British.

The Hungarian Communists, with Red Army backing and direction, are violently taking over power in Hungary, replacing the pro-Allied regime. The chief Communist there came from Russia.

In other words, Russia exercises direct control over all of southeast Europe except Greece, and through armed Communists is striving to seize that country.

PHONY COMMUNIST FRONTS

In all cases Soviet Russia works through phony fronts. They are said to represent the oppressed common people, who have risen up and joined hands to throw off feudal yokes. That is false. The fronts are exclusively Communist instruments, devised to deceive the natives and the rest of the world.

These fake Balkan coalitions are said to consist of peasants, workers, and progressive intellectuals, according to the classic Soviet formula. At first they did contain Communists, Socialists, some Peasant Party leaders, and a few feeble bourgeois democrats. But every element not subservient to Russian-directed communism has been forced out. These fronts now contain only compromised remnants of Socialist parties, a few renegade "democrats," and not a single authentic peasant leader. They are Communist tools.

The Greek EAM or National Liberation Front is of the same nature. With the exception of the Communists, it contains no group that before the war was any stronger there than the prohibition party is in the United States. The EAM is a Communist-formed and Communist-directed front, using four especially created or fictitious groups as Communist stooges. It is working for world revolution, as is all the "front governments" in southeast Europe.

THE BALKAN COMMUNISTS ARE TYRANTS

The Russian-imposed, Russian-directed Communist governments in the lands north of Greece maintain totalitarian regimes. They have wiped out a large part of their real or potential political opponents in bloody purges, whose brutality has not been equalled in modern Balkan history.

They maintain large organizations of secret police which keep watch on dwellings, places of business, schools, coffee houses and practically every citizen. This exclusively Communist police works through terror, prisons, concentration camps. It controls jobs, civil-service positions, the distribution of food, clothing and dwellings. It works hand in hand with people's courts that operate as branches of the Communist Party and are in the service of world communism.

The Balkan armies are under Communist control and serve as sections or auxiliaries of the Russian Red Army. Like the "Glorious Red Army" they are above criticism. They are as sacrosanct as kings and emperors used to be.

SLAVE LABOR

The Balkan workers and practically all job holders have been forced into state unions directed by Communist dictators. In Yugoslavia, the Communist labor boss has come direct from Russia. The other Balkan labor bosses were trained in Russia. Slave labor and forced labor are officially and extensively practiced in Yugoslavia, Bulgaria and Albania. Men and women are snatched on the streets. Members of the free professions must get licenses from Communist officials.

Most property in Yugoslavia used for productive purposes, such as workshops, stores and factories, has been confiscated by the Communists. In Bulgaria Communists control most factories and much of the trade.

PEASANTS ARE PERSECUTED

The peasants are objects of special persecution in each Communist-dominated Balkan country. Some peasants have been robbed of their land; others have been put into Sovhozi (state farms) and Kolhozi (cooperative farms) and reduced to the status of work gangs. Everything produced by the peasants is subject to confiscation by the state, and much is being confiscated. Not one peasant leader in any Communist-ruled land is allowed freely to carry on his political activity. Most are subject to extreme repression. Not a few have been killed. To receive land or supplies, peasants must join Communist or Communist-led parties.

With property, enterprises, jobs, workers unions and the peasantry under communistic control; with the police, army, and courts serving as departments of the Communist Parties, every family's subsistence is at the mercy of the Communists.

THEY IMPRISON MINDS

The schools, from the kindergartens up, are Communist controlled and serve as institutions for Communist indoctrination. Communist students force the dismissal of non-Communist professors. Communist-led workers demolish student dormitories.

The publication of books and magazines is under Communist direction and control. In Yugoslavia there is no opposition publication or paper; in Bulgaria the last opposition daily has been suspended; in Albania even opposition whispers are stifled.

The radio is exclusively in Communist hands. Sport organizations, women's societies, children's and youth's associations, touring clubs, and every other social institution have been taken over by Communists. Religious activity is restricted, though religious services are permitted.

DRIVE AGAINST GREECE

The purpose of such tyranny is twofold: First to enable a minority to hold power and second to convert the Balkan peoples into shock troops for the advance of imperial communism.

Already Russia is using those troops for further advances. She and her satellites are pushing against Greece with great force in order to establish a solid front of Communist regimes from Moscow to Athens.

Soviet Russia, Bulgaria, Yugoslavia, and Albania give constant and extensive moral support to the Communist-led Greek rebels. Yugoslavia and Bulgaria also give them military aid. Slav Communists in Greece, closely connected with Yugoslavia and Bulgaria, are among the most active fighters against the Athens government. They and their comrades in Belgrade and Sofia want to separate large northern areas from Greece; they want to partition Greece, through the device of a "free Aegean Macedonia."

Naturally, there are other factors in the situation. Greece is a barren, overpopulated land, crowded with destitute refugees. It suffered greatly from the war—from many wars. The nation has long been divided into political factions that have bitterly fought each other. There are armed Fascist conspirators as well as armed Communist conspirators. The Government is not free from graft.

But these matters, though exceedingly regrettable, are only subsidiary. The salient fact, overriding all others, is that armed Communist conspirators forming part of a Balkan Communist front are trying to impose a Tito-like regime on Greece. They have been striving toward that since 1943, working closely with Tito and directly with Soviet missions. For that they created EAM. Sometimes the Communists have been in the Government, as in 1944, sometimes out of the Government, but in all cases they have worked with equal vehemence and treachery to seize exclusive power. Regardless of whether there is a king or president in Athens, whether this government exists or another, the Communists will continue to work for power, with violence and deceit.

The task to which President Truman has called America is not easy. Nor will it be brief. One of the most terrific world forces in history is trying to break through the Greek front as a further step toward setting up a global Soviet system. What is pressing on Greece is not a few mountain rebels, but world communism. America is asked to check that force of darkness and tyranny, not chiefly for the sake of the 7,000,000 Greek people—though that is important—but in order to hold the American front against total enslavement.

Sincerely,

REUBEN H. MARKHAM.

MARCH 27, 1947.

Mr. Ickes Reviews Vote Frauds by Pendergast Machine in Kansas City

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 5, 1947

Mr. REED of New York. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Hon. Harold L. Ickes, former Secretary of the Interior, in the Washington Evening Star of Monday, June 9, 1947:

MAN TO MAN—FIGURES CITED IN REVIEW OF VOTE FRAUDS BY PENDERGAST MACHINE IN KANSAS CITY

(By Harold L. Ickes)

It is hoped that President Truman is hot on the trail of the ballot thieves of Kansas City. In the meantime, it might be helpful to have a little more of the background of that primary campaign in the President's own congressional district where not only the ballots but an election was stolen.

When President Truman made up his mind to purge Representative Slaughter, he turned to Jim Pendergast for support. Mr. Pendergast had already announced that he would be for Mr. Slaughter. Notwithstanding this, the President called Mr. Pendergast to Washington and insisted that he desert Mr. Slaughter and support Mr. Axtell. He did, and on the face of the returns, Mr. Axtell won the nomination. But the returns from the political bad-lands dominated by the Pendergast machine were so grotesque as to arouse suspicion that votes had been stolen for Mr. Axtell.

It appears that in the four wards in President Truman's congressional district, the total vote for Mr. Axtell was 12,104. That for Representative Slaughter was 2,075. Since the Axtell plurality in the entire district was only about 2,000, this means that the additional 10,000 votes for Mr. Axtell in the Pendergast hunting ground nominated him. The next chapter in the story was of indictments by the grand jury involving 71 persons. The theft of the ballots followed as a matter of course.

RETURNS IN SENATE RACE CITED

If the foregoing figures are interesting, the following will not be less so. President Truman wanted to be county collector in 1934. But "Boss" Tom Pendergast made him Senator instead. The returns from the Pendergast strongholds in Kansas City in the primary election held in August of that year were also in the Pendergast pattern.

At that time Harry S. Truman was an obscure county judge, whose duties were really those of a county commissioner. He was nominated after a hard fight with the late John J. Cochran, of St. Louis. In that primary the following votes in Kansas City were significant: ward 1, Truman 17,485, Cochran 49; ward 2, Truman 15,145, Cochran 24; ward 3, Truman 8,182, Cochran 34. The total in these three wards was Truman 40,812, Cochran 107, or a plurality in four Pendergast wards alone of 40,705. Truman carried the State over Cochran by 40,745 votes.

In 1934 there were alleged to be 21,731 registered voters in ward 1, from whom Mr. Truman received 17,845 votes. A later investigation disclosed that there were 8,462 possible voters in the ward in 1944. In ward 2, in 1934 there were 20,097 registered voters of whom 15,145 voted for Mr. Truman. The 1944 investigation disclosed only 9,018 persons eligible to vote. In ward 3, in 1934 there were 13,845 registered voters, of whom 8,142 voted for Mr. Truman, while 10 years later an investigation disclosed only 6,845 eligible voters. This net loss of 31,547 voters from wards 1, 2, and 3 of Kansas City may have been a bona fide loss, but I doubt it. It looks as if the registry had been padded with ghost voters in 1934.

EIGHTY-FIVE THOUSAND GHOSTS FOUND

While the figures quoted relate only to three sample wards, the same situation, in fact, existed in eight wards in Kansas City. Mr. Truman in all eight wards had received a total of 82,989 as against 387 votes for Mr. Cochran. The 1944 investigation disclosed a total of 85,000 ghost voters in 16 wards of Kansas City. It seems that these ghost voters accounted for the Truman plurality. It is significant that Mr. Truman won over Mr. Cochran by only 40,745 votes, which is less than 50 percent of all the number of ghost voters.

In 1940 Senator Truman was again nominated, this time over Governor Stark. His plurality was only about 7,000 votes. Again, the Pendergast machine with its ghosts supported Mr. Truman.

In the 1936 election, the Pendergast machine had again brazenly stolen ballots. The United States district attorney at that time

was Maurice Milligan, the brother of Tuck Milligan who had fought Mr. Truman in 1934 for the Democratic nomination for Senator. As the two Milligan brothers studied the returns coming in on election night from precincts that they were confident Tuck Milligan had carried, Maurice vowed to break the Pendergast machine and send the vote thieves to the penitentiary. As a result of his efforts, 278 election officials were sentenced. In 13 jury trials, 63 were convicted, 36 pleaded guilty, and 160 entered pleas of nolo contendere. The cases that were nolle prossed numbered 19.

After he became President, Mr. Truman proceeded to pardon (not parole) a number of these election officials who had been convicted. When one of them, Mrs. Frances Ryan, who had been a judge of election, was pardoned, Charles G. Ross, publicity secretary for President Truman, tried to satisfy the public curiosity by saying that it was a "routine matter." Perhaps he was thinking of vote-stealing by the Pendergast machine.

Address of Hon. John W. McCormack, of Massachusetts

EXTENSION OF REMARKS
OF
HON. ALFRED L. BULWINKLE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. BULWINKLE. Mr. Speaker, under permission to extend my remarks, I include a commencement address delivered by our colleague, Hon. JOHN W. MCCORMACK, on June 5, 1947, to the graduates of Belmont Abbey College and the Preparatory School, at Belmont, N. C.:

Most Reverend Abbot, very reverend and reverend Fathers, members of the faculty, members of the graduating class, and ladies and gentlemen, you are about to leave this splendid institution of learning, in which you have spent important years of your life in its formative period, some of you to continue your studies elsewhere, some of you to continue in this institution and some of you to assume the full responsibilities of life. In any event, all of you are about to take another step in the journey of your life. Whatever that journey may be, by reason of the period of time you have spent here, you go forth well equipped to take that journey and to meet with confidence the challenge of the coming years.

Yours has been the privilege of able guidance while a student in this institution of learning. Your teachers have sought to develop in you the intellectual and moral virtues. They have sought to convey to you, and convince you thereby that happiness and perfection are not found in the pursuit of wealth, fame, or power alone, but rather in the unselfish devotion to the higher ideals.

You have been educated and trained to be leaders in Christian and Godlike thought and action, to be future leaders in your communities, leaders in civil life, leaders in business and professional life, some, leaders in public life, some, maybe, leaders in the field of religion. But no matter what your future journey may be in the years to come, leaders in the service of God and country.

That leadership will be a constructive one, a productive one, if you retain and put into practice the fundamental principles and truths you have learned here as students.

Despite the temporary discomfort they may occasion, and the consistency of conduct they may demand, if you fail to adhere to these first principles in your own life, your leadership will have lost its value, and the real happiness of life will be lost to you.

As students here you must have caught something of the spirit of the teachers who have been your guides.

That spirit might well be summed up in one word—truth.

If ever there was a time when the truths we believe in must be lived up to and put into active, energetic, dynamic, and courageous operation, it is today, in this period of the world's history.

It is because of that love which your teachers have for truth that they have waged an uncompromising battle against every form of error, against evil and sin, against hate, to prepare you for the future battle of life, and to bring earthly and eternal happiness to yourself and to others.

The lives of your teachers at Belmont Abbey College must serve as a challenge to you as in the days and years to come you have memories of the eternal truths inculcated in you, to ever drive you on to greater and greater heights, memories of the joy that can be yours when you put to work what you have stored here in your minds and hearts.

The majority of you are about to leave here in one of the most trying periods of the known history of man. You have lived through one World War, and some of you served in that war with honor and distinction. We have seen the youth of our country respond nobly in war to the call of duty, to defend and preserve our institutions of government, and the way of life we believe in.

We have seen the whole of our people respond, the great power of our country developed and utilized in winning that war under the leadership of one who has taken his place among the immortals of all time, our late beloved Franklin D. Roosevelt.

Our part in the recent war was the determining factor in its successful outcome, and by winning it we have seen the triumph of an American ideal of government under God and law" over the titanic forces. In that case, Nazi Germany, which would have subjugated man and make him a slave of the state by the attempted banishment of God.

In that conflict we had to meet and defeat the immediate danger then to the continued existence of our liberty and freedom.

With the ending of the recent war, the hopes of mankind ran high that the days of universal and permanent peace had finally arrived.

Our hopes in this respect, due to the actions of the Soviet Union, are almost shattered.

Across the horizon we see another titanic force which would subjugate man and make him a slave of the state by the attempted banishment of God."

Without minimizing in the least the dangerous world situation that exists, and speaking directly to the point, if the Soviet Union persists in its efforts, and the issue is joined, I approach the coming days with confidence, with optimism of the successful outcome, and not with lack of confidence or with fear.

As the late Franklin D. Roosevelt once well said, and we can make it one of the guides of our life, "The only thing we need to fear is fear itself."

Or as another great world leader of this period, His Holiness Pope Pius XII, well said only a few days ago in his powerful and timely message calling upon Christian creeds to unite in their common cause against the challenge of atheistic communism:

"If there is something today that gives cause for fear, it is fear itself."

The answer to the present challenge of atheistic communism is to meet the false premises upon which this destructive ideology is based with the truths we are possessed of and in which we so strongly believe, and of governments dedicated to those truths which come from God Himself * * * of the dignity of man as contrasted with the power and totalitarianism of the state, to exercise their power to preserve those truths for themselves and for future generations.

The answer will be found in forward-looking, sound, dynamic, affirmative, courageous leadership in all walks of human activity, and particularly in the field of religion—of all religions—and in the field of government.

We must keep in mind in connection with the present world situation that the Soviet Union, while a powerful nation potentially—and one of the two most powerful in the world of today—has its internal weaknesses, particularly from an economic angle.

As we view the world of today, there are three great nations—the United States, Great Britain, and the Soviet Union. Of these three, the two most powerful—one actually and the other potentially—are the United States and the Soviet Union, respectively.

One nation, the Soviet Union, with its adherents in every country, is determined to impose its ideology wherever it can, using any and all means to do so.

It is challenging the way of life we believe in. It is taking over, through its Communist Parties and the vicious methods employed, country after country. There is no question but what Communist Parties in the various countries are backed up actively by the Soviet Union. Hungary is the latest example. After a government of a country is taken over, the processes of liquidation are engaged in * * * the first attack being against religion—not one religion but against all organized creeds.

Faced with this world situation, the question an American properly asks is: "Under such conditions, what course of action should our country take? What course of action is for the national interest of our country?"

After all, a nation, whether large or small, must give primary consideration to its own national interest.

There are one or two alternatives: To remain inactive; to follow negative policies and leadership; to go isolationist; to fail to face the realities of the world situation; or to adopt affirmative policies and take affirmative action, using the great power of our country as its national interest demands.

For your consideration and for whatever value my opinion may be worth to you, it seems to me that for our country to take the first course would be taking the road of defeatism and contrary to our own best interests.

We cannot escape the fact that all nations and all peoples are looking either to the east to Moscow, or the west to Washington.

It is known that the great majority of the peoples of countries behind what Winston Churchill properly termed "the iron curtain" are hoping and praying that the day of their deliverance from the hands of the oppressors is not far off. There is powerful discontent behind the iron curtain.

Before the pressure on the unfortunate people behind the iron curtain can be relieved so they can with freedom from fear establish the form of government of their own choice, our country must use its powers to stop an extension of the iron curtain and to assist the decent elements in countries at present outside of Soviet control to resist with success the influences that would destroy them.

There is no question but what a great majority of the people of Poland, Yugoslavia, Lithuania, Latvia, Estonia, as well as other present satellite nations of the Soviet Union, at the first opportunity possible when their will can be expressed without fear, will oust the Communist regimes now in control of their governments.

Such regimes exist where the Russian Army has an occupying force.

Fortunately our country is committed to a policy of active assistance, in accordance with international law, to countries resisting

aggression. Our country has not recognized any of these regimes that have been forced upon a people.

The message of President Truman of a few months ago is a recognition of the present world challenge, and a message to the world that we do not intend to sit idly by and witness country after country taken over by the forces of atheistic communism in violation of international law. By his message, we also inform the world that we do not consider that such happenings are consistent with our own national interest. The address of President Truman is another ringing American message that will take its place among the foremost pages of history.

The Congress of the United States also recognized the gravity of the situation when it followed President Truman's recommendations and passed the Greek-Turkey legislation, to preserve those countries against the forces of aggression. That action was also for our own best interests.

The message of President Truman and the action of the Congress has committed our country to an affirmative approach in meeting the challenge and in acting for our national interest.

It would not be consistent with our national interest for our country to sit idly by and permit country after country to be taken over by the forces of international Communism and to wait, through our neglect, until this vicious wave has reached our own shores. To follow such a course, in my opinion, would be criminal negligence.

We must remember that this situation has been forced upon us; that we have to act now, or it will soon be too late.

If our country failed to act, or fails to do so in the future as conditions require, every country now outside of "the iron curtain," against their will, would have to turn to Moscow to make the best agreements possible, and the first one made will be the beginning of the end for that country.

There is not a country in continental Europe that is free from fear. And as country after country falls to the Soviet control, whether direct or indirect, the countries comprising the Western or the Christian civilization become smaller in number, and are taken out of the spiritual and constructive influences of our civilization.

And with continental Europe under the direct or indirect control of international communism, Asia, already on the defensive, and Africa will in all probabilities quickly follow.

The forces of decency in the world have reached their last line of defense. That last line of defense is in Europe. The line must be held there before we can start rolling back this challenging wave. It would be a world catastrophe of first importance, for example, if either Italy or France become subjected to a Communist government. The forces of decency in those countries, already subjected to powerful pressure, are fighting hard to save their countries from such domination.

It is in our national interest, as well as in the interest of a future decent world, that our country take and maintain affirmative action wherever necessary.

In order for this to be done, public opinion in America must be aroused to a recognition of the situation, and with a determination that our country meet and perform its responsibilities as the first power for good that exists in the world of today. In this respect you and all other American citizens can play an important part. An aroused public opinion plays a most important part in the life of a democracy.

In connection with a consideration of the present world situation, we must keep in mind that the deliberate unwillingness of the Soviet Union to cooperate with understanding with other nations is the primary cause of the present fear and unrest that exists throughout the world.

On an occasion of this kind, matters of import, and what I have discussed is a matter of grave import, should be discussed with all frankness. You are future leaders of our country, that is, you can and will be if you carry with you into your future life the truths you have learned at Belmont Abbey College.

As the Communist is one possessed with fanatical mind, believing in a destructive ideology which he would impose on others, so must those who believe in God and our way of life make ourselves active missionaries advancing the constructive truths that our philosophy of life has given to us.

I have presented to you today a picture of a world in which forces of evil and destruction are attempting to dominate, but on the other side there are powerful forces of good and constructiveness, and the forces of good, when organized, always overcome the forces of evil.

We can thank God that our country has recognized and assumed its proper and necessary leadership in world affairs as they exist in the troubled world of today.

With the assumption and the continuance of that leadership, exercising our great powers diplomatically and economically, with an aroused American public opinion in support of affirmative policies, you and I can go forward and look to the future with confidence. We need have no feeling of fear.

In discussing with you, as I have, the present world condition, I mainly do so for the purpose of conveying to you a message of confidence as you take the next step in your journey of life, and not of fear. Therefore, as you take your next step, let confidence and not fear dominate your thoughts and your actions.

The experience of life should teach us that when men and women become indifferent to the dignity of human beings they soon begin to think that saving their physical existence means saving their dignity.

When individuals or nations become indifferent to God, then spiritual values are no longer the driving force of their lives and their existence, and the life of an individual, and the existence of a nation, becomes a mad scramble to attain the false peak of economic stability.

When people become indifferent to truth they are then the target for the shattering gunfire of propaganda, emotionalism, and of the false prophets.

It is then that the final goal ceases to be the center around which noble hopes and ambitions resolve. It is then when people grow weary of being human beings and pretend to shake off their humanity by wearing false faces.

If some of you feel that the pioneering spirit is no longer needed, you are sadly mistaken. Those who possess noble ideals must still try to eliminate the dark barriers of hatred, intolerance, selfishness, and evil, and the harmful results that flow therefrom which have kept the human family divided.

Who are better able to go forth and penetrate these debasing barriers to the progress of mankind and progress than you who have been educated to a way of life, based on truth, love, and sacrifice—you who possess the truth—you who recognize the individual and respect his God-given rights.

Mellon Foundation Gifts

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 10, 1947

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newpaper articles:

[From the Pittsburgh Press of June 9, 1947]

OVER $32,000,000 OF MELLON BEQUEST TO BE GIVEN TO PITTSBURGH—ALL REMAINING ASSETS OF FOUNDATION WILL BE SPENT WITHIN 15 YEARS FOR PROJECTS

The Mellon Foundation is about to give over $32,000,000 for projects in the Pittsburgh district.

The vast bequest will enable Pittsburgh institutions to carry on activities expected to prove of national and international value.

All remaining assets in the foundation established by the late Andrew W. Mellon will be distributed in approximately 15 years, and all for use in this district.

Trustees of the A. W. Mellon Educational and Charitable Trust, in making this announcement today, said that the program for doing so will be made public later. The announcement was made at the same time that the foundation issued a report on its first 15 years of operation.

ESTABLISHED IN 1930

Trustees are Paul Mellon and Mrs. Ailsa Mellon Bruce, children of A. W. Mellon, and Donald Shepard, long associated with him.

Remaining assets in the Mellon trust had a book value of $32,416,459 at the end of 1946. But their present market value is believed to be very considerably higher.

The Mellon trust was established in 1930 for "such religious, charitable, scientific, and educational purposes as are in furtherance of the public welfare."

The trustees decided to concentrate all future grants in the Pittsburgh area because Mr. Mellon's major interests had always been in and around his home city. However, he left no specific directive as to the activities or location of projects to be helped by the foundation.

WILL BE ADJUSTABLE

"The trustees decided to distribute all remaining assets of the trust within the next 15 years because Mr. Mellon during his lifetime questioned the wisdom of leaving substantial foundation funds in perpetuity," the trustees said. "They emphasized, however, that the program will have to remain adjustable both to shorter and longer periods, depending on future developments."

No indication of how the vast sum will be distributed was given in today's report. It simply said that the money will go for "a major project or projects in the Pittsburgh area."

As soon as further policies are decided on, the future program of the trust will be announced. Until that time, it will make no new grants.

The 15-year report issued today showed that Pittsburgh and Washington institutions already have received millions in grants from the fund. Its total distributions through 1946 has been $78,270,280.

Total market value of Mr. Mellon's gifts and bequests to the trust exceeded one hundred millions. This sum was substantially increased by later earnings.

The foundation's biggest gifts were to the National Gallery of Art in Washington. The building cost over sixteen millions and an endowment fund of five millions was established. The art collection which Mr. Mellon gave to the gallery was valued by congressional committees at fifty millions.

Total value of this gift, which was made to the American people in a letter to the President, exceeded seventy-one millions. It was the largest gift ever made by an individual to the Nation. In making it Mr. Mellon stipulated that the gallery must not bear his name.

BIGGEST BENEFICIARY

Chief Pittsburgh beneficiary of the trust has been the Mellon Institute of Industrial Research. This is an endowed nonprofit institution organized in 1913 by Mr. Mellon and his brother, Richard B. Mellon.

It conducts research in the pure and applied natural sciences through the medium of fellowships. Research is done both for public and private organizations. It also trains research workers and distributes scientific data for public use.

The Mellon brothers donated $8,400,000 for the building on a basis of equal shares. The Mellon Trust gave $285,232 to the institute for research projects, including pneumonia studies and investigation of antimalaria compounds. Securities for the endowment were used in 1946 to add $1,154,520 to that fund.

VARIETY OF GIFTS

In addition to the major gifts to the National Gallery of Art and Mellon Institute, the trust announced a wide variety of charitable gifts during the last 15 years. These grants totaled $4,898,872, for the following uses:

Social welfare, $2,036,551.
Education, $1,277,613.
Health, $600,108.
Public and civic enterprises, $133,500.
Religious institutions, $16,100.
World War II relief agencies, $835,000.

Much of this money came to Pittsburgh institutions.

Three-fourths of the $2,036,551 for social welfare went to the Pittsburgh Community Fund. Much of the educational grants were to the University of Pittsburgh for buildings, scholarships, and the University Press. The total given to Pitt was $630,428.

Carnegie Institute of Technology, Shady Side Academy and Pennsylvania College for Women also received grants. The PCW endowment fund received a grant of $500,000 last year.

SYMPHONY AIDED

The Pittsburgh Symphony has received $140,000 from the trust. Pittsburgh Playhouse and other organizations in the field of fine arts have been helped. The Boys' Club in Pittsburgh also received help.

Half a million dollars went to the Red Cross War Fund from 1940 to 1945, with $268,500 for the USO and other war agencies.

The Mellon Trust never actually has carried on projects. It has acted solely as a grant-making agency to established public educational and charitable institutions. It has taken no part in the administration of institutions receiving grants.

* * * * *

The money apparently will go to established Pittsburgh institutions or to such as might be set up to carry projects in behalf of the public.

The 15-year report covered operations of the foundation through December 31, 1945, during which time it made grants of $75,956,305. Gifts in 1946 were $2,313,981.

The National Gallery of Art now houses over 16,000 works of art. Over 2,000,000 visitors from all parts of the world annually visit it.

The Mellon Institute in 35 years has issued thousands of publications and articles. During that time 979 United States patents and 920 foreign patents were taken out as a result of its research.

[From the Pittsburgh Press]

GREAT GIFT OF PITTSBURGH

On top of a great program for public improvements in Pittsburgh—including new highways, traffic control, the Point Park, urban redevelopment, a parking authority, elimination of stream pollution, and smoke control—comes today a surprise announcement of outstanding importance.

The A. W. Mellon Educational and Charitable Trust is going to devote all its remaining assets to projects in the Pittsburgh district.

These assets have a book value of more than $32,000,000, but their actual market worth is believed to be considerably greater.

Within a period of 15 years, this vast sum will be used to support projects for the general welfare. So great is the amount thus assured for public, religious, charitable, scientific, literary, and educational purposes—as provided in the language of the trust—that its expenditure in this one section should produce outstanding results.

The three present trustees—Paul Mellon, Ailsa M. Bruce, and Donald D. Shepard, announce that they hope these results will have national and international value.

The decision to distribute the entire trust for use in the Pittsburgh area again emphasizes the loyalty to and interest of the Mellons in the city where they founded their careers and made their wealth.

"The major interests of the donor had always been in and around his home city," was the simple explanation of the trustees.

These benefactions can mean much for the public welfare, and particularly for the welfare of Pittsburgh.

The city already is a center of scientific and educational research; rich in the arts and eminent as a school, hospital, and laboratory area. It has numerous institutions eminently able to carry on work of the utmost importance for the welfare of mankind.

Now it is assured that vast funds will be made available to further such work and to carry on other projects which may be included in the program.

The Mellon trust will make no further grants until the new program is announced.

Its report indicates that a survey already is under way to determine "the major needs of the Pittsburgh area, including those now existent and those likely to develop in the foreseeable future."

The combination of this vast private charity with the great program of public improvements now getting started can reshape the whole future of the Pittsburgh district.

[From the Washington Post of June 9, 1947]

MELLON FUND GIFTS TOTAL SEVENTY-SIX MILLIONS IN 15 YEARS—REPORT SHOWS BULK OF PHILANTHROPIC TRUST WAS INVESTED IN NATIONAL GALLERY

Nearly $76,000,000 in cash and works of art were contributed to local and national institutions by the A. W. Mellon Educational and Charitable Trust during its first 15 years.

Most of this amount—$71,000,000—represents the building, endowment, and works of art of the National Gallery of Art here. The gallery was given to the Nation by the late Andrew W. Mellon through the trust. This is the largest gift ever made by an individual to the United States Government.

A report of the trust, to be distributed today, shows that other Washington institutions benefited by gifts of $368,850 during the period from December 30, 1930, when Mr. Mellon created the fund, to December 31, 1945. The largest of such local gifts went to the Community Chest and the Corcoran Gallery.

The trustees, Paul Mellon and Mrs. Ailsa Mellon Bruce, children of the former Secretary of the Treasury, and Donald D. Shepard, of Washington, long-time associate of Mr. Mellon, plan to distribute the entire remainder of the fund within the next 15 years. At the end of 1946, its book value was $32,416,459, but the market value was substantially higher, the report states.

The total of all contributions in the 15-year period covered by the report amounted to $75,956,305, and additional gifts of $2,313,981 were made during 1946.

Mr. Mellon began to give property and securities to the trust in 1930. In 1931 he made his first gift of paintings, and later all the works he had gathered became part of the internationally famous collection of the National Gallery.

The book cost of the Mellon collection was $32,490,155, but at the time of the gift, it was valued by congressional committees at about $50,000,000.

The building housing the Gallery, dedicated in 1941 and accepted by President Roosevelt cost $16,057,433. In 1942, the trust established a $5,000,000 endowment for the Gallery, which as expressly stipulated by the donor, does not bear his name.

Mr. Mellon's hope that other donors would contribute to a great national collection, has been realized, and the Gallery now houses more than 16,000 works of art.

In addition to its major project and to the Mellon Institute of Industrial Research in Pittsburgh, previously generously endowed, the trust has made a wide variety of charitable grants, totaling $4,898,872.

Among these have been the following, made to institutions and agencies here in Washington:

In the field of social welfare: American Red Cross, District of Columbia Chapter, $52,250; Boys' Club of Washington, $10,000; Boys' Club of Metropolitan Police, $850; Community Chest, Washington, $122,000; Central Union Mission, $3,600; Child Welfare League of America, $100; unemployment relief in District of Columbia, $9,050; Washington Home for Foundlings, $50,000.

In education: American University, $5,000; National Symphony Orchestra, $4,500; Corcoran Gallery of Art, $65,000.

For health: Gallinger Hospital, cancer research, $1,500.

For religion: Washington Protestant Episcopal Cathedral Foundation, $9,000.

For war relief: USO special committee, Washington, $7,500; United War Fund, Washington, $28,500.

Carter Glass

MEMORIAL ADDRESS
OF
HON. PATRICK H. DREWRY
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1947

On the life, character, and public service of Hon. CARTER GLASS, late a Senator from the State of Virginia

Mr. DREWRY. Mr. Speaker, the life of CARTER GLASS exemplifies the opportunity there is for every American who possesses ambition, courage, determination, and willingness for hard work to succeed in what he attempts to do.

CARTER GLASS was born in Virginia in 1858. His span of life covered the argumentative excitement of a possible disruption of his country, the actual conflict which was the outgrowth of two schools of thought as to the interpretation of the Constitution of the United States, the so-called reconstruction period, the building up of the devastated area of the country in which he lived, the patriotic and heart-burning efforts of Virginians to put their State on the road to recovery, and three war periods in which his beloved State was endangered by the events affecting the welfare of his Nation. Such a period required moral, mental, and physical strength of a high order. His efforts resulted in placing him at the top of the statesmen of his time, who successfully

used their genius for the welfare of their country.

His father, an officer in the Confederate Army, was a newspaper publisher, but, like all other Virginians, lost everything during the War Between the States. CARTER GLASS was 7 years old when the war ended, and Virginia, utterly bankrupt, was not in a position to provide complete educational facilities, so he, like other Virginia boys with limited educational opportunities, was forced to educate himself. He read and studied the books to which he had access, mainly in his father's library. The books were not many, but they contained in their pages the philosophy of the sages of the world. With a retentive mind, he never forgot his reading during this formative period of his life, and his writings and his speeches show his acquaintance with the thought of the great philosophers of former times.

Naturally, in his efforts to make a living and get an education, his mind turned to newspaper work, and he became, first, a newspaper carrier at 13, and a year later went to work in the newspaper office as a typesetter. It is possible that his extensive vocabulary was partly obtained from the nature of his work, as unaccustomed words when setting type fixed themselves in his mind.

When he was 18 years of age his family moved from Lynchburg, Va., where he was born, to Petersburg, Va., his father having accepted the editorship of a Petersburg daily. I talked with him frequently about his life in my home town and enjoyed the recital of his experiences as a printer. He soon, however, had an urge to write and became a reporter for a Lynchburg paper, and from this time on, as he worked up finally to the ownership of the paper upon whose staff he had commenced his work, he became known throughout the State for his editorial style and his vigorous, trenchant method of expression. He was at his best probably in his political editorials, and soon began to take a personal interest in the politics of the State. Probably the value of his work as an editorial writer may never be properly evaluated, but as a journalist, he became well known throughout the State before he went into public life. His first public office was as State senator from the senatorial district comprising the city of Lynchburg and Campbell County, and he was a member of the State senate from 1899 to 1903, after which he resigned.

A State convention was called in 1901 to write a new organic law for Virginia, the purpose being to get rid of laws which were obnoxious to the people of the State and had been forced upon them in the reconstruction period. CARTER GLASS was selected as a delegate to that convention. It was an opportunity to do the things that were much to his liking and uppermost in his mind. Due to his work in that convention, he became one of the best known men in the State, and shaped the basic law to an extent that was probably greater than that of any other delegate. While there have been constitutional conventions since that time, that Constitution of Virginia still remains basic, and is largely the foundation of the work of the following constitutional conventions. The work of the convention of 1901–02 still remains, and the work of CARTER GLASS stands out in the framing of it.

In 1902 he was elected to fill a vacancy in the House of Representatives from the Sixth Congressional District of Virginia, and was seated December 1, 1902, in the Fifty-seventh Congress. He was reelected to all of the succeeding Congresses through the Sixty-sixth, but before the commencement of the Sixty-sixth Congress, he resigned to accept the position of Secretary of the Treasury offered him by President Woodrow Wilson. The President's attention had been called to Senator GLASS' ability in his handling in the House of the Federal Reserve Act, and when Mr. McAdoo resigned, it is reported that he suggested to the President that Mr. GLASS would be the man to take his place. He was the first Secretary of the Treasury from Virginia and the first Cabinet officer from Virginia since John B. Flood was Secretary of War in President Buchanan's administration. In his position as Secretary of the Treasury, he was called upon to clean up the waste and wreckage of war, and there were numerous matters involving the Treasury, both foreign and domestic, which required the closest attention. This is not the place nor the time to do more than point out that at a dangerous time in the financial condition of the country, he served conscientiously and faithfully and with distinction.

Then came his appointment by the Governor of Virginia to the vacancy in the Senate of the United States occasioned by the death of Thomas S. Martin, but he remained as Secretary of the Treasury until the vacancy caused by his resignation of that position could be filled by the President; therefore, he did not take his seat in the Senate until February 2, 1920. He was elected to the Senate for the unexpired term, and then reelected for successive terms until his death May 28, 1946. His service in the Senate stands out before the country to such an extent that it is not necessary to go into details concerning it. An analysis of his personal character indicates his greatest attributes were courage, and independence of thought and action. From a legislative standpoint he was an outstanding and vigorous champion of the Constitution of the United States. In the history of the Senate, as the years passed from the beginning of the Government, and as long as this Government endures, CARTER GLASS will be ranked as one of the great leaders of that body. His position in legislation can be given in his own words in extracts from his speeches, which indicate his independence of mind and his appreciation of the fundamental principles as evidenced in the Constitution:

> It is more than likely, though I do not admit it, that I have been wrong more than I have been right. But whether I have been right or wrong, I have spoken my own mind and voted my own way and did not permit anyone to do it for me. If I have been wrong, I regret it. In all events my purpose always has been to serve Virginia and my country.
>
> The people of my State, I think, understand when they send me to the Senate, they send me to exercise my own best judgment and heed my own conscience. I would rather go out of the Senate and spend the few remaining years of my life where I was born among my people, and without their favor—but possessing still my intellectual integrity—than to surrender my convictions.

Again he expressed the same thought in the following words:

> I prefer to think of a United States Senator as a representative of the sovereignty of his State and subject every moment of his service to the promptings of his conscience and the preservation of his own intellectual integrity.
>
> I refuse to believe that the people of Virginia want me, as their representative, or the people of other States want their representatives, to vote for things unconstitutional and oppressive.

He was noted for his adherence to a strict interpretation of the Constitution. He consistently, fearlessly, and with ability advocated adherence to the Constitution of the United States, and shaped his votes and his work in accordance with his views thereon. In his own inimitable phraseology, he called himself "a relic of constitutional government."

His views of the construction of the Constitution is expressed with such clarity that I am setting out a further extract from his addresses:

> The Constitution belongs to the people. It was written by great representatives of the people, chosen for the purpose, and was ratified by the people as the Supreme Charter of their Government, to be respected and maintained with the help of God. With the consent and by mandate of the people their Constitution provides how it may be amended to meet the requirements of the ages. It has always been so, and no administration in the history of the Republic has attempted to flank the Constitution by a legislative short-cut so vividly denounced by Woodrow Wilson as "an outrage upon constitutional morality."

I cannot end this feeble tribute to a great man without striking a personal note. I came to the House of Representatives a few months after he took his seat in the Senate. I had known him for many years, but had not had an intimate acquaintance with him. My work in the House involved, in my opinion, cooperation with my colleagues, both in the House and Senate. I conferred frequently with Senator Glass and he never failed me. I relied upon his good judgment and his intense patriotism and his love for our State and Nation. My views, to a large extent, coincided with his. He had the great attribute of loyalty, not only to his country but to his friends. I felt that I had learned his friendship—he most assuredly not only had my loyal friendship, but also my deep admiration for him as a man of integrity and ability. His character was beyond reproach. I feel deeply a personal loss, the loss of a strong friendship, and the political scene lacks in depth as well as in picturesquesness since he has been away from it. His death created not only a vacancy in the office which he held, but it also left a vacant place in the line-up of men throughout the years who have given their best patriotic endeavors to the welfare of their Nation.

Address by James A. Farley Before Canadian Exporters' Association

EXTENSION OF REMARKS
OF
HON. J. HOWARD McGRATH
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES

Wednesday, June 11 (legislative day of Monday, April 21), 1947

Mr. McGRATH. Mr. President, among the civilian population of our country there is perhaps no finer exponent of good will and good neighborliness than the Honorable James A. Farley, former Postmaster General of the United States and now chairman of the board of the Coca-Cola Export Corp.

Recently at Toronto, Canada, he delivered before the Canadian Exporters' Association an address which in every respect rings true to these traditions.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WORLD TRADE AND WORLD PEACE

An American coming to Canada is proud of both countries. If, as in my case, he has recently traveled in Europe and Asia, he is also humbly grateful for them. Our two countries, beyond most others, know the real content of peace.

Actually, peace depends on what goes on in people's minds. Canada and the United States, like other countries, have a lot of assorted and abutting geography. If we wanted to we could make that geography bitter and venomous, as are the quarrels overseas. In that case, Toronto could be another Trieste. Detroit could be a pistol pointed at the head of somebody. The St. Lawrence River could be another Dardanelles, and Alaska an encircling movement. Thanks to the right-mindedness of our peoples, these things don't happen here and they won't happen here. As an American, I am proud of the achievement, and I am thankful to the gracious spirit of both our countries.

If we could teach the spirit of Canadian-American relations to all the countries in the world, we should have real peace, and sometimes I think that is the only way we ever will get it.

We have not got real peace now. In the past year and a half I have seen most of the Western Hemisphere and a great part of the Eastern Hemisphere. I claim no expertness in foreign affairs, and do not pretend to have all the answers to every country over which I have flown in an airplane. But, as a businessman not wholly unfamiliar with politics I know some things when I see them, and they may be of interest.

Practically everywhere there is social unrest. I cannot, of course, speak about the Soviet Union, where the press is censored and visitors do not go about freely. My guess is that if you got below the surface, you might find unrest there too. If this is not so, I cannot make out why they have to keep millions of Russians in prison camps all the time.

Eleswhere we don't have to guess. We know. There is a general, huge movement, taking different forms in different countries, and differing in intenseness practically everywhere.

The slogans and political catchwords and catch phrases of this unrest differ, depending on the country and depending on political leaders who either exploit the unrest or oppose it. The experts can report on the various local issues. I know from my own political experience, however, that slogans and political catchwords and catch phrases, together with local issues, are only the crest of a wave. They are usually cast up as a result of some deep unhappiness beneath the surface.

The Lord knows that in most parts of the world—our own countries being perhaps among the amazingly few happy exceptions—there is plenty to create unhappiness. In many places there is not enough to eat, and food and other supplies are getting less. Great blocs of people are increasingly hungry; they are apprehensive of being hungrier yet. The mere business of standing endlessly in line, to get less food than you need and of a kind you don't want, makes people bitter and hard.

Also, practically everybody is afraid. Sometimes they know what they fear. More often they are simply afraid of the whole future. This is chiefly true in Europe. Tomorrow is a day not to be hoped for, but dreaded. Life there is not happiness, it is survival.

Against that background I found many fine and splendid men and women with their heads up, trying to meet the soul-trying problems of the time. Some of them were working through their governments. Others were working with Protestant, Catholic, Jewish, and other religious bodies. Still others were in business or private occupations. I think the huge majority everywhere pray that they and their colleagues will bring order out of the wreckage and pull things together again. But they want honest leadership and help, and they need both badly.

This is where we come in. North America has that leadership whether we want it or not. Our civilization is in one piece, it is working, and it is successful. You and I know, of course, that we have our own trouble spots and headaches and some failures. Being democracies we talk about them and expose them and in that way get them cleaned up. But by comparison we are so far out ahead that no one else is even in sight. Our poorest are living in luxury by comparison with the middle and lower average across the sea.

In that respect, let me say that the Canadian job has been perhaps the most successful in the entire world. You did it by straight thinking and hard work and great loyalty. You paid half your war expenses currently. You kept your prices in bounds. Your food prices are where ours were a year ago—and I wish ours were back there. While you have been doing this for your own people you have been one of the three greatest contributors of goods and food and money to the stricken Old World. This is a great record brought about not only by wisdom in high places but by loyal action of all Canadians. My hat is off to you, and so is that of everyone who knows your glorious record.

We in the United States also have not done so badly, though we have had our slight dose of postwar inflation which I hope is now petering out.

In combination, our two economies have put us at the business and economic top of the entire world—and the entire world knows it. This is one reason why we have a leadership position which we could not resign if we wished.

Partly because of this, North America, and particularly the United States, has likewise top position in sheer power. Military strength today has its roots in commercial production and its branches in organizing ability. In a hemisphere of great natural resources these elements make us powerful beyond any combination yet known. We did not go out to get this position. It happened automatically when we really stretched and stinted ourselves to make our full contribution to defend civilization in World War II. Nevertheless, you and I have to live with the results and they are going to affect us, both of us, right along from now on.

The war job proved that we could nearly double our national production even though the flower of Canadian and American youth was taken out of industry and put into armies. That would have been amazing in itself, but something else happened, too. Partly because we took naturally to the air and partly because we use machines, our two countries proved that the power of this hemisphere can be laid down practically anywhere in the entire world. Armies crossed the Atlantic and reconquered western Europe. Task forces pushed into the Pacific and dumped an unbeatable barrage on Japan. Equipped with atomic bombs which, I might observe, were jointly developed by Great Britain, Canada, and the United States, the military force we had at the end of World War II, and could have again if needed, gave us unlimited scope for power politics if we were minded in that direction, as I hope we will not be.

As a result, from now on no political or diplomatic combination anywhere can ignore the attitude of North America. Whether we like it or not, we are one of the dominant world forces. That puts some questions on our doorstep. Throughout my travels I had the privilege of talking to most of the representative men in the many countries I visited. Over and over again they asked, in different ways. "Do you know what you want? What is your policy? How do we fit into it? We have world leadership, and now we have to live up to it.

That is a large contract. I spoke a moment ago of the general sense of fear and unrest outside our common countries. Peoples are looking to us to help in bringing about a real peace.

My belief is that in the next 2 or 3 years this leadership will be tested. The test may come soon. Here are some reasons:

The Old World, and particularly Europe, has not reconstructed itself. That is, they are not producing and trading at levels which take care of their people. They have been filling in by securing goods from the Western Hemisphere, chiefly from the United States. They are not producing and exporting enough goods in payment. Instead, they have been getting by with relief funds and using their prewar supply of American dollars and their gold. Just now the United States is exporting monthly goods worth nearly a billion dollars more than the goods she monthly imports. You don't have to be an economist to know that this cannot go on indefinitely. Sooner or later the supply of dollars and gold runs out. Some experts think it will run out this year or early next year. That, of course, would be the end of the export boom in North America; but it would also be the end of even the most modest flow of necessary goods which has kept western Europe afloat during the past 2 years.

This would be bad anyway, but it is made worse by the fact that much of the world, and especially Europe, had a poor food crop last year, and apparently is going to have another bad crop this year. It looks therefore as though European dollar exchange will run out about the same time that her needs for food, as well as for machinery and equipment will be at their peak.

We can see the time coming, then, when the eyes of the world will be on us. They will want to know what we can do about it.

Our governments, well aware of this, have doubtless prepared a plan. May I speak now to ask you, however, and my countrymen in the United States, to think this situation

through and meet it with the best of your brains and the best of your hearts. If we do some proper thinking now, we may save months and years of misery for ourselves and others later on. If things move as now indicated, it may take everything we have got to prevent chaos.

It is no help in this business that there are countries which hope for that chaos and expect to profit by it. I can draw no other conclusion from some of the policies followed by our Soviet friends during the last 2 years. I do not believe their policy will be successful, and I hope and believe they will eventually change it. I have seen a good many attempts at rule or ruin in my life, and I have noticed that the end is always ruin and never rule. But it does add to the problems of the men of good will who want a world of peace and plenty and kindliness.

I have painted a stormy world outlook. But there are some things you can do and do now. Though the Old World is in deep trouble the nations of the Americas, north and south, have a splendid opportunity to help themselves and the world. They are well along the road to close working partnership. They can now close ranks to form a working alliance of peaceful nations, capable of influencing the entire world picture.

Canadians, like Americans, have followed the progress of the Pan American Union and of the inter-American conferences for a long time. In recent years the Canadian Government has sent observers to many Pan-American meetings. I know that Canada's membership in the Pan American Union would be almost unanimously welcomed in the United States and in the other American republics. Because the American Hemisphere has no plan or desire for conquest or aggression anywhere, and because none of us has any wish to weaken Canada's ties with the British Commonwealth, I am clear that it is sound policy and sound common sense to bring together the American nations in a peaceful group thoroughly capable of mutual defense, and also thoroughly able to help our less fortunate neighbors flourish.

The American nations together can do a number of things. They have area enough, land enough, and resources enough to be able to use effectively a considerable number of European immigrants. They can increase still further their own agricultural production. Taken together, they can be almost self-sufficient in time of danger; but they must be buyers as well as sellers in times of peace. The outlines of a great structure have already been drawn. They are already a regional group within the framework of the United Nations. They have guaranteed each other's frontiers. They have outlined a hemispheric general staff for common defense. They have gone farther than any group of countries in maintaining peace.

Traveling through South America, you find everywhere a desire to increase the ties of inter-American unity—to strengthen them through Government action, to ballast them through trade, to widen them through exchange of students, to deepen them through personal friendships. At a time when, in other parts of the world, neighbor suspects neighbor, here there is no fear, and a great desire to get toward common understanding. American nations feel that the interests of all of us ride together. We can bring about the united front of the Americas against the growing fear and misery of the world.

While doing this we can put the united strength of the Americas at the service of the United Nations. We know, of course, that the United Nations is only just beginning. It has its troubles and its problems. It has been taxed up to the limit of its strength. But it is the main hope we have. I know how I would feel, and I think I know how you would feel, if tomorrow's newspapers were to announce that the United Nations had broken up. It would hit every one of us like a stone blow. We should be waiting in fear for the next outbreak of war. And we know that neither the Atlantic nor the Pacific nor the Arctic Oceans would protect us this time from having some of the effects of that war on our northern continent.

Fortunately the countries to the south of us are just as interested in the United Nations as are we. Many of them know the leading part which Canada has played in building the structure. They sent their delegates to Montreal, where the international civil aviation organization has its headquarters. They know that your Under Secretary of External Affairs, Dr. Lester B. Pearson, whom we knew in Washington familiarly as "Mike," is one of the most active and effective servants of the United Nations organization.

Perhaps, being a businessman, I have fewer illusions than some people about the task before us. Both in business and politics you have to deal with hard-boiled realities at all times. People who have quite different ideas have to be brought to agree on a common program. Bills do have to be paid. Interests have to be adjusted. The fellow who wants more than his fair share has to be convinced not only that he cannot get it but that it will be bad for him and the rest of us if he does. We have plenty of that kind in all countries. The job of any politician, national or international, is to take all this welter of ambition and idealism, and self-interest, and productiveness, and hope, and fear, and bring out of it something that works. Politicians are frequently abused. Sometimes they deserve it. But politicians frequently have been the great servants of society.

I can give you one word of hopefulness. From long experience I have noticed that very often people tackle a situation with exactly opposite points of view, and frequently with exactly opposite interests. But I have also noticed that practical men, while they will hang on to their differing ideas, and insist upon their differing interests, nevertheless do agree on a practical plan of action. They will go right on arguing about theories, sticking out for their claims; but they will nevertheless get together to do the practical thing. One result of the free system we have in Canada and in the United States has been to bring up two great peoples who are accustomed to doing just that. This is why a composite federation of provinces has become the Canadian nation, and why a scattered group of colonies came together as the Federal Union of the United States. That same attitude can help world affairs now.

I might add that you will need this kind of experience no matter what changes there are in the social structure of political forms. People are still people, regardless of the political complexion of their government.

Those of us who are assembled here are particularly interested in foreign trade. This is our job, and we get results. We don't call ourselves diplomats. We do the pick-and-shovel work by which peoples get fed, clothed and housed, in spite of international borders. We have to cooperate with each other and with our friends overseas, because if there is no cooperation there is no deal. To the extent that there has been one world, we have had a good large part in making it.

So let me greet you as colleagues, not only in business but also in the work of building a more peaceful world. Our job is expanding and we are moving into a time when our individual work becomes clearly a part of the work of the world. We shall need clear heads and stout hearts. We are not interested in a century of fear. We can, I think, contribute to making a great century. Our work is cut out but I think Canadians and Americans in partnership with the other American nations have shown the way.

Destruction of Potatoes

EXTENSION OF REMARKS
OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, June 11 (legislative day of Monday, April 21), 1947

Mr. HATCH. Mr. President, there has been much discussion on the floor of Congress and throughout the country concerning the destruction of potatoes in this country. I have an article appearing in the May 31, 1947, issue of Business Week, which discusses the problem and points out some of the factors which have not been considered. I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOING THE COMMUNISTS' WORK FOR THEM

If we were given the job of promotion manager for the Communist Party in the U. S. A., we doubt if we could possibly dream up a neater piece of business for our side than that portrayed in the center of this page. This particular exhibit was taken from the Detroit Free Press, one of the most staunchly conservative newspapers in the United States. But the same picture was run with much the same caption and text by daily newspapers through the country.

On the very days when the picture, thanks to wire-photo, was being featured in picture sections from coast to coast, the front pages of the same newspapers were reporting the desperate hunger in Europe and the hurried emergency steps to stave it off. The Nation's newspaper readers were thus left with the clear and dramatically underlined impression that, while Europe cries out with hunger, we destroy fine foodstuffs in order to keep up the price. Certainly it would be hard to conjure up a more damning portrayal of hopeless confusion and frustration in our own house.

Well, what of it? Wasn't it the duty of the press of our free land to tell the plain and unadulterated truth, however unpleasant? It is, indeed, the business of the press to tell the complete truth, but in this particular case one key and easily understood fact, which puts an entirely different complexion on the exhibit, was left out. And other facts which reveal the incident portrayed in a much softer light also were ignored by the blunt report that "A glutted market brings more than 50 tons of surplus potatoes to be dumped by the Government * * * kerosene was poured over the potatoes to render them useless."

The key fact which was completely ignored is that potatoes could not be shipped to Europe. This fact first came to light last January, when the potato surplus began to attract attention. UNRRA officials, noting the availability of 20,000,000 bushels of potatoes, said that a thorough study had convinced them of the impracticability of shipping them to needy countries. Potatoes must be shipped in refrigerated vessels or dehydrated. Refrigerator space, even if available, could be better used for more nutritional foods, UNRRA reported. The cost of preparing and shipping dehydrated potatoes would be five times what it would be to send other foods of equal caloric value.

Another neglected fact is that the Government potato surplus is a hangover of a wartime program which commanded almost universal congressional support when enacted.

In 1942, in order to stimulate production of crops urgently needed for the war effort, the principle of Government support of agricultural prices during a period of postwar readjustment was written into the Stabilization Act. Under this act, which remains in force until 2 years after the end of hostilities (until December 31, 1948), the Government is committed to buy farmers' produce if the market price falls below 90 percent of parity.

As we have remarked before in this space, we think the farm price support program now hurts both the public at large and the farmers themselves. It encourages excess production of the wrong things, and retards the adjustment of farm production to the facts of economic life. In our view, the program should be dropped at the first moment it can be done without having the Government break its pledge. But, even so, this wartime measure is not the utterly inane and antisocial program so starkly implied by the exhibit in question.

Our inquiries indicate that this potato picture (and what it does not tell) has had a wide and deep effect. Indeed, while there is no way to measure it, we doubt if the combined efforts of all the editorial page defenders and expounders of the American way of economic life for the next 6 months will offset the devastating impact of the misrepresentation carried by that single picture, particularly in its vivid and immediate association with starvation in Europe.

We expect the Communists and their cohorts to misrepresent the workings of our economic system. But when the press of the country, in its most conservative reaches, does the Communists' stuff for them with tremendous effectiveness, we call that unfair competition.

Our Illusory Labor Force

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 11, 1947

Mr. ENGEL of Michigan. Mr. Speaker, I am placing in the RECORD a very interesting article which appeared in the April 1947 issue of American Affairs entitled "Our Illusory Labor Force."

This article is by L. C. Walker, president of Shaw-Walker Co., of Muskegon, Mich. Mr. Walker has been a student of economic questions for many years and has written some splendid articles along this line. The following is one of the most thought-provoking presentations I have read for some time. By reason of Mr. Walker's experience and because of his objective point of view, the article offers a surprisingly fresh slant on the whole problem of our labor force and its relationship to the prosperity of the country as a whole. Anyone who reads it will agree that it is a timely contribution on this all-important subject.

The article follows:

OUR ILLUSORY LABOR FORCE—AS IT IS AND AS WE USE IT, CAN WE REPRODUCE OUR FORMER STANDARD OF LIVING?

(By L. C. Walker)

I am interested in the relation of employment to the standard of living, and I suspect that our thinking about it has become greatly distorted.

First, the Government was in a panic about unemployment after the war. Its economists said there would be 8,000,000 or more out of work shortly after the fighting ceased. The lawmakers had wisely passed a law that employers must give jobs back to every enlisted man. They apparently were thinking there would not be jobs enough. Henry Wallace tried to stir things up with his evangel of 60,000,000 jobs. Short of that, he suggested, industry would have failed to do its job, whereupon the Government must act, etc.

I represent a town that was blown up by the war from 16,000 industrial workers to 35,000. We all worried about what would happen to those extra people when we deflated and got back to our peacetime size. We tried to evolve plans to get our labor "imports" to go home, but before we could get very far with that idea a plant or two talked of moving away unless the chamber of commerce could guarantee more men. Soon there was more help-wanted advertising than at any time during the war.

I thought at first it was local. Now I am thinking it is national. The second city in Michigan, Grand Rapids, had surplus labor all through the war. Today it's as hard put for men as we are. When we want parts or material and push for delivery on orders long overdue, the answer is always the same: "We need more men." Domestic help isn't plentiful. Office workers are scarce everywhere. Men want higher wages, not more hours at time and a half.

A STATISTICAL MIRACLE?

During the five war years we heard much about our high production. Everyone praised industry. The flow of guns and ships and planes to the front was astounding. The President lauded labor on every occasion for its hard work and marvelous productivity. He said industry had been restored to a high place in his esteem (or maybe that's overstated). We all assumed these things to be true, with the gross national product, according to the Government's figures, going from $88,000,000,000 in 1939 to $120,000,000,000 in 1941; $187,000,000 in 1943; $197,000,000,000 in 1945; and $200,000,000,000 for 1946. Everyone seemed contented with such facts and there were certain things to be said for them. OPA was keeping official prices down. The statistical cost of living had risen only from the index figure of 96.7 in 1930 to 114.6 in September 1946 (using 1926 as 100). We believed a miracle had happened in production.

I now am of the opinion that even industry was misled by these magnificent figures. Much adulation may have turned our heads. We don't generally analyze a compliment. We overlooked that war material was bought on a cost-plus basis, or at negotiated prices, with nothing basic to protect the Government's purchasing agents and the suppliers protecting themselves. Possibly we were distracted by the OPA propaganda. We forgot to look at the consumer—at what it cost him to survive.

AS CONSUMERS

Let us look now at some comparative prices:

	Autumn, 1946	In 1936	Up
			Pct.
Wheat	$2.10	$1.11	89
Corn	2.03	.88	130
Cotton, bale	192.50	60.10	220

Three automobile dealers handling popular models gave me these figures:

	Autumn, 1946	In 1939	Up
			Percent
Automobile	$2,200	$1,250	76
Do	1,600	900	77
Do	1,039	680	52

A chain-store manager gave me these figures:

	Autumn, 1946	In 1939	Up
			Pct.
House dresses	$5.95	$1.98	200
House coats	$8.95	$3.89	130
Gloves	$2.59, $3.49	98 cents to $1.00.	164
Curtains	$5.39	$1.95	175
Underwear, rayon	59, 69, 79 cents	25 cents	136
Rayon, No. 1	$1.15	59 cents	95
Towels	66 cents	36 cents	83
Wash cloths	19 cents	10 cents	90

I am suggesting that our high national income is not a measure of our productivity; that, for what it will actually buy, it is below what the United States has been used to, even below what is needed to maintain our old standard of living, and that somebody is hoodwinking the people into believing that they are going to get the goods they got before, plus extra for some or all of their savings, plus rebuilding Europe and Russia and Japan, reequipping English mines and plants, starting a manufacturing economy in South America and a few other countries.

I now test my supposition on a different base. I take the period 1929–30 as a composite year. It was one of the last good years, undisturbed by depression or war—when unemployment was normal (only 3,000,000 total unemployed), when cost of living was an index figure of 97, as compared with 115 now. The gross national product in that year was $88,000,000,000. It was a year of good living; you could buy anything you wanted.

In the year 1929–30 much employment was on a 48-hour-a-week basis. Other things being equal, it will take 120 men now to produce as much as was produced by 100 men in 1929–30, simply because they now work fewer hours. The 40-hour week was made a Federal edict in 1934 under the Blue Eagle, the first of the New Deal's regulations of business. Shorter hours appear in more union negotiations all the while and some industries now are working 35 hours a week. For the past 12 years labor, whether organized or not, has been coming steadily closer to a 40-hour week nationally. The workers of the Nation march en masse to the chant, "Shorter hours for all."

THE LABOR FORCE

If it took 46,000,000 gainfully employed to produce our standard of living in 1929–30 it will probably take 9,000,000 more now to produce the same volume of goods and services, other things being equal. And since there are 139,000,000 people in the United Stats now and there were only 123,000,000 then, it will take 12 percent more produce, or 12 percent more producers, to give to all the same standard of living that 123,000,000 enjoyed in 1929–30. So we now have our 46,000,000 workers increased by 9,000,000, plus 12 percent, making a total of 61,600,000 workers needed at 40 hours a week to give the old 1929–30 standard of living to our present population. But that is not all.

Vacations take their toll of production. The old-fashioned 2 weeks of paid vacation for the office force now is extending to the factory workers. It begins as 1 week, but an avowed union objective is 2 weeks and even 3 for employees long in service. It is doubtful if it will stop short of 2 weeks in a complete coverage. The paid vacation sounds too reasonable to be opposed and seems in fact to have a place in our higher standard of living. Then holidays are being added. The number is now seven. The ultimate 2 weeks' vacation means a loss of 4 percent to production time. In fact, 2 percent would be a conservative figure; it allows for office workers, railroad workers, teachers and those others who are already getting vacations. Thus, to make up the

vacation loss and still maintain our 1929–30 standard of living, we need 1,200,000 more workers—bringing the figure to 62,800,000.

UNPRODUCTIVE DEMANDS

But now we have a few increased demands on the labor force, when compared with 1929–30.

The Federal Government now employs 2,400,000. In 1929–30 the number was 550,000. So the demand on the labor force is increased by 1,850,000.

Then there is the defense establishment. In 1945, there were 11,300,000 in the military services. In May 1946, there were 4,000,000, estimated. In 1947–48 or 1949 there will be, I've heard, some 2,000,000, against some 300,000 in 1929–30. Assuming half of these would enter gainful employment, we may say the increased military demand on the labor force is 850,000.

Our Government is trying to provide for veterans some of the education it took away from them in their 4 years of war, and there are some 500,000 of them in our colleges for 1 to 4 years, off the gainful pay rolls.

Adding all these increased demands to our 62,800,000, we find that the labor force needed to reproduce the 1929–30 standard of living now is 66,000,000.

Next we should recognize the effect of our social progress. Benefits of various kinds are drawing off gainful workers from the labor force. The effects of unemployment compensation, old-age insurance over 65, and the veteran program are estimated for me at three and one-half to four million people, divided as follows: The beneficiaries of the veteran program number 1,600,000; of unemployment compensation, 1,400,000; and of old-age pensions 2,000,000. If we discount the old-age figure by 75 percent, and, to be conservative, admit that all the veterans in college are included in the veteran program, it leaves the total of these three social activities at 3,000,000 workers withdrawn from the labor pool.

It seemed very high to me, but adding these 3,000,000 brings to 69,000,000 the labor force needed to produce now a standard of living equal to that produced in 1929–30 by a labor force of 46,000,000.

There are two counteracting factors to be considered: (a) technological advance, which increases output per man-hour and decreases the number of workers required, and (b) the growing inefficiency of labor for the past 6 years which increases the number required.

Technological improvements hitherto have raised industrial production 2 or 3 percent per year; but for the economy as a whole the average is not more than 1 to 1½ percent a year, or 11 to 16 percent for the years from 1930 to 1940. From 1940 on, there is no gain in production per man per hour.

The inefficiency of labor is no delusion and it is a tangle that's difficult to unravel and evaluate. Less work for more men seems to be labor's objective. It varies in different plants and different industries. One national service recently estimated the efficiency of labor generally at 65 percent to 70 percent of normal. One manufacturer said it took 120 man-hours today to produce the equivalent car that 84 man-hours produced before the war. If these were typical, it would take 50 percent more labor to offset this loss. It seems unbelievable, but it has a powerful effect on production and must be considered in an estimate of this kind. To be conservative, we might estimate that the technological advance of 16 percent since 1930 would be offset by the inefficiency of labor.

HAVE WE GOT IT?

Now, how many workers can be had out of the present population of 139,000,000? If you eliminate children up to 14 years, there are 108,000,000 left.

In 1929–30 the number of those above 14 years of age who accepted gainful employment was 54.5 percent. If we apply this ratio to the present population the result is 58,860,000. That figure, therefore, represents the total potential of gainfully employed, or, as we call it, the labor force. (Under the pressure of war the figure of 54.5 percent may have been exceeded as much as 10 percent, but that is not attainable in peacetimes.)

The conclusion is that we now have a labor force of approximately 59,000,000, whereas we need one of 69,000,000 to assure ourselves of a standard of living equal to that of 1929–30—and we are looking for that 1929–30 standard again, with a large plus sign after it.

This is not a rigid calculation. It is a businessman's approximation, based on some experience, some observation, and some help and advice from others on the percentage effects of new conditions. Certainly, there is a shortage of labor now and there is reason to believe that this will be true for some years to come.

What effect will this have on labor rates? Will labor efficiency rise while there are more jobs than men? And what then of prices? Must we pile upon an unsatisfied, lopsided, domestic demand a lot of foreign orders, and should we encourage them by loans, ostensibly to hold up our prosperity? Would it not be better to work 45 hours a week for a few years than to keep on talking about working less? When we need to recover our own standard of living by repairing and re-equipping plants that have had 6 years of hard wear and tear, shall we re-equip the rest of the world first? If so, do we realize it means sacrifice and self-discipline?

EDITORIAL NOTE

Mr. Walker's case may be stated in another way with the same result. First, owing to (a) the shorter work week, (b) more time out for vacations with pay, and (c) the increase of population, we need now a labor force of 62,800,000 to produce as much per capita as we produced and consumed in 1929–30 with a labor force of 46,000,000—that is to say, we need a labor force greater by 12,800,000 to produce the same standard of living as in 1929–30. Then we look at what we call the labor force, meaning all who are gainfully employed. The rule is that of the total population above the age of 14, 54.5 percent will offer themselves for gainful employment. Thus, in 1929–30 with a total population of 123,000,000, the labor force was 46,000,000. By the same ratio a total population of 139,000,000 in 1947 should yield a labor force of 58,860,000. But if it is production you are thinking of, this is an illusory figure because of the way the labor force now is used, or not used. As compared with 1920–30, many more are counted as gainfully employed who are not actually engaged in production, as, for example, men in the armed forces and people employed by Government; and, furthermore, many who belong to the labor force in a statistical sense are not there, as for example, the veterans who are being educated at public expense. Thus, we arrive at the following calculation:

Theoretical labor force from a total present population of 139,000,000; i. e., 54.5 percent of the total population above the age of 14	58,860,000
Now deduct:	
Increase of Government employees	1,850,000
Increase in military service	850,000
Veterans at school	500,000
Beneficiaries of various social programs	3,000,000
Total deductions	6,200,000
Remainder	52,660,000

This remainder of 52,660,000 is what we now have to compare with what we called the labor force in 1929–30, whereas to produce a standard of living equal to that of 1929–30—that is to say, the same quantity of goods and services per capita—we should need at the present time a labor force of 62,800,000. The apparent shortage is approximately 10,000,000, and it is a startling figure. This is entirely Mr. Walker's idea. Many economists may be expected to dispute it.

Federal Savings and Loan Insurance Corporation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 11, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

FEDERAL SAVINGS AND LOAN INSURANCE CORPORATION

For the fiscal year 1948 estimates for administrative expenses for the Federal Savings and Loan Insurance Corporation, after submission to and approval by the Bureau of the Budget, totaled $670,000. The Government corporation control subcommittee of the House has reduced this to $532,000, or a cut of $138,000.

During the fiscal year 1947, Congress authorized the sum of $532,000 for administrative expenses for the Federal Savings and Loan Insurance Corporation. It later approved $18,000 to cover the cost of the pay increase which could not be absorbed. This made the total available for the current fiscal year $550,000. Because of the delay and uncertainties attending the approval of the deficiency request, which occurred on May 26, 1947, the Insurance Corporation had to cut down its operations and effect every possible economy.

The amount which the committee has now recommended for the fiscal year 1948 is the identical amount approved for the fiscal year 1947, but without consideration of the amount allowed for the deficiency. This means, in effect, that the committee expects the Insurance Corporation to continue during the fiscal year 1948 on the same restricted basis that it has had to operate under during 1947, with no opportunity for growth, no opportunity to further extend the protection of insurance of accounts, and no funds with which to meet contingencies which can and may arise.

The Federal Savings and Loan Insurance Corporation has grown, both in size and importance, in each year since its creation. Savings against loss up to a maximum of $5,000 in the Insurance Corporation represents a most important segment in the Nation's economy. Insurance of accounts by an agency of the Federal Government is a life line that not only safeguards the small savings of millions of American citizens but provides great sums of money necessary to adequate home financing in the United States through private mutual, cooperative savings institutions.

Relying on the Government's pledge of protection, over 4,500,000 American citizens have invested their savings to the extent of $6,500,000,000 in these insured associations. These are people of small means. They know little or nothing about balance sheets or financial matters and care little, relying wholly upon the knowledge that their Government has provided protection for their savings through the Federal Savings and Loan Insurance Corporation.

In preparing the estimates for the Federal Savings and Loan Insurance Corporation provision was made for the number of employees adequate to carry out the responsibilities imposed upon it by the Congress. Provision was also made for contingencies which can and may arise. This is good common sense. Nothing would be more fatal for the Insurance Corporation's operations than to be confronted with an emergency such as a receivership, impairment, defalcation, or any other cause requiring immediate action, only to find itself unprepared with insufficient personnel and without enough funds to meet the situation.

The action of the committee in reducing the 1948 estimates to the amount made available for the current fiscal year without consideration of the increasing demand upon the Corporation and the need for additional personnel which must be paid for at the increased rates of pay, places the operations of this agency in a very serious and uncertain position.

Address by George Bacopoulos in the Greek Parliament

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 11, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following address delivered in the Greek Parliament by Mr. George Bacopoulos, deputy for Athens, dedicated to the President of the United States, Harry Truman:

Gentlemen, it is clear from the contents of the communications made by the president of the council, or at least such is the impression given therefrom, that their main point is the one referring to the decision of the people of the United States and their great President, Mr. Truman, to save Greece from the total economic collapse that is now imminent; an event which would have decided of the date of the Greek state and the Greek society; to save Greece from the threat of communism and slavism lurking at its back. And this impression is justified, because this is, indeed, the principal subject of the communications. In the course of the debate on these communications, however, this subject was confined to a secondary place. It is reasonable that the debate should principally devolve around the question of public order and the security of the state. It was proper that the debate should cover this burning question, and previous speakers have reported events of great importance, especially those described for the first time, with such convincing force and national feeling, by Mr. Eliades, the honorable and so hardly tried Florina member. This, however, does not justify the transfer of the principal subject of the government's statements to a secondary degree and its being placed on a plane almost equal to nonexistence.

As though it had itself been subjected to an attack by the parastatal organizations, which were so triumphantly led to this House by the distinguished diplomat and experienced politician from Argolis and Corinthia. And as if frightened by this attack it drew away from sight to avoid the danger. It dived down into the swamp, shall we say, of untimely and purposeless debate on parastatal organizations in order to avoid moral injury.

It would appear that there is still an insufficient apprehension of the moral and material omnipotence of the decision of the people of the United States to put an end to the activities of small or big agitators, the enemies of democratic principles and international justice. All talk about parastatal organizations, which, in fact, do not even exist, at this time and after this important decision, is mere pettishness. Assistance has last year been granted to us by Great Britain, and we are grateful for it, but no decision was taken to put an end to the unsettled conditions and the gradual undermining of Greece, owing to bad neighbors, because the assistance granted was not accompanied by a will to this effect. All sorts of parastatal organizations, EAM, Communist, NOF, SNOF, etc., and everything that goes against the decision of the great American Commonwealth to impose justice and peace on earth, will be swept away like toys by the irresistible current of the creative capacity of the American spirit.

Let us only pray that this spirit will also extend its directive capacity and interest in Greece to all aspects of society and even of the state, and let us ignore the malignant and calculated calumnies that this decision should serve imperialistic aims of the great American democracy. What a blasphemy. But this blasphemy is being uttered by those who in their fight for supremacy have made it a principle to distort even the simplest truth. The great decision of the American Commonwealth, to assist and save Greece, derives from the traditions first created on that historic day of July 4, 1776, and the cause is that small nations are facing the danger of losing their freedom.

In 1776 the heroes of the American Revolution and founders of the present great Commonwealth wrote in that historic document by which they declared the independence of the United States, that all men have equal rights, among which the inalienable right of life, liberty, and pursuit of happiness. It is from this declaration that the tradition starts, which led to the present great decision. And it is not the first time that Americans take up the defense of the freedom of small peoples. In the course of time this tradition took solid roots in the history of the United States.

In 1822 President Monroe declared that the United States would not be indifferent in case the independence of any people of the Western Hemisphere were to be threatened by any European power. This took place at the time of the Greek Revolution during which many Americans came here and assistance of all sorts was sent to support the Greeks in their fight for liberty; an assistance granted with the knowledge of the American Government but without its pursuing any imperialistic aim whatever.

In 1863 Abraham Lincoln, the greatest of Presidents, manifested again, with his famous Proclamation of Emancipation, the belief of American spirit in liberty and the right of all to be free.

Inspired by this belief, Americans fought in 1898 against Spain for the liberation of Cuba. They defeated Spain and occupied the island. They kept it just as long as was necessary to reconstitute it economically and to organize it as an independent state, and then departed. During the period of their occupation they had not omitted to organize a sanitary service which freed the island from the scourge of yellow fever.

True to the same tradition, Americans have sent their armies to Europe in both world wars to fight for the freedom of peoples and international justice. And we all know the share of their contribution to the victory over the evil sprits of humanity as personified in the Italian Duce, the German Fuehrer, and Boris of Bulgaria, in their attempt to subjugate other nations. In all these cases there is not the slightest sign of an intention to follow an imperialistic policy on the part of the American Commonwealth, but only sacrifices in the interest of the freedom of others. But even if the assistance granted to us and the interest shown by the people of the United States in our country, does have the sense of an imperialistic policy, we accept it with pleasure, because it is incomparably preferable to find ourselves under the political influence of such a people than to come under the yoke of criminal communism and barbaric Slavism [applause]: under the influence of a people whose political leaders are competing as to who will be the first to serve international justice in the case of their beloved Greece. Just a few hours ago the news was given over the radio that one of the leaders of the Republican Party, Senator from the State of Ohio, leader of the Senate majority, son of the late President William Taft, and one of the candidates for the office of President, Mr. ROBERT TAFT, declared that he will insist on a speedy assistance to Greece and will oppose the amendment of the House of Representatives as regards a reduction of the amount and any other amendment attaching any strings to the assistance given.

Besides the said tradition, substantial reasons and immediate causes have called for this decision of the American Commonwealth. And these reasons have been created by those who, with actually imperialistic intentions of domination over other nations, have endangered fundamental principles for which a Second World War, such a destructive one, had to be fought.

One is tempted to think that a malignant fate was jealous of the good luck that was coming to the peoples of the world, victors and vanquished, after the victory of right over injustice, of real civilization against camouflaged barbarism.

The same malignant fate which for centuries keeps appearing at important turns of humanity, at critical moments, to hinder the progress of the peoples toward mutual understanding put forth again on the international scene the malevolent spirit of the times, to protract the drama of war and unsettlement. It presented communism, this satanic organ of Slavism, by which it is threatening the independence and freedom of many peoples, for whom the Americans have fought and sustained large sacrifices.

The danger was immediate and great. We Greeks were running the greatest danger of all. In fact, from what has recently come to light, the conspiracy against our country was of a much larger scale than what we imagined. The Slavs had dangerously armed and organized much of the riffraff in Greece.

The whole world and we ourselves were wondering whether there was any hope of a deus ex machina appearing to save the liberal-minded nations from the gloom of slavery and despair. And there, the sunrise from the West. The message of President Truman appeared on the gloomy international horizon as an enlivening sun. Its historic contents are well known. It will constitute a most important milestone in human history. On one side it will be a breakwater against the waves of the communistic plague, which was threatening to flood over the whole of humanity, and on the other hand it will constitute the starting point for favorable evolutions. It has been an honor for us that this milestone was placed in Greece. The fates have again set Greece as one of the advance sentinels of civilization.

It is up to us to prove ourselves worthy of this honor. It depends on us to take advantage of the good fortune sent us by God through President Truman at the most critical moment.

The Government, which includes men of high ideals and capable of fully grasping the significance of this event, should turn its undivided attention to it and prepare the

premises for its realization, adapting them to American mentality which hates bureaucracy, procrastination, useless red tape and slowness. All of us here must rally around the Government, or any other nationalist government, to contribute all we can so that the great aim of social and economic reconstruction of our country may be attained. And when our fatherland is reconstructed, thanks to the assistance of our great friends and to our own efforts, and when economic despondency and misery, into which we have sunk, on account of the war, is followed by prosperity and a moral order of things, then even the slightest vestige of the multiple organizations and rebellions will have also disappeared in the same manner as mosquitoes disappear after a morass has been drained.

Then, we may be sure that Greece will prosper. Greece will prosper, as she deserves to.

Then, grateful to God and Truman, to Truman and the people of the United States, to the people of the United States and anyone who would have cooperated for the good of Greece, we will build on the highest summit of our Macedonian mountains a replica, an immense replica of the Statue of Liberty, adorning the port of New York, with the torch in her hand to show the light to the people beyond our frontiers and to show to them what liberty and social justice are. With the other hand she will be crowning the statue of Truman, who will in this case symbolize the idealistic greatness of the American spirit. [Long applause.]

Broadcasting of Proceedings of Congress

EXTENSION OF REMARKS
OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 11 (legislative day of Monday, April 21), 1947

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Let Us Put Congress on the Air," by Jack H. Pollack, published in Pageant magazine of July 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S PUT CONGRESS ON THE AIR

(By Jack H. Pollack)

You sit in your favorite easy chair, flip your radio dial. The announcer says: "We now bring you the United States Senate."

Immediately you are transported to the plush-carpeted upper Chamber. There, stormy debate is taking place on whether your rent should be raised or your income tax lowered, how much sugar should be allowed on your table or what size army your country needs. For as long as debate goes on—or as long as you care to listen—you have a ringside seat at history, your history, being made.

This is no far-fetched idea. A bill has been introduced that would put Congress' entire proceedings on the air. If this measure becomes law, television will bring you an eyeful as well as an earful. You may see half-empty chambers, legislators snoozing over their newspapers, taking a pinch of snuff, utilizing brass spittoons, sometimes even coming to blows.

There is no question that you and every other citizen should know more about what goes on among your elected representatives. One poll shows that only one voter in seven ever writes or wires his Congressman, and that half of us do not even know our Congressman's names. Broadcasting proceedings on Capitol Hill would change that almost overnight. And the behavior of our lawmakers could be expected to improve noticeably.

ALOLPH SABATH, of Illinois, whose 41 years of service make him the dean of the House of Representatives, puts it this way: "Broadcasting Congress would raise the level of debate. Members would restrain themselves from reckless remarks and not go off half-cocked." And Mr. BILBO, of Mississippi, expresses his own feeling: "If people back home heard everything we said in the Senate, I wouldn't get reelected—and neither would some of my high-falutin' colleagues."

Were Congress on the air, you probably would no longer hear Nebraska's KENNETH WHERRY try to slug Oregon's WAYNE MORSE on the Senate floor. Pennsylvania's Representative ROBERT RICH might think twice befor offering his solution for handling the atomic bomb: "Hide it so no one could get it." If Massachusetts housewives were listening to him, Representative CHARLES GIFFORD might pause before charging that women Congressmen are "dangerous."

In a recent exchange on the Senate floor between BREWSTER, of Maine, and TOBEY, of New Hampshire, BREWSTER irritably declined to continue because "it would be like arguing the right of way with a skunk." This unparliamentary remark does not appear in the permanent CONGRESSIONAL RECORD because, on reflection, BREWSTER deleted it. Had he been facing a microphone at the time, however, chances are he never would have made it.

Democracy requires regular communication between citizens and their elected representatives. The Pilgrim Fathers came face to face with their public servants in town meetings. President Lincoln put aside time twice a week to talk to workers, farmers, businessmen, housewives. Even professorial Woodrow Wilson once sighed, "I would rather hear what men are talking about on trains and in the shops and by the firesides than hear anything else, because I want guidance and I know I would get it there."

Were Congress broadcast, legislators would be more apt to follow the people's will rather than greedy, vocal pressure groups. Opinion polls show that ordinary folk often are years ahead of Washington in their thinking. Long before Congress adopted such measures, Americans favored war preparedness, price control, pay-as-you-go taxation. Three years before Pearl Harbor, a Gallup poll found that most Americans wanted to stop shipping scrap iron to Japan.

Senator CLAUDE PEPPER, who introduced the bill to put Congress on the air, aptly points out: "It's the people's business we're transacting, and they have a right to know what is going on. If we fail to broadcast our proceedings and keep in step with the times, our citizens may wonder if we're afraid to let them hear what we're saying. * * * We provide galleries for people to come and hear Congress. Why shouldn't the millions who can't come also be able to listen in?"

The Pepper bill would allow any commercial station or network to send over the air waves all or part of Congress' proceedings either as a live or canned broadcast. Complete transcriptions would be made of all debates, which stations could buy at cost. PEPPER adds: "Press and radio reports about Congress are often fragmentary and strongly biased. Uncensored broadcasts would serve as a check on those newspapers which delete or distort the news."

The press has a defender in Senator TOM CONNALLY, of Texas. He opposes legislative broadcasts because they "would take away the dignity and solemnity of the Senate." Actually, that dignity and solemnity is perhaps the greatest obstacle to broadcasting Congress. The haughty upper Chamber, where many Senators still walk in the shadow of Webster, Clay, and Calhoun, has been far more hostile to the proposal than the often more democratic House. For example, Ohio's Senator BRICKER dismisses the Pepper bill as a silly idea. But Representative GEORGE BENDER, Ohio's largest vote getter, declares: "Broadcasting Congress would give more Americans a chance to participate in democracy."

Strongest Senatorial objection to broadcasting Congress is behind the scenes. Last year members of the Streamlining Congress Committee recommended a weekly broadcast; when the idea was frowned on by Maine's influential WALLACE WHITE (now majority leader), the recommendation was dropped.

Outwardly, Senators offer various arguments against being aired. Some fear their privacy of conversation would be jeopardized (though a simple seat switch could disconnect any individual microphone). North Carolina's CLYDE HOEY says, "Broadcasting us would only increase conversation. We need more action—less talk." Rhode Island's THEODORE GREEN adds, "If the Senate were broadcast, it would never do any work."

There are dissenters, of course. Wisconsin's Senator ALEXANDER WILEY, Judiciary Committee chairman, asserts: "Every means to give the American people a closer understanding of their National Legislature is worth trying. I have often recommended that the CONGRESSIONAL RECORD be modernized and put on sale on American newsstands. This suggestion could go hand in hand with broadcasting limited sessions of Congress."

Kansas' ARTHUR CAPPER, 82-year-old Senate veteran, adds: "I've witnessed a lot of changes in my time and there's no reason why some day people shouldn't be able to hear and see Congress broadcast. Any proposal that will give people more information about their Representatives ought to be encouraged."

Despite this, the United States Senate in many ways still is back in the gaslit era. Lacking even a public-address system, upper-chamber acoustics are so atrocious that it is difficult to hear the near-whispers of aged Senators. Others, too proud to wear hearing aids, also are at a disadvantage. Obviously microphones ought to be placed behind Senators' desks to help them hear what colleagues are saying. Idaho's GLEN TAYLOR concurs: "Broadcasting Congress is an excellent idea, but even before we get around to it, we ought to fix it so that we can hear what's going on ourselves."

The House of Representatives already boasts seven microphones, including one each for the Speaker, the majority and minority leaders and the roll-call clerk. An operator in the gallery controls voice volume. Lacking the Senatorial filibustering privilege, Representatives are jealous of the time allotted them. This prompts CLARE HOFFMAN, of Michigan, to observe, "If we put Congress on the air, we ought to put it all on or not at all. Otherwise, we wouldn't be giving people back home a true picture."

Broadcasting complete proceedings would bring greater recognition to the hard-working Congressman now hiding his light under a bushel. Tennessee's Democrat ESTES KEFAUVER avers, "If we were on the air, public indignation and enthusiasm would be multiplied, a healthy sign in a democracy."

Actually, a few congressional events now do go on the air. Recently Americans heard the first live broadcast of a congressional committee's proceedings when two networks caught Under Secretary of State Dean Acheson testifying on the Greek-Turkish loan. Since last year some radio stations have been recording, editing and then rebroadcasting important Washington happenings. Ex-Secretary Ickes' last press conference from the Interior Department was wire-recorded; so was the Bilbo cross-examination before the Senate War Investigating Committee.

Despite these preliminary successes, radio officials entertain misgivings about airing 96 Senators and 435 Representatives regularly. They fear it would accentuate the ham rather than the statesman, and bore or disillusion the public. One radio man complains, "Congress would be too highbrow for our gum-chewing audience." Another warns, "The blabbermouths would have a field day at the expense of the less articulate." Yet Nathan Straus, president of WMCA in New York, declares, "Radio can perform no greater service than to bring into every American home the deliberations of those who make our laws."

What really disturbs radio most is that Congress on the air would have to be a "sustaining" program. Instead of a lucrative advertiser, the people—who elect the program's participants—would be the sponsor.

Some legislators resent this general attitude rather strongly. Says Oklahoma's Representative MIKE MONRONEY, "I think it is rather pathetic that the United States Congress, in discussing an important issue, must beg for time to reach the people of this country and then be allocated time at 11:15 at night." Adds ex-Representative John Coffee, of Washington, "The airways, after all, are 'public domain'."

Some suggest that Congress run its own broadcasting set-up, with plants on the east and west coasts for short wave. Twelve frequencies would be needed. Engineers estimate it would cost $800,000 annually to operate two congressional stations—one for the Senate and one for the House. Two million dollars would be required to install the equipment.

A government-owned station has been the answer in New Zealand, only country now broadcasting complete legislative sessions. Ever since the Labor Party came to power a dozen years ago, New Zealand has been airing its parliamentary proceedings over a 60,000-watt government station in Wellington. Legislators can be heard from 2:30 to 11 p. m. daily; not allowed to read speeches over the air, they make debate snappy and extemporaneous. During popular listening hours, equal time is given to both parties.

Two years ago Canada's prairie province of Saskatchewan also began broadcasting part of its legislative proceedings from Regina, the capital. Radio time, purchased from a local station, is allotted to parties on the basis of their representation. A government publication reports that "public reaction has been enthusiastic beyond our fondest hopes."

In the United States, Connecticut has experimented in airing its public servants. Thanks to the new radio room in the State Capitol, Nutmeg voters get full reports on legislative debate and hearings from their representatives' own lips. These State-sponsored broadcasts are worked out in cooperation with Connecticut's 15 radio stations.

City-government proceedings have been broadcast in Buffalo and Toledo. But the most successful municipal experiment was in airing the New York City Council between 1938 and 1940. Broadcast by city-owned WNYC, the program won a listening audience of over a million and made the average New Yorker far more civic-minded. Sad to say, ward-heeling Tammanyites finally voted themselves off the air so they could carry on in comparative privacy.

Today Americans are Congress-conscious and information-hungry. Many would applaud the opinion of Dr. George Galloway, staff director of the Reorganizing Congress Committee: "It seems only a question of time before Congress will use radio and television as channels of direct communication with the electorate." The main objections seem to come from Congress itself. In the last analysis, if you want Congress broadcast—and want it hard enough—you'll get it.

Home Owners' Loan Corporation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 11, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

HOME OWNERS' LOAN CORPORATION

The voluntary reduction in expenses which the Home Owners' Loan Corporation has made year after year speaks for itself.

The estimate for HOLC which was approved by the Bureau of the Budget for 1948 totaled $3,875,000 and called for a total of 910 employees, both home office and field. After these estimates had been submitted to Congress the Corporation found it could close the Dallas Regional Office and save $152,000. The Government Corporation Control Committee was advised of this closing and informed that the estimates for the Home Owners' Loan Corporation could be further reduced from $3,875,000 to $3,723,000. This saving effected also a reduction in personnel of 70 employees. The committee has reduced these estimates to $3,000,000, a cut of $723,000.

The Corporation's records show conclusively that on its own initiative it has effected economies and eliminated personnel at a rate greater than the reductions in the Corporations workload.

As of June 30, 1946, the number of loan and property accounts had been reduced by 57.8 percent from the total number of loans made; whereas, during the fiscal year 1946 the Corporation's administrative expenses had been reduced by 82.5 percent as compared with the fiscal year 1937 which is the first year in which the Corporation's status changed from that of a lending institution to one in liquidation.

The Corporation's personnel has been reduced from a peak of 21,000 to the employment, as of May 30, of 792. Field operations for the entire Nation are now carried on through two regional offices.

As of June 30, 1946, there were 430,307 accounts scattered over the entire Nation. This had been reduced on December 31 last to 387,642 accounts. Of this number, 81,220, or nearly 21 percent had balances of $500 or less. Over 22 percent more, or 87,015 accounts, had balances ranging from $500 to $1,000. Approximately 70 percent of the borrowers, numbering 269,249, owed the Corporation $2,000 or less.

The Home Owners' Loan Corporation in extending relief to over a million distressed home owners became the largest mortgage-lending institution of its kind in this or any other country of the world. Even today, with practically all of its properties disposed of and its mortgage-loan portfolio reduced by over one-half of the original number of loans made, it still remains the largest mortgage-lending institution of its kind in the country.

In the original disbursement of billions of dollars, and subsequently in the collection of many millions of dollars, every working day received in the form of cash, money orders, etc., defalcations or embezzlements have been practically nil. This is attributed, in the main, to the Corporation's personnel, both quantitative and qualitative.

From time to time various speculative interests have suggested that they would buy all the loans of the Corporation at par and relieve the Home Owners' Loan Corporation of all responsibility. None of these proponents have been able to demonstrate financial responsibility sufficient to purchase even a small part of the loans.

The reports which have been circulated from time to time that the Home Owners' Loan Corporation loans would soon be sold out have consistently stimulated activties on the part of private lending institutions to persuade borrowers whose names they secured from public records to refinance with them immediately. As a result over 92,000 loans which had been paid down to a point where they no longer represented any risk have been taken over by private lenders. The interest loss to the Corporation on these loans which had been made good at great public expense was over $40,000,000.

In 1943 the executive vice president of the United State Savings and Loan League devised a plan under which the Corporation would prepare lists of all its borrowers, by States and communities, with the facts concerning their accounts, and furnish this information to all who might be interested in bidding for any of the loans. The impracticability of such a plan, however, is apparent to anyone familiar with the home mortgage business. It would cost the Corporation a large sum to prepare such data as that suggested by the United States Savings and Loan League and the Corporation would have no assurance whatever that any part of the loans would be purchased.

If the lists were circulated, there would be many calls at the homes of borrowers with obviously disturbing results. Wherever possible, institutions or brokers having the lists would take over, by direct refinancing, the loans which they regarded as good and leave the Corporation with the small accounts and those which they considered doubtful.

Subsequent to the proposal to invite bids for the HOLC loans by States and communities, the United States Savings and Loan League undertook to organize State committees which would make firm purchase commitments. This effort failed, however, and no dependable commitment of any kind has ever been submitted.

No sooner had the Corporation completed its lending operations in 1936 than proposals were made to turn these loans back to the institutions which only a very short time before were the very ones who were threatening foreclosure. It cost the Corporation over $58,000,000 to place these loans on its books. This amount was not charged against the borrowers but was absorbed as a part of its operating expenses.

It was frequently stated that the Government should get out of the real estate mortgage business. Notwithstanding the fact that only a short time before these mortgage lending institutions were pleading with their Government to come to their rescue.

In July of 1941 the United States Savings and Loan League presented to the Corporation a plan for selling its assets to the 12 Federal Home Loan Banks. It provided for passing the assets of the Corporation to the members of the banks for their ownership and administration. It was proposed that the Corporation be not dissolved and that its bonds be left outstanding since by letting these bonds remain outstanding whatever loss there may be ultimately will fall on the Government without requiring any additional guarantees from the Government. The memorandum outlining this plan frankly stated that:

"The above suggested plan places the losses upon the Government where it justly belongs."

The Government Corporation Control Subcommittee expresses the opinion that it is possible to sell all of the outstanding loans on the books at the present time at not less than face value without recourse. It should be possible to make such sales by areas or States, selling en bloc all the mortgages in a given area. The loans are for the most part paid down to where they are backed by sound mortgage collateral, and should be readily salable in large lots.

If previous proposals, at a time when loan balances were substantially higher than they are today, failed to progress such a plan is far less practical today with loan balances so far reduced and with loans being paid in full at the rate that they are at the present time.

Conservation Farming

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 11 (legislative day of Monday, April 21), 1947

Mr. ROBERTSON of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the prize essay written by Miss Muriel Moore, of the New Market High School, of New Market, Va. Her essay, which is entitled "Conservation Farming," was the winning essay of the Lord Fairfax Soil Conservation District of the Valley of Virginia, composed of the counties of Frederick, Clarke, Warren, and Shenandoah. More than 500 pupils in 20 high schools competed in the contest. In my opinion the essay, which I am submitting for the RECORD, is worthy of the consideration that it will receive by being published in the record of our proceedings.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

CONSERVATION FARMING

(By Muriel Moore, New Market High School, New Market, Va.)

For years our soil was thought inexhaustible. New land was plentiful. New farms could be carved from the wilderness cheaper than the old could be maintained. Now we are building a new economy based on proper land usage. We know now that our lands can be exhausted. Few virgin soils remain. Our soil is our heritage to be passed on to the next generation better than it came to us. For on our soil depends the progress of America and that progress is in our trust.

America was built by men and women seeking independence and security. Our food, our shelter, our clothing, all come from the soil. As the soil is lost, so is our security and our freedom. Without secure farm homes, adequate and stable incomes for farm people and a continuous supply of farm products, we Americans cannot maintain a high standard of living either on our farms or in our cities.

Already we have great rural poverty where erosion has been particularly serious. More than 50,000,000 acres of once fertile American soil can no longer be used for the production of cultivated crops. From another 50,000,000 acres we have lost more than 50 percent of the topsoil. In fact, erosion has taken at least 25 percent of the topsoil from half of the farm land of the United States. Poor lands mean poor crops and low incomes. As incomes drop, the standard of living falls, taxes go unpaid, trade is reduced, school facilities decline, malnutrition becomes common, and people migrate in search of freedom and security. This has been the history of mankind.

Serious as erosion is in some areas, the situation in most sections is not so critical but that it can be controlled by prompt action. Uncontrolled water moving swiftly down our slopes and hillsides is the greatest destroyer of valuable topsoil and soil nutrients. The Mississippi alone annually dumps at least 730,000,000 tons of soil into the Gulf of Mexico. To this tremendous tonnage must be added the millions of tons of soil washed off fields and dropped along the way.

Farmers use tremendous amounts of commercial fertilizer every year in an effort to maintain and improve the fertility of their soil. This tonnage is puny in comparison with the soil nutrients erosion removes each year. Even the volume of soil nutrients taken from our fields in the form of crops is small compared with losses due to erosion.

Conservation calls for intelligent utilization of our land resources today and their maintenance for profitable future production. It may mean putting the land in good physical condition, changing the rotation, using fertilizer and soil-building crops, contour farming, strip cropping, terracing, and planting trees and grass.

But before any of these, must come a plan, a workable plan that will least disrupt the present productive capacity of the farm, and which will, at the same time, aim at soil conservation. The plan must take into consideration the physical characteristics of the farm—types of soil, fertility, erosion, and the degree of slope. It must show which fields by strip cropping, contour planting, terracing, and other conservation measures can be used for most profitable production of annual crops.

Contour strip cropping, the planting of alternate strips of cultivated and close-growing crops on the contour, holds fertile soil and rainfall and increases crop yields. To be most effective, some of more critical strips should be kept in hay crops of perennial grasses and legumes. A thick matting of grass filters the water, increases absorption and penetration, and slows down the movement of the run-off water. By keeping the soil and more of the water on the hillside crop production is benefited. In Iowa, records show that contouring in 1943 increased corn yields 5.6 bushels per acre. When rows are run on the contour each furrow acts as a miniature dam, holding the water in check so that more of it can soak into the ground and be stored for use of crops during periods of light rainfall. Contour cultivation distributes water over a field, eliminating concentration in low areas where gullies might start. Contour strip cropping makes possible a better balance between soil building and harvested crops on most farms. Less power is required for farming round the hill on the contour. With longer rows there are less turns.

Terracing is usually on larger fields having long, gradual slopes. Terraces are in the nature of long dams. When on the true contour they hold the water or, if made with a slight degree of slope, they conduct the water slowly and safely off the field.

The maintaining of high organic matter content in the soil is very important in the control of erosion. Organic matter increases the absorptive capacity of the soil. This reduces the amount of run-off water, thereby lessening erosion. It is important, therefore, to follow a rotation system that will return large amounts of organic matter to the soil.

Trees and grass hold water on the hillside, storing the surplus in the subsoil. Each blade of grass, each tree, each bit of organic matter serves as a barrier, holding the water where it falls until it can be absorbed. The sponge-like covering of dead leaves, twigs, and other litter releases the water slowly; protects and holds the soil in place. The roots of trees and grasses bind together the soil particles, holding them where they will be a source of plant nutrients.

Uncontrolled gullies not only destroy the fields where they exist, growing even wider, deeper, and longer, but they also may be responsible for a covering of unproductive subsoil over once fertile acres below. Gullies can best be checked with vegetation. Checking old gullies is important, but it is even more important to prevent the formation of new ones.

Soil losses in the United States total more than 5,000,000,000 tons annually along with the enormous loss of rainfall. From farm lands alone the annual loss is about 3,000,000,000 tons, enough to fill a freight train which would encircle the globe 18 times.

It is estimated for an adequate standard of living there ought to be five acres of arable land per capita in the world. Actually there are about two. Nutritionists estimate that at least 2½ acres are necessary for a minimum diet. Some nations have less than one.

Soil conservation is an obligation of every American interested in the preservation of freedom and security for the generations of tomorrow. As Patrick Henry said soon after the Revolution, "He is the greatest patriot who stops the most gullies." Thomas Jefferson, philosopher, statesman, and architect, taught and practiced the art of contour farming.

There Is a Legal Answer to Political Use of Racist or Religious Prejudices, and Chicago Has Found It

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. SABATH. Mr. Speaker, there is not a man or woman of responsibility in America who does not deplore race-baiting and religious-baiting in the Nazi pattern, and who has not anxiously canvassed the possibilities of fighting such actions effectively without sacrificing any of our own precious liberties of speech and press.

To my mind, the most intelligent suggestion made is that the political use of racial or religious prejudices should be regarded as against public interest and therefore classified as a crime.

My own great city of Chicago, always progressive and always ahead of the rest of the country in needed legislation, has actually adopted a city ordinance which makes the incitation of a race riot a crime under city law.

I am proud of my city for taking this action.

Under leave granted, I am inserting the full text of the ordinance. I hope that this will be a model for similar laws in every municipality and eventually in every State of this Union; and I do not see why this cannot become a model for a Federal act to help implement the civil rights provisions of the American Constitution.

Be it ordained by the City Council of the city of Chicago:

Section 1. chapter 193, of the municipal code of Chicago is amended by adding thereto the following section:

"193-1.1. Inciting race riots: It shall be unlawful for any person or group of persons, or any corporation, firm, organization, association, league, or other body, to print, publish, post, distribute, circulate, or exhibit, or cause to be printed, published, posted, distributed, circulated, or exhibited, any handbill, dodger, circular, booklet, pamphlet, leaflet, card, sticker, periodical, pictorial print,

picture, painting, or other written or printed matter which exposes any individual or any racial or religious group to such hatred, contempt, ridicule, or hatred, violence, hostility, or discriminatory practices against any person or group of persons because of his or their race, color, religion, or manner of worship as to endanger the public peace.

"Any person violating the provisions of this section shall be fined not less than $25 nor more than $200 or imprisoned for not less than 10 days nor more than 6 months for each offense.

"SEC. 2. This ordinance shall be in force from and after its passage and due publication."

Introduced by Alderman Benjamin M. Becker, fortieth.

Federal Home Loan Bank System

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 11, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

FEDERAL HOME LOAN BANK SYSTEM

The estimates for the Federal Home Loan Bank System for the fiscal year 1948 as presented to the Congress amounted to $1,965,000. The committee has cut this $715,000 to $1,250,000.

Of the total of $1,965,000 requested, $1,398,819, or 71.2 percent would be fully repaid by the institutions examined or served. The amount which the committee recommends for all administrative expenses is $148,819 less than would be collected from private sources alone. If examinations of insured institutions on which the Government has a risk of $7,500,000,000 are to be carried on during 1948 even on a reduced basis there would be no funds left to cover any of the expenses of the office of the Governor of the Bank System, the Supervisor's office, Comptroller's office, Legal Department, and others.

The Federal Home Loan Bank System has grown, both in size and in importance, each year since its creation. The assets of the member institutions have more than doubled since 1939 and are now over $10,000,000,000.

During the fiscal year 1946, the 11 regional banks advanced to member institutions nearly $315,000,000. Repayments during the same year amounted to over $243,000,000 with balances outstanding at the end of the 1946 fiscal year of over $203,000,000.

The sale of the banks' debentures and bonds in the open market, have always been heavily oversubscribed because they represent the joint and several obligations of these banks. The country's greatest financial institutions are among the largest buyers of these debentures and bonds, and their purchases are a reflection of their judgment on the sound management of these banks.

Under the law these banks must be examined at least twice in every year. I am sure that the purchasers of these debentures and bonds know this fact. There would be good reason on the part of these purchasers to be concerned about the value of these bank debentures and bonds if they knew that through lack of funds the examination of these 11 banks would have to be curtailed.

If the amount recommended by the Committee for Administrative Expenses for the fiscal year 1948 should become law, the bank administration would have no choice other than to restrict the number of examinations to be made and narrow the scope of the examinations which could be made. Such a limitation could have serious consequences.

Everyone knows we are now in a period of the most serious inflation in real estate values. It is certainly as serious in its possibilities for trouble as it was when the worst mortgage panic in history took place in this country in the early thirties. The collapse in the real-estate-mortgage market at that time made it necessary for the Government, through the Home Owners' Loan Corporation, to take over 1,000,000 defaulted mortgages and to make loans and advances to restore stability to the extent of nearly $3,500,000,000. We cannot shut our eyes to the contribution which is being made by many lending institutions of all kinds to the present state of affairs.

Under its rules and regulations the Bank System is required to examine all insured associations at least annually. At present there are over 2,500 such insured institutions. Because of the shortage of funds during 1947, the Federal Home Loan Bank staff of examiners dropped from 173 to 154. On a basis of the number of insured institutions at the present time and the increased size of the institutions, not less than 195 examiners can meet the need. Overdue examinations have risen from 386 at June 30, 1946, to approximately 500 at the present time.

Never before in the history of the Federal Home Loan Bank System has the necessity for current examinations been so great. This need is the result of the unprecedented demand for homes throughout the Nation together with the active market for existing homes. Supervision of insured institutions is based on the examiners' reports. There can be no intelligent supervision of these insured associations without accurate information which can be produced only by careful and up-to-date examinations.

Work of the Examining Division is not only essential for the protection of the savings of millions of American citizens whose incomes for the most part are not large, but for the protection of the Federal Savings and Loan Insurance Corporation against losses and for the guidance of supervisors, directors, and officials of the insured associations. If only the amount recommended is approved, there may be serious repercussions on the responsibility and liability of the Federal Savings and Loan Insurance Corporation.

During the current fiscal year, Congress authorized for the Bank System, $1,501,000. The deficiency to cover the cost of the pay increase which was approved on May 26, 1947, amounted to $140,000. In other words, during the fiscal year 1947, this Bank System operated on a subnormal basis with a total of $1,641,000. The Bank System estimates for the fiscal year 1948 provided for the recruitment of a staff sufficient to keep current with this work. It certainly stands to reason that if it was impossible to keep pace with the necessary work even under subnormal conditions with a total of $1,641,000, this bank operation cannot hope to come anywhere near doing the job with only $1,250,000.

The recommendation by the House also provides "that the cost of terminal leave of any personnel of the Office of the Administrator shall be paid out of funds available for administrative expenses to the constituent units of the National Housing Agency." This is an indeterminate figure and may be an additional drain on the resources of the Federal Home Loan Bank System which it cannot meet. In addition, if the amount recommended by the committee should become law, employees would have to be terminated at great expense from both the Examining Division and all other divisions and sections of the Bank System. Terminal leave would also have to be a determining factor as to the number of employees which will have to be terminated, since all terminal leave must be paid out of the reduced amount available.

Our Heritage

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 11, 1947

Mr. TRIMBLE. Mr. Speaker, the long-deserted estate on a side road just outside of town had been restored to its original beauty and usefulness. The old weather-beaten house had been transformed into a stately dwelling. The rough, weed-choked lawn had been cleaned up, fenced, and beautifully landscaped with shrubs and flowers.

The ramshackle barn had been replaced. The surrounding acreage, including a large woodland off toward the foothills, was under new fences, and was alive with growing crops and herds.

Indeed, the change in the old place was so impressive that the pastor of the local village church, on viewing the place and its transformation, was moved to remark: "My! My! The Lord certainly can work wonders." He was inspired. The host, the new owner of the place, readily accepted the observation, but after a moment's reflection, said: "But my good man, you must recall what this place looked like when God was working at it all by Himself."

The purpose of this story is to bring sharply to our attention the fact that God put a great heritage into our hands when He gave us land. He leaves it to our will, our initiative, and our resourcefulness to preserve that heritage. He furnishes the sunshine and the rain. We must do the work. In other words, the parable of the talents is exemplified in this story. Former owners of the estate had hidden the talent which God had given them. The present owner had increased the talents which God had entrusted to him, and the result was an inspiration to the pastor, the neighbors, and the world, and, above all, pleasing to God.

Nature has been especially generous with us in the Third District of Arkansas. Our forests, our fields, and our streams are bountiful. Our hills, our valleys, our plains are rich in scenic splendor. Our hardwoods, our fertile soil, and our useful minerals are on every hand. Our all-year-round climate is unmatched anywhere in the country. The district is a veritable garden spot. We are up front in the vanguard of progress. Our opportunities for development are unlimited.

Actually, our natural wealth has been so great that, for the most part, we have been disposed to accept nature's gifts as adequate to all our needs. As a result, we have neglected our responsibility to conserve our resources, and, therefore, our opportunity for progress. We have not always recalled that the gifts are exhaustible, and that we are called upon to work with our natural resources in such manner that they might be con-

served and developed to our continued advantage. We have not realized fully that our forests can be cut almost to the point of exhaustion; that our farm lands have been seriously depleted of soil fertility by erosion and our own neglect; that our streams require control and development. Nor have we fully appreciated the natural value of our hills and valleys, our streams, and our forests.

It appears to me that our immediate opportunities for progress continue to depend upon our efforts and successes in, first, soil conservation; second, diversified farming; third, orderly marketing; fourth, rural electrification; fifth, flood control and power development; sixth, improvement of our roads, highways, and common-carrier services.

Since the advent of Government interest and assistance in flood control and rural electrification a few years ago, we have made creditable progress in our district in each of the above directions. However, since we are now at the threshold of full realization of our efforts, it is imperative that we concentrate our interests and pull together so that our district may continue to grow and prosper.

Since I have been a Member of the Congress, I have supported all legislation which I thought would tend to the achievement of the objectives toward which we must strive. Now, let us take up briefly the six different items which I have mentioned.

Since the first immigrants landed on the shores of this country, we have exploited our soil and our other natural resources. Heretofore, when soil became so depleted that it would not sustain the family, there was always a new frontier, and the pioneers lifted their little families and moved westward across the mountains. These are the people who settled our own section. They came from Tennessee, Kentucky, Georgia, and Alabama. They were the salt of the earth. And so it continued until their posterity had moved westward to the Pacific. Now we must pioneer in a new direction, and we have learned that it is necessary to conserve what fertility is yet left in the soil and to reestablish that which we have taken away. I have constantly supported all the measures in the Congress, including the appropriation for soil conservation, which I thought would help the farmer keep and improve his heritage.

Closely allied with soil conservation, and a part of it, is crop diversification. My father was a corn farmer. He reared a family of nine children raising corn. Not until the last of us was nearly grown did he accept the diversification programs and begin to put back into the soil by crop rotation the fertility which the corn had taken away. I think farmers generally in our section now accept that as wise soil and business practice. I have supported this program at every opportunity.

In this connection, I might add that only in recent years has anything approaching security on the farm been developed. Workers in civil-service status have for years been contributing to a retirement fund against that day when they will be retired on account of age, physical disability, or completion of service tenure. The same situation obtains in most of our other industries where the laborer contributes to benefits of unemployment compensation under social security to take care of himself and his family in case of physical disability, lay-off, or retirement. Various enterprises are protected by law in their income. For instance, the utility companies, where rates are so fixed that they have a guaranteed 6-percent income above all expenses, including taxes, salaries, rebates, advertising funds, and public-relations funds. The same situation practically obtains in the insurance field, where the rates are fixed to insure proper protection to the policyholders and at the same time guarantee a profit to the company. But the farmer has no such security. He must fight and scratch for his. All too often he sells in a free and competitive market and must buy his machinery, his fertilizer, and his electricity in a protected market.

In view of these circumstances, it has become necessary for the farmer to watch his sowing and his reaping more than ever. No longer can he meet his competition by proceeding in a haphazard fashion. He has learned that in order to prevent the dumping of his product on a slow market at a loss, he can establish processing and cold-storage plants to hold his product until the demand is better. He also has established various marketing associations and cooperatives to help him in marketing his grain, his poultry, his livestock, and his fruits and berries. By this method he has a larger volume, and therefore can command a better bargain. I have supported legislation to encourage this enterprise upon the part of the farmer, and I think it is one of the essentials to security on the farm.

Rural electrification is really a godsend to the farm home. For years, our rural people hoped and clamored for electricity. It never came—until the Rural Electrification Administration was established and money was lent to the farmers to establish their own organization and bring this much needed commodity to their farms. When electricity came to the farm home, washing machines, refrigerators, stoves, and lights came with it. The farm home became more attractive to our young people, and as a result more of them are staying on the farm to make it their calling. I have supported this program with all my strength. I shall continue to support it, and I shall resist any movement to hamstring it.

Flood-control projects in our district are a definite reality. Already Norfork Dam is completed. Work is moving ahead at Bull Shoals. In the not too distant future, Gilbert Dam, the Lone Rock Dam, the Table Rock Dam, and the Beaver Dam will all be built. They will do three things to our district. First, they will control floods; second, they will develop much needed hydroelectric power, without which small industry will not come to our section; and, third, they will make our district one of the garden spots of the United States from a recreational standpoint. I shall continue to support these projects. I have voted in the past to tie all these dams together. I shall continue to vote the same way, believing that we will have a greater bargaining power when all our property is tied together than we do if we have single and isolated projects to offer the utility companies who are now asking for the power developed at the dams. They want to buy it at each dam separately.

I have supported and shall continue to support Federal aid to public roads, farm-to-market roads, and rural mail routes. They should receive help because progress marches along these roads.

I have also supported and shall continue to support Federal aid for airports. We are in the beginning of the air age. Air transportation is in its youth. Not only will the development of a great Federal and State aid program help us commercially, but it will be one of our strongest lines of defense in case of emergency.

With forces united, let us as farmers, laborers in the industries, and industry itself strive to work together for the future with our chins up and our motives just.

Japan Is Paradise for Government Planners

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 14, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith an article by Mr. Ralph Donaldson of the Cleveland Plain Dealer:

JAPAN IS PARADISE FOR GOVERNMENT PLANNERS
(Article 12)

Japan under the occupation is a paradise for planners, a happy hunting ground for regulators. There is enough price control, rationing, and allocation of scarce materials to delight the soul of the most avid New Dealer.

It is not surprising that a number of Washington bureaucrats, whose agencies were shot out from under them, so to speak, have found their way to Japan where they can practice the art of regulating a nation's economy to their heart's content.

Every basic commodity in Japan is scarce—fertilizer, food, oils, timber, coal, and steel.

The Japanese themselves ruined some of their production facilities by wasteful methods during the war and the years preceding it when they were preparing for war. Others we smashed with our B–29 bombing raids.

Japan has about 15,000,000 acres of land under cultivation. The Japanese Government has announced plans to put another 3,500,000 acres under cultivation, but American agricultural experts doubt whether this will be possible.

POPULATION TROUBLES GROW

Meanwhile, due to population dispersal as a result of bombings and the repatriation of Japanese from other countries, there has been a recent increase of 300,000 families, plus 2,000,000 individuals in the farm villages.

The production of fish, an important item in the Japanese diet, dropped during the war because many of the fishermen went

into the navy. They returned to find their boats deteriorated and their nets rotted, with little chance of replacement. They are now producing 3,000,000 tons of fish a month, but another 1,000,000 is needed.

Last August, SCAP authorized a Japanese Antarctic whaling expedition, but the authorization probably will not be repeated because all the other whaling countries protested.

Legislation is now being prepared to abolish tenant fishing. In the feudal days each coastal village had certain fishing rights. Most of these rights were mortgaged and the mortgages foreclosed. Thus for years the fishing rights have been controlled by absentee owners, who collected as high as 50 percent of the take.

TIMBER PINCH AGGRAVATED

From 1937 to 1944 the Japanese cut twice as much timber as they were raising. So they now have have a timber shortage, aggravated by the fact that much of their sawmill capacity was destroyed in the war.

The Japanese need lumber to build 4,000,000 homes, including the replacement of 3,000,000 destroyed in the war, 200,000 which depreciated to the extent of needing replacement and 800,000 needed to house repatriates. The industrial requirements probably will equal the amount needed for homes.

Large quantities of lumber are required for housing the Americans and their families. Additional quantities will be needed to crate the machinery shipped out of Japan for reparations.

Japan produced 57,000,000 metric tons of coal in 1940. Last year's production was only 23,000,000. The mining industry needs wood to shore up the tunnels and also to build miners' homes. It also needs steel for tools and machinery. But the steel industry, or what is left of it, needs coal in order to operate. The planners are having a tough time figuring that one out.

Farmers and fishermen are supposed to sell a certain percentage of their production to the Government which, in turn, rations it to consumers at controlled prices. What the producers have left over they may use themselves or sell in the black market.

In the fishing industry the rationing system works this way: only poor quality and slightly spoiled fish reach the legitimate market; the best quality finds its way to the black market. (Just like the OPA.) The government is now trying to figure out a way of overcoming this by allocating oil to run the fishing boats on the basis of the quantity and quality of fish sold through legitimate channels.

The great problem of the planners is to increase production of all kinds. But there is no profit motive in the Japanese economy now. The only incentives toward increased production are patriotism, pride in achievement, and a hope of better times in the future.

A controlled economy has never been successful in peacetime in modern times. But it has a better chance to succeed in Japan than in the United States, for instance, because the Japanese people are accustomed to regimentation.

Rev. Francis M. Juras

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 11, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article which appeared in the Pilot, Friday, June 6, 1947, by Bill McMorrow on the life of Rev. Father Francis M. Juras, pastor of St. Francis Church, Lawrence, Mass., who will celebrate his "silver jubilee" in the priesthood on June 22, 1947:

MEET YOUR PASTOR

(By Bill McMorrow)

Congratulations. No other word in the dictionary is more adequate as an introduction to the brief story of Rev. Francis M. Juras, pastor of St. Francis Church, Lawrence, for in but two short weeks, on June 22, the beloved leader of this widely known parish will celebrate his silver jubilee in the holy priesthood with a Solemn High Mass at 9 a. m., at which Archbishop Cushing will preside and preach.

Father Juras was born in the village of Bridai, Lithuania, on June 16, 1891, and attended the village schools there, graduating from the academy with highest honors. In 1912 he came to America, and attended St. Charles College, Catonsville, Md., and later St. Vincent de Paul University, Chicago. He matriculated at Kendrick Seminary, St. Louis, and later attended St. John's Seminary in Brighton, being ordained on the feast of Corpus Christi in the cathedral in Boston by Cardinal O'Connell. Immediately following his ordination he was assigned as curate to St. Francis Church, Lawrence, remaining until 1927, when he transferred to St. Joseph's, Lowell, as pastor for a 2-year stay. In 1929 he returned to Lawrence and St. Francis parish, laboring in the service of the people here until the present time.

RELIGIOUS FAMILY

A zealous pastor, under his able direction St. Francis parish has flourished and is an exemplary and well-organized unit of our diocesan family. Aided by his capable curates, Rev. John F. Bernatonis and Rev. Peter A. Shakalis, a newly ordained priest who has replaced Rev. Felix Kenstavicius who transferred to St. Pius parish, Lynn, some 16 active parish groups meet here each month, resounding out a plan of Catholic action that is on par with the finest in the diocese. To attempt to outline them all, space will not permit, but it will suffice to say that in the opinion of Father Juras, each of them rates high, and collectively they are the very backbone of the parish.

In 1945 a large piece of property adjacent to the church was purchased as a proposed site of the new parish hall and recreation center, to be erected as a memorial to the servicemen of the parish. The "Servicemen's Memorial fund" is, of course, an item of interest to all in the parish, and Father Juras looks forward with pleasure to the time when conditions will permit breaking ground for this worth-while project. He was loud in his praise of Peter Jaskal, president of the Building Fund Society for the outstanding job he has done, and pointed out that Mr. Jaskal is also president of Saint Francis Holy Name Society which is currently running on a full-steam-ahead basis.

NOTED WRITER

The literary work of Father Juras hasn't been confined to books and religious themes alone, for he is well-known as a feature writer of several magazines and newspapers. From 1935 till 1945 he was general manager of "Darbininkas" the popular Lithuanian newspaper published in South Boston, and he is an honorary member in the Lithuanian Roman Catholic Alliance of America, and a member of the board of directors of the Lithuanian Roman Catholic Federation of America, an affiliate of the NCWC.

The renovation of beautiful St. Francis Church has long been considered one of Father Juras' major accomplishments by his parishioners, and it's a known fact that he delights in the wide variety of parish activity, much of which takes place in the spacious hall in the basement of the church. Here, in addition to regular meetings of societies and sodalities, is held the Sunday-school classes and released-time religious instruction, something near and dear to the pastor's heart; and the church itself is certainly a tribute to his love of God and his people, with a picturesque altar, several devotional shrines, among which is a beautiful reproduction of the Grotto of Our Lady of Lourdes, a life-sized crucifix, and over the tabernacle a delicately carved statue of St. Francis, patron of the parish. Here, it may well be repeated, is a church of which every parishioner may be proud.

CHARITABLE ACTIVITIES

Well known in Lawrence, he was one of the initiators of the project to build a Catholic hospital there, and he currently serves on the board of directors of the Bon Secours Hospital, judged by authorities one of the finest institutions of its kind in New England.

In 1921 he was elected national president of the Knights of Lithuania, and he likewise is affiliated with scores of organizations, too numerous to mention in such a brief recapitulation. It is, however, safe to say that as he approaches June 22 his legion of loyal friends will join in a fervent prayer "that the silver leaves of their devoted pastor's crown of glory will turn to gold in God's sacred priesthood."

The Labor Bill

EXTENSION OF REMARKS

OF

HON. FRED A. HARTLEY, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 11, 1947

Mr. HARTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the New York Times of Tuesday, June 10, entitled "An Extreme Measure," and another from the New York Times of Wednesday, June 11, entitled "A Veto—On What Grounds?":

[From the New York Times of June 10, 1947]

AN "EXTREME" MEASURE?

Critics of the labor-management bill, which is now awaiting action by the President, have called it an "extreme" measure. Is this charge justified? Is this legislation "punitive" in the sense that the President used the term in his message of last January on the state of the Union?

Such a question necessarily calls for some basis of comparison. If the bill is "extreme," or if it is unduly restrictive, then it must be "extreme" or unduly restrictive with reference to something else. Admittedly the bill is "extreme" when compared with what the labor leaders themselves have been urging. For they have been urging that nothing be done; and it is elementary that something—anything—is "extreme," or excessive, when "nothing" is taken as the norm.

Aside from those who have made a career of taking orders from the AFL, the CIO, and the PAC, labor has no more staunch friend in Congress than Senator IVES, the liberal Republican of New York. Senator IVES and Senators MORSE and AIKEN were able, because of the strategic positions they occupied, to see to it that a much more temperate bill emerged from the House than would have been produced had the measure been written by a committee representing the cross section of Congressional opinion. Said Mr. IVES, in the closing Republican brief for the measure:

"I, for one, had hoped that no legislation would be required. But the course of the hearings of the Senate Labor Committee in-

dicated that there is abuse, and there is inequity, and that these abuses must be corrected and these inequities eliminated. No one could have listened to the hearings without knowing that something was wrong. But those immediately connected with the labor unions refused to agree to any type of legislation. We received no help whatever from the representatives of organized labor. Even the legislation that I myself proposed, mild as it was, met with vigorous objection. This legislation goes down the middle of the road—it will not 'destroy' trade unionism."

It cannot be stressed too greatly that, left to its own devices, Congress would have liked a stronger measure than the one it turned out. It is not necessary to recite again the numerous points of difference which made the House (Hartley) bill a good deal more extreme than the Taft-Hartley measure as it was worked out in conference, for these have been discussed many times recently. There can be little doubt that the House gave in to the Senate on most major controversial points, not because it favored the Senate version but because it was persuaded that to insist upon its own bill, or a halfway compromise between the terms of that and the Senate measure would have been to court an almost certain Presidential veto.

No discussion of this question would be complete without reference to two pieces of legislation which came before the Seventy-ninth Congress last year. The first of these was the Case bill for the general reform of the labor laws, which was the predecessor of, but in several respects more restrictive than the present Taft-Hartley bill. Although the President vetoed that measure, his action was sustained by the narrow margin of five votes, and this in spite of the fact that his own party at the time had a substantial margin in both Houses of Congress.

But it was another bill of that period that not only merited the term "extreme," but could certainly be called "punitive" if that word has any meaning at all. That measure was aimed at strikes such as that on the railways last May. Employees, under the provisions of this bill, who failed to return to work lost their Wagner Act standing; they and officials of the offending unions might be drafted into the Army by the President, and the latter would be empowered to fix their wages and working conditions, as well as to divert any earnings of the railroads into the United States Treasury. It was not Congress, but President Truman himself, who produced this remarkable legislative proposal, although it took the House only 2 hours to approve it. Ironically, it was the Senate, moving more deliberately and with Mr. TAFT playing a conspicuous part, which struck out the more hysterical and extreme provisions of the bill, such as loss of seniority for workers, the draft clauses, and criminal penalties for offending workers.

In sum, while labor leaders like to declare, without specification, that the Taft-Hartley bill is "punitive," "vindictive," "antilabor" and "extreme," the fact would appear to be that by any valid test it rates none of these terms. For we have seen that it is less harsh than the Hartley bill; that it is less stringent than the kind of bill Congress really wanted to pass; that it has been described as "middle-of-the-road" by a Senator who fought throughout consideration of the legislation to see that labor's rights were safeguarded; that it is milder than the corresponding measure of last year, the Case bill, which narrowly failed of enactment in a Democratic Congress, and, finally, that it does not remotely approach in severity the only positive piece of legislation offered by the President himself.

[From the New York Times of June 11, 1947]

A VETO—ON WHAT GROUNDS?

When Congress has approved an important piece of legislation not only by an enormous vote but actually with the majority support of both parties in both Houses, only the soundest and most persuasive reasons justify a Presidential veto. Mr. Truman's mail, we are told is running strongly in favor of a veto of the new labor bill which now awaits his action. But it is not unusual for the opponents of a measure to be more active in their letter-writing than those who are in favor, and surely a mere count of pros and cons in a mail representing the opinions of a tiny fraction of the country's population will not supply Mr. Truman with an adequate reason to annul with a stroke of his own pen the considered action of both parties in Congress. He must have better reasons than that, if he intends to veto the bill and expects his veto to carry conviction to the public. Where will he find these reasons?

In this space yesterday we examined the argument that the new labor bill is extreme and punitive, and we found, on the basis of comparison, that it is less harsh than the original Hartley bill; that it is less stringent than the kind of bill Congress really wanted to pass; that it has been described as middle-of-the-road by a liberal Senator who fought throughout the debate on the measure to see that labor's rights were safeguarded; that it is milder than the corresponding measure of last year, the Case bill, which narrowly failed of enactment in a Democratic Congress, and, finally, that it does not even remotely approach in severity the President's own proposal of just a year ago to draft strikers into the Army in cases of national emergency.

If a veto will not stand up, in the eyes of the public, on the unconvincing charge that this is a case of "extreme" and "punitive" legislation, then on what other grounds can a veto be based?

Let us examine the possibilities.

1. Can it be argued successfully that this bill is a hasty, slap-dash effort, and that a subject so serious and important as labor-management relations deserves more careful study and consideration?

That argument will not stick. Few bills before Congress have received the thorough consideration, the careful preparation, and the searching debate which this measure has received. The Senate began hearings on it as early as January 23; the House on February 5. Scores of witnesses, representing the whole range of opinion, were heard. The House gave the bill a full-dress discussion. The Senate debate on it lasted literally for weeks. Compare this record—if the test is to be how carefully and how adequately the bill was prepared and discussed—with the less than 2 days' debate that was given in 1935 to the enactment of the Wagner Act.

2. Can it be argued that the new bill is unnecessary, that there is no need for action in this field by Congress, and that the best policy is simply to do nothing and let matters work themselves out by their own accord?

The answer to this argument is the unprecedented and immensely costly record of 113,000,000 man-days of work lost through strikes in 1946. Matters are not working themselves out satisfactorily by their own accord. The Wagner Act, unamended and unaccompanied by other necessary legislation, has fallen short of its own declared purpose to reduce "strikes and other forms of industrial strife and unrest." The need for further action to promote the conditions of responsible, even-handed collective bargaining is evident.

3. Can it be argued that this is a mere partisan measure, and that partisanship should have no place in matters of such grave importance?

The Democratic Senators approved this measure by a vote of 17 to 15. The House Democrats approved it by a vote of 103 to 66.

4. Can it be argued, finally, that Congress had no mandate from the people for legislation in this field?

Is it not fair to assume that the Members of a House of Representatives elected on peacetime issues only 7 months ago have at least as good an understanding of what their constituents expect of them—if there is unfortunately to be a difference of judgment here—as has a President elected under the wartime conditions fo 1944? On the final test, these Members of the House of Representatives voted for this legislation by a majority of 4 to 1.

As for the Senate: 32 of its Members also have a fresh mandate from the people, won by election last November. Of these 32, 17 voted for this legislation; 6 more were paired for it or announced in favor, and only 7—fewer than 1 out of 4—were opposed or paired against.

Address of Hon. John W. Byrnes, of Wisconsin

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 11, 1947

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. JOHN W. BYRNES, of Green Bay, Wis., Member of Congress, Eighth District, Wisconsin, keynoting National Young Republican Federation Convention at Milwaukee, Wis., June 6, 1947:

Mr. Chairman, fellow Republicans, it is a distinct pleasure to appear before this magnificent gathering of Young Republicans. I speak as one of you and I am thrilled, as I am sure each one of you must be, at this concrete manifestation of our strength, our purpose, and our determination.

We Young Republicans have witnessed a tremendous growth in our national federation since last we met. Today, we boast of active and virile State organizations in 46 of our 48 States. In a year's time, we have effected an almost three-fold increase in the number of our affiliated associations. There are today more Young Republican clubs and more young Republicans than ever before in the history of our movement.

This startling growth has not been a haphazard thing.

It is the product of thoughtful planning, careful organization and steady hard work. It is the result, to a large extent, of enthusiastic effort and intelligent direction on the part of our State, regional and national officers. It would not have been possible but for the spirit, faith and boundless enterprise of our national chairman, Ralph Becker.

But, more than this, our growth has been inseparably bound together with a national resurgence of belief in the principles and purposes of the Republican Party. The youth of America, imparting strength and vitality to that resurgence, has found vehicle in the Young Republican movement. The Young Republican movement has lent purpose and direction to that strength and vitality. The combination has created a political force unique in American life.

Today, however, we are not met to mull over our achievements. We would be neither young nor Republican if we were content to dwell in the past. Today, in the manner of youth, we meet to fix our hopes and aspirations firmly upon the future—the future of our movement, our party, our Nation, and our world. It is to that future that we address ourselves today.

We need, first, to look to the future of the young Republican movement.

We are frankly a political organization, and it is only good politics that we frequently take stock, assay our influence, and clarify our objective. We should not only know where we are going but how fast we are getting there.

Our objective, in the words of our national chairman, is "to sell practical politics to the youth of this country as an essential part of the American way of life and to interest that same youth to work within the framework of the Republican Party."

That objective is based upon the sincere belief that youth will find its hopes and ideals best expressed in the program and principles of our party. It is based equally upon the belief that our party, as a growing and dynamic thing, cannot long survive without youth's energy, idealism, and progressive influence.

If we are to realize our objective, it seems clear that we must recognize that our success must necessarily depend upon our appeal as an effective political organization. It is necessary, therefore, that we constantly evaluate our practical effectiveness.

That effectiveness can be measured, first, by our success in influencing party policy; and second, by our success as practical politicians within our own political party.

It is a startling fact that the age group represented by the membership of the Young Republican movement constitutes nearly 50 percent of the Nation's total potential voting population. We may well ask ourselves if our influence in American political life is commensurate with the power we wield at the polling place.

Have we Young Republicans effectively assumed the responsibility that is an essential feature of political activity? This question must be answered in the affirmative if our appeal to the youth of America is to be constant, positive, and self-perpetuating.

While serving as the rallying point for youth and Young Republicans everywhere, we must never forget for a moment that the individual members of the Young Republican Federation are an integral part of the Republican Party. The theory of young republicanism has not been, and never was intended to be, that its members must serve as apprentices before active participation in party and governmental affairs.

Of course, we admit the practical difficulty of youth aspiring to legislative and executive positions of high responsibility. Of course, we recognize that success in political life, as a practical matter is too often dependent upon long and faithful service. However, we are just as quick in asserting that these considerations shall not prevent youth from a dynamic participation in political policy-making and office seeking. Youth has the power at the ballot box; youth has the greatest stake in the future. The combination forms an inexorable political force.

We have the opportunity to demonstrate that this power cannot be denied. It is more than an opportunity; it is a full-fledged challenge. If we fail to prove our effectiveness, we will soon lose our appeal as a political organization. The youth of today is not interested in polite debating societies. He is interested in his future; he is interested in effective political action.

Therefore, we must demonstrate our ability to influence party policy; we must demonstrate our ability to become effective participants in party and governmental affairs. These are not things which shall be given to us; these are things which we must win.

First, we must make ourselves heard in party councils.

Our success as an organization is not alone measured by our total enrollment. It must be measured also by the number of young Republicans who are members of Republican county committees, who are chairmen of these committees, who are members of the Republican State committees, who have become State committeemen or State chairmen. Our influence will be small indeed and our purpose thwarted unless we are working members of the regular organization. We must rid ourselves of the belief that it is more important to aspire to high office in the Young Republican Federation than to become lowly workers in the Republican Party. We are no separate organization; we are an indivisible part of the Republican Party. We have no other reason for being.

Second, we must become active in government.

The success of a practical politician is determined by his ability to get elected to office. If we are to demonstrate our effectiveness as a practical political group, young Republicans must be elected to political office. The place to begin is at the grass roots. Active participation in local politics leads invariably to active participation in State and National politics. Sound Republican—that's spelled with a capital R—government begins at home. Ask yourselves, as representatives of almost half of the potential voting population, how many young Republicans in your area have become city councilmen, county supervisors, or State legislators; how many have held city, county, or State executive positions. The growing voice of youth will not be heard in governmental affairs until youth takes his place in government. While it is true that the Young Republicans have led the way, it is equally self-evident that we still have far to go.

These practical achievements are true measures of our effectiveness as a political organization; if we fail as practical politicians, by what right can we expect to interest the youth of America in practical politics as an essential feature of the American way of life? We will have our greatest appeal to youth when we conclusively demonstrate that we offer a dynamic medium for effective political action. We can interest youth only when we offer him results. Results cannot be achieved by words; they stem from action. Such action cannot be confined to frenzied activities around election time. It must be continuing; it must be useful; it must be measured by our influence in party and governmental affairs.

But, to present the youth of America with an active, influential and effective vehicle for his ambition, energy, strength, and vitality is not enough. Our appeal cannot be based alone upon our effectiveness as a working organization. It must be based equally upon the fundamental soundness of our political principles and our party program. It is not enough to show that our voice will be heard; our voice must be atuned to the wishes, desires, and ambitions of American youth.

It is the impressive responsibility of our federation to give fresh meaning and new scope to the time-tested principles of the Republican Party. We must accept the solemn responsibility of actively influencing a party program that will meet the great challenge of the postwar era. No party can stand still. It is the privilege of youth to provide the driving force and the steady infiltration of new hopes and fresh ideas that militate against stodginess and immobility, the inevitable forerunners of political decay. In short, as Republicans, we pledge allegiance to our party principles, and as young Republicans, we acknowledge our responsibility in the formation of a program that will give new meaning to those principles in these days of decision.

We are facing up to that responsibility in this convention. It is significant that the forums to follow have been given the general title, Problems of Youth. It will early be discovered, I believe, that the problems of youth are the problems of America, and that the problems of America are the problems of the world. By frankly facing the problems of youth we lay open for discussion and recommendation the entire field of political activity. We fulfill our function as catalytic agent for the Republican Party. We take responsibility for the formation of a party program.

Our immediate concern is with the keynote of that program.

I think we need not search far for it. Our program must be based upon a solution to the fundamental problem of youth, of the Nation, and of the world.

That problem is the preservation of peace.

It is the problem of preserving the peace in the world while retaining the American way of life at home. Our program must face squarely the issues involved in the solution of that problem. It is made compellingly urgent by the advent of potential mass destruction through scientific warfare; it is made increasingly difficult by the rise of political doctrines which are based upon the abrogation of the basic rights of men.

The preservation of peace is of special concern to youth. Youth has historically fought the wars of mankind; youth has inevitably picked up the rubble when the guns fell silent. Youth will fight the next, and will live in the wilderness it creates, if youth now fails its duty in the campaign for peace.

We, then, representing the youth of a great political party, have a significant obligation. Ours is the opportunity to enlist the fire, the spirit, and the optimism of youth in the formation of a program for peace. Ours is the solemn duty to insure that our program for peace is based upon the Republican principles of individual freedom and the hopeful promise of the American way of life. We must not fail in this duty, this obligation, this fateful opportunity.

I believe our first task is clear.

It is the development of a national state of mind. What America needs is a sudden and rude awakening to the lateness of the hour. As a Nation, we are capable of great national effort; we are also unfortunately capable of colossal numbness, of a disregard for actualities, of looking fondly back instead of sternly ahead.

This fact must sink into our consciousness, and, in all truth, must become part and parcel of our national state of mind.

We are dangerously close to losing the peace.

We are close to losing it by reason of our very blindness to the urgency of our danger. Half-hearted measures based upon faint-hearted support will not surmount the obstacles to peace. What is needed now is a great new boldness springing from an understanding and a united people. Our great move for peace must emerge clear and strong from the purifying crucible of public opinion. An aroused America, in time of war, has demonstrated her potential for destruction; an aroused America can surpass that effort in building for peace.

In the development of this new mood, we representatives of youth have a significant role. We must channel this new awareness into the creation of positive and constructive action and away from indecision, negation, and wishfulness. We must fully and critically assess the policies and actions of our national leaders. We must constantly be on the alert for obscurity of motive, faulty planning, and maladministration. We must demand complete information; we must beware of secrecy, inconsistencies, and half-truths.

The present administration must stand indicted for its failure to take the people into its confidence and to make clear the issues involved in the battle for peace. It has failed to present a clear and understandable picture of what must be done, what it must cost, and what sacrifices it calls for. It is tragic that, with the world calling for boldness of action, we are presented with piecemeal proposals, each designed to cope with the latest emergency. Such indecision can only drive the American people into an isolationism which they neither feel nor desire.

No American foreign policy can ignore the world's need for America's ingenuity and resources. No American political party, aspiring to national leadership, can ignore these facts:

There must be created in the world an atmosphere in which peace is possible. The peace is lost if the free peoples of the world succumb, in desperation, to the false promise of communism. Unless there can be created in those nations a measure of prosperity and self-sufficiency, their surrender to that ideology is inevitable. Their restoration to productivity is dependent upon the ability and willingness of the United States to contribute her genius and productive capacity to the task. Unless we are willing to watch the rest of the world erupt into chaos and are prepared to fight off the beast that arises from the debris, we cannot escape that responsibility.

These untarnished facts, it seems to me, make certain our acceptance of that responsibility. The cost of doing nothing is too terrible to admit of inaction. Our great need now is the development of a national spirit without which a national effort for peace cannot be sustained.

The great question is: Are we to move willingly to the great task with the full support of an informed and determined people, or are we to accept grudgingly and fitfully an unwanted responsibility, hampered by the suspicion and skepticism of a doubtful America?

We invite failure by the latter course. Our present policy of piecemeal effort, confusion and waste, based upon negative and emergency thinking, is producing doubt and skepticism in the minds of the people. It is inviting failure. The support it gains is based upon fear and timidity instead of courage and boldness. We must act to enlist the full and unqualified support of a determined American people in a clear program for peace.

That support can be won.

First, there must be created, as I have already mentioned, a universal understanding of the urgency of the world situation and of the cost of our failure to act boldly and surely.

Second, there must be presented to the American people a broad outline of the job to be done. They must know what must be done and where, what it will cost, and what sacrifices will be necessary. The program must be geared to the rebuilding of productive facilities. It must lead toward self-sustaining, free nations. The American people cannot long be sold on a program to feed and clothe the world; they will support a program which will help the peoples of the world feed and clothe themselves.

Third, this broad program must be coordinated under a unified administration. Waste and misdirected effort cannot be financed by America. Definitely planned results cannot be achieved by unrelated agencies tossing American dollars and resources hither and yon. The singleness of our purpose demands unity and clarity of action.

These are the basic concepts in a program for peace.

The eventual scope of such a bold program will tax the productive genius of the American system to the utmost. It will kill forever our political isolation from the rest of the world. It involves nothing less than world leadership—toward peace, prosperity, and freedom.

We young Republicans must be in the forefront of the ranks of those who are demanding our assumption of that leadership. The youth of America with its great stake in a peaceful future will find voice and direction within our fold.

We have another great responsibility—a responsibility distinct in itself and yet inseparable from our responsibility to create an enduring peace.

It is the maintenance of a strong, free, and productive America. It is the retention of incentive and competition within our economic system. It is the encouragement of enterprise, individual freedom and individual responsibility. It is the safeguarding of individual rights.

We must have faith in our traditions, our institutions, and our republican form of government. We must have confidence in the American people. For too long a time, our people have been ignored by their Government. The day of glittering promises must give way to the day of honest facts. If our program is based on justice, equity, and right, we need never fear its public acceptance.

We must be a united America. The New Deal game of playing one group of our people against the other for political gain must give way to unselfish unity of purpose and action. Let us recognize that the maintenance of a strong America and a peacefull world will require just as much real courage, noble sacrifice and spirit of high adventure as did the waging of war.

In all honesty and frankness, then, we must be aware of the inherent dangers in our program for peace. The greatest of these is that, in our struggle for peace, we lose those freedoms without which even peace is unendurable. Such dangers are ever present during time of war; a campaign for peace, such as we envisage, is equally rife with threats to basic freedoms. We must be alert to meet that peril.

There will be those who will insist upon greater centralization of our Government, upon greater control over the means of production, upon vast increases in the power of the executive branch and upon further regimentation of our daily lives. There will be others who will seize this opportunity to destroy the very freedom we seek to spread. They will maintain that it is necessary in the name of peace. These are real dangers.

It is basic to Republican principles that only a free America can be strong and productive. We must prove that our freedom is the underlying cause of our strength and productivity. We must champion the cause of freedom by demonstrating its workability. The world looks to a strong and productive America; it must follow a free America.

We must recognize that our system is not perfect and that we must constantly be alert to the changing tempo of human affairs.

Within our system, we must guard against the concentration of economic power in the hands of a few—in government, in labor, and in business. We must adopt and enforce the rules which will prevent the monopoly of power by any segment of our society. When the proper balance is struck, there is no limit to the productive capacity of the American system.

We are a Union of States. We must return to the States those powers of government we have denied them for so long. Our greatest safeguard against the concentration of power in the Federal Government is the creation of strong and progressive State governments. We lose one of the essential ingredients of democracy when we kill civic responsibility by the steady removal of power to Washington.

We must eliminate waste and inefficiency from Government. We destroy the essential confidence of our people in democracy when we make of our Government an unwieldy and burdensome bureaucracy. We must cease Federal hand-outs to pressure groups who draw their sustenance from the sweat of our citizens.

We must remain strong. We cannot allow our hopes for peace to weaken our national security. Our acknowledged superiority on land, sea, and in the air must remain our greatest insurance against the threat of war.

Thus, we can bring life and meaning and hope to our program for peace. With a strong faith in our own traditions and institutions, with an abiding determination to succeed, we will rally to our banner the strength and vitality of American youth in the battle ahead.

We will make of our federation an effective political organization; we will bring new scope and meaning to that effectiveness and to the principles of the Republican Party in this momentous hour. The job is ours; let us move to it with firmness and dispatch.

Naval Service Veterans Opposed to Armed Forces Merger

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 11, 1947

Mr. VAN ZANDT. Mr. Speaker, Navy Club, United States of America, a service organization chartered by Congress, composed of veterans of the Navy, Marine Corps, and Coast Guard, with 147 "ships" from Maine to California, conducted its annual reunion in Milwaukee, Wis., on June 5–7. There the delegates, carrying a mandate from thousands of members, unanimously adopted a resolution opposing merger of the armed forces, including the present proposal now before the House Committee on Expenditures in the Executive Departments. The text of this resolution follows:

Whereas Navy Club, U. S. A., is opposed to a merger of the armed forces of the United States because, on the basis of historical evidence, such a merger would inevitably weaken our ability to defend ourselves; and

Whereas Navy Club, U. S. A., recognizes the practical necessity for joint operations in active theaters of war; and

Whereas to achieve joint operations close coordination is required at the highest echelon; and

Whereas responsibility for such coordination is placed in the hands of the President of the United States by the Constitution; and

Whereas the existing proposal to delegate such vast authority in the hands of an appointed official constitutes a violation of the spirit if not the letter of the Constitution: Now, therefore, be it

Resolved, That Navy Club, U. S. A., recommends permanent status for the Joint Chiefs of Staff, expanded to include the commandant, United States Marine Corps, and the commandant, United States Coast Guard, during those periods when the Coast Guard operates under Navy command, as the supreme military operating command; and be it further

Resolved, That Navy Club, U. S. A., recommends the creation of a joint intelligence agency, empowered to coordinate the activities of all existing intelligence agencies, empowered to analyze all intelligence gathered by existing agencies and by its own agents, and further empowered to provide such additional intelligence gathering facilities as are necessary; and be it further

Resolved, That Navy Club, U. S. A., recommends the creation of a national security council, composed of the top civilian heads of all agencies concerned with security; and be it further

Resolved, That Navy Club, U. S. A., recommends the creation of such joint boards as are necessary to achieve unification in the fields of procurement and services where such unification is deemed efficient and economical.

Sensible Recommendation

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 11, 1947

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Manitowoc Herald-Times of May 28, 1947:

A SENSIBLE RECOMMENDATION

It appears that Manitowoc will wait a while for its long-talked-of new post office.

Recently the Public Buildings Administration in Washington announced, with a modesty unusual in a Government bureau, that the present is a poor time for post-office building. It recommended that all such construction be indefinitely postponed.

This would, of course, delay building of a local post office for which the Federal Government has recommended financial aid amounting to several hundred thousand dollars.

Manitowoc needs a new post office, the present structure having been outgrown by the city. Local postal employees are handicapped by lack of adequate space in which to handle a mail-call far exceeding the daily turn-over processed when the Franklin Street building was erected.

Nevertheless we are heartily in accord with the Washington recommendation and compliment the agency director who made the announcement for possessing a fair amount of economic acumen and common sense.

Public building at this time means Government competition with the housing program. True, not many private homes are being built but chances for stepped up construction in this line would be greatly endangered by any extensive public-works program.

At present there is neither the materials nor the labor available to do justice to both programs. Building post offices would drain off some of each and further skyrocket prices and wages in the construction field. Building costs are roughly twice what they were before the war—and very much higher than they ought to be now.

Another, long-range reason for postponing Government building at this time has to do with the economic theory that public works of any kind should not be undertaken during boom times. It is suggested that Government projects, which during the last depression many times were merely job-making projects, should be delayed for less prosperous years when they would create no shortages and would help combat unemployment.

Government construction now would exhaust many job opportunities that might well be held in reserve for leaner times and would cost the Government, meaning you and me, much more than it would some years hence. It also would raise hob with Congress' announced intention of paring all Government expenses to the bone.

Hon. Emmet O'Neal

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 11, 1947

Mr. CANFIELD. Mr. Speaker, I desire to be among those expressing pleasure over the appointment of our former colleague, Emmet O'Neal, of Louisville, Ky., as our American Ambassador to the Philippines.

As a congressional secretary, some years before I entered the House, I came to know Mr. O'Neal as a friendly gentleman who had time for and thought in terms of "the other fellow." His democratic spirit, his engaging smile, and his attitude of good-will, made him a favorite among Capitol Hill workers.

The new Ambassador was among the first to shake my hand and wish me well when I became a member and I was glad in my third term to be named to the House Appropriations Committee Subcommittee on Treasury-Post Office Appropriations on which he was then serving as a majority member. He was a proven legislator and his common sense approach to the problems of our day was reflected in his effective presentations on the floor.

It was a treat to see Emmet O'Neal at play on the House gym floor after a busy day. He could hold his own with the fastest youngsters who today can be counted in his corner because he never violated the rules of the game.

Frank Bilowith, of Passaic, N. J., and other fighting veterans of World War I from my district, who served with Emmet O'Neal in the famed First Division, are happy, too, over the recognition accorded their former comrade.

And most certainly the Philippines Ambassador to our country, Hon. Michael Elizalde, and Brig. Gen. Carlos P. Romulo, the new Republic's ambassador to the United Nations, both of whom served as Resident Commissioner in the House with Mr. O'Neal, are rejoicing that their friend is to be in Manila as the representative of the mother republic.

I was in the Philippines in January 1946, and I saw what the brave people of the islands had to go through for freedom's cause. I have a lasting affection for these folks and I feel we are serving them well when we send them Mr. O'Neal.

Our Ailing Building Industry

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 11, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Robert J. Lewis, which appeared in the Washington Evening Star of June 10, 1947, entitled "Our Ailing Building Industry":

OUR AILING BUILDING INDUSTRY—WHEN IT SHOULD BE MAKING FULL SPEED AHEAD THERE ARE DANGEROUS SIGNS OF SLOWING DOWN

(By Robert J. Lewis)

Signs of stagnation in the construction industry constitute a warning to the rest of the economy.

Prices have risen to fantastic heights and are still edging fractionally higher. Under the weight of the cost burden, the housing program has begun to sag unmistakably, and much commercial and industrial building has been postponed or canceled.

The Commerce Department, which earlier predicted a housing construction volume of $6,000,000,000 for this year, now expects a volume of only between $4,250,000,000 and $4,800,000,000.

Housing Expediter Creedon and Housing Administrator Foley both have repeatedly warned that costs must be reduced if homes are not to be priced out of the market.

HALF A BILLION DROP IN PERMITS

Permits for all urban construction in the first 3 months of this year fell to $923,000,000—a drop of $515,000,000 from the total for the same period last year. Construction contracts awarded in the 37 States east of the Rocky Mountains dropped 18 percent in April of this year below the volume for the corresponding month last year.

Despite the continuing housing shortage, fewer new houses have been started throughout the country in the first 4 months of this year than in the same period last year, when material shortages held up production.

Builders in some parts of the Nation complain that completed houses are moving slowly, or not at all. The April quarterly review of the construction situation prepared by the Commerce Department reports the "general atmosphere of the residential construction industry is disturbing." Continuing, it says:

"Builders appear to be increasingly reluctant to start new projects because of expectations that both construction costs and the prices of finished houses are due for a drop.

"Reports are also accumulating concerning the difficulty of selling newly-completed houses, and it is clear that the housing market is far less active at the present time than it was some months ago."

EMPLOYMENT FALLING OFF

The gloomy picture is also beginning to be reflected in employment figures. According to the Bureau of Labor Statistics, on-site employment in new private residential construction in April this year was 383,000 workers, in comparison to 406,000 in the same month last year—a drop of 23,000 workers.

Government officials employ the word "critical" when they discuss building material prices, and are seeking to bring about widespread voluntary reductions. Reports are heard that building materials are even beginning to pile up in some lines.

For example, lumber—which tripled in price over 1939—threatens to become so plentiful that certain parts of the industry hope for relaxed export controls in order that more of this product may be sold abroad.

Paradoxical as it may seem, in view of last year's concern over material shortages as they affected housing, the Government is now reported to be considering a plan to raise the limitation on non-residential construction so that materials and labor may not be left idle.

Also, a significant result of the present rarefied construction price level is the effect it has on commercial, industrial, and public projects.

A February survey by the Civilian Production Administration, recently released, shows that more than $165,000,000 in nonresidential construction authorized between March and September 1946 has been deferred by the sponsors. Of that amount, 62 percent was put off or canceled because of excessive costs or because contractors were unwilling to set prices.

POSTPONEMENT UNTIL BETTER DAYS

In the District area, many needed projects have had to be postponed owing to high costs, including Federal and District Government construction.

The CPA's limited sampling survey of 89 projects in the Washington area, authorized

between March and September 1946—all of which were to have begun last year—showed that 21 projects to cost $5,245,000 had not yet been started by March, this year, and that the sponsors of 10 projects to cost $3,323,000 had either definitely abandoned the projects or postponed them until after July 1.

The social and economic consequences implicit in the present construction-cost level are admittedly serious. Why is building so expensive? What is chiefly to blame? High-labor rates? Excessive builders' profit? Skyrocketing material prices? Or lowered production on the part of labor?

Emmet O'Neal

EXTENSION OF REMARKS
OF
HON. FRANK L. CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 11, 1947

Mr. CHELF. Mr. Speaker, it is indeed with a great deal of pleasure that I learn of the confirmation by the Senate of the Honorable Emmet O'Neal, of Louisville, Ky., as Ambassador to the Philippines.

Our former colleague here in the House and a Member of the Kentucky delegation is eminently qualified for this most important diplomatic post. At a time when friendship and understanding among the nations of the world is imperative, his appointment is a source of inspiration.

His lovable disposition, his sterling character, his devotion to duty, his vast experience in Government, his ability to make friends and hold them, in my humble opinion, make him stand out like the Washington Monument on the diplomatic front.

Kentucky is proud of Emmet O'Neal and I am sure I express the sentiments of all of his former colleagues of this House when I say: May he have a full fruition of his dreams, a happy realization of his endeavors in his new assignment, and may God bless him in every official act.

Statement of Benjamin Spewak

EXTENSION OF REMARKS
OF
HON. ROBERT N. McGARVEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 11, 1947

Mr. McGARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

TWO AND ONE-HALF YEAR PLAN FOR THE OPENING OF 100 AGENCIES FOR THE SALE OF THE ARTS AND CRAFTS OF THE PUEBLO TRIBES AND OTHER TRIBES, WITHOUT ANY EXPENSE OF OPENING OR COST OF MAINTENANCE TO THE GOVERNMENT IN 100 OF OUR AMERICAN CITIES

(By Benjamin Spewak, former manager of an Indian goods building at Williams, Ariz.)

HOW TO PUT PLAN INTO PERFORMANCE

First. Stockroom in Albuquerque, N. Mex., for assembling, price tagging and shipping of the arts and crafts; Indians on reservations and in Indian schools outside of the State of New Mexico, need not send their arts and crafts to the Indian Field Agency at Albuquerque, but instead send a weekly report of arts and crafts on hand and the Albuquerque Agency will send them official price tags and direct them where to ship.

Second. Each item have Government sticker with sale price in plain figures, and name of tribe.

Third. Price determined at 300 percent profit above actual cost of production to the Indians.

Fourth. Preference be given to modern arts and crafts made today by the Indians in the Pueblo villages and in Indian schools, and that of other Indian tribes.

Fifth. Pamphlets are to be printed for mailing purposes giving a brief history of each Indian tribe with one illustration for each tribe.

Sixth. Only one agency to be opened in each major city in largest department store.

Seventh. Stock signs be prearranged portraying the arts and crafts of each tribe, sent to each agency with shipment of goods, to make the arts and crafts plainly understood by the public.

Eighth. When the agency is opened the management of store is to advertise it in their regular ad once a week, each Thursday; the Arts and Crafts office in Washington, D. C., mail each week 1,000 circular letters with pamphlet enclosed of the arts and crafts, also name of store. The names are to be taken from phone directory, and each name in directory is to get a letter until all names in directory are exhausted; then the Arts and Crafts Board stops mailing and store agency is left on its own.

Ninth. Agencies make remittance to the Arts and Crafts Board monthly less 40 percent of the money taken in.

Tenth. After percentages are paid on arts and crafts sold and other expenses deducted, there should be 100 percent profit.

Eleventh. After all the agencies are in operation they should bring a minimum net profit of $78,000 the first year, basing on $15 profit for each agency each week.

Twelfth. The author of this plan be given appointment by the Arts and Crafts Board to put the agencies into operation for the duration of the 2½ years required to put plan into performance.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. EDWARD G. ROHRBOUGH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 11, 1947

Mr. ROHRBOUGH. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein an editorial from the New York Times, of June 7, 1947, urging full consideration of a bill to provide Federal support for education. I agree with the editorial that it is neither desirable nor advisable to dispose of so important a measure without full consideration. It follows:

FEDERAL AID TO EDUCATION

Hearings before the House subcommittee on education have now come to a close and the subcommittee is considering its report. Some 60 witnesses appeared before it to argue the pros and cons of Federal help to the Nation's schools. Previously a Senate education subcommittee had voted to report a similar bill favorably, and is now ironing out the final details of the measure.

Some leaders of the House contend that this is not the time to add new expenditures to the Federal budget. But the House itself ought to have an opportunity to consider this question and to debate the bill openly and on its merits. To keep it "frozen" would be poor strategy; too many people are concerned with the plight of the American public schools. It is neither advisable nor desirable to kill so important a measure in this manner.

Twenty-seven organizations have banded together to see that the House gets an opportunity to vote on the bill. The reason they are centering on the House is that little difficulty is expected to arise in the Senate, where Senator TAFT is sponsoring a Federal-aid measure. It is to be hoped that the House, too, will assure a vote.

President Truman's Address Before the Canadian Parliament

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by President Truman at Ottawa, Canada:

TEXT OF PRESIDENT TRUMAN'S ADDRESS BEFORE THE CANADIAN PARLIAMENT

Following is the text of President Truman's address before a joint session of the Canadian Parliament yesterday in Ottawa, as recorded by the New York Times:

"Mr. Prime Minister, Honorable Members of the Senate, and Members of the House of Commons of Canada, this is my first visit to Canada as President of the United States, and I am happy that it affords me the opportunity to address this meeting of the Members of both houses of the Canadian Parliament. Here is a body which exemplifies self-government and freedom of the nations of the great British Commonwealth. The history of the Commonwealth proves that it is possible for many nations to work and live in harmony and for the common good.

"I wish to acknowledge the many courtesies extended to me on this visit by the Governor General, Viscount Alexander, who paid me the honor of a visit in Washington a few months ago. His career as a soldier and as a statesman eminently qualifies him to follow his illustrious predecessors.

"For the courtesy of appearing before you, as for other courtesies, I am sure I am largely indebted to my good friend, Prime Minister Mackenzie King.

"I was particularly happy to be present yesterday when we were honored in the rotunda of this Parliament Building. It is a wonderful ceremony and one which, I think, he richly deserves. I also appreciate very highly his political advice, which he gave me this morning.

"I have come to value and cherish his friendship and statesmanship. As our two nations have worked together in solving the difficult problems of the postwar period, I have developed greater and greater respect for his wisdom.

"Americans who come to know Canada informally, such as our tourists, as well as those whose approach is more academic, learn that Canada is a broad land—broad in mind, broad in spirit, and broad in physical expanse. They find that the composition of your population and the evolution of your political institutions hold a lesson for other nations of the earth."

STRENGTH, UNITY GAINED

"Canada has achieved internal unity and material strength, and has grown in stature in the world community, by solving problems that might have hopelessly divided and weakened a less gifted people.

"Canada's eminent position today is a tribute to the patience, tolerance, and strength of character of her people, of both French and British strains. For Canada is enriched by the heritage of France as well as of Britain, and Quebec has imparted the vitality and spirit of France itself to Canada. Canada's notable achievement of national unity and progress through accommodation, moderation, and forbearance can be studied with profit by her sister nations.

"Much the same qualities have been employed, with like success, in your relations with the United States. Perhaps I should say 'your foreign relations with the United States.' But the word 'foreign' seems strangely out of place. Canada and the United States have reached the point where we no longer think of each other as 'foreign' countries. We think of each other as friends, as peaceful and cooperative neighbors on a spacious and fruitful continent.

"We must go back a long way, nearly a century and a half, to find a time when we were not on good terms. In the War of 1812 there was fighting across our frontier. But permanent good came of that brief campaign. It shocked Canadians and Americans into a realization that continued antagonism would be costly and perilous.

"The first result of that realization was the Rush-Bagot Agreement in 1817, which embodied a spirit and an attitude that have permeated our relations to this day. This agreement originally was intended to limit and to regulate the naval vessels of both countries on the Great Lakes. It has become one of the world's most effective disarmament agreements and is the basis for our much-hailed unfortified frontier."

A HAPPY COMPOUND

"I speak of that period of history to make the point that the friendship that has characterized Canadian-American relations for many years did not develop spontaneously. The example of accord provided by our two countries did not come about merely through the happy circumstance of geography. It is compounded of one part proximity and nine parts good will and common sense.

"We have had a number of problems, but they have all been settled by adjustment, by compromise, and by negotiations inspired by a spirit of mutual respect and a desire for justice on both sides.

"This is the peaceful way, the sensible way, and the fair way to settle problems, whether between two nations that are close neighbors or among many nations widely separated.

"This way is open to all. We in Canada and the United States are justifiably proud of our joint record, but we claim no monopoly on the formula.

"Canada and the United States will gladly share the formula, which rejects distrust and suspicion in favor of common sense, mutual respect, and equal justice with their fellow members of the United Nations. One of the most effective contributions which our two countries can make to the cause of the United Nations is the patient and diligent effort to apply on a global scale the principles and practices which we have tested with success on this continent.

"Relations between Canada and the United States have emphasized the spirit of cooperation rather than the letter of protest. The Rush-Bagot Agreement was stated in less than 150 words. From time to time it has been revised by mutual agreement to meet changing conditions. It was amended as recently as last December."

COLLABORATION INTENSIFIED

"The last war brought our countries into even closer collaboration. The Ogdensburg agreement of 1940 provided for the creation of the Permanent Joint Board for Defense. It was followed by the Hyde Park agreement of 1941, which enabled us to coordinate our economic resources with increased efficiency.

"Common interests, particularly after Pearl Harbor, required the creation of several joint agencies to coordinate our efforts in special fields. When victory ended the necessity for these agencies they were quietly disbanded with a minimum disturbance of the national economies of the two countries. It's common sense again.

"The Permanent Joint Board on Defense will continue to function. I wish to emphasize, in addition to the word 'Permanent,' the other two parts of the title. The board is joint, being composed of representatives of each country. Canada and the United States participate on the basis of equality, and the sovereignty of each is carefully respected. This was true during the gravest dangers of the war and it will continue to be true, in keeping with the nature of all our joint undertakings.

"The Board was created, and will continue to exist, for the sole purpose of assuring the most effective defense for North America. The Board, as you know, has no executive powers and can only make recommendations for action. The record of the Board provides another example of the truly cooperative spirit that prevails between our two countries.

"The spirit of common purpose and the impressive strength which we marshalled for action on all fronts are the surest safeguard of continental security in the future."

WAR AND PEACE ALLIANCE

"The people of the United States fully appreciate the magnificent contribution in men and resources that Canada made to the Allied war effort. The United States soldiers, sailors, and airmen in the heat of battle knew their Canadian comrades as valiant and daring warriors. We look back with pride on our association as stanch allies in two wars.

"Today our two Nations are called upon to make great contributions to world rehabilitation. This task requires broad vision and constant effort.

"I am confident that we can overcome the difficulties involved, as we overcame the greater difficulties of the war. The national genius of our peoples finds its most satisfying expression in the creation of new values in peace.

"The record proves that in peaceful commerce of the combined efforts of our countries can produce outstanding results. Our trade with each other is far greater than that of any other two nations on earth.

"Last year the flow of trade in both directions across the border reached the record peacetime total of $2,250,000,000. We imported from Canada more than twice the value of goods we received from the United Kingdom, France, China, and Russia combined. United States purchases from Canada were about six times our purchases from Great Britain, nearly 10 times those from China, and 11 times those from France. We sold to Canada nearly as much as we sold to Britain and France together.

"Gratifying as the volume of our trade now is, it is capable of even further expansion to our mutual benefit. Some of our greatest assets are still to be developed to the maximum. I am thinking of one particularly that holds tremendous possibilities, the magnificent St. Lawrence-Great Lakes system, which we share and which we must develop together.

"The St. Lawrence project stirs the imagination of men long accustomed to majestic distances and epic undertakings. The proposal for taking electric power from the river and bringing ocean shipping 2,400 miles inland, to tap the fertile heart of our continent, is economically sound and strategically important."

TRADE ACCORDS CITED

"When this program is carried out, the waterway that is a part of our boundary will more than ever unite our two countries. It will stimulate our economies to new growth and will spread the flow of trade.

"There have been times when short-sighted tariff policies on both sides threatened to raise almost insurmountable barriers. But the need to exchange goods was so imperative that trade flourished despite artificial obstacles. The reciprocal-trade agreements of 1936 and 1939 made possible a sensible reduction of tariff rates, and paved the way for our present phenomenal trade.

"Something more than commercial agreements, however, is required to explain why Canada and the United States exchange more than $2,000,000,000 worth of goods a year. Ambassador Atherton has aptly given the reason as not free trade but the trade of freemen. That record flow of goods and the high standard of living it indicates, on both sides of the border, provide a practical demonstration of the benefits of the democratic way of life and a free economy.

"The benefits of our democratic governments and free economies operating side by side have spread beyond our countries to the advantage of the whole world. Both nations expanded their productivity enormously during the war and both escaped the physical damage that afflicted other countries. As a result, Canada and the United States emerged from the war as the only major sources of the industrial products and the food upon which much of the world depends for survival.

"Canada has responded as nobly to the challenge of peace as she did to that of the war. Your wheat has fed millions who otherwise would have starved. Your loan has strengthened Britain in her valiant battle for recovery.

"The United States is particularly gratified to find Canada at our side in the effort to develop the International Trade Organization. We attach great importance to this undertaking, because we believe it will provide the key to the welfare and prosperity of the world in the years immediately ahead.

"In sponsoring the International Trade Organization, the United States, with the cooperation of Canada and other countries, is making a determined effort to see that the inevitable adjustments in world trade as a result of the war will result in an expanding volume of business for all nations.

"Our goal is a vast expansion of agriculture and industry throughout the world, with freer access to raw materials and markets for all nations, and a wider distribution of the products of the earth's fields and factories among all peoples. Our hope is to multiply the fruitfulness of the earth and to diffuse its benefits among all mankind."

A CHALLENGE FACED

"At this critical point in history, we of the United States are deeply conscious of our responsibilities to the world. We know that in this trying period, between a war that is over and a peace that is not yet secure, the destitute and the oppressed of the earth look chiefly to us for sustenance and support until they can again face life with self-confidence and self-reliance.

"We are keenly aware that much depends upon the internal strength, the economic stability, and the moral stamina of the United States. We face this challenge with determination and confidence.

"Free men everywhere know that the purpose of the United States is to restore the world to health, to reestablish condi-

tions in which the common people of the earth can work out their salvation by their own efforts.

"We seek a peaceful world, a prosperous world, a free world, a world of good neighbors, living on terms of equality and mutual respect, as Canada and the United States have lived for generations.

"We intend to expend our energies and to invest our substance in promoting world recovery by assisting those who are able and willing to make their maximum contribution to the same cause.

"We intend to support those who are determined to govern themselves in their own way, and who honor the right of others to do likewise.

"We intend to aid those who seek to live at peace with their neighbors, without coercing or being coerced, without intimidating or being intimidated.

"We intend to uphold those who respect the dignity of the individual, who guarantee to him equal treatment under the law, and who allow him the widest possible liberty to work out his own destiny and achieve success to the limit of his capacity.

"We intend to cooperate actively and loyally with all who honestly seek, as we do, to build a better world in which mankind can live in peace and prosperity.

"We count Canada in the forefront of those who share these objectives and ideals.

"With such friends we face the future unafraid."

Little Caesar's Threat

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. GAVIN. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith an editorial from the late city edition of the Pittsburgh Post-Gazette, Wednesday, June 11:

James Caesar Petrillo's threat to expel Representative CARROLL D. KEARNS, a Pennsylvania Republican, from the American Federation of Musicians springs ostensibly from the Congressman's agreement to share the podium at the musical festival to be conducted by Dr. Joseph Maddy at Interlochen on July 4.

Of course, Mr. Petrillo feels about Dr. Maddy as John L. Lewis does about J. A. Krug. But there may be still another reason for Little Caesar's rancor toward Mr. KEARNS. The Congressman was among those who voted for the Taft-Hartley labor bill, the bare mention of which sends the head of the musicians into a running fit.

Mr. KEARNS is a music teacher in Greenville, Pa. If he's booted peremptorily out of the union, he is robbed of a right to earn a living at his profession. But Mr. KEARNS is also a Congressman, earning $15,000 a year to represent the people of his district—and is therefore in a position to do something about the meat upon which "this our Caesar feeds that he is grown so great." Of the two jobs, we should think he would prefer the work in Washington.

If Mr. KEARNS stands up against Mr. Petrillo, as we hope he will, his teaching career may suffer. If he knuckles under to the arrogant little union boss, he may have to answer to his constituents. Faced with these prospects, his choice should be obvious.

Official Fears Death of Filbert Industry

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. NORBLAD. Mr. Speaker, as I have several times heretofore stated on the floor of the House, the filbert-nut situation in this country is a very serious one. If imports continue in the future as they have in the past, it seems but a matter of time until this industry will be ruined. Mr. John E. Trunk, who is thoroughly familiar with the entire situation, last week discussed this subject at a meeting at Amity, Oreg. Under leave to have printed in the Appendix of the RECORD a newspaper report of this speech as taken from the Telephone Register at McMinnville, Oreg., I include it herewith:

OFFICIAL FEARS DEATH OF FILBERT INDUSTRY

Pacific Northwest filbert industry, comprising practically the entire filbert output of the United States, is in danger of complete annihilation because of unrestricted European imports of the product into this country.

This, briefly, sums up the precarious position of some 3,500 Oregon and Washington nut farmers as set forth by John E. Trunk, manager of the Northwest Nut Growers Association of Dundee, at the annual meeting of Amity-Gaston members held at Amity last Monday. "Hundreds of thousands of pounds of filberts are being dumped into this country from Mediterranean bases," declared Trunk who became manager of the Northwest Association June 1. "Unless our Government takes immediate action to curb these imports the domestic filbert industry faces ruin," he said.

* * * * *

Threat to the home market loomed during the past year, Trunk stated. Small shipments of filberts from foreign countries to the United States prior to the war did not make serious inroads into the enterprise here, he said.

"Today, however, we have a very different picture," warned the executive. "From September through March of the past year a total equivalent to 25,000,000 pounds of shelled and in-the-shell filberts was laid down in our ports from abroad.

DOMESTIC SUPPLY ENOUGH

Home growers produced during that period, 18,000,000 pounds of in-the-shell nuts. This amounts to more than sufficient to supply domestic needs. As a matter of fact we have been doing extensive research in this field with a view of developing other than food uses for an ever-increasing filbert production, Trunk revealed.

One-third of last year's domestic filbert crop is being sold at the present time at a loss, Trunk said. This will have a depressing effect on prices paid for the incoming crop, he pointed out.

Italy is our greatest threat in the unshelled filbert market, according to the figures listed by Trunk. Last year Italian growers were compelled by their government to divert part of their crops to oil. This year they have a bumper yield and so will be able to greatly increase exports.

Turkey leads with shelled filberts while Spain contributes somewhat to the top-heavy market. It is estimated that foreign shipments of filberts to this country this year will be more than 30,000,000 pounds.

"Europe is starving. They are in great need of American dollars in spite of our loans to them," declared Trunk. "This, coupled with the advantage of a low tariff, ideal climate conditions for year-around production and cheap labor give our foreign competitors all the advantages," he said.

IMPORTERS UNDERSELLING

Domestic growers have tried to offset the infringing trade by lowering prices only to be met by underselling tactics of importers.

Turkey has met our lowered prices by subsidizing, and other governments are expected to follow suit

Raising tariff would be a help in the opinion of growers but drastic quota restrictions on imports are necessary to divert disaster, states Trunk.

Implications of Invasion of Sinkiang

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, June 12 (legislative day of Monday, April 21), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial entitled "Choice of Doctrines," from the Washington Daily News of today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHOICE OF DOCTRINES

Great wars do not come as bolts from a clear sky. Their causes are cumulative. They result from the loosing of forces which gather momentum until they become as irresistible as the tide.

The shooting in World II began on September 1, 1939, when Hitler invaded Poland, 6 months after he invaded Czechoslovakia, and 1 year after Munich. Britain and France declared war two days later.

Formal hostilities between Japan and China date from the exchange of shots by troops of the two countries near Peking on July 7, 1937. But that too, was the climax of a long series of incidents.

Historians are coming to regard the Jap invasion of Manchuria in 1931 as the actual beginning of World War II, and the Italian attack on Ethiopia in October 1935, as the opening of its European phase.

We thought of these beginnings of the most tragic period in history today when reading the report that Outer Mongolian troops, allegedly supported by Russian planes, had invaded the Chinese province of Sinkiang.

History has a habit of repeating itself.

Outer Mongolia is a Soviet satellite, so this undeclared war is in fact a Russian invasion of China, in the same sense that a Yugoslavian attack on Greece would be accepted as a Soviet attack.

This attack on Sinkiang probably is not the start of an all-out war against China. More likely, it is a feeler, designed to determine how the other great powers, including America, will react. If so, it is in the same pattern as the Soviet coup in Hungary, the demand for a pro-Russian Government in Austria, and the Communist intrigues in Italy and France.

But, taken together, these developments add up to an impressive threat of an all-out war to come.

Hitler, Mussolini, and the Jap war lords pushed their luck too far and found death for themselves and brought civilization to the brink of destruction.

Premier Stalin and his associates in the Kremlin can provoke a repetition of that

catastrophe by pursuing the mad adventure upon which they have embarked. But though it is late, it is not too late for Russia to seek and find an answer to all her legitimate needs by peaceful means.

The solution can be found in President Truman's statement at Ottawa:

"We seek a peaceful world, a prosperous world, a free world, a world of good neighbors, living on terms of equality and mutual respect, as Canada and the United States have lived for generations."

The world of tomorrow must be such a world if civilization is to survive and move on to better things. Canada and the United States have found happiness and security in that kind of world. And, as the President said, "we intend to expand our energies and invest our substance in promoting world recovery by assisting those who are able and willing to make their maximum contribution to the same cause * * * to build a better world in which mankind can live in peace and prosperity."

The choice today is between that doctrine and the doctrine of Hitler and Mussolini, which can end only in chaos and disaster.

Development of Columbia Basin Water Resources

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, June 12 (legislative day of Monday, April 21), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dealing with the development of the water resources of the Columbia Basin, addressed to me by Theron D. Weaver, colonel of the Corps of Engineers, and chairman of the Columbia Basin Inter-Agency Committee.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COLUMBIA BASIN INTER-AGENCY COMMITTEE,
Portland, Oreg., May 29, 1947.

Hon. WAYNE L. MORSE,
United States Senate,
Washington, D. C.

DEAR SENATOR MORSE: Those interested in the development of the water resources of the Columbia Basin have for some time been deeply concerned with the problem presented by competing interests between the Columbia River fisheries and the power and navigation needs of the Northwest.

Commercial and sport fishing are important resources of the region, but the fishing benefits as compared to the magnitude of the actual benefits from other uses of the water resources are relatively small. Opponents of water resource development point to dam construction as the primary destructive agency to fish life, while proponents of multipurpose development believe that such work can be carried out in a manner not inimical to perpetuation of the fishery industry, and that over-fishing, stream pollution, unscreened diversion canals, damage due to logging operations, general industrialization and development of the area account largely for the depletion of the fish runs.

The Department of the Interior has submitted preliminary recommendations by that Department concerning the problem to the Federal Inter-Agency River Basin Committee, which in turn has referred the matter to the Columbia Basin Inter-Agency Committee for consideration and recommendation.

Conclusions of the Department of the Interior may be summarized as follows:

a. The salmon runs, even with full use of fish ladders and all protective devices, are impaired by any mainstream dam on the Columbia below the Okanogan, or on the Snake below the Salmon River.

b. The annual wholesale value of river-caught salmon ranges from $6,000,000 to $10,000,000. Capitalized value of the resource may be said to be $125,000,000.

c. Some five Indian tribes will be dispossessed of fishing sites reserved to them under treaty. An arbitrary capitalized value of fifteen to twenty million dollars might be placed on these rights.

d. An arbitrary capitalized value of $20,000,000 might be assigned to the sport fishing of salmon on the river.

e. The Bonneville Power Administration estimates that it needs peak firm power capacity of 3,875,000 kilowatts by 1955. This requires in addition to existing installations 9 units at Grand Coulee (1,070,000 kilowatts), 1 unit at Detroit (41,000 kilowatts), 3 units at Hungry Horse (142,000 kilowatts), 9 units at Foster Creek (576,000 kilowatts), 12 units at McNary (828,000 kilowatts), and 4 plants in the lower Snake River (364,000 kilowatts). All of these installations are now authorized. Only the latter two are a threat to the salmon.

f. The Corps of Engineers assigns annual navigation benefits of over $7,300,000 to the mid-Columbia and Snake projects.

g. The Department agrees that the Columbia River fisheries should not be allowed indefinitely to block the full development of the other resources of the river. If they were to be preserved at any cost, eight potential projects on the Columbia and five on the Snake would have to be abandoned. The costs would be about 5,000,000 kilowatts of low-cost power capacity (80 percent on the Columbia), the acceptance of only shallow-draft navigation above the Dalles and none on the Snake, and the ultimate sacrifice of about 1,000,000 acres of irrigation. It is difficult precisely to equate these potential benefits against the value of the present Columbia River salmon, but all concerned within the Department are agreed that they are the foundation of the ultimate development of the Pacific Northwest and that they considerably outweigh the resulting cost to the commercial fisheries, the Indians, and the sportsmen.

h. It is, therefore, the conclusion of the Department that the over-all benefits to the Pacific Northwest from a thoroughgoing development of the Snake and Columbia are such that the present salmon run must, if necessary, be sacrified. This means that the Government's efforts should be directed toward ameliorating the impact of this development upon the injured interests and not toward a vain attempt to hold still the hands of the clock.

i. Possibilities of amelioration. There are several substantial opportunities for easing the burden of those injured by the proposed developments. They are:

(a) Downstream salmon development: The Fish and Wildlife Service has outlined a possible program for salmon development in the lower river and coastal streams. That program consists of (1) removal of obstructions, (2) abatement of pollution, (3) screening all diversions and construction of fish ways, (4) transplantation of up-river runs, (5) extension of artificial propagation.

(b) Indian readjustment: The Indian tribes should receive just compensation; some part of any downstream salmon development should be made available for their use; arrangements should be worked out for Indian use of carcasses from the hatcheries; and alternative economic opportunities should be developed for the Indian fishing population.

(c) Rescheduling: The present construction schedule will largely be fixed by the rate of appropriations. Obstruction of the Columbia by McNary might be completed by 1952, and of the lower Snake probably 1 or 2 years later. The Dalles and the other projects on the main streams below the Okanogan and Salmon Rivers have not yet been authorized (nor is there any assurance that they can or will be authorized in time to meet the power needs as determined by the Department of the Interior). McNary has gone too far to stop or to delay. Low-cost power can be found which will, for the immediate future, meet the power capacity represented by those projects without injurious effects upon the salmon. The Dalles and the lower Snake projects have a combined capacity of about 1,900,000 kilowatts. Of this capacity, only 365,000 kilowatts is needed before 1956; it is scheduled to come from the lower Snake. Power needs for the next decade or more might be met by two, or at the most all, of these projects: Hell's Canyon, on the Snake, 495,000 kilowatts; Boundary (or Z Canyon), on the Pend Oreille, 400,000 kilowatts; and Wolf Creek, on the Snake, 425,000 kilowatts. If these projects were scheduled for completion before the Columbia dams (except McNary) below the Okanogan, and the Snake dams below the Salmon River, the Columbia salmon run would probably have an additional life of 15 to 20 years, and could hardly fail to be preserved against this threat for at least 10 years.

j. Recommendations: The following recommendations represent the preliminary views of the Department:

(a) The current plans for further installations at Grand Coulee, Rock Island, and Kerr, and for construction of Hungry Horse, Foster Creek, Detroit, and McNary should be carried forward with all speed.

(b) The Hell's Canyon, Boundary, and Wolf Creek projects, or such other sizable upstream projects as should prove more practicable, should be authorized and scheduled for construction ahead of the Dalles and the lower Snake projects, and ahead of the other planned but unauthorized main-stream projects below the Okanogan and the Salmon Rivers.

(c) The Fish and Wildlife Service should promptly and vigorously prosecute its program for lower-river improvements.

(d) The Office of Indian Affairs should lay detailed plans, in consultation with the other interested agencies, for (1) an agreed or arbitrated valuation of fishery rights, (2) acquisition of downstream rights, and (3) alternative economic opportunities.

The Columbia Basin Inter-Agency Committee will hold a meeting in the city hall, at Walla Walla, Wash., commencing at 9 a. m., Wednesday, June 25, to hear the views of those affected by this problem. Oral testimony will be heard, but only from those submitting written statements and will be limited to not more than 10 minutes. For the accuracy of the record, all important facts and arguments will be submitted in writing. Written statements may be handed to the Secretary at the hearing, or mailed to him beforehand. Insofar as practicable, briefs reciting factual data will cite the sources of that data. Briefs should be submitted in quadruplicate.

THERON D. WEAVER,
Colonel, Corps of Engineers, Chairman.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, June 12 (legislative day of Monday, April 21), 1947

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert in the

Appendix of the RECORD three editorials dealing with Federal aid to education. It is very encouraging to find newspapers in several of the Northern States which formerly have not supported this program now giving their unqualified support to it.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post of June 12, 1947]

SCHOOL AID

Approval by a Senate Public Welfare Subcommittee of the Taft-Thomas-Hill proposal for Federal aid to education is a heartening first link in the long chain that must be welded to bring about a rehabilitation of the country's public-school system. We hope for prompt endorsement by the full Public Welfare Committee to be followed by debate and decision by the Senate as a whole. We hope, also, that the House will not be laggard on the spurious pretext of economy. In view of the fact that the bill, as now drafted, does not call for commencement of Federal grants to the States until the beginning of the fiscal year 1949, it can no longer be argued that it threatens the balance of the 1948 budget. Since it would probably be impossible for the States to begin operating under the program before the opening of the 1948 school year, the delay seems warranted. But the program ought to be enacted into law in the current session of Congress so that the machinery of administration can be established and set in motion.

The Taft-Thomas-Hill bill is strictly a States' rights bill. It provides for a grant-in-aid program to the States and rigidly denies the Federal Government any measure of supervision or control respecting the nature and techniques of the State school systems to which it will contribute financial aid. This being so, we can see no logic in the opposition of Senator DONNELL who cast the lone vote against the program in the subcommittee on the ground that it would leave to State discretion whether aid should be given to nonpublic schools such as parochial institutions.

We think it a bad idea to give public funds to nonpublic schools. Nevertheless, this is a matter in which the States are entitled to exercise their discretion. Senator DONNELL cannot have it both ways. If the States are to be kept fully free from Federal dictation, they must be free to distribute their school funds as they see fit. The overriding interest of the Nation as a whole is in seeing to it that its children everywhere have adequate educational opportunities. Because some States do not now possess the financial resources necessary to provide such opportunities, they must be given help. Federal contributions—without strings attached—are the simple, direct, effective way to lift State standards to a minimum of decency.

[From the New York Times of June 7, 1947]

FEDERAL AID TO EDUCATION

Hearings before the House subcommittee on education have now come to a close and the subcommittee is considering its report. Some 60 witnesses appeared before it to argue the pros and cons of Federal help to the Nation's schools. Previously a Senate education subcommittee had voted to report a similar bill favorably, and is now ironing out the final details of the measure.

Some leaders of the House contend that this is not the time to add new expenditures to the Federal budget. But the House itself ought to have an opportunity to consider this question and to debate the bill openly and on its merits. To keep it frozen would be poor strategy; too many people are concerned with the plight of the American public schools. It is neither advisable nor desirable to kill so importunate a measure in this manner.

Twenty-seven organizations have banded together to see that the House gets an opportunity to vote on the bill. The reason they are centering on the House is that little difficulty is expected to arise in the Senate, where Senator TAFT is sponsoring a Federal aid measure. It is to be hoped that the House, too, will assure a vote.

THE NEW SCHOOL-AID BILL

A Senate subcommittee has approved a Federal grant of $300,000,000 to the States to raise standards of education, Senator AIKEN, chairman, predicts approval by the full committee and action by the Senate next month. The prospect is encouraging; the need for Federal aid to meet the current emergency in education is now generally accepted. Generally accepted, too, is the principle that Federal aid must involve no Federal control of schools.

Main issues outside that general area of agreement turn on the basis of distribution of Federal aid and on the share, if any, which may go to private, including religious, schools. This paper has favored a straight equalization program, such as the original Taft bill provided. Equalization is the paramount justification of the use of Federal taxing powers in support of education. Although poorer States, such as Mississippi, spend a greater proportion of the State's total income on schools, they are unable to meet the higher standards of States blessed with greater resources. Yet the responsibility to decide the Nation's destiny will fall no less upon the handicapped youth of Mississippi than upon the more fortunate youth of, say, California. But the fact that under a straight equalization program some States would receive no Federal aid is not politically popular.

The subcommittee bill is a compromise. It provides a flat $5 Federal grant a child to all States which qualify—to qualify a State must provide school funds averaging $50 a child in each school district. It would give additional funds to the needier States according to an equalization formula like that in the Taft bill. We still think the Taft bill is better.

The compromise bill includes no reference to the use of Federal money for nonpublic schools, thereby leaving decision to the States. The Taft bill (also sponsored by Senators CHAVEZ, COOPER, ELLENDER, HILL, THOMAS of Utah, SMITH, and TOBEY) would have permitted each State to spend the same proportion of its Federal grant as of its own funds for nonpublic schools. The argument for State determination of the issue is that since Federal aid is to be predicated on the State's independence of control, it would be illogical for the Federal Government to impose any strictures that the States themselves do not impose. Although we feel strongly that public funds should be reserved to public schools, we cannot refute that argument. There is, however, a question as to the wisdom of striking out the Taft bill's provision. Certainly a Federal bill must not give any new leeway for relaxations of the principle of separating church and State. That question the Congress should examine carefully.

American Economic System on Trial

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, June 12 (legislative day of Monday, April 21), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "American Economic System on Trial Against Russian," delivered on April 28, 1947, by George W. Rochester, a member of the Los Angeles bar.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICAN ECONOMIC SYSTEM ON TRIAL AGAINST RUSSIAN

(Address by George W. Rochester, Los Angeles bar, radio station KRKD, April 28, 1947)

With all the uncertainty of life and the age in which we live, there is very little that one can definitely state as a certainty, but I am sure of one thing, that each person has a destiny. By the same token, America has a destiny. What that destiny will be is conditioned by what we do today, and not tomorrow. It is with the destiny of our country that all of us should vitally concern ourselves.

For 16 years millions of people throughout the world have known only depression, want, hunger, and war, and now, as we emerge from that cataclysmic conflict, we feel a common impulse moving the minds of men throughout the world. There is no certain date that we can state this movement of men's minds as taking place, but we can all feel the gradual hope of mankind for a better life.

This is very noticeable by the struggles we now see taking place in China, India, Indonesia, and Eurasia, where the goodly part of 2,000,000,000 people are seething in unrest, trying in their various ways to gain a better life than that which they have experienced during the recent two decades. Each one of them either consciously or subconsciously, is asking questions.

Whether they realize it or not, their inquiries could be crystalized by these two questions: What forces prevent the technology of the modern world from being used for the happiness of the plain man, and if the industrial machine can supply man for war, why can't it supply the comforts of man at peace?

Americans also are asking these same questions because they are motivated by the same impulses for a better life and a better destiny. We veterans know what American industry and technique did during the war. We so utilized the finest intellects to develop a technique of production and distribution by labor and capital, which produced the greatest era of industrial activity the world has ever seen. I well remember how we all marveled before the invasion of Europe at the endless supply of food, clothing, munitions, and ordnance of all kinds that came to us in an unending and increasing stream, until we used to think that if another tank was placed on the little island of England it would surely sink.

And what do we find today? Even in one segment of this great productive machine we see that it has failed miserably and cannot even produce houses for the men who fought to give America the chance to make a decent Nation and a decent world. It seems beyond our comprehension that, with the potential and proven capacity of production that we have in this country, thousands of our comrades are homeless and unable to put a roof over the heads of themselves and their families. And, having seen what we could do with our productive economy, we are unable to understand any sane reason why our economy cannot furnish a job, home, food, and education for all.

Since the industrial revolution in the latter part of the eighteenth century, I think it can safely be stated that the economy of the civilized world has been based on the so-called free enterprise system. That system has had its modifications and its panic and prosperity spheres, but all during this time it has never had a complete competitor with an entirely different system. Now we are confronted with a virile, strong, and

growing competitor, fostered by Russia. Let us accord Russia the conviction that they think their system is the proper way of life, and believe themselves morally right, the same as we feel that our way of life is morally right and for the best interests of the people. We then see in this postwar period two contending systems of economy. On the one hand, our private enterprise system, and on the other the communistic system of Russia. We have a formidable competitor who, in the years with their potential power and wealth, will keep us on our toes and be a tonic for us to prove that our way of life is the better.

There is no question that our industrial capacity to produce far surpasses Russia's present productive industrial capacity, and it is in the potential future with Russia's aggressive desire to assimilate other countries, that causes us to have the fear that we have toward Russia. We should not fear Russia, but we should be more resolved to perfect our own economic system, and in that way prove to the millions of people now in a quandary which system they should choose—that ours is the better and under our way of life they would have more political, as well as industrial, freedom. For fear begets panic, and many are jittery today. Fear begets hatred, and the hatred for Russia is growing in our country, that hatred being fanned on by the apostles of hate and the propaganda we frequently read. Fear begets violence, and there is actual talk of war with Russia, even a this time when blood is still flowing from the last war. My friends, if we permit fear to take its course, we will be committing the age-old disaster that fear brings to pass what it fears. Instead of this, we should make a constructive use of the fear that we have today—not panic, not hatred, not war, but dedicate ourselves to make our democratic economy so effective for all the people that it proves its superior ability to meet most needs.

In order to do that, the ultimate criterion to decide the issue between Russian communism and American democracy must be which of the two systems does the more for the common man—and war will not settle that issue. You have head Aesop's fable where the lion and the goat argued over who should drink first, neither trusting the other, and about the time that they thought they would settle the question by fighting they looked up and saw a vulture leisurely flying over them, waiting for the result of the conflict, and straightway they decided to drink together. If we resort to war, the vultures will get us both.

But there is no disputing the fact that our economic system is on trial before the world and has never experienced such a terrific human force in opposition to it as we are seeing and will see the remainder of our lives and our children's lives. The success or failure of our political and industrial freedom depends upon the moral strength that we have to discipline ourselves and not allow greed, avariciousness, and the grasping instinct of some to upset the equilibrium of our supply and demand. We must accept two cardinal principles by which our body politic must discipline itself if we are to perfect and win in the competitive race now going on. First, we must accept the fact that the primary end of economic production is not profit, but satisfaction of human needs. Profit is necessary, but secondary. And, second, we must realize that what is physically possible is financially possible.

We veterans know this to be a fact, for when we left for war our Nation was in a depression and was insolvent as a government, but withal we produced more food, more ordnance, and more munitions than all the world could put together. If we cannot develop this necessary self-discipline to attain and follow these principles, our industrial freedom, and the world's, will be lost, because the ultimate victor will be which system does the most for the plain people of the world.

With the supreme test of our economy at hand, the spreading of hate will not solve the contest. This reminds me of a dramatic scene in the recent play staged in Los Angeles called "The State of the Nation." Those of you who saw it will remember Mary Mathews as the wife of a Presidential candidate, attending a dinner where her husband's supporters were discussing how to get the most votes. Involved in that inquiry were playing prejudices of the people against each other, taking advantage of the intolerance of classes and racial distinctions, putting to gain the accumulated self-interests of different groups, and holding the threat of war over the heads of voters. Finally, Mary Mathews, in deep and tremulous emotion, arose from the table and said, "All of you are talking about the next war. When will someone talk about the destiny of the next generation?"

Postmaster of Hartford, Conn.

EXTENSION OF REMARKS
OF
HON BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, June 12 (legislative day of Monday, April 21), 1947

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Mr. Dillon Fills the Bill," from the Hartford Times of June 6, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. DILLON FILLS THE BILL

President Truman has sent to the Senate the nomination of Acting Postmaster Edward J. Dillon to be permanent postmaster of Hartford. It could be added to the 775 being held up by the Senate Civil Service Committee. Hartford will trust it will not be, or that if it is a way will be found to persuade the committee that, regarding the desirability of this appointment, at least, there can be no question.

Senator WILLIAM LANGER, of North Dakota, chairman of the committee, thinks that "many of these nominees are broken-down hacks of the Democratic Party who are trying to beat qualified civil-service candidates to plush jobs." The Democratic retort is that Senator LANGER is trying to sidetrack some Democrats and force the appointment of Republicans.

We are not concerned with that dispute, but only with the need that a suitable permanent postmaster should be appointed to a vacancy which has lasted for many months.

Certainly Mr. Dillon is not a "broken-down hack of the Democratic Party" who is trying to beat qualified civil-service candidates to the job. Mr. Dillon is himself the qualified civil-service candidate for the place. He is not a political aspirant in any sense, Democrat though he be. He is a postal service career man, who has come up through the ranks over a period of 35 years or more to be successively superintendent of mails, assistant postmaster, and finally acting postmaster when death created a vacancy.

The Civil Service Committee is asking for $33,000 to investigate alleged politics in connection with the pending nominations. This investigation will cover political activities in the civil service, chiefly in the postmaster field; whether any postmasters, on threat of losing their positions have been compelled to pay tribute financially or otherwise to anyone or to a group of politicians; third, whether there has been an attempt to compel men and women occupying positions of postmaster to violate the Hatch Clean Politics Act.

These questions can be answered categorically in the case of Mr. Dillon. He has been engaged in no political activity. Hartford at large neither knows nor cares what his party affiliation is. He has not been compelled to pay tribute, financially or otherwise, to anyone. There certainly has been no attempt to compel him to violate the Hatch Act nor any evidence of any disposition on his part to do so. His was the only name certified for the appointment after the civil-service examination and Congressman Kopplemann, then in office, promptly recommended that he be named.

The Hartford post office, unless we are very much mistaken, does the largest business in New England outside of Boston. Its postmastership is a highly important place, regarded by citizens and businessmen as a business and not a political post. What they want is efficient service, not a job for any politician. That is what they get and know they will continue to get from Mr. Dillon. It is why there is no sentiment in Hartford, except on the part of those who would like the job themselves, for the appointment of anybody else.

If the Senate committee wants to approve an appointment which conforms to its own specifications, here is its opportunity.

An Issue Long Dead

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Honolulu Star-Bulletin of June 2, 1947:

AN ISSUE LONG DEAD

Objection to the admission of Hawaii, Alaska and Puerto Rico as States has been voiced by Nicholas Murray Butler in a letter to J. A. Krug, Secretary of the Interior.

President Butler wrote:

"Under no circumstances should Alaska, Hawaii, or Puerto Rico or any other outlying island or Territory be admitted as a State in our Federal Union. To do so * * * would mark the beginning of the end of the United States as we have known it. * * * Think of what would happen were the vote of one Senator from Alaska, Hawaii, or Puerto Rico to defeat the ratification of an important treaty."

He suggests that these Territories "be set up, by treaty, as independent and self-governing nations, subject to but two limitations:"

(1) Their foreign relations should be subject to the approval of the President and Senate of the United States.

(2) Litigants in any of these countries should have the right of appeal to the Supreme Court of the United States.

In answer to Dr. Butler's objections the following may be pertinent:

"The United States as we have known it" was changed when Hawaii, Alaska, and Puerto Rico were made Territories of the United States.

Our country is always changing. The recent war and the current Truman doctrine

against communism, as well as the award of the strategic trusteeship of the Pacific islands, have been significant changes.

Our country remains strong by adaptability to change.

Hawaii and Alaska are already Territories of the United States with a large measure of local self-government through legislative bodies.

There is no precedent for either a Territory or a State to be detached from the United States and set up on an independent basis. There is precedent for Territories to become States. That has been the normal procedure. Western Territories when they became States were more detached from Washington than are Hawaii and Alaska now.

The senatorial vote issue raised by Dr. Butler is untenable as a political doctrine. All votes have to be associated for and against a proposition. One vote cannot be considered as deciding the issue.

Dr. Butler's suggestion of setting up these Territories as independent and self-governing nations would change the character of the United States more than their admission as States. Our country is not now a commonwealth of nations. Political, legal, defense, and international relations problems would be difficult to solve.

The dangers Dr. Butler envisions would be as great and more complicated under his suggested system than under our tried and proved federation of States.

When Alaska was ceded and Hawaii was annexed, these areas were incorporated into the United States. Rights were conferred on the residents of these areas by treaty and by act of Congress. The United States should live up to those agreements.

The status of Territory meant then, and has always meant, that the citizens of the Territories could look forward to statehood. That is the American system. That is the United States as we have known it.

Dr. Butler's suggestions mean the adoption of a system of imperialism, not the maintenance of the American system.

Dr. Butler was for many years the eminent president of Columbia University. He is now retired as its president emeritus, 85 years old. When he proposes that Hawaii should be set up as a self-governing nation, substantially severing its natural union with the Federal Government, he is living in the past, and talking the language of an issue long dead.

It died when the Republic of Hawaii, succeeding the monarchy, was established as a prelude to annexation to the United States.

Good Luck, Mr. Ambassador

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, it was with great personal satisfaction that I read of the Senate confirmation of our friend, the Honorable Emmet O'Neal, of Kentucky, as Ambassador to the Republic of the Philippines. No finer choice could have been made and none could have brought greater satisfaction to his colleagues in the Congress.

We are fortunate in having such a man as Emmet O'Neal to represent our country in the Philippines. He carries with him a sound knowledge of the islands' problems and needs and the Filipinos will find in him a valued friend and counselor. It is a job of tremendous importance that he undertakes but that he will conduct his responsibilities with dignity, tolerance, and understanding we of the Congress have not the slightest doubt. To our friend, Emmet O'Neal, and to his charming wife and beautiful daughters, we say good luck, Mr. Ambassador, and may God continue to guide you in the future as he always has in the past.

Socialism

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

SOCIALISM

Louis V. Sutton, president of the Carolina Power & Light Co., has renewed his opposition to the Buggs Island project on the Roanoke River by filing a brief with a congressional committee. In his brief, the power company official describes the project as "a perfect example of socialism."

Mr. Sutton would turn the clock back a long way. The Buggs Island project merely seeks to develop hydroelectric prower as a by-product of flood control and as a means of paying for flood control which is desperately needed on the Roanoke River. It does not go as far as numerous other projects such as the TVA, which have long ago demonstrated their usefulness and are conceded to be in the public interest by all except a few die-hards like Mr. Sutton, who takes occasion to denounce the TVA in his brief filed on Buggs Island. But, if such projects are a perfect example of socialism, surely any attempt to regulate power companies in any fashion would be an imperfect example of socialism. It is not likely that even Mr. Sutton would go so far as to advocate doing away with any control whatever of power companies. Hydroelectric power is a natural resource and belongs to the public. All power companies have a monopoly which gives the public a particular interest in them.

Government ownership of a dam on the Roanoke River and Government ownership of all productive enterprise, which is what is generally understood to be socialism, are two different things. Surely Mr. Sutton is not afraid that the comparatively small project on the Roanoke River will destroy the large and prosperous Carolina Power & Light Co., which he heads. In fact this company has had its greatest prosperity since the advant of the TVA which is adjacent to the territory of his company. The company has also withstood successfully the competition of the Santee-Cooper project which is in the territory of the company. The truth is that cheaper electricity has not only been a boon to the public, but has been of great benefit to the private power companies, which have greatly increased their sales since they lowered their rates.

Mr. Sutton will not frighten anyone, not even his own stockholders, by the cry of socialism. And, so far as the public is concerned, likening the Buggs Island project to the TVA will be commendation of the project rather than a condemnation of it.

The Role of the United States in the United Nations

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, under consent granted me, I am inserting in the RECORD, in two parts, a copy of a speech I made before the National Federation of Catholic Students with the cooperation of the social action department, NCWC, and the Catholic Association for International Peace, at New York City on Monday, June 9, 1947. The second part of this speech will appear in tomorrow's RECORD.

The first part follows:

THE UNITED STATES IN THE UNITED NATIONS

THE ORIGIN AND DEVELOPMENT OF THE IDEA

The idea of the United Nations may be traced indirectly to the Atlantic Charter. In that charter, given to the world on August 14 of 1941, when the late President Roosevelt and Prime Minister Churchill declared that they "deem it right to make known certain common principles in the national policies of their respective countries on which they base their hopes for a better future for the world," they probably foresaw the future United Nations. Therein may be found the germ of the idea. The next step, definitely a great step forward, was the Declaration of the United Nations, issued jointly by 26 nations on January 1 of 1942, confirming their adherence "to a program of purposes and principles embodied * * * in the Atlantic Charter."

On September 21 of 1943 the House of Representatives took a step which brought this country another step nearer to full membership in a future world organization. On that day the House passed, by a vote of 360 to 29, the Fulbright resolution, which, incidentally, I had a part in drawing up, as "favoring the creation of appropriate international machinery with powers adequate to establish and to maintain a just and lasting peace * * * and as favoring participation by the United States therein." On November 5 of the same year the Senate of the United States also voted, by 85 to 5, for a similar resolution (Connally resolution) stating "That the United States * * * join with free and sovereign nations in establishment and maintenance of international authority with powers to prevent aggression and to preserve the peace of the world." The spirit and the content of these resolutions, and their easy passage by overwhelming margins both in the Senate and in the House of Representatives, surely served as proof that at least the elective branch of the United States Government was definitely wedded to the idea of the United Nations.

At about the time when the Connally resolution was being taken up in the Senate the United Nations idea was being echoed at the Foreign Ministers meeting in Moscow. The declaration issued from Moscow on November 1, jointly by Secretary of State Cordell Hull and the Foreign Ministers of China, Russia and the United Kingdom, stated "That they recognize the necessity of establishing at the earliest practicable date a general international organization * * * for the maintenance of international peace and security." The Dumbarton Oaks conversations on international peace and security organization, held among the representatives

of the United States, China, Russia, and the United Kingdom, August 23 to October 7, 1944, registered the intent of the Moscow Declaration of November 1. As the result of these conversations proposals were agreed upon in which it was stated that "there should be established an international organization under the title of the United Nations * * *." Finally at the Crimea Conference of the Big Three, in February of 1945, it was agreed that a conference of United Nations should be called to meet at San Francisco on April 25, 1945, to prepare the charter of such an organization, along the lines proposed at Dumbarton Oaks. Then it was agreed that the governments of the Big Three, as well as those of China and France, jointly sponsor invitations to the conference.

The San Francisco Conference, "a town meeting of the world," opened on April 25 with 46 nations participating. In about 2 months its work was completed and it was concluded on June 26 with an address (in person) by President Truman. On that day the drafted charter was signed by the United States representatives and by the representatives of 49 other nations. Thus the charter of the United Nations was born.

Article 110 of the charter provides that the charter will come into force upon the deposit of ratifications with the Government of the United States by the governments of the Big Five, and by a majority of the signatory states, that is, by 24 states. In his address at the concluding plenary session of the Conference the President had said: "I shall send this charter to the United States Senate at once. I am sure that the overwhelming sentiment of the people of my country and of their representatives in the Senate is in favor of immediate ratification." Subsequent events proved that the President was correct in his judgment and hopeful expectation. On July 2 he personally took the charter to the Senate and in his address to that body he urged prompt ratification. Prompt ratification it received; in less than 4 weeks the Senate gave its advice and consent for the ratification of the charter by a vote of 89 to 2. On August 8 the President signed the formal document by which he ratified the charter * * * (and) the instrument of ratification was deposited in the Archives of the Department of State, and thereby the United States Government became the first to complete action necessary to bring the charter into force."

The charter came into force on October 24 of 1945 when the governments of the big five and 24 other nations had deposited their instruments of ratification with the State Department. "It is now my happy privilege," said then Secretary of State Byrnes, "to sign the protocol which, in accordance with article 110 of the United Nations Charter, will attest to the fact that the charter has come into force." On December 4, 1945, the Senate, by a vote of 65 to 7, passed legislation "to provide for the appointment of representatives of the United States in the organs and agencies of the United Nations, and to make other provision with respect to the participation of the United States in such organization." In brief and chronological order such is the story of the birth of the United Nations.

It is also worth noting that long before the official birth of the United Nations the United States had been working with numerous international groups. In nearly all cases we were serving as sponsors and hosts and had a major share in their creation, working and eventual merging with the United Nations. A few of these were:

The International Conference on Food and Agriculture, held at Hot Springs, Va., in May 18–June 3, 1943, proposing "the creation of a Food and Agriculture Organization of the United Nations."

The United Nations Relief and Rehabilitation Administration (UNRRA) came into being on November 9, 1943, under the sponsorship of the United Nations. The agreement was signed at the White House on that day by 44 nations. And our financial share in the work of this organization, totaling more than $2,700,000,000, or about 80 percent of its budget, was voted by Congress without any bickering.

At the invitation of the United States Government the representatives of 44 nations met at Bretton Woods, N. H., in July 1–22, 1944, and prepared the final act providing for International Monetary Fund and International Bank for Reconstruction and Development.

Again at the invitation of the United States the representatives of 52 nations attended, in November 1–December 7 of 1944, the International Civil Aviation Conference "to negotiate proposals for an international civil aviation organization."

THE UNITED STATES AT WORK IN THE UNITED NATIONS

The part played by the United States in the United Nations may be seen, first, through the work of the United Nations Security Council, then by her work in the General Assembly, and lastly, by the leadership which the United States Government has assumed in the work of numerous other organizations of the United Nations. It will be difficult, in a brief survey such as this, to enumerate in detail and to evaluate exactly the part played by the United States. It is safe to say that the United States has played and is still playing a great part, perhaps the leading part, in the United Nations. In this survey, first the work of our representatives in the Security Council will be considered; then our share in the General Assembly; and lastly, the work of our representatives in other organizations, particularly in the Atomic Energy Commission, in the Economic and Social Council, and in a number of other organizations.

The charter confers upon the Security Council "the primary responsibility for the maintenance of international peace and security." This responsibility is in general only commensurate to the power each of the Big Five wields, for it is assumed in the charter that power and responsibility go together. In the course of its first meetings in London early in 1946 all important cases taken up by the Security Council dealt with peace and security: the Iranian case, the Indonesian case, the Greek case, and the case of Syria and the Lebanon, all had in them the elements of disturbance in respective areas. In the case of Iran, one of the Big Five was involved. According to a treaty, Allied forces should have withdrawn from Iran 6 months after the termination of hostilities. The United States and the British had abided by the treaty and had withdrawn their forces from Iran long before the stipulated date, but the Russians were slow in their move to withdraw from northwestern Iran. Several protests from Iran to Russia did not settle the matter, and finally Iran appealed to the Security Council. On January 19, 1946, the matter was placed before the Council, Iran's charge being "interference by the Soviet Union in its internal affairs." In this case "the United States position, * * * was that the Council should take no action other than to encourage the continuance of the negotiations in progress between the Union of Soviet Socialist Republics and Iran, but should evidence its continued interest in the case by retaining the matter on its agenda." When the Council was holding its New York meetings in March this matter came up, and "Secretary of State Byrnes, * * * took the position that the matter was properly on the Council's agenda. On the Soviet proposal that the Council should postpone its consideration of the case, he pointed out that the Council could not, under its responsibilities, decide on a postponement until the representative of the country bringing the matter to attention had been heard upon that issue." A month later when information was received from the Soviet Government about the withdrawal of Russian troops, the Council adopted a suggestion of Secretary Byrnes "that the Secretary-General of the United Nations should obtain from both the Soviet and Iranian Governments a report as to the status of the negotiations between them and a report as to whether the withdrawal of troops was conditional upon the conclusion of other agreements between the two governments." Thus it becomes clear that the United States took a decisive stand in this matter and successfully challenged those who opposed the consideration of the case, or the keeping of it on the Council's agenda.

On January 21 of 1946 the Government of the Ukrainian Soviet Social Republic protested against the alleged "use of British, and even some Japanese, troops against the Indonesian population" and called upon the Council to carry out an on-the-spot investigation. The United States representative was against such an investigation, stating that "it might prejudice or retard the negotiations then in progress between the Dutch authorities and the Indonesian Nationalists." The majority of the Security Council assented to the views of the United States representative.

On January 21 of 1946 the chairman of the Soviet delegation charged that "the presence of British troops in Greece constituted interference with that country's internal affairs and contributed to tension fraught with grave consequences to the maintenance of international peace." The United States representative took a decided stand against this charge. He did not believe that the situation was likely "to endanger international peace and security within the meaning of the charter; accordingly the * * * Security Council was without charter authority to recommend procedures or methods of adjustment." Then the Council accepted a proposal put forward by the United States representative that the matter "should be closed." In its New York meetings, on August 24 of 1946, the Greek question came up again in another form. On that day the representative of the Ukrainian Soviet Socialist Republic complained of internal conditions in Greece and of the Greek-Albanian frontier incidents, "allegedly provoked by Greek armed forces." Then the United States representative moved for the establishment of a commission to investigate, "with authority to call upon Albania, Bulgaria, Greece, and Yugoslavia for information." The negative vote by the Soviet representative blocked the adoption of this resolution, and the Council took no action at the time.

In December the Greek issue came up to the Council for the third time. This time it was the Greek Government which brought the complaint, contending that her northern neighbors were lending support to the violent guerrilla warfare being waged in northern Greece, and requesting the Council to conduct an "on-the-spot investigation." Then the United States representative proposed the establishment of a commission. On December 19 the Security Council approved this proposal. Under this resolution the commission, consisting of the representatives of all members of the Council, was given authority "to conduct its investigation in northern Greece and * * * in other parts of Greece, in Albania, Bulgaria, and Yugoslavia. * * *" Since January this commission has been carrying on its on-the-spot investigation. Just now it has repaired to Geneva and is preparing its report to the Security Council.

The question of British and French forces in the Levant was also brought to the Security Council in February of 1946. Then the Lebanese and Syrian delegations to the General Assembly complained of the "continued presence" of these forces in their countries. The United States representative on the Council stated that the withdrawal of these

forces should proceed as quickly as possible. He pointed out that the parties should first seek a solution of their own choice, preferably by direct negotiations. He then proposed a resolution, "expressing confidence that the troops would be withdrawn as soon as practicable and negotiations to that end undertaken without delay." This resolution failed to pass the Security Council "because of the negative vote of the Union of Soviet Socialist Republics." Both France and the United Kingdom, however, declared their intention to carry out the sense of the resolution, to which Syria and the Lebanon readily agreed.

The few instances cited above in which the United States representative worked in the Security Council amply show the important and the leading part played by the United States in that body. But the work of the Council is not the only mirror in which the United States part in the higher councils of the United Nations is reflected. As has been truly stated, "the Foreign Ministers Conferences are as closely interlocked as the links in chain," and in these meetings also the United States representatives have taken a leading part. Before the end of the Security Council's meetings in London, Secretary Byrnes pressed for and obtained the consent of the Soviet delegation that a peace conference be called at Paris in July. When it was found that the Paris Peace Conference could not accomplish all that was expected of it, then again the Secretary of State stood firm on his contention that the work of drafting peace treaties must proceed without delay. As the result of his persistence peace treaties with Italy and the four Axis satellite countries (Bulgaria, Finland, Hungary, and Rumania) were drafted and signed on February 10, 1947. In his address to the General Assembly on December 13 last, Secretary Byrnes declared that "the United States has also persistently urged the conclusion of a treaty recognizing the independence of Austria and providing for the withdrawal of foreign troops." This has not been accomplished yet. At the recent Moscow Conference of the Big Four Foreign Ministers, Secretary Marshall ably and urgently pressed the aims of his predecessor, even though the representatives of the Big Four could not agree and produce the desired treaty.

Compulsory Military Training

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a plan advanced by Francis S. Murphy, publisher of the Hartford Times, Hartford, Conn., for compulsory military training through State guard units of the country. The article follows:

TRAIN OUR BOYS IN CONNECTICUT

(A plan advanced by Francis S. Murphy, publisher of the Hartford Times, for compulsory military training through State guard units of the country, is being submitted to President Truman by Senator Hart.

(Senator Hart has informed Mr. Murphy that he is studying the plan and also is bringing it to the President's attention.

(Mr. Murphy, national councilor of the National Aeronautics Association for Connecticut, a trustee of the University of Connecticut, and chairman of the aviation advisory committee of the State development commission, calls attention to the large number of airports throughout the country, both constructed and planned, which would supplement the basic training facilities in most of the States.)

(By Francis S. Murphy)

The National Guard has made a splendid record in two great wars and it was available for duty at the start of both conflicts. It seems to me, therefore, that if we are to have a policy of required military training in this country we should seriously consider the advantages of joining such training with our National Guard program.

Each State of which I have information has facilities for the military training of its share of the several hundred thousand youths who reach their eighteenth birthday each year. I suggest that these boys could be given 3 months of intensive training during the summer.

Some 12,500 young men become of age 18 in Connecticut each year, with 10,000 or more fit for military training and I believe that Bradley Field in Windsor Locks could easily accommodate these men. Having a great water supply, a top-notch sewage disposal system, excelled by no other airfield in the country, and ample for a city of 35,000, housing accommodations, fire-protection apparatus, etc., Bradley Field has everything all made to order to undertake such a program and yet can be used for any commercial-aviation use that would develop.

Army pay, $50 a month, probably should be paid these youths while they are in summer training.

Those asking for a full year given over entirely to military training will probably object to a limiting of the program to two summers, and with that one should not quarrel. It can be pointed out, of course, that boys, during this war, have been sent into action after a few months of basic training. Possibly a complete program would require that two summers be given over to the acquiring of military competence and that between those two summers, the youths could be required to drill one night a week on a schedule approximating that of the National Guard in peacetime. In effect, we should be setting up a compulsory National Guard, somewhat at variance with our national ideas, but far less so than the proposal to turn over to the Federal Government, in peacetime, control of every healthy 18-year-old boy in the Nation.

I should not expect that this compulsory military training program would replace the volunteer National Guard as we have known it. As a matter of fact, many young men would wish to continue military experience after their required service and the senior, volunteer branch of the National Guard would probably be much larger than formerly because of the earlier interest aroused. The Army would be able to assign substantial numbers of officers and noncommissioned officers as instructors. In the event of unemployment and the need for a made work program, there is much of a worth while nature that could be done in providing additional facilities for this program. The State would find it necessary to provide more armories. Certainly we should find that to be the case in Connecticut, although I am informed that Connecticut has 27 of them, distributed quite well throughout the State.

This proposal is in harmony with that of many educators who feel that if we must have compulsory military training, much of the program should be conducted at the community and State levels. Dr. Alonzo G. Grace, commissioner of education for Connecticut, a few months ago, asked the War and Navy Departments, in planning for compulsory training, to provide for "the organization and administration of a basic program by the National Guard in the several States." Dr. Grace believes that if the military leaders of the country will seek the full cooperation of the adjutants general and the educational authorities in the States, we can have a thoroughly American program of military training, much of it conducted in the home States.

Connecticut installations are paralleled in most States, exceeded in some. The advantages of using available space at airports for some of the basic training of youth is obvious. We have the fields the war gave us and we shall have municipal and other airports, all of which will be included in any national defense plan likely to be written. Why not use these fields to the limit of their capacity? I suggest the use of Bradley Field on account of its great size (over 2,000 acres) and its complete equipment.

Possibly the National Guard training, compulsory at 18, could be made optional at 17, and many boys would like to meet the requirements while they are in high school. Boys away at college could have the ROTC training to compensate for weekly drill.

It would be my hope that our health resources, our education facilities, and the aviation opportunities of the State would be joined in such a program sufficiently to help Connecticut's boys in preparation for civil life as well as giving them basic training as soldiers.

I am not attempting to write a military preparedness program for the Nation. In fact, it is an idea, rather than a plan, that I should like to advance. Our military leaders are men of good judgment and their advice regarding minimum military strength for the United States should have great weight when we write a national policy.

It is my hope, however, that we shall adopt a training program in keeping with American ideas, rather than European continental policies. While we decry increased centralization of power in Washington, we should try to decentralize, so far as possible, any required training program for youth. If the job can be done at home, or some substantial part of it, we should not turn it over, completely, to the National Government.

All that can be done in the community and State should be done here. The boys should go out of the home State to participate in maneuvers or war games involving armies in the second summer, which would allow for a new group each year for basic training in the home State. It would be well, I think, for the boy to have some military training at home in advance of that experience.

I submit that there are two questions, not one, for the American people to decide. First, do we need a peacetime policy of compulsory military training? Second, if we do, is it possible to give much of this training in or near the home community, coordinated with education and employment and to require a few months, rather than a year, of full time service in the armed forces?

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. BUCK
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. BUCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Herald Tribune for June 9, 1947:

STATEHOOD SEEN AS A BUSINESS SPUR IN HAWAII—TRADE AND INDUSTRY SEEK BENEFITS OF UNITED STATES LAWS, END OF DISCRIMINATION

Statehood for Hawaii—an end toward which 12 bills in Congress are directed—would greatly benefit Hawaiian business firms, and remove inequities they have suffered for years while sharing equally with

mainland firms the costs of running the Federal Government, according to representatives of two prominent island businesses who commented on the proposed legislation yesterday.

Hawaiian businessmen not only feel that the Territory is ready for statehood, culturally and politically, but that its business and industry should receive the benefits of our laws, and be spared the repetition of instances in which they have actually been discriminated against by Federal legislation.

This sums up the contentions of Henry A. White, president of Hawaiian Pineapple Co., Ltd., and C. J. Henderson, executive vice president of Castle & Cooke, Ltd., two concerns representing the island's principle products—pineapples and sugar.

TAX BURDEN CITED

"Hawaii is too important economically to be represented in Congress only by a nonvoting delegate," Mr. White pointed out. "Hawaii pays more in Federal taxes than 14 of the present 48 States. Territorial status for this important part of the country is inequitable for half a million people, and unsound for their businesses."

Furthermore, it should be emphasized that reasons for statehood for Hawaii far transcend mere protection for Hawaiian business. The businessmen of Hawaii, over a long span of years, have made an extraordinary record of achievement, not only in pineapples and sugar, but in shipping, banking, insurance, and many other fields.

Mr. White said the economy of the islands was vitally affected, however, by policy made in Washington, with respect to such matters as labor relations, industrial and agricultural development, transportation, finance, public health, and welfare.

LABOR RELATIONS A PROBLEM

He cited as one matter in which Hawaii particularly desires a say in national policy, and, in turn, the protection afforded by national legislation, the problem of labor relations, which he called "the most troublesome of the island's postwar problems."

"Hawaii's problem in employee-employer relations is part of the general national problem," Mr. White explained. "Union leadership here stems from the mainland; yet the cost of labor strife is more acutely felt here. Shipping tie-ups cut off essentials—even food supplies. Also in our great sugar and pineapple industries, involving the irrevocable loss of crops."

Mr. White added that labor strife could destroy the economy of the islands, resting as it does on sugar and pineapples, and warned also that excessive labor costs in the Hawaiian pineapple business could result in a rise of foreign competition which might wrest world leadership from it.

LAWS HELD DISCRIMINATORY

Commenting further on the need of Hawaii's businesses receiving equal treatment, Mr. Henderson pointed out numerous examples in which the territory had failed to receive benefits granted to the States, and of laws which discriminated against Hawaiian industry.

"When the Federal Road Act, providing funds for the States for road building, was passed by Congress in 1916, it did not include any provision for extending the benefits to Hawaii," Mr. Henderson declared. "This inequity was not corrected until 1924 when Congress passed a special amendment providing for inclusion of Hawaii.

"Hawaii also was omitted in 1917 from provision of the Smith-Hughes Act for aid of vocational education. Correction of this inequity was not accomplished until 7 years later when Congress amended the measure to apply to Hawaii."

POTATO EXPERIENCE TOLD

"Under provisions of the Potato Control Act of 1935, the Agricultural Adjustment Agency placed what amounted to an embargo on shipment of Hawaii-grown new potatoes to the mainland market. This discrimination would have ruined Hawaii's potato industry had not the Supreme Court subsequently declared it unconstitutional.

"The Jones-Costigan Sugar Act of 1934 listed Hawaii along with the nonincorporated areas of Puerto Rico and the Philippine Islands and with the foreign country of Cuba, which were not guaranteed minimum quotas for sugar production. This measure, drawing sharp distinction between Hawaiian sugar production and that of the mainland United States, resulted in a substantial and damaging reduction for Hawaii.

"It is sometimes argued that Congress usually if not always has been willing to adjust and correct such inequalities—in time. But the time required for congressional machinery to reverse itself and straighten out these matters usually accumulate to the disadvantage of Hawaii."

Colorful Exhibition of Royal Hawaiian Heirlooms

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 12, 1947

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

COLORFUL EXHIBITION OF ROYAL HAWAIIAN HEIRLOOMS

A rare collection of masterpieces of native Hawaiian handicrafts, comprising heirlooms of the Hawaiian royal family, now has a permanent home in the Smithsonian Institution, Washington, D. C. These heirlooms were bequeathed by Princess Abigail W. Kawananakoa, of Honolulu, upon her death April 12, 1945. Her husband, Prince David Kawananakoa, a direct descendant of the Oahu, Kauai and Maui royal families, had been named an heir to the Hawaiian throne by King David Kalakaua and Queen Liliuokalani, the last reigning monarchs of Hawaii. Many of the specimens in the collection had been owned and used by King Kalakaua and his queen. Others had belonged to Hawaiian royalty of earlier times. One beautiful feather cape may have belonged to Kamakahelei, chieftess of Kauai, when Capt. James Cook discovered the Hawaiian Islands in 1778.

The collection includes four colorful ceremonial feather capes worn by members of the Hawaiian royal family. The capes were made of carefully selected feathers of the o-o and iiwi birds, skillfully and painstakingly tied to a foundation of olono (native hemp) fiber. Thousands of tufts of small yellow, black and red feathers were required for the construction of a single cape. The handsome feather capes and cloaks are considered the highest achievement of Hawaiian craftsmanship. The making of these elaborate garments had practically ceased by the middle of the nineteenth century.

Some of the finest examples of Hawaiian woodwork are exemplified by three large bowls in this collection. These bowls, used for serving poi, a popular native Hawaiian food made from a paste of the taro root mixed with water, were hand-carved with stone tools from kou and milo wood. The largest bowl is 84 inches in diameter and stands more than 15 inches high. Its walls were carved to less than one-half inch thickness and were highly burnished. Two of the bowls were used by David Kalakaua, seventh King of Hawaii, who was elected to the throne February 12, 1874, and died in San Francisco, Calif., January 29, 1891. The cover of one of the bowls bears his royal crest.

There is a rare hand-woven mat in the collection which was made by women of Niihau the westernmost inhabited island of the Hawaiian group. The background is woven from the brown leaves of a sedge which grows along the shores and in marshes on the island. The colored figures in the mat are formed from the darker, lower portion of the stem of the same plant. Very few mats of this kind, known to Hawaiians as pawehe niihau, have been made in the last 50 years.

This valuable collection has been placed on special exhibition on the ground floor of the United States National Museum at Tenth Street and Constitution Avenue. Later it will serve as the nucleus of a revised and modernized exhibition on Hawaiian ethnology. Along with these specimens will appear other important examples of Hawaiian handicrafts collected by the historic United States exploring expedition under Capt. Charles Wilkes, which sailed under orders of President Van Buren to explore and survey "the Great Southern Ocean in the important interests of our commerce." Specimens collected by this and by later expeditions have been carefully preserved in the collections of the Smithsonian Institution since its establishment a century ago.

Our Responsibility to the Honored Dead

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 12, 1947

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address prepared and delivered by me at the Memorial Day exercises in Naugatuck, Conn.:

Fellow citizens, this year, perhaps more than ever, we should realize with great seriousness the responsibilities incumbent upon us, the living, to those who have given their lives for their country. No more mouthing of words, expressions of fine sentiments or firing of salutes will fulfill our duties to those who died on the field of battle. These are precarious times, less than 2 years completion of the most terrible conflict in history, and already there are many who state that another war, more terrible than any of which man has ever dreamed, is confronting us. This Nation nor any other Nation can today even dream of war. Every country in the world is faced with shortages of physical and material power necessary to prosecute a war. This alone, however, is not assurance enough that there will be lasting peace. Only the peoples of the world, acting in concert, can assure such peace.

We, the people of the United States, who for generations treasured self-rule; we, who fought wars to preserve self-rule, deliberately and with aforethought in San Francisco relinquished some measure of our sovereign rights as a nation in order to band together with our allies to make certain that no numeral three would be affixed to the name "World War." This was a great concession for the American people to make, and another is before us as a result of the American development of atomic weapons.

As a corollary to our action in joining the United Nations organization we must aid now in strengthening it through the allotment to it of international control of atomic energy.

This tremendous force, now held as a monopoly by the United States, must be relinquished to an international authority with powers never before granted to any body of individuals. So long as we maintain superiority in this field other nations for self-protection will attempt desperately to exceed our efforts in this field. The world cannot afford an armaments race in atomic weapons as some unscrupulous despot will surely seek greater power through this means.

I believe that the American people are willing to grant to an international atomic development authority the powers which must be inherent in it to control effectively atomic development. Our representatives in the United Nations have stated this as the position of the United States. We must stand firmly behind this proposal to insure the peace of the world.

The chief opponent at this time of such a plan is the Soviet Union, yet they are agreed that some system of control is necessary. Our positions are not so unrelated that we should despair of agreement. In lieu of an agreement in treaty form, signed by all participating nations, and vesting authority in the United Nations, Russia desires international control by treaty only, with punishment for violators meted out by the individual nation. In place of inspection by internationally constituted teams, Russia desires national inspection. Russia desires, as we do, the destruction of all atomic weapons, but they wish it before agreement is reached, and we state that international control must be a reality before we take this step. These are the main differences in our programs. These differences are not insurmountable.

Agreement on international control can and, I believe, will be realized in the immediate future. It must be reached if we are to live in peace with our neighbors. It must never again be said of these valiant dead that they died in vain. America can lead in the search for a better world through a lasting peace if all of us will but remember that our responsibilities to those we honor today are never ending and our debt to them never paid.

Thank you.

Ten "Don'ts" by J. Edgar Hoover of the FBI

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extract from Newsweek of June 9, 1947:

TEN DON'TS BY J. EDGAR HOOVER OF THE FBI

We can successfully defeat the Communist attempt to capture the United States by fighting it with truth and justice, implemented with a few don'ts:

Don't label anyone as a Communist unless you have the facts.

Don't confuse liberals and progressives with Communists.

Don't take the law into your own hands. If Communists violate the law, report such facts to your law-enforcement agency.

Don't be a party to the violation of the civil rights of anyone. When this is done, you are playing directly into the hands of the Communists.

Don't let up on the fight against real Fascists, the KKK, and other dangerous groups.

Don't let Communists in your organization or labor union outwork, outvote, or outnumber you.

Don't be hoodwinked by Communist propaganda that says one thing but means destruction of the American way of life. Expose it with the truth.

Don't give aid and comfort to the Communist cause by joining front organizations, contributing to their campaign chests, or by championing their cause in any way, shape, or form.

Don't let Communists infiltrate into our schools, churches, and molders of public opinion—the press, radio, and screen.

Don't fail to make democracy work with equal opportunity and the fullest enjoyment of every American's right to life, liberty, and the pursuit of happiness.

Coosa-Alabama River Project

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 11, 1947

Mr. RAINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following statement made by me before the Civil Functions Subcommittee of the Appropriations Committee, with reference to the Coosa-Alabama River project:

Mr. Chairman, Senator SPARKMAN asked me to state for the record that he was here to testify in support of this project, representing himself, Senator RUSSELL, of Georgia, and Senator HILL, of Alabama. It was not possible for him to remain until this hour, for the reason that he is to follow Senator RUSSELL on the floor of the Senate in a discussion of the Bulwinkle bill. Senator SPARKMAN asked me to state that he and each of the other Senators earnestly request favorable consideration of the committee on the Coosa-Alabama River project.

Mr. Chairman, I represent the Fifth District of Alabama, through which flows the great Coosa River. As you know, the Coosa and Tallapoosa Rivers are in junction at Montgomery, Ala., and the river to the Gulf of Mexico is known as the Alabama River. Thus, the entire river system is known as the Coosa-Alabama River. First of all, I want to speak a word in support of the project known as the Allatoona Dam near Cartersville, Ga., which is in the district represented by the Honorable HENDERSON LANHAM, of Rome, Ga. This dam, as you know, is already under construction, and I am quite sure is entitled to the funds necessary for its completion. The dam is on the headwater of the Coosa River, and is one of the essential dams to be built in the over-all construction and development of this river system. I, therefore, urge, first of all, that the necessary funds be allocated for the completion of this project.

There is a long legislative history back of the proposed construction on the Coosa-Alabama River. For more than 50 years, the need for this great project has been presented to the Congress by interested citizens, by the people of the States of Alabama and Georgia, and by their elected Representatives in the Congress and in the Senate. Finally, in the Seventy-ninth Congress, the development of this great river system was approved, and the authorization in the rivers and harbors bill of that Congress, provided for the sum of $60,000,000 to begin the work. It is in support of that authorization that I, along with the other Members of the Alabama and Georgia congressional delegations, appear before your committee this afternoon.

It is not necessary, I know, for me to urge the need and feasibility of this project, since that has been heretofore established, both before the Rivers and Harbors Committee and before the Congress itself, by competent witnesses and by the United States Army engineers. The $60,000,000 which was authorized in the Seventy-ninth Congress was to provide for the initiation and partial accomplishment of the basin development of the Coosa-Alabama River, as outlined in House Document 414, Seventy-seventh Congress, as follows:

"Alabama-Coosa Rivers, Ala.: Initial and ultimate development of the Alabama-Coosa River and tributaries for navigation, flood control, power development, and other purposes as outlined in House Document No. 414, Seventy-seventh Congress, is hereby authorized substantially in accordance with the plans being prepared by the Chief of Engineers with such modifications thereof from time to time as in the discretion of the Secretary of War and the Chief of Engineers may be advisable for the purpose of increasing the development of hydroelectric power; and that for the initiation and accomplishment of the ultimate plan, appropriations are authorized in such amounts as Congress may from time to time determine to be advisable, the total of such appropriations not to exceed the sum of $60,000,000."

The development of this river system by the use of multiple-purpose dams is economically feasible and justifiable, on the basis of (a) flood control, (b) navigation, and (c) hydroelectric power. The plan for ultimate development of the river system provided for a 9-foot navigation channel from Mobile, Ala., to Rome, Ga. It is interesting to note when this river development is complete, it will be the second longest navigable waterway in the world. I call to the attention of the committee that this river system is adjacent to, and would carry the traffic for one of the greatest industrial sections of the South. Engineering reports prove conclusively that sufficient tonnage would be available on the river to justify the development for a navigation standpoint.

Over all the years, the section traversed by this river, from the mountains of north Georgia, to the Gulf of Mexico, has been subjected to great and serious damages by the ravages of constant floods. Floods and soil erosion are greatly endangering the fertility and the productivity of the soil in this great agricultural region of our Nation. The committee, I know, subscribes to the now well-founded principle of conservation, that flood control is one of the essential responsibilities and obligations of the Nation. On the basis of flood control, this project is feasible and sound.

We come now to a brief discussion of the hydroelectric power possibilities of the Coosa-Alabama Rivers. Hydroelectric engineers state that the Coosa-Alabama Rivers, from the mountains of north Georgia to the Gulf of Mexico, present the second greatest power potentiality in the United States—surpassed only by the Columbia River. The Army Engineers' plans set out in House Document 414 provide for the construction of hydroelectric dams which would step up the power generating facilities of this great river to the point where the ever-increasing need for power could be met in this fast-growing industrial section of our country. A report recently released, and known as the Southeastern Power Survey points up conclusively the urgent need for hydroelectric generating facilities of this river. Only yesterday the Alabama Power Co. broke ground for a $12,000,000 steam-generating plant in my home town, Gadsden, Ala., on the banks of the Coosa River. This steam plant is being located at Gadsden because the demand for power is so great in this industrial section of Alabama. We have steel mills, soil-pipe-manufacturing plants, the largest rubber-manufacturing plant in the South, textile mills, paper mills, and many other great industries, which are multiplying over and over again the demand for power in

the section through which flows the Coosa River.

Yes; I know, Mr. Chairman, there are those who maintain that this is no time for the Congress to expand the hydroelectric facilities of this Nation. This position is sought to be maintained under the cry of economy. I submit that the curtailment of funds for much-needed hydroelectric facilities is a short-sighted policy. I will remember, as do the members of this committee, that the same charge of needless appropriations for hydroelectric power was made many times with reference to the great Tennessee Valley Authority. I do not need to recount here for this committee the uncontradicted fact that the TVA hydroelectric facilities were a top-flight factor in our being able to achieve the fabulous quota of 100,000 airplanes a year during the days of the war. I should like to state here, for the benefit of the committee, that my investigation discloses that the TVA's hydroelectric facilities are being stretched to the saturation point. I know that demands for electric energy are being made on TVA by private power companies, which the TVA is not able to meet. We must have new and further development of hydroelectric power facilities, and this very project presents the best potential power pull in America.

I well realize that the President did not include in his budget the appropriation to meet the authorization requested. However, that is not a complete answer, and should not be accepted as such by this committee. The urgent need, the full and complete financial justification, makes it necessary that this work be begun, not 5 years from now, but immediately.

Can it really be said, Mr. Chairman, that the appropriation of funds for the development of a project which has such potentialities for the general good, not only of the people of the section through which the Coosa-Alabama River flows, but for the people of the Nation, should be denied in the name of economy? Is the failure to expend the necessary capital outlay for the development of our long-prized natural resources in this country, economy? I submit, Mr. Chairman, such a course is the practice of hurtful and false economy.

Allow me to express my appreciation to you, Mr. Chairman, and the members of the committee. You have a tremendous job. I sometimes wonder if the people of the Nation know the long hours and diligent endeavor which you, as members of the Appropriations Committee, work, in an effort to solve the problems of the people.

Republican Achievement

EXTENSION OF REMARKS
OF
HON. EDWARD G. ROHRBOUGH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 11, 1947

Mr. ROHRBOUGH. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include herein the following excerpt from a letter that I recently received:

Let me add one other Republican achievement for the peoples' benefit. This is Memorial Day. My breakfast table this morning provided biscuit, butter, eggs, bacon, jellies, and whatever else I desired could be obtained. Last Memorial Day, 1946, under the Democrats, I recall distinctly that I could not get a loaf of bread, nor could I get a stick of butter, breakfast bacon, nor much of anything, and had to use crackers that day for bread.

Our Soldier-Statesmen

EXTENSION OF REMARKS
OF
HON. EDWARD G. ROHRBOUGH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. ROHRBOUGH. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to include therein an address delivered by Dr. Frederick Taylor Wilson, entitled "Our Soldier-Statesmen."

Dr. Frederick Taylor Wilson, widely known historical writer and lecturer, delivered on Monday, June 11, 1947, at Shepherd College, Shepherdstown, W. Va., an address of much historic interest. His subject was Our Soldier-Statesmen. Dr. Wilson was introduced by Dr. W. H. S. White, who is retiring as president from Shepherd College, ending a tenure of 27 years. President White has rendered outstanding service as head of Shepherd College and as a citizen of West Virginia. Dr. Wilson spoke, in part, as follows:

Our Nation has always paid high homage to its war heroes. Rightfully or wrongfully, we have favored the sword more often than the pen in choosing our national heroes. Only two of our Presidents had won Nation-wide renown as writers before reaching that high office. Those two were Theodore Roosevelt and Woodrow Wilson, each of whom wrote great books of permanent historical interest. Fourteen of the thirty-two different men who have been President had had some sort of military experience before they became President.

Washington and Monroe were soldiers of the Revolution; William Henry Harrison and Andrew Jackson were soldiers of the War of 1812; Zachary Taylor and Pierce were in the Mexican War; Grant, Hayes, Garfield, Benjamin Harrison, and William McKinley fought in the Civil War. Hayes, Garfield, and Harrison held the rank of brigadier general at the close of that war. McKinley was known always afterward as Major McKinley. Major had been the rank held by Monroe at the close of the Revolution. Theodore Roosevelt became a colonel in the Spanish-American War; and Truman was a captain in World War I. Lincoln had pride in having served for a brief period as a captain in the Indian war known as the Blackhawk War.

Out of the long list of these military men only five of them—Washington, Jackson, William Henry Harrison, Taylor, and Grant—reached the Presidency primarily on account of their fame as soldiers. Suppose we look at the careers of these five great national heroes.

Washington, who was unanimously chosen as our first President, deserved that honor. Without him there would not have been a successful Revolutionary War; without him there would not have been a successful writing and ratification of the Constitution of the United States. He was the most selfless of all our Presidents. He was truly first in war and first in peace, and he will forever be first in the hearts of his countrymen. Like a great mountain peak, towering above its fellows, so will the figure of Washington forever rise in our mountain range of great men.

It is a paradoxical fact that Jackson won the Presidency primarily as the hero of the battle of New Orleans, which was fought after the peace treaty had already been signed in Paris, which treaty had been signed by John Quincy Adams, Jackson's opponent in his second bid for the Presidency. Jackson had lost the Presidency to Adams in the contest decided by Congress in 1825, though Jackson had received more popular and also more electoral votes than Adams. Adams had only carried the States of New England and New York, seven in all, in the campaign of 1824. Jackson, whose fame largely rests on his career as a soldier, was 45 years of age when he began his first military service in the War of 1812. His entire career in the field as a soldier was for a period of less than 3 years. Jackson had gone to Congress from the new State of Tennessee at 29 years of age, and one year later had been promoted to the office of United States Senator from that State. He also served for 6 years on the highest court of Tennessee when only a very young man. Jackson's career as President was a mixture of both success and failure. His administration is known now as an era in history, and it is looked upon as the first great triumph of democracy in American political history. But, his imperial manner and dictatorial rule all but split in twain the political forces of that day. A great depression followed the Jackson administration and his own hand-picked successor, Marin Van Buren could never be reelected after his one term in the White House despite his repeated efforts to gain that high office. All of this made it easy for the Whig Party, made up largely of anti-Jackson forces, in win the Presidency in the campaign of 1840 and again in 1848.

The short-lived Whig Party which existed as a party for only a score of years, won the Presidency both in 1840 and again in 1848 by capitalizing on the personal popularity of two great war heroes, William Henry Harrison and Zachary Taylor. The first of these, Harrison, was 68 years of age and was holding the office of county court clerk at Cincinnati, Ohio, when he was taken up by the Whig Party as its nominee, without any platform of principles, and in a demagogic fashion elevated to the White House. Harrison, as a young man of 26, had represented the great Northwest Territory in Congress and had served for more than a dozen years thereafter as the Governor of the Indiana Territory, composed of the present States of Indiana, Illinois, Michigan, Wisconsin, and part of Minnesota. He had been a chronic seeker after public office and had only won in seven of his nineteen efforts in that direction. In 1836 Harrison ranked next to Van Buren in electoral votes and then 4 years later defeated Van Buren by a still larger vote than that by which he had been defeated in the campaign of 1836. Harrison died 1 month after taking the oath of office as President and was succeeded by Tyler, the first of the seven men who became President on account of the death of a President while they were serving as Vice President.

There is nothing to make the student of history believe that William Henry Harrison would have been a great President had he lived to serve out his term.

Zachary Taylor was the least fitted to serve as President of all the men who have held that high office. He was a professional soldier who had served in the United States Army during the greater portion of his life. He fought with distinction in Florida against the Seminole Indians, who still boast that they have never surrendered, and when the Mexican War came on Taylor led the Army which marched across the Rio Grande in the early days of the Mexican War. Taylor, who had never voted in his life, was taken up by the Whig Party in 1848 while Taylor was living as a cotton planter in Louisiana. He was the last President elected directly from a Southern State to the Presidency, and that was 99 years ago. No one was more surprised than Taylor over his election. He had refused to pay the postage on the letter sent him telling him of his nomination when it first arrived. He was soon lost in the great duties of his high office, and it was fortunate

for his fame that he died before he had been asked to sign the compromise measures of 1850, which he had opposed. As a soldier and as a man, he had won high respect, but he had few, if any, of the qualities of a statesman.

The career of U. S. Grant as a statesman was a tragic one. He had been a practical failure even as a soldier in his early life and had left the Army some years before the Civil War came on. He was not invited back into the Army when the Civil War began, and came back into the service through the State Militia of Illinois, in which State he lived at that time. He was the only President educated at West Point, and his military knowledge was greatly needed in the training of young soldiers at that time. Grant received the highest military distinction, and as a military hero was elevated to the Presidency. There he was surrounded by advisers so vicious and corrupt that his administration is known among historians as the tragic era. He was the only one of the seven Ohio-born Presidents who served 8 years in the White House, and it was well for the country that Grant was denied the return to the White House which he so much desired 4 years after he had left that seat of power. Grant, as an ex-President, was an even greater failure than before his rise as a soldier.

So, in the light of our former experience with military heroes as Presidents, it would be well for the Nation always to solemnly pause before replacing the epaulet of the soldier with the toga of the statesman.

"Dream not that sword and helmet
Are signs of valor true
For peace hath greater victories
Than battle ever knew."

It is of great significance that the only man thus far in our history who has reached the Presidency as a result of fame won in World War I was Herbert Hoover, the Quaker man of peace who won his high distinction, not as the leader of marching men but as the great humanitarian who led our Nation in the feeding and clothing of the distressed people of the world.

In recent months Mr. Hoover has won the increasing affection not only of this Nation but of the entire world by his untiring efforts in aiding in the solving of the great problems which followed in the wake of the recent war.

Mike Mansfield's Statement on the Hungry Horse Dam Before Senate Appropriations Committee, May 1947

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, under consent granted me, I am inserting a copy of my remarks before the Senate Finance Committee in behalf of appropriations for the vitally needed Hungry Horse Dam in northwest Montana:

STATEMENT OF HON. MIKE MANSFIELD, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MONTANA

Senator CORDON. Congressman MANSFIELD is present, and I understand he desires to make a statement in connection with the Hungry Horse Dam appropriation in Montana.

We will be glad to hear from you, Congressman, at this time. You may file your statement with the reporter, and it will be made part of the record in connection with the hearings on that project.

RESTORATION OF FUNDS REQUESTED FOR HUNGRY HORSE PROJECT

Representative MANSFIELD. Thank you, Mr. Chairman, sir.

Senator CORDON. Go right ahead, please.

Representative MANSFIELD. Mr. Chairman and members of the committee, this is my second appearance before a Senate committee on behalf of the Hungry Horse project in northwest Montana. As you know, the project was authorized on June 5, 1944, and since then, in excess of $3,000,000 has been appropriated for this project.

The need for the Hungry Horse is very apparent when one considers that in 1943 the Army engineers tried to take over the Flathead Lake to use as they saw fit for the purpose of furnishing firm power from downstream dams.

FLATHEAD LAKE AUTHORIZATION

Because of the unanimous protest of the people of the State of Montana, the Army engineers were forced to back down on their demands and to insure that another attempt would not be made to raise Flathead Lake, an authorization bill was passed unanimously by both the House and the Senate and signed by the President on June 5, 1944.

This authorization was intended to give security to the people of western Montana insofar as the raising or the lowering of Flathead Lake was concerned. It was intended also to bring about the economic development of our State and to make use of the forest, minerals, and soil resources which we possess in abundance. It was also going to further add to the power potentialities of Bonneville and Grand Coulee and because of that fact, it was and is the key point in the economic development of the Northwest and as such has been recognized by all the governors of the Northwest States, Republicans and Democrats alike.

I might interpolate here that it is also unanimously backed by the Republicans and Democrats who represent the State of Montana in both Houses, and always has been.

The authorization of the Hungry Horse is the only such measure passed by the Congress since 1939, and I earnestly urge this committee to restore the full amount requested by the Bureau of Reclamation and the Budget so that this project can go ahead and Montana will be given its first opportunity to develop one of its resources for its own benefit.

As you, many of you, gentlemen, know, Montana has been mined and milked of its resources for a number of years. I think it is about time that Montana is developed for the benefit of Montana people and not for outside interests.

OPPOSITION OF POWER COMPANY

I realize that for 3 years now the Montana Power Co., a subsidiary of the Electric Bond & Share, has appeared before this committee in opposition. I cannot understand their position because when we saved Flathead Lake, we saved for this company its dam at Polson. This company has had many years to develop the Kalispell and Whitefish area in which the Hungry Horse is located, but only when the Government goes in do they become interested.

To me, it is another indication of their spite-work tactics which has been amply illustrated in their opposition to the REA program, and I urge this committee to recognize the fact that what the Montana Power Co. is intending to do is in direct contrast to the wishes of the people of the State of Montana. I have no opposition to utilities, like the Montana Power Co., working in their own field, but I do resent their dog-in-the-manger attitude in opposing a project of this kind which they in no way would be able to finance, but which they would stop because it would give the people of my State a chance to participate in the development of the resources which we possess.

POTENTIAL POWER IN MONTANA

I should like to call the attention of the committee to the fact that Montana has approximately one-tenth of the potential hydroelectric power in the United States. That water was put there for a purpose, and that water, so far as we are concerned, is going to waste at the present time.

AMENDMENT REQUESTED

I am not here to advocate a boondoggling project. I am here to ask this committee to raise the amount granted by the House to $4,500,000, so that we can get this project under way; so that cheap power will be given to our farmers; so that cheap power will bring security and comfort in the lives of our people; so that cheap power will bring in industry and help develop our resources; so that flood-control efforts will be strengthened all along the Columbia; and so that the peace and security of the people of the State of Montana will be enhanced as a result. I plead with you for this project, not only from an economic, but also from a humanitarian, point of view.

NATIONAL BENEFITS

We want to borrow sufficient money from the Federal Government to develop a resource which will be to the Nation's benefit as well. We will repay the Federal Government every dime which it invests in this project, and after that payment has been made the revenue accruing from the sale of power will continue to pay to the Federal Government a sizable sum each year. We do not ask for pity or sympathy. We only ask for an opportunity to develop our State for the benefit of our people on fair and equitable terms.

ANSWERS TO STATEMENTS OF POWER COMPANY

Mr. Chairman, I have here an answer to the statements made by the Montana Power Co. in the House, and also an answer to the statements made by the Montana Power representative, Mr. Corette, before this committee last Friday.

I ask consent to insert these with my remarks in the record at this point.

Senator CORDON. Without objection, the data will appear immediately following your remarks.

(The material referred to is as follows:)

"THE TRUE POSITION OF HUNGRY HORSE

"Mr. Corette, of the Montana Power Co., has appeared before the House Subcommittee on Interior Appropriations and made statements to the effect that the Hungry Horse Dam and the Hungry Horse-Kerr Dam transmission line should not be built. I appreciate this opportunity to show that the opposite is true and that these two projects are sound in every respect.

"REGIONAL POWER SUPPLY

"Mr. Corette started out by asserting that there is a surplus of power in Montana and therefore no new facilities are needed. He quotes from a news release of Dr. Raver issued January 17, stating that Montana supplied 72,000 surplus kilowatts to Washington. There is no disagreement that a surplus has existed in eastern Montana; however, this surplus is fixed both as to time and place. Mr. Corette may be willing to repose in the present but I am looking to the future. A year ago there was a surplus at Grand Coulee. Now there is a definite shortage and every generator is being worked to the limit to supply the demand. Three new 108,000 kilowatt units are to be brought into service within the next year and every kilowatt of this electricity has already been spoken for. I am not willing to risk a shortage in Montana because of a surplus in eastern Montana on January 17. Furthermore, the surplus is fixed as to place. There are shortages in

Montana even now. The town of Kalispell has been receiving poor electrical service because of weak transmission lines into the area. It is not enough to have sufficient generation—there must also be a capable transmission system.

"Kerr Dam-Kalispell transmission line

"The power situation at Kalispell can be relieved by the construction of the Kerr Dam-Kalispell line, which is the first step of the Hungry Horse-Kerr Dam line. Contracts have been let for the construction of the project. Initial funds have been already appropriated but $237,000 will be required in 1948 to carry forward the work. Forty-five thousand dollars additional will be needed in 1949 and this will complete the project. The $237,000 item is contained in the 1948 budget now being considered and has been approved by the Appropriations Committee. The power line now connecting Kerr Dam and Kalispell is a 33,000-volt line owned by the Indian Service. All agree that the time has come for this line to be supplemented with additional capacity. This 33,000-volt line traverses the east side of Flathead Lake which during certain seasons of the year creates a freezing, moisture-laden atmosphere. When there is a west wind this moist air sometimes deposits ice on the transmission line to such an extent that the wires break. The ice deposit is so heavy that it is economically infeasible to build the line strong enough to carry the load. When a breakage occurs, power service is interrupted. Such failures are so frequent that relief of some kind is imperative. This is one reason that the Kerr Dam-Kalispell line is being built. In addition to the need for better service to Kalispell, this new line capacity is required for growth in the power load. This latter need is recognized by the Montana Power Co. in the form of its proposal to buy the Indian Service 33,000-volt line and rebuild it at higher voltage and capacity. But it would at the same time stop construction and rescind all appropriations for the Kerr Dam-Kalispell line. Such a proposal does not solve the ice problem, and service would still be interrupted under this scheme. The Kerr Dam-Kalispell line will solve both parts of the problem by providing substantial power capacity and by preventing interruptions to service. This line will follow along the western shore of Flathead Lake and thus will not be affected by the same winds which blow the moist, freezing air to the opposite shore.

"Hungry Horse Dam

"The Montana Power Co. continues to oppose the Hungry Horse Dam, which is looked to as the No. 1 project of Montana by the people. Figures are quoted that power developed at Hungry Horse will cost $340 per killowatt and thus be more expensive than other Columbia River projects. This figure completely ignores the benefits which the storage of water in Hungry Horse Dam will bestow on the power plants lower down the river—Grand Coulee, Bonneville, McNary, Foster Creek. Every acre-foot of water held in Hungry Horse Dam during the wet season and released during the time of greatest power needs will add kilowatts to the prime power outputs of the big downstream dams. The more down river dams there are built, the greater will be the benefits from this Hungry Horse storage. I have obtained a computation of Hungry Horse power costs which shows that the 3,500,000 acre-feet of storage will create 435,000 kilowatts of additional power at Grand Coulee, Foster Creek, McNary, and Bonneville. The over-all cost of power created by Hungry Horse including integrating transmission lines, and incremental costs at downstream power plants will be 1.1 mills per kilowatt-hour at 100 percent load factor. This figure will decrease as more downstream power plants are brought in to benefit from the storage. Lower cost power cannot be found today. Funds for this project have been cut by the Appropriations Committee from $4,500,000 to $1,550,000.

"Reductions in either the dam or the transmission line will only delay the time when power can flow to the homes, businesses, and industries that need it even at this moment. From a purely financial standpoint, it is unwise to delay the projects as the power users of the area will be correspondingly delayed in their ability to return the cost of the projects with interest to the Government. The Appropriation Committee has wisely rejected the request of Montana Power that the appropriation for Hungry Horse-Kerr Dam be rescinded and has instead approved the full budget request for $237,000. I ask that this action of the committee be sustained. I further ask that the cut in the funds for Hungry Horse Dam be restored to the full amount of $4,500,000 as requested in the budget estimate.

"ANSWERS TO STATEMENTS PRESENTED TO SENATE COMMITTEE BY MONTANA POWER CO., IN OPPOSITION TO HUNGRY HORSE PROJECT

"Mr. J. E. Corette, Jr., appeared before the House and Senate committees in his official capacity as vice president of the Montana Power Co. rather than as a representative of the people of Montana. His House statement was not available to me until the House record was printed. In my submission to this committee I have answered all the points raised by Mr. Corette when he appeared before the House committee.

"In a similar manner the copy of his statement before the Senate committee was not available for examination until he completed his presentation. I have gone over his Senate statement and I find that it is more or less repetition of the House statement but in a different form. On page 1 of his Senate committee statement he raised points all of which were previously covered in the House hearings. I have answered the items mentioned on page 1 of his Senate committee presentation by points 1, 7, 10, 11, and 12 in the first part of my statement before this committee. The items covered on page 5 of his Senate committee statement I have answered as point 11 and the items on page 8 have likewise been answered by points 2 and 6. Therefore, in what follows I will only cover such points not previously answered.

"MONTANA POWER CO.'S SENATE COMMITTEE STATEMENT

"There is very little new material included in the Corette Senate committee statement and a great deal that should be covered has been omitted. He failed to cover the real reason for the Hungry Horse project; namely, the protection of the natural advantages of Flathead Lake. He failed also to cover the earlier efforts of his company to manipulate the lake levels and similarly the efforts of the Federal Government to do likewise during the late war. The Hungry Horse project was initiated as a means of regulating the river flow without using Flathead Lake for a regulating reservoir in order that Montana as well as the downstream States could secure the material benefits which would accrue from regulated river flows. The water in the Flathead, Clarks Fork, and the Columbia belong to all the people of the Basin States. In order to make an equitable distribution of these benefits between the several States the regulation of this major stream should be kept in the hands of the duly elected representatives of the people. The control should never be allowed to go into private hands. This can be accomplished without disturbing in any way the vested rights of any enterprise and without the use of any investment-destroying devices by any side. Unless there is an equitable distribution of the benefits accruing from the regulated flow the region will encounter conflicts between States, which the founding fathers and all Congresses to date have sought to avoid. Therefore, the early constitutional provision covering control of interstate waters is one of the wisest concepts of man. The experience for the last 150 years has verified this wisdom.

"A new thesis in Mr. Corette's Senate committee presentation is that the benefits all accrue to the States of Oregon and Washington. He built his case on this point.

"On page 6 of the Corette brief filed with the Senate committee, Mr. Corette presented a table which he captioned 'No justification for Hungry Horse.'

"This table totally ignores the State of Montana and it will be noted that no capacity is allocated to Montana in his justification. All the plants which he cites will serve the purpose of meeting conditions in the States of Oregon and Washington. The reason for this is obvious. His company and the Washington Water Power Co. are building a high-powered transmission line from Kerr Dam to Spokane. The Montana Power Co. will use this line to their advantage by circulating power flow with the Washington Water Power Co. Such use of the projected transmission line will give the Montana Power Co. full use of Columbia power without being in a required position to pass benefits along to the people of Montana. The intent of the table on page 6 of the Corette statement is very obvious when Montana capacity is purposely omitted.

"This is factually incorrect. The principal benefits of Hungry Horse, and that is the reason I have initiated the Hungry Horse legislation, accrue locally to Montana. This is possible without in any way disturbing the benefits which accrue downstream because the same regulated water can be used over and over again for all downstream uses. Mr. Corette's presentation totally ignores the economic position of the people of Montana and fails to point out what the State needs in order to be transferred from a colonial status.

"About one-quarter of Mr. Corette's presentation covers advertisements for the Montana Power Co. The people of Montana know the good points of the power company without further repetition. The people of Montana also look upon Mr. Corette as one of its outstanding citizens and without surrendering one iota of this respect they can honestly and sincerely differ with him on points involving the economic destiny of the State.

"The Montana Power Co. is strictly a hydro generating organization. It has 13 hydro plants in the Columbia and Missouri watersheds. Within the last several days I have had an opportunity to look into the statistics covering the Montana Power Co. which are made a matter of official record under the Water Power Act by the Federal Power Commission. The 13 hydro plants of the power company have a total installed capacity of about 314,000 kilowatts capable of generating in an average year in excess of 1,500,000,000 kilowatt-hours. Approximately 9 percent of this capacity was installed prior to December 31, 1909; 50 percent of that total capacity was installed between 1910 and 1919, nearly 10 percent between 1920 and 1929, and 32 percent was installed after 1930. This is exclusive of the new 56,000 unit now going in to the Kerr Dam plant at the foot of Flathead Lake.

"These statistics show that over two-thirds of the hydro capacity of this company was installed in the period before the extensive use of hydro power for electrochemical and electrometallurgical processes became standard. Consequently, the larger part of their installation was made to fit load conditions existing a decade or so ago. These conditions are quite different from load conditions which would result from modern metal processing. As a result, the Montana Power Co. is long on short-peaking capacity but short on energy which is the principal re-

quirement of electro processing. Hungry Horse will remedy this situation without causing any hardship to the Montana Power Co. The modernization of Montana's resource base will accrue to the benefit of the Montana Power Co. as well as all the people of the State of Montana.

"The real reason for Mr. Corette's objection to the Hungry Horse project is cited for the first time on page 2 of his Senate committee presentation wherein he outlines his opposition to the Bonneville agency. This is not a present issue before this committee as a close examination of the Bonneville submissions do not show any request for funds to tie the existing Oregon-Washington grid into Hungry Horse. Naturally this matter cannot become an issue until Hungry Horse approaches the stage of actual completion. It would be decidedly unwise to ask for any money for the interconnection transmission lines at this time for the reason that such expenditures would remain a dead investment until long hour-use power capacity at Hungry Horse becomes surplus to the State of Montana. This is a long way in the future. The Federal Government by no stretch of the imagination can be conceived of going into competition with the Montana Power Co., which is largely a retailing agency. There is no authority in law for any Federal agency to encroach upon State jurisdiction, which is the implication of Mr. Corette's statement.

"On several previous occasions I have fully covered the Army engineers' report which appeared as House Document No. 643. Also, on numerous occasions I have pointed out that this report was only authorized for local flood protection, and omitted any appraisal of storage or power benefits. It is distinctly beside the point to use the Army engineers' report as Mr. Corette has done. I need not repeat at this time the facts on this report which I have fully covered in official presentations and remarks during the past 2 years. The same situation applies to the reclamation component of the Hungry Horse multipurpose project mentioned by Mr. Corette.

"On page 5 of Mr. Corette's Senate presentation he incorrectly used the data accompanying the Federal Power Commission's document No. IT 5955 applying to Bonneville costs. In using this data he included the Bonneville transmission system which is not properly included in the term 'Bonneville project' as defined on page 3 of the Chief Engineer report to the Federal Power Commission.

"In this Federal Power Commission document the Bonneville project is defined as the dam, locks, power plant, and appurtenant works in accordance with the provisions of the Bonneville Act. In the Federal Power Commission's communication, the transmission system is defined as a separate activity. The correct figures for the Bonneville project can be found on page 3 of the cited Federal Power Commission report and these show $58,000,000 as the total amount allotted to power at the Bonneville project out of a total project investment of $84,000,000 in round numbers.

"The statement given on page 7 of Mr. Corette's presentation is factually incorrect, as Hungry Horse by law and by practice has never been conceived as a project 'to supply anticipated power shortage in Oregon and Washington.' The legislation covering Hungry Horse was drafted and passed long before the present load condition in Oregon and Washington was known. The reason for the Hungry Horse legislation was amply set out during the hearings before the House and Senate reclamation committees and during the debates attending the passage of the act.

"The conclusions cited by Mr. Corette on page 8 of this skillful presentation are based entirely on the Montana Power Co.'s viewpoint. They totally ignore the interest of the people of the State of Montana and if accepted would result in a great State being retained in the colonial status. I have fully answered all the points raised to date by Mr. Corette and in so doing I have attempted to show all the respect that his position merits.

"The value of reclamation projects is not generally recognized throughout the United States. These projects are no longer an experiment—they are a proven success and a good Government investment.

"Although Montana was a source of raw materials during the war, it did not have any war projects because of the lack of cheap power. This lack of development within the State has created a serious problem in the aflux of the youth and business interests to other areas. Since the beginning of this project, many thousands of people have returned to Montana and many more thousands will return if the project is completed.

"I have put in much time on this particular project and I am more than willing to put in a lot more. Especially when the future and livelihood of so many people is in doubt. The fear of raising Flathead Lake has kept the people in that area in a state of confusion and uncertainty."

Representative MANSFIELD. Mr. Chairman, if I may say a few more words:

LOCAL BENEFITS TO MONTANA

Montana is one of the few States in the Union which, in the last two decades has lost much in the way of population. It is not because we lack resources, because I believe, taken on a comparative basis with any other State, we have as much as most, and more than many.

My State has been held back because of the fact that it has been controlled by corporations, who have their chief interest outside the State, as a whole. I have mentioned that we have been mined and milked for a good many years. This project, the Hungry Horse project, is the first project which will be of benefit to the people of Montana directly.

Of course, many of you may think of the Fort Peck Dam and the $180,000,000 spent by the Government there. As a matter of fact, at the present time it does not mean a thing to the State of Montana. It is a project primarily for the down-river States in the Missouri Basin. This is a project which will be a benefit to the State of Montana and the fact is that because of it many individuals are coming into our State, hoping to establish businesses there.

We want them to come in. We want to give our children opportunity. We want to give our people security.

And I have been pleading for this particular project because I believe in it with my whole heart and soul, and I know that outside of the Montana Power Co. I speak for all of the people of Montana, Democrats and Republicans alike.

Senator CORDON. Thank you very much, sir.

Representative MANSFIELD. Thank you, Mr. Chairman.

The "Soak-the-Poor" Tax Act

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 9, 1947

Mr. SABATH. Mr. Speaker, the gentleman from Minnesota [Mr. KNUTSON] recently stated that the Democratic Party had in the Seventy-ninth Congress passed an income-tax law which reduced corporate tax liability by $6,000,000,000, and pointed out that President Truman had signed that bill into law.

While the gentleman made a factual statement, he was endeavoring to give the Democratic Party undeserved credit for an enactment forced through the Congress and upon the President by a coalition, led by Republicans but unfortunately participated in by some Democrats which crossed party lines.

The credit or shame for prematurely eliminating the excess-profits tax belongs to the Republican Party and its present numerical majority in Congress.

The gentleman also is in error when he assumes that the so-called carry-back provision or the privilege of utilizing previously unused credits from losses applies only to corporations. The same privilege applies to individuals making the individual income tax return. Of course, individuals did not have to pay an excess-profits tax and, therefore, the elimination of those taxes do not accrue to the direct benefit of individual taxpayers. Nevertheless, to the extent that corporations were relieved of tax liability up to as much as 90 percent and the tax saving went immediately into distributed profits, the individual was the beneficiary of this unfair special-privilege law.

Naturally, I do not boast of the part which some members of the Democratic Party took in handing back that $6,000,000,000 gift to big business, but it had, at least, the justification of repealing a specific and special wartime tax.

But now the Republican Party, through its congressional majority and still with the support of a small segment of the Democratic Party which has no responsibility to the people, has made another huge gift of about $4,000,000,000—billions, not millions—to the wealthy. It is another example of the Republican policy of "soaking the poor and coddling the rich."

I am giving here a table which shows how little the present income tax law helps the man with a small income and how much it helps the bloated plutocrat of wealth and unending avarice. You will notice that a married man with two dependents does not save one cent under this bill until you reach the income category of more than $2,000 a year.

A worker getting that munificent salary and trying to support a wife and two children would receive the vast benefits of 56 cents a week in tax saving or $29 a year. That would not pay the milk bill for the two children.

But a millionaire receiving an income of $1,000,000 would save $1,897.59 a week or a total of $98,675 in a year. If his income was $5,000,000 a year he would save almost one-half million dollars a year under this law.

In other words, we add $29 to the spendable income of the little fellow barely able to scrape by on $2,000 a year, but we add $450,000 a year to the spendable income of the man who could live in luxury merely on the interest of his annual income. We give the millionaire back more than four times as much in one week as the little fellow earns in a whole year.

I have tried to reduce this table to a point where even Republican Members of Congress can get the full impact at a glance.

Help-the-rich tax reduction in terms of take-home pay—married person, 2 dependents

Net income before personal exemptions	Take-home pay after Federal income tax—present rate	Increase in take-home pay	
		Yearly	Weekly
$2,000	0	0	0
$2,500	$2,405	$29	$0.56
$3,000	2,810	57	1.09
$4,000	3,620	76	1.46
$5,000	4,411	118	2.27
$6,000	5,202	160	3.07
$7,000	5,955	209	4.02
$8,000	6,708	259	4.97
$9,000	7,423	316	6.07
$10,000	8,138	373	7.13
$15,000	11,362	728	14.00
$20,000	14,110	1,178	22.65
$25,000	16,479	1,704	32.75
$30,000	18,619	2,277	43.78
$40,000	22,558	3,489	67.09
$50,000	25,889	4,823	92.75
$100,000	36,699	13,461	258.86
$250,000	59,525	28,688	570.76
$500,000	93,400	58,175	1,118.76
$1,000,000	166,150	98,675	1,897.59
$2,000,000	296,650	194,675	3,747.59
$5,000,000	725,000	450,000	8,646.15

The lowest tax bracket in the "married, two dependents" group is $2,500.

In the "single person, no dependents" group the lowest bracket is $600 and the take-home increase figures $6 a year, 11½ cents a week, 1 percent.

In the "married, no dependents" group, the lowest bracket is $1,200, the take-home increase $12 a year, 23 cents a week, 1 percent.

Thirty million dollars was slashed by Congress from the school-lunch program, which previously benefited 7,000,000 children.

Thirty million dollars in tax relief was allotted to 577 taxpayers in the $300,000-up brackets.

Keep Exchange of Students in Mundt Bill

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. JOHNSON of California. Mr. Speaker, due to the fact that I arranged to be in California on an official trip to participate in an air-power conference and also primarily because a telegram today disclosed the serious and critical illness of my mother, I may not be on hand for a vote on the Mundt bill providing generally for the building up of good will for the United States in foreign countries.

I am heartily in favor of the general purpose and principles of the Mundt bill. While there may be some minor amendments that would make the bill better than it is, irrespective of whether these amendments are passed or not, I intend to vote for the bill.

I approach the matter in the following manner: During the war we were absolutely united in the prosecution of the war. By that unity we won the great victory and brought about a cessation of hostilities. However, the real objective of our effort was not the bare winning of the war, but it was really the winning of the peace which was to follow the war. I have never met a person but what they hoped and many of them expected that with the winning of the war the Allied Nations would forge a peace which would be permanent. We must realize that America came out of the war as a leader of the world and particularly it was the special leader of those who looked forward to and hoped and prayed for a world of peace. Therefore, to me the great mission of the United States of America today and of the Congress should be to lead the way and forge the necessary instruments that will assure the world a lasting peace. We realize that we are having tremendous difficulties. Some of our allies are not cooperating. Some of our allies are, in fact, stirring up misunderstanding by telling untruths or only half-truths about America. They are charging us with imperialism when in fact we turned loose the Philippine Islands after having held them for 46 years. We not only gave them their freedom but we entered into agreements to help them for a prolonged period in order that they might develop into a strong, sturdy, self-reliant, independent nation. We have given untold sums of money, supplies of all kinds, and various other types of help to the unfortunate persons of Europe and Asia.

We must, and it seems everyone should, understand that a misunderstood America is one that cannot be the real leader that we should be. Much as I dislike propaganda, I think we should use that vehicle to develop good will for America. By the radio and other means we should let the world know what America really is, namely, "the land of the free and the home of the brave."

These matters have been brought before the Congress by Members of the committee who have studied and written this bill. I have the utmost confidence in them and am willing to accept their judgment as to what we should do and how we should do it.

There seems to be some objection to the provision providing for the interchange of students. To me this is a highly important provision of the bill. It has been my pleasure to have traveled in many parts of the world on official missions for the Military Affairs Committee of the House. I have met students who were trained in America in France, in Belgium, in England, in Greece, in Egypt, in Palestine, in Japan, in Korea, in China, in the Philippines and in Siam. Every one of these persons was really an American ambassador of good will. In their student days in America they learned to understand something of the spirit of America. They learned to understand how America extols the individual and how it gives him the utmost personal freedom and opportunity. In Japan our committee had a meeting with about thirty members of the Diet, who had been trained in America. This is a small group in a large nation, but they might be the very nuclei that will result in the development of self-government in Japan. These people have seen how it works. They know what obstacles lie in the way of its development and it may be that they can finally help bring their Japanese comrades to the point where they too can successfully have a self-governing system. I have been a firm believer in the interchange of students by knowing something first-hand about the International Club organized at the University of Wisconsin many years ago by the noted Associated Press correspondent, Louis P. Lochner. I, also, came to know about the benefits of having foreign students study in America, through the International House at the University of California, where hundreds and hundreds of students have lived in the atmosphere of that great university and come to really understand America and its institutions and customs. My judgment on this matter is confirmed by President Robert G. Sproul, of the University of California. He wired me that he is most heartily in favor of section 201 of the Mundt bill as it is now written. Testimony from such an individual as President Sproul is highly important. He is the president of the largest university in America. He is noted as a great educator and a marvelous administrator. Spread over seven campuses are over 30,000 students under his jurisdiction. He has been familiar with the results of foreign students living in the International House and taking courses at the University of California. He is recognized as one of America's great educators and besides that is a very public-spirited man. I do certainly hope that the House will not amend or change the provisions of section 201 of the Mundt bill. As I said before, our most pressing and challenging mission for the United States today is to find a way to permanent peace. This bill and the particular section to which I refer is a step in that direction. We cannot turn down our millions of servicemen and the other millions who supported them and who expect Congress to prepare the road which will lead to lasting peace. The Mundt bill is a segment, and a very important one, of that highway. I do wish I could be here to vote for the bill and hope it will pass by an overwhelming majority so that America's leadership for world peace will be strengthened thereby.

Address by Fleet Adm. Chester W. Nimitz, Record of Vice Adm. C. H. McMorris, and List of Naval Vessels Named for Alabamians

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, June 12 (legislative day of Monday, April 21), 1947

Mr. HILL. Mr. President, on last Monday, Representative PETE JARMAN, Vice Adm. Charles H. McMorris, of the United States Navy, a distinguished Alabamian, and I accompanied Fleet Adm. Chester W. Nimitz, Chief of Naval Operations, to Tuscaloosa, Ala., where Admiral Nimitz delivered an address at the graduation exercises of the University of Alabama. I ask unanimous consent to have printed in the RECORD the

address delivered by Fleet Adm. Chester W. Nimitz, on that occasion; a brief summary of the naval record of Vice Adm. Charles H. McMorris; and a brief list of the ships in the Navy, named for Alabamians.

There being no objection, the address by Admiral Nimitz, the summary of the naval record of Vice Adm. McMorris, and the list of ships named for Alabamians, were ordered to be printed in the RECORD, as follows:

ADDRESS BY FLEET ADM. CHESTER W. NIMITZ, UNITED STATES NAVY, CHIEF OF NAVAL OPERATIONS, AT UNIVERSITY OF ALABAMA, TUSCALOOSA, ALA., JUNE 9, 1947

It is gratifying to know that people like yourselves, who live at some distance from our seacoasts, are always ready to extend a cordial welcome to the Navy. I hope this will always be so, for although our ships and planes and submarines are most often seen by the people of our coastal cities, the Navy owes its existence and its strength to all Americans, regardless of where they may live.

Though Alabama has only a small window on the sea, its citizens have maintained strong interest and ties with the Navy. No less than 52 ships have names derived from your State, counties, cities, rivers, and citizens. A battleship, *Alabama*, third of that name; a heavy cruiser, *Tuscaloosa*, named after your fair city; two light cruisers, *Birmingham* and *Mobile*—these ships all have marvelous war records in World War II. Two other ships, the U. S. S. *Howard W. Gilmore*, submarine tender, and U. S. S. *New*, destroyer, were named after Alabama heroes who won Congressional Medals of Honor. I do not believe any other State, not even my native Texas, can boast of such a record.

I welcome this opportunity to express the Navy's appreciation for the very substantial contributions to the war effort of this great State of Alabama. You have given us some of our most capable and distinguished naval officers, and we are counting on you to supply us with more in the future. Men like Raphael Semmes, who first distinguished himself in the Mexican War and then in the War Between the States, don't come along very often. It was Semmes who commanded the famous commerce raider *Alabama*, which paralyzed Union commerce for 2 years. And then there is Rear Adm. Richmond Pierson Hobson, Congressional Medal of Honor winner, who sank his ship, the *Merrimac*, off the entrance to Santiago Bay in order to bottle up the Spanish Fleet. That exploit is an inspiration to all of us and it will live forever in American naval history. That wasn't the least of Admiral Hobson's accomplishments, for as the Representative in Congress of the Sixth District of Alabama he was the most helpful in establishing the Office of the Chief of Naval Operations, the position I now hold. So you see, I owe a very personal debt to Admiral Hobson. I don't have to tell you much about one of our most famous marine officers, Gen. Holland M. Smith, who also hails from Alabama. In fact, he received a degree from this very university. You've all read in the newspapers about his exploits in the Pacific during the past war. He commanded the Fifth Amphibious Corps in the Gilbert and Marshall campaigns and also in the seizure of Saipan. Later he became commanding general of the Fleet Marine Force, Pacific, and served as commander of expeditionary force troops at Iwo Jima.

There is another naval officer from Alabama who established a brilliant record in World War II, but I have purposely refrained from mentioning him until this moment because he is here tonight and I want to be sure he receives the full recognition he deserves. I refer to Vice Adm. Charles H. McMorris, of Wetumpka, who, first as my war plans officer, and then my chief of staff, must receive much of the credit for the success of our operations against the enemy in the Pacific. The importance and value of his services in these positions is matched only by his outstanding achievements as commanding officer of the cruiser *San Francisco* during the Battle of Cape Esperance off Guadalcanal, and as commander of a cruiser task force in the Battle of the Komandorski Islands.

Alabama's over-all contribution to the winning of World War II can never be fully assessed, but I do know that the men you sent overseas, and the long hours you labored on the home front to produce all the things they and their comrades required, were instrumental in achieving final victory. In particular, I thank the University of Alabama for participating in the V–12 program, and furnishing the Navy with vitally needed medical officers. Many others who served in the armed forces received their education here at this university, and the splendid performance of duty of those who served in the Navy reflects great credit upon their earlier training. Among those who did not come back are 355 graduates of this university.

Although the shooting war has now been over for nearly 2 years, I find no evidence that the university's contribution to the country's welfare has slackened in any degree. On the contrary, it is currently participating in the naval aviation college program, and has opened its doors to a great many veterans who would otherwise be denied the chance to obtain a higher education. I don't believe further proof is needed of the splendid manner in which this institution is fulfilling its obligations to the Nation.

I have had many opportunities since the end of the war to visit colleges and universities throughout the country. At each of these I have been deeply impressed by the work being done by students who are also veterans. I do not believe the American campus has been subject to such a beneficial influence since the birth of our country. These GI students are bringing to the classroom an awareness of individual responsibility which is also a challenge to our educators. I am sure that faculty members will agree with me when I say that the young veterans are displaying the same qualities of devotion to duty, determination, and willingness to learn that they did in the armed forces. And I predict they will leave their mark upon the campus, in the form of higher standards of study and conduct, for years to come. I am informed that of the approximately 8,000 students on this campus, over half are veterans and that these veterans are upholding the generally fine scholastic records of all GI students.

I pay special tribute also to our educators who are working long hours to accommodate the unprecedented numbers of those desiring a higher education. They are helping to reduce our wartime educational deficit, and this is something of the greatest value to the future of the Nation.

Now, as never before, knowledge is power—power to establish a real and lasting peace, or power to create weapons which can bring about the destruction of a greater part of civilization. We must continually strive for greater educational opportunities for everyone, for the responsibilities we bear in the world today call for the fullest understanding of the forces which make for peace or war. Upon our success or failure rests the hopes of all peace-loving nations. We must not fail our trust.

We hopefully await the conclusion of satisfactory peace treaties, and although progress has been discouragingly slow, there is no reason to believe that satisfactory agreements cannot be reached. If we have the courage and patience to hold onto our ideas strongly enough, eventually right will prevail. Writing treaties is one thing, but writing them with good will is another, and without good will there can be no real peace. I am hopeful that there are enough intelligent men of good will in the world to make a real peace possible.

We are united in the desire to abolish war for all time. Those of us who have seen first hand the death and destruction of modern warfare, and who can visualize the consequences of another war, are the strongest advocates of peace. While the United Nations has not yet accomplished much, it is still our best hope for lasting peace. Here again, we must have patience, for if this international peace agency eventually proves successful, it will reward all our efforts. We should not find it so difficult to be patient, for here in the United States we went through a very similar experience when we first obtained our independence and were struggling to establish a form of government satisfactory to all. It took the Thirteen Original Colonies over a decade to agree to our present Constitution and yet they had the tremendous advantages of common speech, purpose, and effort, and had just concluded a successful war against a common enemy. How much more difficult is the task of the United Nations, as it struggles to achieve its goal in spite of the difficulties caused by language barriers, varying aspirations, and conflicting interests? In the light of our own example, we can hardly expect quick and easy results from the United Nations.

Just as it is important to maintain our faith in the ultimate success of the international peace organization, so is it important that we erect our own safeguards against aggression in the meantime. Before we can safely disarm we must make sure that three prerequisites have been met. First, it is vital that sound and equitable peace treaties be written, in order to eliminate at the beginning much of the cause for a future war. Second, we must have reliable safeguards against the possibility of a would-be aggressor arming for world conquest. These safeguards must include inspection if they are to be effective. And finally, there must be reasonable assurance that the United Nations is a going, workable organization. No nation with a genuine desire for peace can find fault with such a program.

Just as education can do much to banish the misunderstanding and suspicion that leads to war, so can it give us the weapons to prevent war if international controls fail. History has proven too often, and too recently, that it is the weak, and not the strong nation, which invites attack. We must make sure that the means for waging successful war are in the hands of those who hate war. The inventive genius which gave the United States the most effective weapons of World War II must always be capable of giving us more effective weapons than those of possible aggressors. This becomes the responsibility of our educational institutions, and laboratories, for it is there that the technical skills and knowledge so essential to the waging of modern warfare are acquired.

Think of the unlimited possibilities that years of peace can bring us and remember that it is largely within our power to insure the peace. Many war-devastated nations look to us to fulfill our responsibility as a moral leader of the world. No nation has ever had a greater obligation to civilization. Now, more than ever, there is need for courage, foresight, and wisdom. But if we are willing—each of us—to forget personal desire and work to the limit of our ability for the common good, I am confident that we shall emerge a happier, more prosperous, Nation and world.

To those of you who have just completed your educational work at this university, and who are about to start your life's work—congratulations, good luck, and Godspeed.

VICE ADM. CHARLES HORATIO M'MORRIS, UNITED STATES NAVY

Vice Admiral McMorris was born in Wetumpka, Ala., on August 31, 1890. He attended public schools in Wetumpka before entering the United States Naval Academy, Annapolis, Md., on June 26, 1908, from the State of Alabama. Graduated and commissioned ensign in June 1912, he was promoted to lieutenant (junior grade) on June 8, 1915; received temporary promotions to lieutenant and lieutenant commander during World War I, and was commissioned in those ranks on June 8, 1918, and June 3, 1922, respectively; and subsequently received promotions as follows: Commander, October 1, 1931; captain, July 1, 1939; rear admiral, November 14, 1942; and vice admiral, September 23, 1944.

Following graduation in 1912, Vice Admiral McMorris had consecutive service aboard the battleships *Delaware, Montana,* and *New Hampshire,* participating in the occupation of Veracruz in the Mexiçan campaign in 1914. In August of that year he returned to the U. S. S. *Montana* for torpedo instruction, after which he joined the U. S. S. *Maryland* on November 18, 1914. While serving in the *Maryland* he assisted in salvaging the U. S. S. *F–4,* which sank off Honolulu in 1915. He received a letter of commendation for assistance in rescuing passengers from a vessel grounded in the Gulf of Lower California during a storm that year.

Assisting to fit out the U. S. S. *Shaw* at the navy yard, Mare Island, Calif., he served in that destroyer from her commissioning, April 9, 1917, when she proceeded to Queenstown, Ireland, to join the destroyer force on June 17, early in World War I. Detached from the *Shaw* on July 30, 1918, he returned to the United States to duty in connection with fitting out the U. S. S. *Meredith* at the Fore River Shipbuilding Corp., Quincy, Mass., and served as her executive officer from her commissioning, January 29, 1919, until June of that year.

Vice Admiral McMorris assumed command of the U. S. S. *Walke* on June 13, 1919, and, detached a month later, reported for 3 months' duty at the Navy recruiting station, Pittsburgh, Pa. During the next 2½ years, he served in the Detail Section, Officer Personnel Division, Bureau of Navigation, Navy Department, Washington, D. C. He next became navigator of the U. S. S. *Baltimore* in March 1922, transferring in September of the same year to the U. S. S. *Burns* and serving as her executive officer until detached on December 5, 1924, to report for duty with Mine Squadron Two, Fleet Base Force.

From September 1925 until May 1927 Vice Admiral McMorris had duty in the Department of Seamanship and Flight Tactics at the Naval Academy, Annapolis, Md., where he was also assistant editor of the United States Naval Institute Proceedings. In May 1927 he assumed command of the destroyer *Shirk,* operating off the coast of Nicaragua during the second Nicaraguan campaign, with destroyer squadrons, battle fleet. In February 1930 he was transferred to command the U. S. S. *Elliott.*

Returning to the Naval Academy in July 1930 Vice Admiral McMorris served for 3 years as instructor in the Department of English and History, and for 2 years during that period was editor of the United States Naval Institute Proceedings. After duty from June 1933 until June 1935 as navigator of the U. S. S. *California,* he served the two succeeding years in the Detail Section, Officer Personnel Division, Bureau of Navigation, Navy Department.

In July 1937 Vice Admiral McMorris reported for instruction at the Naval War College, Newport, R. I., and completing the senior course there, he reported as operations officer on the staff of Vice Admiral Adolphus Andrews, United States Navy, now retired, commander, scouting force, United States Fleet. He served in that assignment, which also included duty from October 1939 to January 1941 as operations officer of the Hawaiian detachment, until February 1, 1941, when he became war plans officer on the staff of the commander in chief, Pacific Fleet. For services in this capacity from December 7, 1941, until April 15, 1942, he was awarded the Legion of Merit with the following citation:

"Legion of Merit: For exceptionally meritorious conduct in the performance of outstanding services to the Government of the United States as war plans officer on the staff of the commander in chief, United States Pacific Fleet and Pacific Ocean areas, from December 7, 1941, to April 15, 1942. Serving with distinction in an assignment of vital importance during the early critical days of the Pacific war, Vice Admiral McMorris rendered invaluable service to his command and, by his initiative and judgment, contributed materially to the conduct of our operations against the Japanese Empire. His professional skill and devotion to duty reflect the highest credit upon Vice Admiral McMorris and the United States naval service."

Vice Admiral McMorris commanded the U. S. S. *San Francisco* from May 14 until November 9, 1942. For heroism as commanding officer of the *San Francisco* during the action on October 11–12, 1942, he was awarded the Navy Cross, and is entitled to the ribbon for, and a facsimile of, the Presidential Unit Citation awarded the *San Francisco,* with the following citations:

Navy Cross: "For extraordinary heroism as commanding officer of the U. S. S. *San Francisco* during the night action against an enemy Japanese force of cruisers and destroyers, October 11–12, 1942. In the van of battle during the entire action, Vice Admiral McMorris fought his ship valiantly, maneuvering with the expertness of an able seaman and striking at the enemy with determined and effective gunfire despite the difficulties of night combat. As captain of the flagship, he rendered valuable service to the task force commander and contributed materially to the success of our forces."

Presidential Unit Citation, U. S. S. *San Francisco:* "For outstanding performance in action against enemy Japanese forces off Savo Island, in the Solomon Islands on the night of October 11–12, and again in the early morning of November 13, 1942. In the latter engagement, the *San Francisco* silenced and disabled an enemy battleship at a range of 3,000 yards, sank one enemy destroyer, and damaged two other enemy vessels. Although heavily damaged by 15 major caliber hits, she lived to fight again, her survival a distinctive tribute to the valorous spirit of her officers and men."

In December 1942, Vice Admiral McMorris assumed command of Cruiser Task Force 8, operating in the North Pacific. Referring to the Battle of the Komandorski Islands, Admiral King's first report on the United States Navy at War states: "* * * the enemy, late in March 1943, undertook to support the two garrisons by sending through a small but heavily protected convoy. Early on the morning of March 26, a unit of our North Pacific Force, commanded by Vice Adm. C. H. McMorris, encountered the advancing enemy force, which included heavy and light cruisers, some destroyers and cargo ships, about 65 miles south of the Komandorski Peninsula. Our force, although outnumbered, closed for attack.

"The engagement which followed developed into a running gunfire duel between our cruisers *Salt Lake City* and *Richmond* and enemy cruisers. This was followed by a torpedo attack delivered by our destroyers, upon completion of which the enemy retired in the direction of Paramushiru, 500 miles to the westward. Our damage was small and our casualties were light. While the damage inflicted on the enemy is not definitely known, a superior enemy force, after being engaged for 3½ hours, had been prevented from supporting Japanese garrisons at Kiska and Attu."

For his services during this action, Vice Admiral McMorris was awarded the Distinguished Service Medal with the following citation:

Distinguished Service Medal: "For exceptionally meritorious service to the Government of the United States in a duty of great responsibility as commander of a cruiser task group in action against enemy Japanese surface forces in the Aleutian area, March 26, 1943. Daringly intercepting an enemy cruiser and destroyer force, escorting a convoy of two train vessels, Rear Admiral McMorris outmaneuvered the enemy and launched a brilliant attack. Tactically disposing his greatly outnumbered force for maximum striking power, he achieved a complete rout of the enemy, compelling the Japanese to withdraw toward the Kuriles with three badly damaged cruisers while impairment to our forces was comparatively light. By his distinctive ability as a leader and fighter, Rear Admiral McMorris disrupted a vital enemy mission and prevented sorely needed supplies from reaching Japanese-held bases in the Aleutian area."

In June 1943 Vice Admiral McMorris assumed duty as Chief of Staff and Aide to Fleet Admiral Chester W. Nimitz, United States Navy, Commander in Chief, Pacific Fleet and Pacific Ocean areas. For his services in this capacity during the final phases of the hostilities of World War II, he was awarded a Gold Star in lieu of a second Distinguished Service Medal, with the following citation:

Gold Star in lieu of second Distinguished Service Medal: "For exceptionally meritorious service to the Government of the United States in a duty of great responsibility as Chief of the Joint Staff and aide to the Commander in Chief, United States Pacific Fleet and Pacific Ocean areas, from July 1943 to September 1945. Charged with the coordination of work by staff members, Vice Admiral McMorris supervised the preparation and execution of strategic and tactical plans for naval operations against the enemy Japanese forces in the Gilberts, Marshalls, Marianas, Western Caroline Islands, Iwo Jima, and Okinawa and, in addition, rendered invaluable assistance in the capture of Hollandia and Morotai, in the support of the Philippines Campaign, in attacks on the home islands of the Japanese Empire and in carrying out the naval phase of the occupation after the enemy's defeat. Throughout the steady advance of our forces in the Pacific area, Vice Admiral McMorris, by his knowledge, judgment, and efforts, contributed materially to the success of our operations against the enemy. His professional ability and devotion to the fulfillment of an important task reflect great credit upon himself and upheld the highest traditions of the United States naval service."

On February 8, 1946, Vice Admiral McMorris was ordered to duty as commander, Fourth Fleet. He was relieved of this command on September 20, 1946, and ordered to duty with the General Board, Navy Department, Washington, D. C.

In addition to the Navy Cross, the Distinguished Service Medal, the Legion of Merit, and the Presidential Unit Citation to the U. S. S. *San Francisco,* Vice Admiral McMorris has the Mexican Service Medal; Victory Medal, Destroyer Clasp; Second Nicaraguan Campaign Medal; and is entitled to the American Defense Service Medal, Fleet Clasp; the Asiatic-Pacific Area Campaign Medal; the Philippine Liberation Medal; and the World War II Victory Medal.

Vice Admiral McMorris' wife, Mrs. Elizabeth M. McMorris, daughter of Colonel David Brainard Case, U. S. A., resides at Marietta, Pa. His son, David Spencer McMorris, Princeton, 1940, was a lieutenant in the Naval Reserve during the war and serving on the U. S. S. *South Dakota* when the surrender ceremonies took place in Tokyo Bay.

Vice Admiral McMorris' official address is Wetumpka, Ala.

No less than 52 ships have names derived from Alabama counties, cities, rivers, and citizens. Battleship *Alabama*, third of that name; a heavy cruiser, *Tuscaloosa*, named after that fair city; two light cruisers, *Birmingham* and *Mobile*.

Among ships named for persons from Alabama are two named for Medal of Honor winners, both deceased. They are: U. S. S. *Howard W. Gilmore* (AS–16), named for Commander Howard W. Gilmore, USN, born in Selma, Ala.; and U. S. S. *New* (DD–818), named for John D. New, Pfc, USMC, born in Mobile, Ala.

Other ships named for Alabama persons are:

U. S. S. *Austin* (DE–15), for John A. Austin, ChCarpenter, Warrior, Ala.

U. S. S. *Charles E. Brannon* (DE–446), for Ensign Charles E. Brannon, Montgomery, Ala.

U. S. S. *Brock* (APD–93), for Ensign John W. Brock, New Brockton, Ala.

U. S. S. *Dortch* (DD–670), for Capt. Isaac F. Dortch, Gadsden, Ala.

U. S. S. *George F. Elliott* (AP–105), for Maj. Gen. George F. Elliott, USMC.

U. S. S. *Henry A. Wiley* (DM–29), for Admiral Henry A. Wiley, Troy, Ala.

U. S. S. *Kalk* (DD–611), for Lt. Stanton F. Kalk.

U. S. S. *King*, for Commander Frank R. King, Albany, Ala.

U. S. S. *Melvin* (DD–680), for Lt. (jg) John T. Melvin, Selma, Ala.

U. S. S. *Neal A. Scott* (DE–769), for Ensign Neal A. Scott, Montgomery, Ala.

U. S. S. *Newell* (DE–322), for Lt. Comdr. Byron B. Newell, Camp Hill, Ala.

U. S. S. *Henry W. Tucker* (DD–875), for Henry W. Tucker, pharmacist mate third class, Birmingham, Ala.

U. S. S. *Hobson* (DMS–26), for Rear Adm. Richmond P. Hobson, Greensboro, Ala.

U. S. S. *John Hood* (DD–655), for Rear Adm. John Hood, Florence, Ala.

U. S. S. *John Q. Roberts* (APD–94), for Ensign John Q. Roberts, Boaz, Ala.

U. S. S. *Osmond Ingram* (APD–35), for Osmond Ingram, gunner's mate, Birmingham, Ala.

U. S. S. *Porterfield* (DD–682), for Rear Adm. Lewis B. Porterfield, Greenville, Ala.

U. S. S. *Rogers* (DD–876), for Charles E. and Jack E. Rogers, both S1c, Birmingham, Ala.

U. S. S. *Slater* (DE–766), for Frank O. Slater, S2c, Marshall County, Ala.

U. S. S. *Tatum* (APD–81), for Lt. Comdr. Laurice A. Tatum, Chambers County, Ala.

U. S. S. *Thornhill* (DE–195), for Lt. (jg) Leonard W. Thornhill, Lamison, Ala.

Navy ships named for counties in Alabama are: *Winston*[1] (AKA 94); *Autauga* (AK 160); *Blount*[1] (AK 163); *Bullock* (AK 165); *Marengo* (AK 194); *Chilton* (APA 38); *Clay*[1] (APA 39); *Elmore*[1] (APA 42); *Fayette*[1] (APA 43); *Lamar*[1] (APA 47); *Sumter*[1] (APA 52); *Cleburne*[1] (APA 73); *Crenshaw* (APA 76); *Cullman* (APA 78); *Geneva* (APA 86); *Shelby*[1] (APA 105); *Colbert* (APA 145); *Lowndes*[1] (APA 154); *Lauderdale*[1] (APA 179); *Pickens*[1] (APA 190); *Talladega* (APA 208).

Navy ships named for rivers in Alabama are: *Cahaba* (AO 82); *Tombigbee*[2] (AOG 11); *Escatawpa*[2] (AOG 27); *Conecuh* (AO 103).

[1] Also named for counties in other States.
[2] Also named for rivers in other States.

The Leaders of the So-Called Arab Higher Committee Should Be on Trial at Nuremberg, Not Accredited to the United Nations

---

EXTENSION OF REMARKS
OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 9, 1947

Mr. SABATH. Mr. Speaker, the decent people of America learned with horror a few weeks ago that the so-called Higher Arab Committee, headed by the notorious collaborator with the Nazis, Haj Amin El-Hussein, the Mufti of Jerusalem, has been accredited to the United Nations Assembly.

I would have thought the Mufti's blood-stained record is known to all. I have in my own files a copy of a carefully documented statement showing his war record of active collaboration with the Axis, which was presented to our State Department more than a year ago.

HIS SINS FORGIVEN

It now appears, however, that not only will the Mufti not face trial for his war crimes in company with his accomplices in international crime and race murder, but that he is to be welcomed back into the family of nations, his sins forgotten and forgiven. The Mufti was one of those who enthusiastically aided and abetted the horrible Hitler plan for killing off all Jewish people.

But, fortunately for world morality, not everyone has forgotten. I have received, and I believe that every Member has received, a copy of a brilliant study of the Arab Higher Committee and of the self-appointed Arab spokesmen, and the Mufti, prepared by the Nation Associates, thoroughly documented, and presented briefly and concisely.

Under permission to extend my remarks, I now insert in the RECORD the first nine pages of this document, and urge Members to look at their own copy and see there the reproduction of photographs of the Mufti with Hitler, with Himmler, with his storm troops, and copies of official Nazi documents proving the Mufti's blood guilt:

THE ARAB HIGHER COMMITTEE OF PALESTINE

The Political Committee of the General Assembly of the United Nations decided on May 7, 1947, without a dissenting vote, to invite the Arab Higher Committee to testify before it on the Palestine question.

The invitation was extended after an assurance from the delegation of the United Kingdom that the Arab Higher Committee represents a considerable portion of the Arab population of Palestine. Moreover, a special sitting of the General Assembly was convened, under pressure of the Arab states, in order to issue the invitation in a form which would invest the Arab Higher Committee with the same diplomatic status as the Jewish Agency for Palestine, the internationally recognized representative of the Jewish people.

It is important, in view of the extraordinary emphasis placed on the testimony of the Arab Higher Committee, to examine its origin, its membership, its leadership, and its purpose.

COMMITTEE APPOINTED BY ARAB LEAGUE

The Arab Higher Committee of Palestine is a creature of the Arab League comprising Egypt, Iraq, Syria, Lebanon, Transjordan, Saudi Arabia, and Yemen. The head of the Arab Higher Committee is the ex-Mufti of Jerusalem, Haj Amin el-Husseini, a full partner of the Axis before and during World War II, and an escaped prisoner of war who has found asylum in the Palace of the King of Egypt.

The Arab Higher Committee, representing the six Arab parties of Palestine, came into existence in 1936. A year later it was established that the Mufti and his associates in the Arab Higher Committee were responsible for the 1936 riots which took a toll of hundreds of British, Jewish, and Arab lives. Accordingly, the Palestine Government in 1937 declared the committee illegal and ordered it disbanded. Some of its members were arrested and sent to Seychelles. Others, including its chairman, the Mufti of Jerusalem, escaped to Syria, whence they continued to direct Arab operations. During his exile in Syria, the Mufti even succeeded in liquidating most of the Arab leaders of Palestine who opposed him and his policies.

Until 1943, the Arab Higher Committee had no formal existence. The Mufti, in the interval, had moved from Syria to Iraq, where he organized the revolt against the British in 1941. When that failed, he fled to Germany and there played his role as Axis ally in the war against the United Nations.

In 1943, a number of prominent Palestinian Arabs made an effort to establish an Arab Higher Committee but were prevented from achieving their purpose by followers of the Mufti who had remained in Palestine during the war and who feared that, in the absence of the Mufti, the new body would oust them from leadership.

In 1944, however, the effort to establish an Arab Higher Committee was given stimulus when the Arab states, under British incentive, began to form what has now become known as the Arab League. In September of that year, political leaders from neighboring Arab countries came to Palestine to urge Palestinian Arabs to agree among themselves on the composition of an Arab Higher Committee. These attempts again met with failure, due in every instance to the opposition of the followers of the Mufti who were hopefully awaiting his return from Germany and his resumption of leadership.

A temporary truce was established in 1944 when Musa el Alami, a mild supporter of the Mufti, was recognized by the Arab League as the sole representative of Palestinian Arabs, pending the formation of a Palestine Arab Higher Committee.

A few months after VE-day, when the Husseini family, to their great astonishment, found that the British were reluctant to try the Mufti as a war criminal, they were emboldened openly to demand the return of the Mufti and his aides to Palestine. In this they were joined by the Arab states and the Arab League.

In November 1945, the Foreign Minister of Syria, Jamil Mardam, headed an Arab delegation to Palestine, the sole purpose of which was to solve the problem of setting up an Arab Higher Committee. The Husseini family finally agreed to the establishment of an Arab Higher Committee on the promise that the Arab League would induce the British to release Jamal Husseini, nephew of the Mufti, from his internment in Rhodesia as a pro-Axis leader. Assurance was also given to them that the chairmanship of the Arab Higher Committee would be held open for the Mufti on his return, and that the vice chairmanship would be assigned to Jamal Husseini. When most of the seats had also been assigned to the Husseini family, the Arab Higher Committee was established.

Leaders of the other Palestine Arab parties attacked the formation of the committee on

the ground that it was unrepresentative. The Arab press demanded the holding of elections. No notice, however, was taken of these objections. Soon after its formation, however, the committee was boycotted even by some of its own members and was again dissolved.

In February 1946, Jamal Husseini was released by the British and permitted to return to Palestine. He immediately reestablished the Arab Higher Committee and enlarged it to include some 29 members. But two-thirds of the membership was assigned to the Mufti's representatives or supporters of his policies. Again this action was opposed by the leaders of the five other Palestine Arab parties. Ten members of the Arab Higher Committee split with it and formed another group known as the Arab Higher Front, leaving the Arab Higher Committee to the exclusive possession of the Husseini family.

In June of 1946, the Mufti escaped from his forced residence in Paris and reached Egypt. The Arab League, meeting then in Bludan, Syria, entered into negotiations with the Mufti and, soon thereafter, took things into its own hands and appointed the present membership of the Arab Higher Committee, establishing the Mufti as chairman; his nephew, Jamal Husseini, as vice chairman; Dr. Hussein Khalidi as secretary general; and Emil Ghouri and Ahmad Hilmi as members.

THE ARAB LEAGUE'S RELATION TO PALESTINE

The Arab League was established in February of 1945 and its principal function to date has been to demand the independence of Palestine and the ending of Jewish immigration, and in general, to prevent the implementation of the Palestine Mandate.

In 1945, the member states of the Arab League adopted the following resolution on Palestine:

"At the end of the last war, Palestine, like the other Arab states detached from the Ottoman Empire, was liberated from Ottoman domination. Having become autonomous, she was no longer dependent on any other state.

"The Treaty of Lausanne proclaimed that her fate would be settled by the interested parties. But if Palestine has not been able to order her own destiny, it is nevertheless true that it is on the basis of the recognition of her independence that the Covenant of the League of Nations in 1919 settled her status.

"Her international existence and independence therefore cannot de jure be questioned any more than can the independence of any other Arab country.

"If, for reasons beyond her will, her independence has failed to materialize, this circumstance cannot constitute an obstacle to the participation of Palestine in the work of the council of the League.

"The State signatories of the present Covenant consider that, under these conditions and by reason of the special circumstances involving Palestine, until that country can exercise all the effective attributes of her independence, it behooves the Council of the League to designate an Arab representative from Palestine who will participate in its work."

The existence of the Arab League was officially registered at the organizing conference of the United Nations in San Francisco in 1945. The League was the culmination of more than 4 years of effort which had been encouraged by Anthony Eden, then Foreign Secretary of Great Britain.

THE LEADERS OF THE ARAB LEAGUE

Since the opening of the Extraordinary Session of the United Nations on Palestine, all pretenses have been dropped as to the role of the Mufti of Jerusalem as Chairman of the Arab Higher Committee and the man who gives it orders.

The titular recognition accorded the Mufti is further strengthened by the list of delegates named by the Arab Higher Committee to represent it before the Political Committee of the United Nations. In a message addressed to the Secretary General on May 4, 1947, from Cairo, the headquarters of the Mufti, Hussein Khalidi presented the following names: Emil Ghouri, Rajai Husseini, Henry Katan, Wasef Kamal, Isa Nakhleh, Rasem Khalidi.

Of this list, Emil Ghouri alone is a member of the Arab Higher Committee. Of the five other members, one is a cousin of the Mufti, and two—Wasef Kamal and Rasem Khalidi—are notorious for their long-time association with the Mufti in his Axis activities.

THE DOSSIER OF THE MUFTI AND AIDES

Haj Amin el-Husseini, Mufti of Jerusalem

Haj Amin el-Husseini has a long-time record of complicity with terrorism. Responsible for the Arab riots in Palestine in 1920, he fled to Transjordan to escape a 10-year sentence of imprisonment, returning only after complete amnesty had been granted.

In 1922, he became the Mufti of Jerusalem and later the President of the Supreme Moslem Council, during which period he had at his disposal more than 100,000 pounds a year.

The Shaw Commission, appointed by the British Government to investigate the 1929 riots, attributed to the Mufti a share in the responsibility for these riots, in which 133 Jews were killed and 239 wounded. No action was taken to curb his activities, with the result that in 1936 he again was responsible for new attacks upon the Jews of Palestine. At the same time, he caused the assassination of hundreds of prominent Arabs, including 24 leading Palestine Arabs who refused to accept his leadership.

The captured files of the German High Command in Flansburg at the war's end reveal that the Arab riots of 1936 in Palestine were carried out by the Mufti with funds supplied by the Nazis. The report states: "Only through funds made available by Germany to the Grand Mufti, of Jerusalem, was it possible to carry out the revolt in Palestine."

Following his escape from Palestine to Syria and later to Iraq, he and his henchmen were directly responsible for the anti-Jewish pogrom in which almost 400 Jewish men, women and children were stabbed or brutally clubbed to death in the streets of Bagdad. An investigating committee appointed by the legitimate Iraq Government, following its restoration after the revolt in 1941, declared that the causes of the disturbance, "are, in the opinion of the investigating committee, Nazi propaganda emanating from the following sources: (1) the German League; (2) the Mufti of Jerusalem and his henchmen who followed him to Iraq. This man was accorded enthusiastic reception in Iraq and has turned it to his own use to disseminate many-sided Nazi propaganda. His influence on government and army circles became so strong that he could give orders to his group to set to work to spread anti-Jewish and anti-British propaganda among all classes of the population."

In Iraq the Mufti's first undertaking was to organize the Iraqi revolt with Jemal el Husseini, now vice chairman of the Arab Higher Committee, as his chief of staff.

After the failure of the Iraqi revolt, the Mufti escaped to Tehran and found refuge in the Japanese embassy. From there he escaped to Italy. In October of 1941, he conferred with Mussolini, Ciano, and Dino Alfieri. From Rome he communicated with Balkan Moslems under Italian rule in Yugoslavia and Albania.

In November 1941, he went to Berlin. The Nazis established a special office for him in Berlin entitled, "Buro des Grosmufti," with branches organized later in other parts of Germany and Italy. His activities included propaganda, espionage, organization of Moslem military units in Axis-occupied countries and in north Africa and Russia, establishment of Arab legions, of an Arab brigade and organization of fifth-column activities in the Middle East, including sabotage and parachutist expeditions.

In the course of his propaganda work, the Grand Mufti had at his disposal not only the German-controlled radio, but radio stations in Bari, Rome, Tokyo, and Athens. In addition, he was responsible for sending to the Middle East various propaganda publications in Arabic.

His espionage service extended throughout the Middle East. He had a suboffice in Geneva linking him to Egypt and Turkey, and another in Istanbul, branching out all along the Syrian-Turkish frontier in Mersine, Alexandretta, Antioch, Adana, and Diarbekr. These stations received information directly from the Mufti's agents in Palestine, Syria, and Iraq, and maintained close contact with members of the German Intelligence in Turkey.

In Athens the Mufti established a parachutist and sabotage school for Arabs.

In The Hague, under his direction, Arab students were trained in wireless transmission, high explosives, and demolitions. The Mufti's agents were parachuted into Palestine, Syria, and Iraq. A number of them were caught by the British. On a number of occasions these agents, with the help of local Arabs, cut telephone and pipe lines in Transjordan and Palestine and sabotaged railways and bridges in Iraq.

Another of the Mufti's accomplishments was the organization of Moslem military units. He attempted to recruit for the German military command some 500,000 soldiers from Morocco, Tunisia, and Algeria. In Asiatic Russia, he collaborated with Moslem Russian Quislings and White Russian traitors whom he helped to form pro-Axis legions.

In 1942, he started to organize Axis Arab legions from among Arab students in Germany and Arab prisoners of war who followed him to Germany. His legionnaires wore the German uniform with Free Arabia patches on their shoulders.

After the Jewish Brigade had been recognized by Winston Churchill in 1944, the Mufti, on November 2, with the consent of Ribbentrop, called upon all Arabs in Germany hailing from Palestine, Iraq, Egypt, and Syria to join the Arab Brigade.

Accepting a proposal of the Japanese that he broadcast to Moslems in the South Pacific and India, the Mufti recorded numerous broadcasts which were beamed to India, Indonesia, and Java.

On September 3, 1941, Maj. Gen. Erwin Lahousen, one of the top officials of the Abwehr, whose secret diary was among the captured German documents, wrote: "The Grand Mufti, who left Iraq to go to Iran, is currently in connection with the Abwehr II (sabotage division of the Abwehr). According to reports from Tehran he is safe with the Japanese envoy."

A year later, on June 2, 1942, Lahousen wrote in his secret diary: "The Italian national, Captain Simen, took part in discussions with the Grand Mufti concerning the utilization of the connections with the Grand Mufti for the purpose of Abwehr II, in order to demonstrate the solidarity of the Axis Powers."

A month later, on July 13, 1942, Lahousen made the further entry in his secret diary: "A meeting between the chief of the Abwehr" (Admiral Canaris, who was also Hitler's representative in arranging for the Franco revolt against the Spanish Republican Government), and the Grand Mufti of Jerusalem took place in the apartment of the chief. I (Lahousen) took part in the discussion. The Mufti made an offer to the chief that the followers of the Arabian Freedom Movement, which was led by him, as well as the followers of the former Iraq Prime Minister, Kallani (leader of the Iraqi revolt against Britain), were to be used for purposes of sabotage and

sedition in the Near East in accordance with the purposes of Abwehr II."

Wasef Kamal

Wasef Kamal, member of a well-known Nablus family and a teacher by profession, is notorious for his extremist propaganda among his students and for his association with the Istaklil Party during the disturbances in Palestine in and after 1936. He was a member of the National Committee in Nablus and played a role in the organization of the 1936 riots. Arrested in that year, he soon escaped to Transjordan and later to Iraq. An ally of the Mufti, he played an important role in the Iraqi rebellion of 1941 against the British.

From Iraq, he escaped to Turkey. During the first part of the war he remained in Turkey as an agent of the German Secret Service from which he received a salary. In 1943 he went to Italy and Germany where he served as one of the closest collaborators of the Mufti. He returned to Syria in April 1946. He was one of the few Arab leaders excluded from the amnesty of November 1946, because he is regarded as dangerous.

In April 1947, Wasef Kamal was appointed by the Arab Higher Committee as a member of a propaganda delegation to the United States. Having arrived in this country, he is in attendance at the sessions of the United Nations.

Rasem Khalidi

Rasem Khalidi, member of a well-known Jerusalem family and a former Palestine Government official, has been one of the closest collaborators of the Husseini family, and particularly of the Mufti.

In 1936, at the outbreak of the Axis-sponsored Palestinian Arab uprisings, he was a member of the most intimate inner circle of Haj Amin el-Husseini.

In 1937, after the dissolution of the Arab Higher Committee, he was a member of an underground committee which directed Arab terrorism in Palestine. After his arrest in 1938, he fled to Syria and then to Iraq, where he joined the Mufti in organizing the Iraqi rebellion of 1941. After its failure he fled to Ankara and thence to Italy and Germany. In the midst of the war, in 1943, he served as an announcer on the Axis-Arabic radio station in Athens. Since 1944 he has been a member of the Mufti's personal entourage, first in Berlin and later in Paris. In July 1945, he returned to Egypt and in November 1946 was included in the Palestine Government's amnesty. Although permitted to return to Palestine, he preferred to remain in Egypt. Most recently, the United States Consul refused to grant him a visa to the United States because of his activities in Nazi Germany.

Emil Ghouri

Emil Ghouri, a member of the Arab Higher Committee, has long been active in extremist politics in Palestine. After the dissolution of the Arab Higher Committee in 1937, he was exiled and moved to Egypt and Iraq. In Iraq, he worked with the Mufti as a member of his Foreign Relations Committee in charge of propaganda. A report of the British General Service of Intelligence, on December 1, 1941, listed Emil Ghouri as one of a group "who are responsible for propaganda, intrigue, and subversive activities inside and outside Iraq."

Ghouri was permitted to return to Palestine in 1941 on condition that he would not engage in politics. This condition, however, has not been met. He has been a member of each of the three Arab Higher Committees named since 1941, and is the political editor of the Husseini daily, Al Wahda. He is the organizer and political leader of the underground Arab army, and is alleged to be one of those responsible for internal terror against Arab opponents of the Mufti and Arabs who sell land to the Jews. He advocates that all Jews who came to Palestine since 1918 be regarded as foreigners and be deprived of rights in an independent Arab Palestine.

Jamal Husseini

Jamal Husseini, nephew of the Mufti and for many years his right-hand man, has been the head of the Palestine Arab party, the Mufti's party, since 1935. He was the closest assistant of the Mufti in organizing the 1936–39 Arab rebellion. In 1939 he joined the Mufti in Bagdad and organized the pro-Axis fifth column in Iraq which culminated in the Iraqi rebellion.

He fled from Bagdad en route to Tehran, but was captured there by the British before he could make good his escape. He was placed in internment in Rhodesia as a dangerous pro-Axis leader. There he spent 4 years until he was finally released in February 1946 and allowed to return to Palestine owing to the pressure of the Arab League.

Five months ago, in January 1947, at the Mufti's request, three of his aides in the Axis adventure were added to the Arab Higher Committee. These were Izzat Darwaza, Is'haq Darwish, and Muin el Madi. The latter was the head of the Mufti's espionage office in Turkey, while the former two operated in Germany and Athens. Today, unquestionably the center of activity of the Arab Higher Committee is in Cairo, with the Mufti playing a game which he hopes will bring about his recognition by the Arab states as the Palestine Arab government-in-exile.

The extent of the alliance of the Mufti and his aides with the Axis is presented in the following pages in photographs and photostatic copies of documents found among the papers of the Mufti in his villas and offices in Germany at the war's end, and among the official papers of the Nazi government. Most, if not all, of these documents are now in the possession of the State Department of the United States.

The record shows that the chairman of the Arab Higher Committee and his principal representatives were involved in an active partnership with Rome and Tokyo, with the Moslem quislings of the Balkans and the Soviet Union, with Axis representatives in the Middle East, and with Vichyites in the French territories of north Africa.

The documents prove, moreover, that due to the insistence of the Mufti, the extermination program of the Nazis was carried out even in those satellite countries which were willing to permit the rescue of the Jews.

It is to these men, whose acts establish their place among the worst of the Axis war criminals, that the United Nations has accorded the honor of appearing in behalf of the Arabs of Palestine.

Congressional Independence

EXTENSION OF REMARKS

OF

HON. HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 12, 1947

Mr. SEELY-BROWN. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Hartford Courant, one of the outstanding newspapers in the Nation. This editorial accurately describes the circumstances which call for the adoption of House Resolution 219, which is now pending before the Committee on Rules.

CONGRESSIONAL INDEPENDENCE

Representative GEORGE MACKINNON, Minnesota Republican, last week introduced in the House a much-needed resolution during one of his rare speeches in that body. He expressed the view that it is about time the House declared its independence from the threats of intimidation that have frequently been made on the floor in connection with passage of the tax and labor bills and lesser legislation. It has become altogether too common for self-appointed spokesmen for the President to bring pressure on Members of the House on the ground that Mr. Truman will veto a measure if such-and-such a provision is included or excluded, whichever it may be.

To eliminate this browbeating of Congressmen, who after all are just as much entitled, indeed obligated, to have their own opinion on legislation as is the President, the Minnesota Republican has introduced the following resolution;

"It shall be a breach of order in debate on any pending bill or resolution to make any reference to the opinion of the President of the United States, or to the nature of any future action the President may take unless such opinion or reference to future action was contained in an official communication or message from the President to the House."

Such a resolution would obviously leave the door open for legitimate communications from the White House with regard to pending legislation, but it would eliminate much of the speculation that masquerades as inside information about the President's views, in order to influence legislation.

Too much attention to the supposed attitude of the President on pending legislation engenders the sort of political tactics that constitute the greatest obstacle to conscientious law making. Measures such as the tax and labor bills should be passed on their merits. It is the duty of Members of Congress to shape the best and fairest legislation they can on these and other matters, regardless of what the President's attitude may be. His duty is to approve or to veto in accordance with his own convictions. Certainly Congress should not shape its course of action with the anticipation of either securing the President's approval or of putting him in an embarrassing dilemma.

Representative MACKINNON'S resolution would help maintain Congress in a position of equality with the executive branch of the Government and enable it, if its members are willing, to decide important questions on their merits instead of on a basis of political maneuvering. It would also, incidentally, protect Mr. Truman from being embarrassed by the articulate Members of Congress who are only to ready to divulge to their colleagues what his views are, or what they think they should be, on any given issue. Unless and until this country adopts the parliamentary system, in which the Cabinet is directly responsible to Congress, we will do well to keep our traditional separation of powers from being vitiated by the actions of irresponsible sycophants who like to proclaim what they think are the President's views.

Use of Canned Fruits and Vegetables in Relief Program

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 12, 1947

Mr. KEATING. Mr. Speaker, it is my hope that the various governmental

agencies charged with the purchase of supplies to fulfill our relief program, as well as those whose duty it is to make purchases of food supplies for the War and Navy Departments and other governmental needs, will give every possible consideration to the use of canned vegetables and fruits.

Modern methods in the industry have enabled canners to retain in their product practically the full nutritive value of a fresh item and, of course, the great merit in canned goods lies in their nonperishable quality.

Under leave granted, I desire to set forth a letter which I have received from Mr. Arthur E. Nash, secretary of the Association of New York State Canners, Inc., to which I invite the careful consideration both of my colleagues and the Government agencies:

ASSOCIATION OF NEW YORK
STATE CANNERS, INC.,
Rochester, N. Y., June 6, 1947.

Hon. KENNETH B. KEATING,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN KEATING: The Association of New York State Canners, Inc., is a trade organization representing canners, freezers, grape juice and specialty packers throughout New York State. Membership of the association is composed of 85 companies with a total of 130 processing plants. The State pack of fruits and vegetables annually exceeds 20,000,000 cases of which approximately 95 percent is packed by association members.

The board of directors of the association in a meeting Monday, May 26, 1947, voted to bring before you the position of canned food stocks in the Nation and to explain the attitude of our industry relative to the advisability of consideration for the purchase of canned foods for relief shipments to foreign countries.

The May 24, 1947, issue of the American Institute of Food Distribution, Inc., very clearly points out an analysis of this canned food picture. The following quotation taken from this issue substantiates the concern of the industry for shipments of high food value stocks to Europe:

"Analysis of May 1 conners' stocks of the major vegetables and tomato juice shows how burdensome inventory position of wholesalers and distributors has backed up on canners. As of that date according to the National Canners Association statistics, packers held a total of 18,916,000 cases, basis No. 2's of corn, peas, snap beans, tomatoes and tomato juice. This compared with a grand total of 5,554,000 cases as of the same date last year or 241 percent more. On March 1, the last time Food Institute made this comparison, canners' stocks were only 90 percent greater than a year earlier."

This situation as presented on the abovementioned items is likewise true on many other vegetables and fruits in the United States. The industry is concerned with this trend and its possible effect on the agricultural situation throughout the country.

It is not the intent of our group to emphasize the relieving of a situation which in essence is our own problem. However, with the world in need, it seems highly logical that a great deal of consideration should be given to shipments of good foods to these needy areas from stocks which are in surplus.

Canned foods are nonperishable and are easily handled for export shipment. This is not the case with some products which might be under consideration by Congress or its committees for the relief of the needy areas.

We realize, of course, that you have many problems to consider in this tremendous program. On the other hand, our industry is in a position to alleviate some of this without affecting the economic situation or without in any way affecting the current inflationary trend.

Detailed statistics substantiating the position of the industry are available through the department of statistics of the National Canners' Association, as well as various bureaus of the Federal Government and trade services. These are readily available to the committees considering this problem.

The association urges that all consideration be given to the purchase of surplus canned foods for shipments abroad.

Sincerely yours,

ARTHUR E. NASH,
Secretary.

Right To Work

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. HAND. Mr. Speaker, with the consent of the House, I am inserting in the RECORD an editorial appearing in the Washington Post on June 6, 1947, entitled "Right to Work."

The Washington Post has been noted for its general support of administration policies, and its particular support of the rights of the workingman and labor unions, so that this editorial generally favoring the labor bill has exceptional significance.

The difficulty with most criticisms of the labor bill is that they denounce it in general terms but seldom, if ever, make any specific objection. If every labor-union member and every workingman would examine carefully all the provisions of the bill, he would find it to be in his interest. It restores the fundamental rights of the workingman, and it does not interfere with the legitimate conduct of a labor union. It is restrictive only of abuses practiced by some labor leaders who, if not checked, would bring the whole labor movement into discredit.

The editorial follows:

RIGHT TO WORK

In the search for some provision of the Taft-Hartley labor bill to which they can point for definite evidence of a reactionary spirit, opponents of the bill are inclined to single out the ban on the closed shop. But that is usually as far as they go. The President is urged to veto the bill because it would outlaw a device that some unions have long employed to make their power effective. Almost nothing is said, however, as to what the bill actually provides or of the additional safeguards it would throw around the right to work.

It is true that the closed shop, as it has been known in the past, would be outlawed as an instrument of inexcusable monopoly. More significant, however, is the fact that something better would be put in its place. Workers could have a union shop at any time simply by getting 30 percent of their number to sign a petition requesting an election on the subject and then commanding a majority of the votes at the election. Certainly that involves no hardship. On the contrary, it gives the rank and file of workingmen a chance to make their own choice instead of having a union shop thrust upon them.

The union shop thus established would be confined to the legitimate purpose of maintaining the union's strength and dividing its expenses among all workers benefiting from its efforts. Unions would not have to carry the so-called "free riders," for the employer would have to fire men who failed to pay their dues. Unions would also be left free to expel their numbers for any other cause. But they could not, as they now sometimes do, deprive a man of his right to work because of mere dislike or disapproval of something he may have done. In other words, the only offense for which the union could force the discharge of an employee would be failure to pay his dues. Tight little labor monopolies would thus be broken and unions would no longer be in a position to dictate to the employer as to whom he could hire. This is nothing more than a belated triumph of common sense.

To take advantage of the union-shop provision of the act, unions would also have to make an accounting for the spending of their funds and state their method of electing their officers. The union shop could operate successfully, moreover, only so long as the union avoided discrimination among employees and fixed reasonable initiation fees that would not amount to a tax on the right to work. Any sort of monopoly standing without regulation in the public interest is utterly incompatible with twentieth century democracy. As we see it, the substitution of a regulated union shop for the closed shop, as provided in the bill, would not detract one iota from the strength of unions in pursuit of their legitimate objectives. It would, of course, correct numerous abuses and take from a few ruthless labor bosses the power to deprive men of the right to work. But these are changes for which the great majority of citizens will be thankful.

Voice of America Appropriation

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. ARNOLD. Mr. Speaker, Phineas T. Barnum, the great genius who made a million dollars exploiting the gullibility of the American people, said, "There's a sucker born every minute." Since Mr. Barnum's time, Mr. Speaker, our birth rate has increased considerably, and if this so-called Voice of America appropriation is passed it will be concrete proof that that ratio referred to has increased along with it.

It looks to me like we are falling for some pretty fancy propaganda. We have been accused of being imperialistic. Why should we even have to answer such accusations by broadcasting across the seas. Our answer to those accusations is already over there.

Three hundred thousand American boys lie beneath foreign soil today. Those boys died fighting, not only so that their own homes and families could remain free, but so that peoples everywhere could be free. Let that be our answer to our accusers. Mere words can but detract from the glory of our victory.

Our boys did not fight to enslave, but to liberate. People all across the continent of Europe cheered and kissed those Americans who were their liberators. Millions of people were rescued from slavery by those American boys who now rest beneath the soil in foreign lands. Do those people think we are going to enslave them? Of course, they know better.

Why, then, do we not call this so-called Voice of America by its right name? It is propaganda, pure and simple. It is a program that defiles the respect we can claim throughout the world. Should we not be ashamed to broadcast swing music and poetry, and praise of Henry Wallace, abroad under the name "Voice of America." Those people heard the real voice of America when they shouted to American liberation troops. They know that the voice of America does not speak of labor battalions, or concentration camps, or revolution. They know already that the real voice of America speaks of freedom, and equality, and of peace.

There are those who say that these so-called Voice of America broadcasts will keep up the peoples' faith in America. We have seen some of the material that is broadcast, and it is difficult to see how we can expect to keep the peoples' faith when they are allowed to see how we can waste these millions of dollars. These broadcasts, which have been going on, did not give the people of Hungary strength to resist the Communist overthrow of their government. People in Hungary, at this very moment, may be saying that American swing music is the best in the world as they march to the mines or fields under an armed Communist guard. What good is that knowledge to those people?

As for the provision calling for the exchange of students with foreign nations, I find no quarrel with that idea. But how many European countries are ready to send students over here to study, and do we have the money to spend on this? In most of those nations people have not even begun to go to work. There is no war devastated country abroad that is back on its feet economically yet. To me, this program seems a bit premature.

If you are hungry, you do not go to college for 4 years to learn how to get a job and then earn something to eat. You go to work and eat first, then you save up something, and then you may plan your schooling. That is the situation right now with these foreign countries. Under this program, they are a drag on the American taxpayer all the way, and the taxpayers of this country cannot stand that drag much longer. It is not right that they should have to.

This bill, as I see it, has no place in the world as it is constituted today. The broadcasts are of no value, we should not have to answer the propaganda of others when we are accused. Our Nation was founded on the principles of freedom, and the world knows it. We cannot improve on that.

A strong America, an America that is capable of backing up the peace we have won, is what the peoples abroad want to see. When they see that we intend to use our might to enforce world freedom—never fear—they will hear the voice of America.

Airplane Disasters

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. BLATNIK. Mr. Speaker, we have all been shocked by the tragic deaths resulting from the recent air-lines crashes. During the Memorial Day week end alone over 180 people throughout the world lost their lives in these disasters. Almost 100 of these people were Americans flying in American planes.

In spite of this appalling toll of lives, Delta Airlines is operating with only 25 percent of its maintenance personnel and with inadequate inspection of its equipment.

The mechanics of Delta Airlines went on strike on May 8. The company has refused to meet with the mechanics even to discuss the issues of disagreement.

At the time of the strike the regional office of the Civil Aeronautics Authority required that Delta airplanes be inspected every 35 hours of flying time. Shortly after the strike began the regional office gave Delta permission to inspect its planes only every 50 hours.

The Civil Aeronautics Authority in Washington is either ignorant of the situation in Atlanta or is deliberately allowing its regional office to serve as a strikebreaker. It is difficult for me to believe that an agency of the Government would lend assistance of this kind, especially at the possible cost of human lives.

I sincerely hope that the CAA is merely unaware of what its regional office is doing and that the matter will be rectified immediately.

H. R. 3036

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. ANGELL. Mr. Speaker, I include as an extension of my remarks, the statement I made before the Public Works Committee of the House on June 10, 1947, on H. R. 3036. This is a bill upon which hearings were begun by the committee on June 4, and which has for its purpose the transfer of the authority for selling electric power generated at reservoir projects under the control of the War Department from the Interior Department to the Secretary of War and which requires all sales to be made at the generating plants. In my judgment the adoption of this proposal would be a step backward and would again place electric power, so essential to our economy, particularly in the Northwest, in the control of private monopolies.

My statement is as follows:

H. R. 3036

(Statement of HOMER D. ANGELL, Member of Congress, Third District, Oregon, before the Public Works Committee of the House on June 10, 1947)

H. R. 3036, a bill to amend section 5 of the act of December 22, 1944 (Public, No. 534, 78th Cong.), was introduced in the House on April 14, 1947, by Hon. GEORGE A. DONDERO, chairman of the House Committee on Public Works. The bill would amend said section 5 to read as follows:

"SEC. 5. (a) Electric power generated at reservoir projects under the control of the War Department, and in the opinion of the Secretary of War not required in the operation of such projects, shall be disposed of by the Secretary of War at the generating plants: *Provided*, That when, in the opinion of the Secretary of War and the Federal Power Commission, interconnecting transmission facilities are necessary to coordinate the operation of two or more federally owned plants with other plants in the area, the Chief of Engineers will construct such transmission lines when specific appropriation has been made therefor: *Provided further*, That when, in the opinion of the Federal Power Commission such action will not prevent full use and development of the power potentialities of a project, preference in the sale of power shall be given to public bodies and cooperatives either directly or through resale by the purchaser. The Federal Power Commission shall determine those costs of projects appropriately chargeable to power. The costs of two or more project in a region may be considered as a unit for the purpose of establishing rates. Rate schedules shall be based upon such costs and will be sufficient to cover annual operating and fixed charges, including interest on and amortization over a reasonable period of years of the capital investment allocated to power. All contracts and rates for the disposal of power shall be subject to the approval of the Federal Power Commission before becoming effective. Contracts shall be effective for such periods as the Secretary of War may determine, subject to the approval of the Federal Power Commission, but such periods shall not exceed 20 years from the date of the contract, and all contracts shall provide for cancellation upon not to exceed 5 years' written notice. All moneys received from such sales shall be deposited in the Treasury of the United States as miscellaneous receipts.

"(b) All transmission facilities, property, and records under the jurisdiction of the Secretary of the Interior used or intended for use in transmitting electric power from reservoir projects under control of the Secretary of War, including transmission facilities under construction shall be transferred from the Secretary of the Interior to the Secretary of War upon the effective date of this act: *Provided*, That nothing in this act shall change the provisions of the Bonneville Act. The Secretary of the Interior shall transfer to the Secretary of War the unexpended balances of all funds appropriated for construction or acquisition of transmission facilities used or intended for use in transmitting electric power from reservoir projects under control of the Secretary of War.

"(c) Nothing in this act shall affect or invalidate any existing contract heretofore made by the Department of the Interior or extension or renewal thereof for the sale of electric power from reservoir projects under the control of the Secretary of War and all such contracts shall be binding and obligatory on the Secretary of War who shall succeed to all the rights, duties, and obligations of the Secretary of the Interior in the matters transferred.

"(d) The provisions of this act shall become effective upon enactment."

The bill, if enacted, would make fundamental changes in Federal power policy which would have material effect on the sale and marketing of electric power from the projects owned and maintained by the Federal Government. First of all, I call attention to the fact that under subsection (b) of the bill, a reservation is made in the following language: *Provided*, That nothing in this act shall change the provisions of the Bonneville Act." I understand that it was intended by this reservation to exclude the marketing of power through the Bonneville agency from the operation of the act. However, that is only partially true by reason of the fact that Foster Creek and Willamette Basin projects, power from which should be marketed through the Bonneville agency, are subject to subsection 5 of the Flood Control Act of 1944, and would be controlled by this bill, if enacted into law. Furthermore, other contemplated, but as yet unauthorized, navigation and flood-control projects on the main stem of the Columbia River, such as The Dalles, John Day, and Arlington projects, which, in all likelihood, would be constructed by the Army engineers and for which Bonneville would logically be the marketing agent, would likewise be controlled by this legislation. These projects are in the very heart of the area served by the Bonneville transmission system, and the power generated by them should be marketed over that system.

It would be a grievous mistake, from the standpoint of management, as well as economy, for the Federal Government to market power from these projects or attempt to do so through an independent system while, at the same time, it owned and maintained the Bonneville network of transmission facilities covering the entire area that would be served by these new projects.

On the other hand, the Hungry Horse and Upper Snake River projects, which are on the Columbia and Snake Rivers in the Columbia River Basin, are reclamation projects and would not be directly affected by this bill. Neither would the bill be applicable to the McNary and Lower Snake River projects, I am advised. Since the bill is an amendment to section 5 of the Flood Control Act of 1944, it would affect only projects subject to that section. McNary and Lower Snake River projects were authorized by the Rivers and Harbors Act of 1944, which specifically provided that the surplus power from both projects should be delivered to the Secretary of the Interior for disposition in accordance with existing laws relating to the disposition of power at Bonneville Dam. Neither project is subject to section 5 of the Flood Control Act of 1944, and as I have said, neither, for that reason, would be subject to the provisions of H. R. 3036.

Speaking from the standpoint of the development of hydroelectric power in the Columbia River Basin, the transferring to the Secretary of War of the function of marketing power from the projects constructed and operated by the Corps of Engineers, would be a step in the wrong direction. It would undo the recent efforts of the Congress to improve administration in this field. All of the power developed by the Federal Government in the Columbia River Basin from projects located on the main stem of the Columbia River, as well as on its tributaries, feeds into a pool of power marketed through one coordinated grid system with transmission facilities reaching into the entire area in the Northwest serviced by this system. It is the most economical and most efficient system that could be devised for bringing the power of these federally owned and operated projects to the various areas of the district needing hydro power. By feeding all of the energy generated into one pool, deficiencies are overcome which are occasioned by breakdowns, lack of firm power, or other deficiencies in development of any plant in the entire system.

Bonneville Power Administration now markets the power from the Bonneville and Columbia Basin projects. It has been designated as the marketing agent for the power from the Hungry Horse, McNary, Foster Creek, and lower Snake River projects and various dams in the Willamette Basin project, including, Detroit, Lookout Point, and Quartz Creek, all of which are now authorized. It has also been requested by the Secretary of the Interior to plan to undertake the function of marketing power from reclamation projects in the upper Snake River Basin. Power from the existing main stream projects is marketed over a transmission system constructed and operated by Bonneville. This transmission system now totals over 3,000 circuit miles, and it constitutes the largest high-voltage system in the world. There is nothing like it anywhere. Bonneville supplies more than 40 percent of the energy requirements of the Pacific Northwest and is marketing power at a rate of approximately 9,000,000,000 kilowatt-hours per year. On the basis of energy produced and sold, Bonneville is the third largest power supplier, public or private, in the United States. The transmission system is loaded to capacity to meet the existing demands for power and must be expanded to market the tremendous quantities of additional power which are necessary to meet demands and which will become available as the authorized projects for which Bonneville has been designated the marketing agent are constructed.

The history of the development of Federal power marketing administration will show an unmistakable trend toward consolidation of the power marketing function into a single department rather than a division of that responsibility among varying departments and agencies. Power generated at reclamation projects has been marketed for many years by the Secretary of the Interior through the Bureau of Reclamation. Lesser quantities of power are generated at projects under the jurisdiction of the National Park Service and the Bureau of Indian Affairs, both of which are agencies within the Department of the Interior.

Until a few years ago there was no general provision for designating a marketing agent for power generated at flood control and river and harbor projects. Bonneville was one of the first large projects within this category. A separate act was enacted for that one project, which provided for the marketing of power by the Bonneville Power Administrator under the supervision of the Secretary of the Interior. In 1940, the act was amended to clarify the status of the Bonneville Power Administration and specifically to place it within the Department of the Interior. The Fort Peck project was completed shortly after Bonneville, and the same pattern of a separate act designating an agency in the Department of the Interior, the Bureau of Reclamation, as market agent, again was followed.

In the early part of the war, the Denison and Norfork projects began generating power, and in the absence of any statute creating administrative machinery, the President, under authority contained in the First War Powers Act, placed the function of marketing power from these dams in the Secretary of the Interior. The latter established the Southwestern Power Administration to carry out this duty. The Flood Control Act of 1944, for the first time, established a general policy and designated the Secretary of the Interior as marketing agent for reservoir projects under the jurisdiction of the War Department. Under this act the Secretary of the Interior can provide staffs to do the actual marketing work, as and where needed. Thus, provision has been made for all Federal power, with the exception of that generated by the Tennessee Valley Authority, to be marketed by the Secretary of the Interior through agencies under his jurisdiction.

As far as the Columbia River Basin hydroprojects are concerned, the enactment of H. R. 3036 would abandon this pattern of fixing responsibility for marketing Federal power in a single Cabinet official and scatter it out again. It would divide the responsibility. Such a division inevitably would mean duplications of staff and perhaps of facilities, and would invite competition and divergent power marketing policies. It would prevent intelligent planning and timing of new generating projects and new transmission facilities. It would be wasteful and inefficient.

As I have said, all projects in the same region and marketing area should be operated as a unit. More firm power can be obtained by the coordinated operation of such units than from their separate and independent operation. Hundreds of thousands of kilowatts of additional firm power are being generated and will be generated in the Columbia River system by coordinated operation. That means more power for the people and industries of the region. It means more dollars to repay to the Treasury and to make the existing and future projects feasible. I am aware that H. R. 3036 contains some provision for coordinating projects, but it is exceedingly vague and ambiguous, particularly in its application to projects which are not under the jurisdiction of the War Department. In the event of the coordination of projects not subject to the provisions of the bill with those which are governed thereby, which agency is to operate the system, sell the power, and account for the proceeds?

The advantage of a single marketing agent is particularly applicable to a region. Separate marketing agencies within the same region mean double staffs and facilities. Poorer service and waste of Government funds are likely to result. For example, Bonneville Power Administration cannot plan a transmission system for reclamation, Bonneville, McNary, and the lower Snake River projects without knowing when power will be available from Foster Creek, Detroit, The Dalles, and other projects in the Columbia Basin. Neither can it plan such a transmission system without knowledge as to the load centers which will be served by power from these additional projects and the location, size, and electrical characteristics of the transmission system necessary to carry their power to points where it will be used.

The Department of the Interior has adopted the policy of a single agency to market power from all projects subject to the Department's jurisdiction within a single region. In the Missouri Basin, power is to be marketed by the Bureau of Reclamation regardless of whether the power is generated at reclamation, river and harbor, or flood control projects. Similarly, in the Southwest, all power is marketed through the Southwestern Power Administration. In the Columbia Basin, Bonneville Power Administration is

now designated marketing agent for all power projects, reclamation and War Department, with the exception of those in the upper Snake Basin. In the Columbia River Basin report of the Department of the Interior, which is now being reviewed by the affected States and will shortly be presented to Congress, there is an express recommendation which would direct the Secretary to designate, as early as practicable, a single agency to carry out the power marketing functions in the entire Columbia River Basin. The Department has adopted this pattern because experience has disclosed it to be the best form of administration and management, both for the region involved and for the Federal Government. Two power marketing agencies in the same region simply makes no sense.

For the reasons I have named, if this bill should be reported favorably, it should be amended to exclude the entire Columbia River Basin rather than just those few projects now subject to the Bonneville Act. The Bonneville Power Administration is a going, experienced, well-staffed, power marketing agency. I know of no reason why it should not market all power developed at Federal projects in the Columbia Basin.

The bill would direct the Secretary of War to dispose of power from projects under his control at the generating plants. In other words, the Secretary would be compelled to sell the power at the bus bar. In this respect, the bill would effect more than a step backward in Federal power policy; it would be a long leap. We need examine only the Government's experience with the Muscle Shoals plant following the First World War, in order to appraise the effects of that policy. The power from that plant was sold at the bus bar to a single company, a private utility, at a low price. The company, in turn, resold it to the consumers at a price many times more than that which it paid for the power. Only the private utility benefited from the project. It was not until the project was transferred to the TVA and its power could be marketed over the TVA transmission system that the project was able to escape the stifling blanket of domination by a single purchaser and could fulfill its proper role in the development of the Tennessee Valley.

The past and the present policy of the Federal Government is to dispose of power in such a manner as to encourage its widespread use and to prevent its monopoly. That policy was specifically adopted in numerous laws enacted by the Congress, including the TVA Act of 1933, the Rural Electrification Act of 1936, the Bonneville Act of 1937, the Fort Peck Act of 1938, and the Flood Control Act of 1944. The sale of power at the bus bar is utterly inconsistent with the policy announced in those acts of Congress. Limited use and monopoly are inherent in bus-bar sales. Only the largest privately owned utilities and industrial customers can afford to make the heavy investment in transmission lines and facilities which will permit them to connect their systems and plants with the dams.

These Federal projects and the power generated therefrom belong to all the people. If the people as a whole are to benefit from their power, the Government must bring them the power at the points where they can use it. In a meeting in Tacoma, Wash., on January 22 of this year, all the major utilities in Oregon and Washington, both public and private, agreed in the following language that power from the Government dams should be carried by Government transmission lines to the region's load centers:

"Inasmuch as these Federal generating plants are located a considerable distance from the region's load centers, and inasmuch as present transmission facilities of the Bonneville Power Administration are already approaching conditions of full load, it is agreed as essential that appropriations for backbone transmission facilities be made available to the Bonneville Power Administration on an annual and continuing basis adequate to provide a means for the delivery of power to load centers."

True, power could be sold at the bus bar at less cost than if transmission lines are constructed to area-load centers. Bus-bar sales, however, would soon eliminate all purchasers but a few of the major privately owned utilities and industrial customers. The result would be that the revenue which the Government received would be sharply curtailed The Government would have no opportunity to sell the power elsewhere, and the few monopolists who were able to take delivery of power at the bus bar would dictate the price which they would pay for power. The strangulation of the Muscle Shoals project would be repeated many times elsewhere.

A policy of bus-bar sales for some Federal projects and transmission-system sales for other Federal projects, which have transmission lines now, in the same marketing area would produce an unfortunate and perhaps chaotic result. Rates would differ and projects would in effect be in competition with each other. It is obvious that Federal projects in the same marketing area should not compete with each other. Competition can be avoided only by means of uniform rates, and such rates are not feasible where power from some projects is sold from a transmission system and power from other projects is sold at the bus bar. Under this bill the Columbia Basin, Bonneville, Hungry Horse, McNary, Lower Snake River, and reclamation projects in the Pacific Northwest would be competing for power markets with the Foster Creek, Detroit, The Dalles, and other contemplated War Department projects. That condition could mean only a loss to the people of the Pacific Northwest, as well as to the Federal Government.

With respect to still another policy, H. R. 3036 would take a backward step. For more than 40 years—ever since the initial authorization in 1906 for the sale of power from reclamation projects—the Federal Government has granted preference and priority to public bodies and cooperatives. I do not know of a single act providing for the disposition of federally generated power which does not embody that preference in one form or another. While H. R. 3036 provides a preference and priority for public bodies and cooperatives, the preference is so limited and tied in with other factors that, for all practical purposes, it is nullified. The preference itself is granted only if it will not prevent the full use and development of the power potentialities of the project, an obvious invitation to the private utilities to take economic action nullifying the preference. That provision extends an open request to the private utilities to demand the entire output of a plant, to the exclusion of public bodies and cooperatives.

In the second place, the policy of the bill in favor of bus-bar sales defeats the preference. Public bodies and cooperatives are unable to finance the erection of the necessary transmission lines, substations, and appurtenant facilities necessary to connect their systems with the generating plants. Only major, privately owned utilities and large industrial customers can do so. Moreover, because of their heavier loads and higher load factors, they can install such facilities at a lower cost per unit of capacity than can the public bodies and cooperatives. For these reasons, a bus-bar-sale policy not only would nullify a 40-year policy granting preference and priority to the small, nonprofit distributor, but in fact it would reverse that policy. Practical economics would give preference to the privately owned utilities and industrial customers.

Under H. R. 3036, the Federal Power Commission would make cost allocations for power and would confirm rates. However, the bill would also require Federal Power Commission approval of every power contract before it could become effective. In my opinion, this would result in an unnecessary and unworkable restriction on the authority of the marketing agent. This kind of a requirement is directly contrary to principles of good business management. I fail to see what is expected to be gained by it. Certainly, it has no counterpart in ordinary utility regulation. Delays in making power contracts effective would be inevitable. If experience during the war years is any criterion, they would often become interminable. During the war, the Federal Power Commission was required to approve power contracts entered into by certain Government establishments and their prime contractors. FPC approval of contracts between Bonneville and such agencies, or their contractors, was often delayed for weeks, months, and in some instances, years. The Federal Power Commission's authority to allocate costs to power and to confirm power rates constitutes an adequate check on the power-marketing agent. The power contract details should be left to the latter. He must have the flexibility in his operations to take advantage of requests for immediate delivery of power, to meet varying situations and, in general, to run his business.

In summary, H. R 3036 proposes drastic changes in Federal power policies—policies that have been in effect 40 years or more and have been reiterated time and time again by the Congress. The changes are backward steps and would be neither good government, good administration, nor good business. It also proposes changes in administration and management which would be more harmful than helpful. The Federal Government is often accused—and not always without justification—that it is too unwieldy. Changes in policies and management should be in the direction of a better and more efficient administration. They should not slide backward and become more unworkable than they are now.

Address to Graduating Class, Immaculata Seminary, Washington, D. C.

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 12, 1947

Mr. McDONOUGH. Mr. Speaker, on June 5 I had the privilege and honor of addressing the 1947 graduating class of Immaculata Seminary here in Washington, D. C., from which my daughter Lucille received her diploma. Immaculata Seminary is under the supervision of the Sisters of Providence and enjoys the honor of being classified as one of the highest rated educational institutions of its kind in the Nation. Here the students are taught the highest principles of fundamental Americanism together

with sound Christianity. The exemplary and self-sacrificing character of the Sisters of Providence as their teachers and molders of their characters is before them daily. I am proud and happy that my daughter had the opportunity to graduate from this fine institution. Here is the speech I made to the graduating class:

Youth is ever the hope and promise of a nation. As it is trained so does a nation grow as the ideals of a nation are imbedded in its youth. The history of civilization reveals that teachers, religious, and political leaders, reformers, social workers, dictators have focused the promulgation of their theories and ideals upon youth. The greatest teacher of all time taught us "that a little child shall lead them."

We hear a lot today about youth. Youth is bewildered, confused, saturated with all kinds of new theories, doctrines in educational, political, social, economic, and even spiritual fields. New ideas are thrust upon him as hard and fast as the rains fall upon the ground—in hope that these ideas will find fertile soil. Rarely do we hear about American ideals, but a great deal about the glories of communism, world government, regimentation, and progressive education. There are those who cry "peace," but have not the slighest idea of peace based on justice—but rather a revolutionary peace, stirring up class against class and setting up ideals for a new system of government in these United States, based on materialism rather than sipiritual ideals. Many of our youth are disgruntled and discouraged, questioning whether World War II was fought to preserve freedom. Over the air waves, from the public platform, through the written word, from every available source written or verbal—24 hours a day, a contsant stream of camouflaged ideas to confuse, to belittle existing customs and tradition, to change, to forsake representative democracy for some new form of government is literally being thrust at our people, especially youth.

The dictators, who recently built up a generation of youth imbued with their ideals, realized that youth demands a cause to champion. Dictatorship, the enemy of democracy, translates itself into impressive armies, powerful guns, and force—tangible evidence that plastic and eager youth can see and be thrilled. Is it any wonder that young America is more and more inclined to listen to the claim that dictatorships are modern and efficient, while democracies are slow, clumsy, inefficient, and have outlived their usefulness?

It seems that never in all history has youth been the object of so much demagogic solicitation and destructive influence as it is today. There is plenty of subversive propaganda going on in our cities, spread by advocates of foreign or pseudo-Americanisms. Soap-box orators find their audiences are increasing. New cults gain supporters rapidly. They aim to interest the young boys and girls in their doctrines so that the future of their movements is assured and will not perish. Many of our young people, groping for a new dawn of opportunity, justice, and freedom, desire an active change in our Government because they have no conception of what our heritage for free men truly is. They have not received training in fundamental principles either in the home, school, or church.

Youth demands a cause to champion. Talking in abstract terms about democracy and freedom, suppressing agitators, warning youth against subversive influences and crime, and trying to control youth are not enough. These are negative methods. The situation demands something positive be done. Youth must have a cause to champion. A cause that will stir his very soul, that will fire his ambition and stimulate his mind. Make America a living, vital reality. Sell America, with all its eternal principles, so that he, in turn, will champion the cause with all of his enthusiasm, vitality, strength, and faith. Knowledge must be his armor and truth his guide. This must be done, from the cradle all through the years of adolescence, if our ideals are to be carried forward.

Give youth a cause to champion. Instill him with all those fine qualities of manhood and womanhood which will enable him to revive the strength of the home, where character is built.

Let us see every student who leaves the schools of America go out into the highways and byways feeling a divine ordination to build a greater America. Let them understand what it means to be an American. Let the young people understand the history of their country and be willing to save the philosophy which gave it birth.

We have seen the failure of nazism, fascism, and communism in lifting up men's souls, in giving them a chance to "reach the stars." The question faces youth today whether we still have the pioneer spirit we once had, and upon its answer will be determined the faith to preserve the spirit of America.

If we are sure our way of life is right, we must prove it to others, who are in doubt. Not by talk, but by actually living the doctrines which we preach. We must prove that our heritage of freedom is a better form of living than any other.

The answer for today, the hope for tomorrow, is quality of our people adhering to fundamental principles. We need a revival of those spiritual realities which will impart wisdom and justice, unity and peace; wide horizons of thought and deep sympathy, deep rooting in truth, integrity, moderation, courage, and faith to go forward and character to endure. We need to take off the fetters of regimentation, employ the methods of free men and go forward in the American way—which alone will bring a moral, economic, and spiritual advance.

Lack of religious training is one of the chief causes of youthful confusion, and unless there is a sound guidance program by parents, teachers, and clergy there can be no effective training in either morals or manners. There must be training in moral law and adequate basic guidance in discipline and knowledge of those old-fashioned virtues. A trained disciplined healthy youngster of 18 is an asset worth a great deal more to the Nation than his living and training has cost.

You have not been exposed to these unstable theories and false ideals. Here at Immaculata Seminary you have had before you daily and hourly by precept and example the exemplary lives of the Sisters of Providence who have dedicated themselves to educating you in the sound and fundamental virtues of life, to instilling in you an appreciation for the better things in life, to preparing you for your future career, and in molding your character and developing your talents.

Millions of children in Europe and Asia are still out of school. Few of the thousands of destroyed schools, universities, libraries, and museums have been rebuilt. Even the simplest educational supplies are totally lacking in some communities.

You are fortunate indeed to have had this fine training here at Immaculata Seminary. You must now assume some responsibility for carrying on—responsibility to your school, to your parents, to your Nation, and to yourselves.

Responsibilities to your school:

To uphold the traditions and good name of your school.

To remember that you carry the name of your school wherever you go.

To obtain the highest records possible in your future studies.

To remember the time, patience, and sincere interest bestowed upon you by your instructors to further your well-being and educational advantages.

To be prudent and moderate in all of your actions so as to reflect credit upon the good Sisters of Mary of Providence whose self-sacrifice and whose whole lives are dedicated to your future welfare.

Responsibilities to your parents:

For the years of hope and love your parents have spent on your behalf.

For the time, patience, and money spent to give you the best of everything.

For the good name and background your parents have maintained in order to give you your present position in life.

Your duty to make good and to so conduct yourself so that they may feel proud and happy over our success.

To always keep in mind that your parents love you and will always be ready and willing to help you, but that you should never take undue advantage of their love and consideration, but that you should make their consideration of you a pleasure and not a burden.

Responsibilities as an American:

To always remember that you are fortunate citizens of the greatest Nation on earth.

That it is your duty to equip yourself mentally and physically so as to be an asset to your country.

To uphold the high traditions of this great Nation and to oppose any attempt to undermine its fundamentals or its institutions.

To be alert and informed on the issues of the day.

To be proud you are an American.

Responsibilities to yourself:

To do your best at all times.

To preserve your self-respect.

To develop your talents.

To prepare yourself for the future both for your own happiness and well-being as well as for your community in whatever pursuit you may follow.

Alternate Canal Routes

EXTENSION OF REMARKS

OF

HON. DAVID M. POTTS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 12, 1947

Mr. POTTS. Mr. Speaker, under unanimous consent granted to me to extend my remarks in the Appendix of the RECORD, I would like to include a letter, with respect to the Panama Canal, from Mr. William G. B. Thompson to the editor of the Wall Street Journal, which appeared in that publication's issue of Wednesday, June 4, 1947.

Mr. Thompson is a member of the American Society of Civil Engineers and a former associate of Gen. George W. Goethals, the builder of the Panama Canal.

ALTERNATIVE CANAL ROUTES

EDITOR, THE WALL STREET JOURNAL:

S. H. Scheibla's Washington story in May 27 issue brings into the open the matter of a sea-level versus a lock canal at Panama. Its vital import to the American people deserves the fullest publicity, respecting the is-

sues at stake, regardless of the comparative estimates of cost or the estimated duration of construction operations for each type.

Argument for a sea-level canal, with one or two exceptions, long antedates the association of any of its present proponents with the project. The present Army predilection for a sea-level canal is ostensibly based on an apprehension that future development of atomic bombing will render the lock structures of the existing canal peculiarly susceptible to destruction. If any double flight of existing locks were destroyed by bombing, the canal would become inoperable. Damage to the Gatun or Pedro Miguel locks could drain Gatun Lake. Damage to Miraflores locks or dam could drain Miraflores Lake. In either case the canal would be unusable.

Quoting from your article:

"The Army favors a sea-level canal because it would be the easiest kind to defend; there would be no mechanical gadgets which could be put out of operation by single bomb explosion."

This statement, if made by the Army, is an oversimplification. No sea-level canal can ever properly function without tide control gates, due to the difference in tidal fluctuation between Colon and Balboa, this difference at times approaching 20 feet. No large vessel entering the Canal at Balboa at the beginning of flood tide there could safely navigate the sharp turns, inevitable in the proposed sea-level canal, because of currents induced by a rise and surge of current incident to 20 or more feet rise in 6 hours. The tidal locks necessary to enable a sea-level canal to properly function would be susceptible, not only to atomic bombing, but to any well placed TNT bomb. For the Army to deny this latter would be tantamount to admitting that the elaborately expensive precautions for guarding the locks against bombing, 1941–1945, were unnecessary. Why, then, should potential future atomic bombing be the pretext for the questionable accomplishment of questionable safety of a sea-level canal?

Ignoring the Army's alleged claim that a canal minus mechanical gadgets would not be susceptible to enemy destruction, diversion of the Chagres and other rivers cannot be ignored or dismissed, respecting its difficulty, ultimately unreliability, and susceptibility to atomic energy destruction.

Much of this proposed diversion would be in deep cuts through hills, in itself subject to jeopardy by earth slides in rainy season. Much of it would be through deep swamps with uncertain and unstable bottom. Here are involved massive dikes, similar to the Gatun Dam. To be ultimately feasible, these dikes must be built of carefully classified material. During relocation of the Panama Railroad, deep fills near Gatun sank out of sight over night. Dikes built to confine the rainy season flow of the Chargres and other streams would be peculiarly susceptible to destruction by any modern bombs, ignoring entirely atomic bombing. Breaches of almost any sections of the swamp dikes would empty enormous volumes of high velocity water flow into the canal ship channel, precluding any kind of navigation during rainy seasons.

If, in fact, future capacity and safety of the Canal demand profound changes in existing conditions, Capt. Miles P. Duval's reiteration of much earlier recommendations for a single lake level at elevation plus 85, from Miraflores to Gatun, which would in fact utilize most of the work already done on the third locks project, deserves a serious consideration which no hysterical demand of any other group for a sea-level canal deserves.

The future economic and military safety needs of this Nation will be ill served by consuming 20 years of its human and physical resources in a venture the essence of which lies in its uncertainty and boldness, as compared with the practical and infinitely less costly alternative recommended by Captain Duval and sponsored by the Navy.

My justification for the above derives from having spent the years 1905 to 1916 working on every phase of the Canal construction in the engineering and construction activities, and 42 years' study of and solicitude for the general integrity of that waterway.

WM. G. B. THOMPSON.

HAMDEN, CONN.

World Federation of Trade Unions' Mission to Japan and Korea

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 12, 1947

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks, I include therein an article appearing in the Times-Herald of June 8 regarding the WFTU's mission to Japan and Korea.

I exposed the World Federation of Trade Unions in more than one address before the House of Representatives as an organization definitely hostile to the United States. Its recent mission to Japan and Korea, to which General MacArthur objected, is further proof of that hostility. Its attitude reflects the communistic influence and domination of this organization as well set forth in the article by George E. Sokolsky, which I include in these remarks:

THESE DAYS

(By George E. Sokolsky)

The delegates of the World Federation of Trade Unions traveled to Japan as the guests of the American Government, the host being the War Department. General MacArthur had no wish for them to come but he was overruled by Secretary of War Patterson. The delegation consisted of Louis Saillant, general secretary of the federation; Ernest Bell, international secretary of the British Trade Union Congress; Willard Townsend, executive board member of CIO, United States of America; Michael Tarazov, secretary of the central council of the Soviet Trade Union; Patrick Waldberg, secretary of the delegation.

Their Information Bulletin recounts of a visit to a Korean textile mill accompanied by three members of the board of the All-Korean Trade Union Congress—a left-wing organization. Apparently the management of the textile mill did not regard this delegation as of very much importance. So, Mr. Saillant expressed his surprise to the director at not having been received as he left his car as it is traditional and customary on all similar missions.

So apparently they got into a fight, that is, the Korean trade union members and the local people. The management—I quote the WFTU report—"then informed us that he refused to grant permission to visit the establishment in the company of the people we had chosen." The fight was apparently a bad one—

"The members of the delegation were later informed that during the course of the morning the Korean police had arrested many members of the All-Korean Congress of Trade Unions who had been distributing the text of the message of welcome in honor of the members of the WFTU delegation." Then the delegation passed the following resolution:

"1. That all the persons arrested shall be released immediately.

"2. That the delegation be given the opportunity of seeing before the departure at 8:30 this evening the two Korean trade unionists who were brutally beaten at the factory.

"3. That a medical report be given to the delegation on the extent of physical damages which those 2 men have suffered.

"4. That the delegation be given a guaranty that the security and the lives of those men and of the other members of the group who were accompanying us will be safeguarded.

"5. That action be taken against the perpetrators of these brutalities and the manager of the factory.

"6. That the director of the plant, Mr. Lee, and his manager, Mr. Kim, who have allowed these incidents to take place and have tacitly approved of them, be discharged from their positions and that they be subjected to the full rigors of the Korean laws which are applicable to such circumstances.

"7. That steps be taken to ensure that the people be guaranteed the right to organize in trade-unions of their own choice on the basis of complete democracy without interference by the state or the police and that this guaranty shall be incorporated in a law.

"8. That this committee through its chairman, Mr. Saillant, be advised as to the disposition of this case and that the Korean people be advised of the results."

The probability is that nobody paid much attention to these world-shaking resolutions. But the point is that it was the War Department of the United States that insisted upon this troublesome delegation going to Japan and Korea where nobody wanted them. It is true that the American delegate, Willard Townsend, is not a Communist and was not in accord with the anti-Americanism of his communistic conferees. Here is a troublesome crowd of left-wing unionists who will, in the future, make their headquarters in the United States, at the United Nations building in New York.

The United Nations is a parliament of governments, but by resolution certain private organizations have been accorded special rights, particularly the right to maintain headquarters on their premises. The WFTU, the international left-wing labor organization, is one of those. This body will in the future have the advantage of a New York address. The cover-up is that the AFL and the International Chamber of Commerce will have offices there, too. But the WFTU is already acting as though it were an accredited international body. Actually, it is a menace.

Secretary of State Marshall Appeals for Continuation of State Department's Information Program

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 12, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, under leave to extend my re-

marks, I am inserting an editorial from the New York Times of June 12, 1947, covering Secretary Marshall's appeal to the Senate for a restoration of the funds to carry on his Department's informational program. I hope the House will heed the sound advice contained in this editorial and give its wholehearted approval to the Mundt measure authorizing the continuation of this vital and much-needed program of making America known—truthfully—to the rest of the world.

APPEAL FROM MARSHALL

Even in his days as Chief of Staff, Secretary Marshall probably never made a more earnest or imperative plea for a program than he did before the Senate Appropriations Committee in asking that at least $55,000,000 be restored of the $60,000,000 which the House has deleted from his budget. Of this sum, $34,000,000 is for the State Department's cultural and informational program. Without it, the Department's staffs will have to be reduced in many places, intelligence activities on which policies are to be based will have to be curtailed, and we shall lose our last direct contact with the people of Soviet Russia and various other countries. The Voice of America is the only voice many Russians hear, except the strident voice of the Soviet Government's propaganda bureau.

The American voice in China, in India, and in southeast Asia also would be silenced. The doors of 70 libraries in 41 countries would be slammed in the faces of thousands of persons who throng them every day, eager to learn about the strongest country in the world and denied any other means. Scholars who look to an opportunity to study in the United States would be denied the opportunity that the State Department now gives them to come to this country.

As Secretary Marshall has tacitly admitted, the cultural informational program has not always been what it should be. But it has been infinitely better than no program at all, and the Secretary promises that in the future, if the money is provided, the program will be "very carefully administered." By thus taking personal responsibility for it, he guarantees all that Congress need ask.

Any American who has traveled recently outside the borders of his own country knows with what hope and eagerness most of the rest of the world looks to the United States for leadership in these anxious days. What good is the best program if it is not explained to other people, and explained to them by those who make it and know what it is intended to accomplish?

The Labor-Management Bill

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. SPRINGER. Mr. Speaker, no one can contemplate what the Pesident will do with the recently enacted labor-management bill, which has passed both Houses of Congress, but that is his responsibility which he must assume. If the President should veto that measure, then the question will resolve itself into the question as to whether this measure, as it is now written, shall be passed over the veto. There has been much discussion upon the question as to what the President will do on this subject. But, if he should veto this measure, and the Congress should fail to pass it over the veto, which requires a two-thirds majority vote, and if John L. Lewis should promote another strike in the coal mines in July which would, without doubt, cause many people in our country to have little or no coal for fuel this coming winter—then we wonder upon whom this deplorable reality would fall. Of course, the President would be the sole and only person upon whom that censure should fall—because he had the last word, and he had the opportunity to prevent such a disaster in our country.

The measure which is now upon the President's desk is a fair and equitable measure, which deals with both labor and management alike; it deals with both fairly; this measure will, if enacted into law, prove to be very helpful to labor over a long-range program; it will be helpful to our people who are attempting to secure jobs in our factories and in our plants, and it will be most helpful to our returned soldiers from the recent war; and, it has been predicted by many whose sympathies have ever been on the side of labor, that this measure is the fairest proposal for both labor and management that has been presented throughout the years.

We must remember that both capital and labor are required in our Nation in order to develop our security and to promote our progress. These groups must work with and for one another. It is manifestly necessary that both be treated fairly in their dealings one with the other. The general sentiment expressed, with respect to the pending measure, is that it is entirely fair to all parties—and that the measure should be enacted into law.

Mr. Speaker, a very illuminating editorial appeared recently in the Indianapolis Times, of Indianapolis, Ind., upon this very subject—which I ask to be incorporated in the Appendix of the RECORD with my own remarks—which editorial is as follows:

FIFTEEN YEARS AGO—AND NOW

Secretary of the Navy Forrestal, speaking in New York, said:

"The temptation to put on labor all the blame for industrial difficulties and high prices is as unjust as it is to saddle all business with that blame. * * * Bitterness against all labor and all labor leaders as a group is just as dangerous, just as unfair, as the tendency 15 years ago to smear all business and management."

That is true. But if, as some of his hearers inferred, Mr. Forrestal was hinting at a line of argument he thinks President Truman might use in vetoing the Taft-Hartley labor bill which is before him, there is other truth that should be stated.

Fifteen years ago there were business abuses that cried for correction. Powerful men, who professed to speak for business, tried to deny these abuses and bitterly resisted the efforts of Government to correct them, by such laws as the Stock Exchange Control Act and truth-in-securities measure. They assailed the advocates of corrective legislation as enemies of business. They set themselves against the unmistakable will of the American people. In many cases they fought unfairly and laid themselves open to smearing tactics which were extended to all business, obvious as it was that all business was not at fault—that most of business was decent and honest.

Much of the legislation these men opposed was enacted in spite of them, and has been accepted. It has hurt business far less—if it was hurt at all—than business was hurt by the methods they used in opposing it.

Today there are labor-union abuses that cry for correction. Powerful men, who profess to speak for labor as a group, are trying to deny these abuses. For years they have resisted bitterly—and, with help from an indulgent administration, successfully—proposals to correct them by law. They are now resisting corrective legislation, passed by overwhelming majorities in Congress in response to the unmistakable will of the American people. They are assailing all advocates of this legislation as enemies of labor. They are fighting as unwisely, unfairly, and stupidly as the professed spokesmen for business did in the 1930's.

Of course, all labor and all labor leaders should not be indicted for the sins of a few. Of course, the vast majority of union members and union officers are honest, good citizens. It is not smearing them to say that the abuses of unionism must be corrected. The legislation now before President Truman will not destroy unions and enslave workers, as the professed spokesmen for labor say.

The measure should be signed.

Tulsa Chamber of Commerce Urges Civil Aeronautics Board Be Continued as Sole Authority for Granting New Air Routes

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, I am in receipt of a resolution adopted unanimously by the board of directors of the Tulsa Chamber of Commerce of Tulsa, Okla. I quote the resolution adopted June 3, 1947:

Whereas we have been informed that there are now pending in the House of Representatives certain resolutions relating to the entry of surface and water carriers into the field of air transportation; and

Whereas embodied in these various House resolutions is the principle that Federal agencies other than the Civil Aeronautics Board be given the right of granting authority for the operation of new air routes: Now, therefore, be it

Resolved, That the board of directors of the Tulsa Chamber of Commerce do hereby express their conviction that authority for the granting of all new air routes should continue to be vested in the Civil Aeronautics Board, under the Civil Aeronautics Act of 1938 as amended; be it further

Resolved, That our Congressman be urged to work and vote for the continuation of this principle by opposing such portions of the above-mentioned House resolutions which would give authority to any other Federal body for the granting of new air routes.

Approved and adopted this 3d day of June 1947, by the board of directors of the Tulsa Chamber of Commerce, in regular session.

G. H. WESTBY, *President.*

Attest:

O. A. BORDER, *Secretary.*

Mr. Speaker, there are several bills pending in Congress which seek to give authority to others than the Civil Aeronautics Board in the matter of granting new air routes. It is the belief of these constituents of mine, leading business and professional men of the city of Tulsa, through the board of directors of the Tulsa Chamber of Commerce, that other Federal agencies should not be given the right of granting authority for the operation of new air routes. I have quoted the above resolution in order that my colleagues and the public may know the strong conviction my constituents hold on this subject.

Loyalty Investigations

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 12, 1947

Mr. LODGE. Mr. Speaker, several Members of the House in recent days have asserted that the State Department is doing nothing to clean out its own personnel. There is a story in today's Washington News which states that the State Department is completing 700 loyalty investigations a month, and that 225 persons, against whom there was unfavorable information, have left the Department.

The text of the article follows:

SEVEN HUNDRED STATE EMPLOYEES PROBED A MONTH

(By Frederick Oechsner)

An average of 700 loyalty and security investigations of employees, transfers, and new applicants is being conducted by the State Department each month, it was learned today.

Following President Truman's Executive order calling for a loyalty check of all Government employees, Secretary of State George Marshall wrote Attorney General Tom Clark requesting the FBI give priority to investigating State Department personnel.

MARZANI SPURRED IT

This resulted from frequent criticism of the Department in Congress and elsewhere for employing left-wingers. The recent conviction of Carl A. Marzani, former State Department employee, on charges of perjury in connection with Communist affiliations, spotlighted the issue.

Two or three investigations each week are initiated as the result of requests from individual Congressmen or from congressional committees.

The Mundt bill, to continue Office of Information and Cultural Affairs, calls for a loyalty check of the agency's personnel; the Greek-Turkish aid calls for similar checks on the members of the field missions.

MONTH EACH

The State Department's own investigations are conducted by a large staff working in the field (principally in the United States) and within the Department itself, in conjunction with the FBI, the military intelligence agencies, credit agencies, and other sources of information. Each investigation takes about 1 month to complete.

Charges of questionable loyalty or reliability by private persons are frequent. In the last 2 years, however, only 50 cases are said to have involved actual security considerations.

VERY SECRET

Certain important cases are referred to a special State Department committee of investigation, the character and membership of which are not disclosed even in the Department itself. Practically all other cases are dealt with by Assistant Secretaries.

Efforts to have the FBI "certify" the loyalty of persons whom they have investigated (generally applicants for employment) have been unavailing. The FBI merely will report its findings and the administrative decision is up to State.

Of 4,500 persons transferred to the State Department from other agencies at the end of the war, all have been investigated. In 342 cases, questionable factors arose; 225 of these left the Department, or were let out, on various grounds; 2 were dismissed; 70 were cleared; the remaining 45 are still under consideration.

Charges against State Department employees, or "soft spots" found in their records, vary greatly.

One involved a young woman who, as a resident of New York's Greenwich Village, fresh from a rural community, had been personally in favor of the candidacy of Communist Earl Browder for office.

The fact was brought to light, and her record investigated. She was cleared and kept her job.

Government Spending

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 12, 1947

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oil City (Pa.) Derrick of June 12, 1947:

SPEND AND SPEND, ELECT AND ELECT

The policy described so well by the late Harry Hopkins of "spend and spend and elect and elect," abetted by World War II, cost this country forty-two and one-half billions during the fiscal year which ends this month. The Cleveland Trust Co. performs a public service by reducing the figure to everyday sums. If every man, woman, and child paid his or her share of that sum, says the bank, it would require $300 apiece.

United States Senator HARRY F. BYRD, of Virginia, devotes practically all of his time to dissecting Government spending. BYRD is a Democrat and because of this activity he has earned the hatred of the Democratic bosses.

Omitting the war expenditures politics is responsible for much of the rest. Take the Federal pay roll. In 1939, the last normal prewar year, the number of Government employees was 919,776. This was during the second Roosevelt administration when "spend and spend and elect and elect" was the order of the day. On June 30, 1945, this number had increased to 3,737,896 and in January of this year it was 2,261,459, well over twice as large as it was in 1939.

Notable among those showing increases were the office of Secretary of Labor, First Assistant Postmaster General, Public Buildings Administration, Public Roads Administration, and Veterans' Administration. The report of the Joint Committee on the Reduction of Nonessential Federal Expenditures submitted to the United States Senate by Senator BYRD shows that the Washington metropolitan area led with 221,288 employees; California ran second with 212,912; New York third with 192,596. Vermont was last with 3,159. Federal employees outside the country totaled nearly 300,000.

The same joint committee also made a report on the assets of wholly owned Government corporations. A summary of the assets, largely in terms of book value, follows:

Cash on hand, in banks, and on deposit	$1,250,935,984
Accounts receivable	499,792,291
Loans receivable	3,719,370,798
Deferred charges	39,266,137
Real property	3,095,267,469
Plant and operating equipment	5,206,769,133
Furniture and fixtures	81,172
Inventories of goods and commodities on hand	1,378,209,602
Investments	486,673,013
Miscellaneous assets	21,724,108
Total assets	15,698,089,707
Estimated liabilities	14,161,000,000

If every man, woman, and child in the country paid the $300 yearly which it takes to run the Government it would be spent as follows: $104 would go for defense; $54 for veterans aid; $45 for international finance (foreign loans and such); $35 for interest; $15 for refunds; $11 for general Government expense, and $36 for all other expenses such as housing, highways, merchant marine, and agricultural programs.

We are dealing now with astronomical figures. President Truman wants to continue spending because he thinks spending means votes. But we think it is high time something were done for the taxpayers. The bill which Congress has passed by overwhelming majorities would cut taxes 30 percent on all low-wage earners, 20 percent on all middle incomes, and 10 percent on those in the top brackets.

If President Truman vetoes the tax reduction it will be purely politics. The economic ills now besetting this country simply cannot stand much more of this political pressure.

Secretary of State Marshall Issues Important Statement Supporting Student Exchange Program of H. R. 3342

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 12, 1947

Mr. MUNDT. Mr. Speaker, several Members of the House have said they

would vote for the Voice of America because General Marshall had recommended the broadcasting, but that General Marshall was not supporting the exchange of students and teachers, and other parts of H. R. 3342.

General Marshall issued a statement to the press this morning very forcefully endorsing the exchange of students and other activities authorized by the Mundt bill. In fact, General Marshall said that the exchange of students in the long run may be far more important than broadcasting. The text of General Marshall's statement follows:

STATEMENT OF SECRETARY MARSHALL ON IMPORTANCE OF STUDENT EXCHANGE

THE MUNDT BILL

At his press conference today, Secretary Marshall made the following statement:

"The Mundt bill authorizes the Secretary of State to conduct an international information and educational exchange program. A number of Members of Congress have stated they would support the Voice of America broadcasts because I had urged the continuation of this broadcasting, but they could not support the exchange of students and professors, or assistance to American libraries and schools abroad, or the assignment of American technicians as advisers to other governments.

"I have supported the continuation of broadcasting because it is the most important single method for correcting false ideas about the United States in those areas where the people are isolated from the rest of the world. I have spoken in support of broadcasting on several occasions because I felt this was the most controversial element in a program for the exchange of information.

"I am unreservedly in favor of the exchange of students, professors, and books. These methods in the long run may be far more important for the interchange of information than broadcasting. I believe that private institutions and organizations must continue, as they have in the past, to bear the principal responsibility for the exchange of students and professors. Assistance from the Government would supplement these private activities. I have seen some of the work of the American-founded schools in China. They are largely financed by private fund raising. During the war the State Department provided these schools with some books and laboratory equipment. The Department also gave to the American colleges in the Near East some scholarship funds for bringing students from the Arab states to study under American teachers in Syria and Turkey. I should like to see that authority continued, and wherever it is necessary in our national interest to supplement the work of private agencies I believe the Department should be in a position to do so.

"The assignment of public officials as advisers to other governments will be increasingly important to the United States in its foreign-relief program and will enable those governments to achieve maximum self-help. This bill contains provision that the Secretary of State can require other governments to pay for the services of these advisers.

"I do not believe that a bill limited to broadcasting would give this Government the opportunities it must have to explain itself to the rest of the world."
